Short & Sweet: The Magnus Sicilian

**1.e4 c5** Hello and Welcome to 'Short and Sweet: The Magnus Sicilian'! This 'Short and Sweet' opening course provides you with an overview of the Sicilian, choosing lines based on World Champion Magnus Carlsen's repertoire. In the Sicilian Black immediately breaks the symmetry on move one, making it an ideal weapon to unbalance the game and play for a win. In the main lines of the Sveshnikov Black frequently sacrifices material to drum up an attack on the white king, which is fun to play and tricky for White to handle. If you are looking for an active and ambitious opening for Black, this is the right one for you. As of today (Nov 11, 2019) Magnus Carlsen has not lost a single game with the Siclian in Classical time control games since 2011! Admittedly, he did not play it that frequently between 2011 and 2018, but

still a very impressive run. I am mentioning non-losing streaks, but what about wins? Magnus has won many attractive games with the Sicilian, often going all out for an attack on the king. I hope you enjoy this overview of the Sicilian, played like Magnus does it! **2.Nf3 Nc6 3.d4**

[ The open Sicilian will very likely always be the critical test of any Sicilian setup. Against the open Sicilian Magnus Carlsen's choice is the Sveshnikov Variation. After 3.d4 cxd4 4.Nxd4 Nf6 5.Nc3 e5 the starting position of this variation arises. ]

**3...cxd4 4.Nxd4 Nf6 5.Nc3 e5**

[ This is the starting position of the Sveshnikov. Nowadays this name of the variation is widely accepted, but there have been many other names over the years. It was first used by World Champion Emanuel Lasker against Carl Schlechter in 1910, but Schlechter played the uncritical 5...e5 6.Nb3 and Lasker obtained a good game easily. ]

[ It was quite quickly figured out that 5...e5 6.Ndb5 should be critical, and for a long while the structural weaknesses in Black's position were considered to be too severe. ]

[ It took almost 50 years to put this line back on the map, when Jorge Pelikan and Herman Pilnik found some new ideas for Black. They mostly investigated 5...e5 6.Ndb5 d6 7.Bg5 a6 8.Na3 Be6 ]

[ and 5...e5 6.Ndb5 d6 7.Bg5 a6 8.Bxf6 gxf6 9.Na3 d5 , lines that still seen today occasionally. So in the late 1960s the move 5... e5 would be called the start of the Lasker/Pelikan/Pilnik-Variation. ]

[ Then in the early 1970s Evgeny Sveshnikov and some fellow master players from the Russian city of Chelyabinsk discovered that after 5...e5 6.Ndb5 d6 7.Bg5 a6 8.Na3 Black should play b5 , rather than 8... Be6. Sveshnikov and mostly Gennadi Timoshenko used their innovation successfully and quite quickly the variation was taken up by some more Russian players, most notably the winners of the World Junior Championships Valeri Chekhov, Sergei Dolmatov and Artur Jussupow, all students of the legendary chess trainer and author Mark Dvoretsky. ]

[ Since these early days almost all of the World Champions and World Championship challengers have played the Sveshnikov (or Chelyabinsk variation, as it is often called in Russia) regularly or on occasion. We can list Kasparov, Anand (occasionally), Kramnik, Topalov, Gelfand, Caruana and of course Magnus Carlsen employing the Sveshnikov on the highest level and even during World Championship clashes, as seen in the Carlsen-Caruana Match in London 2018. Now, what is so great about the Sveshnikov Variation? At the early days of the Sveshnikov Black's weak d5-square and backward d-pawn were thought to be too much to handle - why has this assessment changed? I think this actually needs to be explained combining some general points and some concrete lines. After 5. .. e5 White needs to move the knight and concrete lines show that the only challenging move is 6. Ndb5. In the first lines we will examine why 6. Nb3, 6. Nf3 etc. at best lead to equality for White, often less than that. After 5...e5 6.Ndb5 d6

is best, after which White has the option to enter the line 7. Nd5, as examined in subsequent variations. However, after 7.Nd5 Nxd5 8.exd5 we have to state that Black's structural problems - the d5-square and the d-pawn - are already solved. Only very recently this line has seen some new ideas for White, making it more interesting for White to try. Still Black retains fair chances, usually utilizing the pawn majority on the kingside. ]

[ The two other main lines of the Sveshnikov start after 5...e5 6.Ndb5 d6 7.Bg5 a6 8.Na3 b5 . Before we look at those concrete lines, I need to mention how important the bad position of the a3-knight is. White has lost quite a bit of time already with this piece and will move it again more often than not, trying to connect it with the d5-square. All these time losses with the knight make the position viable for Black. Just imagine the knight would be on e3 instead of a3 - this would be a terrible position for Black. *(* Back to the real position: after *8...b5* Black threatens ... b4, which leaves White with the choice between *9.Nd5* , usually followed by *Be7 10.Bxf6 Bxf6;* or *8...b5 9.Bxf6 gxf6 10.Nd5* . The evaluation of the Sveshnikov depends on the theoretical state of the earlier mentioned 7. Nd5 and these two traditional main lines. In both lines Black gains the bishop pair, which is a great asset to have that early in the game.*;* Now, the line *8...b5 9.Nd5 Be7 10.Bxf6 Bxf6* is White's more strategic choice, trying to exploit the static advantages - control over d5, d-pawn. We will see that Black is able to fight for control over d5, but in many cases does not need to focus on that. Often ignoring the knight and starting play with ...f5 or/and even on the queenside is possible. One point to understand is that it is almost impossible for White to BOTH use the d5-square and build up pressure on the d-file. A knight on d5 plugs the d-file, so White is not just attacking d6 and wins this pawn later. In fact the 'weak' d6-pawn almost never gets lost in any Sicilian. *)* White also has the line 9.Bxf6 gxf6 *(* forced, because *9...Qxf6 10.Nd5 Qd8 11.c4* is too bad *)* 10.Nd5 . In this line the play is more dynamic, because Black will play ...f5 quickly and tries to completely take over the centre. The position opens up, which is excellent for Black's bishop pair. Quite quickly tactics will become an important factor and the knowledge of concrete lines is more essential than in any other line of this repertoire. ]

Before we continue to examine the sidelines, I'd like to mention one very important aspect of the Sveshnikov. Black very frequently will play the move .. .f5, starting play in the centre and on the kingside. Black has a central pawn majority since move 3 and ...f5 will even try to remove the e4-pawn to set the central pawn mass in motion. Contrary to Sicilians without ...e5 Black's play is mostly in the centre and on the kingside, while Black's king is perfectly safe. In lines like the Dragon or the Najdorf Black often loses due to mating attacks, which almost never happens in the Sveshnikov, quite the contrary. In some lines we have to abandon the queenside in order to throw the kitchen sink towards White's king, going for checkmate! This is an important practical consideration that often allows Black to score points from objectively dubious positions. **6.Ndb5 d6 7.Bg5 a6 8.Na3 b5** After 8... b5 Black threatens to fork the knights, so White does not have a wide range of moves. He

either plays 9. Nd5 or 9. Bxf6 first, followed by 10. Nd5.

[The difference between the two options is substantial. After the immediate 8...b5 9.Nd5 Black plays Be7 , after which 10.Bxf6 Bxf6 is the usual follow up. In this line Black is able to recapture on f6 with the bishop, ]

[while after 8...b5 9.Bxf6 you need to capture with the pawn, doubling the f-pawns. In this doubled f-pawn structure the play is considerably sharper early on, as Black is able to play ...f5 quickly to attack White's centre. ]

The line 9. Nd5 Be7 10. Bxf6 Bxf6 is a slower, more strategic approach by White, trying to control the position, in particular the weak d5-square. **9.Nd5 Be7 10.Bxf6** In my mind this is the only logical move, trying to establish control over the light squares, in particular, d5. After the trade White retains three pieces that may use d5, while Black only has two to fight for this square. A downside from White's perspective is the loss of the bishop pair, which is a serious concession. Once you have given it up, you are not getting it back! I know this sounds extremely basic, but it is a very relevant factor. In the middle game, Black's dark-squared bishop is a key piece. If you manage to put it to effective use, it will often be very strong, as it has no counterpart anymore. You will see some examples of this theme in the 11. c4 variation, when ... Bd8-b6 is an excellent idea to keep in mind. A more common scenario is to see the bishop on the diagonal h8-a1, for example on g7 after a later ... g6 and ... f5 is played. In some cases, Black may also simply trade the bishop against a knight showing up on e3. White's problem piece is the knight on a3 and the route c2-e3 looks very natural to improve it. The trade on e3 changes the situation about the d5-square again, as both sides have a bishop and knight to control d5. Depending on the concrete circumstances Black might even be able to play d6-d5, for instance, prepared by ...Be6 and ...Ne7. We will discuss more ideas for both sides in the notes to the individual lines. **10...Bxf6 11.c4** While 11. c3 is still the main line, 11. c4 has gotten more popular starting from the mid 2000s. White forces 11... b4, closing the queenside. This is a completely different approach compared to 11. c3, when White usually goes for a quick Nc2 and a4, attacking Black's queenside formation.

[After 11.c4 b4 the play is rather slow. White has tried various ways to put pressure on Black, but the current theoretical status is completely satisfactory for Black. ]

**11...b4 12.Nc2 0-0** By the way: 12... O-O does not blunder the b-pawn, we will get excellent compensation if White elects to take it. **13.Ndxb4**

[Black gets great compensation after this pawn grab. The move 13.Ncxb4 amounts to the same, as we will exchange on b4 anyway, leading to the same position. ]

**13...Nxb4 14.Nxb4 Qb6** White now has no fully satisfactory solution. Hanging on to the pawn gives Black fantastic play, but the other lines are not attractive either. **15.Nd3** The greedy, but bad option. **15...Bb7 16.f3 Bh4+** Black provokes the move g3, weakening the long diagonal in the process. A coming ...f5 will be more effective

this way. **17.g3 Bg5∓** Black has a great position for just one pawn. White's dark squares are terribly weak and castling is tough to accomplish.

Before we look at those concrete lines, I need to mention how important the bad position of the a3-knight is. White has lost quite a bit of time already with this piece and will move it again more often than not, trying to connect it with the d5-square. All these time losses with the knight make the position viable for Black. Just imagine the knight would be on e3 instead of a3 - this would be a terrible position for Black.

[The difference between the two options is substantial. After the immediate Back to the real position: after Now, the line 8...b5 Black threatens ...b4, which leaves White with the choice between 9.Nd5 Black plays , usually followed by Be7 , after which 10.Bxf6 Bxf6 is the usual follow up. In this line Black is able to recapture on f6 with the bishop, is White's more strategic choice, trying to exploit the static advantages - control over d5, d-pawn. We will see that Black is able to

fight for control over d5, but in many cases does not need to focus on that. Often ignoring the knight and starting play with ...f5 or/and even on the queenside is possible. One point to understand is that it is almost impossible for White to BOTH use the d5-square and build up pressure on the d-file. A knight on d5 plugs the d-file, so White is not just attacking d6 and wins this pawn later. In fact the 'weak' d6-pawn almost never gets lost in any Sicilian. ]

[ while after 8...b5 9.Bxf6 you need to capture with the pawn, doubling the f-pawns. In this doubled f-pawn structure the play is considerably sharper early on, as Black is able to play ...f5 quickly to attack White's centre. ]

The line 9. Nd5 Be7 10. Bxf6 Bxf6 is a slower, more strategic approach by White, trying to control the position, in particular the weak d5-square. White has three mainlines in the Sveshnikov: 6. Ndb5 d6 7. Nd5, 6. Ndb5 d6 7. Bg5 a6 8. Na3 b5 9. Nd5 and this one, which is by far the sharpest and most tactical line of the three. This is particular applies to the line White also has the line **9.Bxf6** you need to capture with the pawn, doubling the f-pawns. In this doubled f-pawn structure the play is considerably sharper early on, as Black is able to play ...f5 quickly to attack White's centre.

[ White has three mainlines in the Sveshnikov: 6. Ndb5 d6 7. Nd5, 6. Ndb5 d6 7. Bg5 a6 8. Na3 b5 9. Nd5 and this one, which is by far the sharpest and most tactical line of the three. This is particular applies to the line 9.Bxf6 gxf6 10.Nd5 Bg7 11.Bd3 , which turns razor-sharp quickly. ]

**9...gxf6**

[ This is forced. Black can't capture with the queen, because after 9...Qxf6? 10.Nd5 Qd8 White has many lines to give him a huge advantage. The brutal 11.Bxb5 *(* and *11.c4* are terrible for Black. *)* ]

A good comparision to make: look at the very popular mainline 9. Nd5 Be7 10. Bxf6 Bxf6 (covered in 2 chapters of the larger course), in which Black has the bishop on f6, while after 9... Qxf6? 10. Nd5 Qd8 it is on f8! So long story short: take with the g-pawn and look forward to playing ...f5 even twice, if possible. **10.Nd5** . In this line the play is more dynamic, because Black will play ...f5 quickly and tries to completely take over the centre. The position opens up, which is excellent for Black's bishop pair. Quite quickly tactics will become an important factor and the knowledge of concrete lines is more essential than in any other line of this repertoire. . The evaluation of the Sveshnikov depends on the theoretical state of the earlier mentioned 7. Nd5 and these two traditional main lines. In both lines Black gains the bishop pair, which is a great asset to have that early in the game. After 10... Bg7 White has two main tries for an advantage. The first one and the sharpest line is **10...Bg7**

[ Black has two good moves in this position, the more traditional 10...f5 and the newer move 10... Bg7, the so-called Novosibirsk variation. Our repertoire choice is quite easy, as the World Champion has always played 10... Bg7, as far as I can see. ]

[ After 10... Bg7 White has two main tries for an advantage. The first one and the sharpest line is 10...Bg7 11.Bd3 , preventing ...f5 for the moment. Black often

sacrifices pawns in this line, leading to wild, tactical positions. *(*The second option is *11.c3* , which is also sharp, but requires less radical measures than 11. Bd3. *)*]

**11.Bd3** This is White's sharpest option, because by preventing ...f5 he basically forces Black into the following lines. , preventing ...f5 for the moment. Black often sacrifices pawns in this line, leading to wild, tactical positions. , which turns razor-sharp quickly. **11...Ne7** The only good move after 11. Bd3. The bishop move prevents ...f5 and we need to get rid of the d5-knight right away. **12.Nxe7**

[White's choice is limited, because with 11... Ne7 we had threatened to take on d5. As usual it's very desirable for Black to take on d5 when White needs to recapture with a pawn. After 12.c4 Nxd5 we would get this favourable scenario. The main course examines a few lines where this happens. ]

Castling is rather natural for both side, so quite often this will be played quickly after a move of the c-pawn, for example In the larger course I will examine **12...Qxe7** After 12... Qxe7 White has two basic options. He can play c4, attacking the b5-pawn, or play c3, preparing to get the offside knight back into the game. White might play c4 or c3 right away or do it after castling kingside first.

[Castling is rather natural for both side, so quite often this will be played quickly after a move of the c-pawn, for example 12...Qxe7 13.c4 f5 14.0-0 0-0 is just as common as 13. O-O O-O 14. c4 f5. ]

[In the larger course I will examine 12...Qxe7 13.0-0 0-0 as the main line and then split the lines with 14.c4 *(*or *14.c3* . *)*]

**13.0-0 0-0** as the main line and then split the lines with **14.c4 f5** is just as common as 13. O-O O-O 14. c4 f5.

[The best way to react to 14. c4. As usual taking on c4 is terrible, as it helps the knight far too much. The best way to react to 14. c4. As usual taking on c4 is terrible, as it helps the knight far too much. 14...b4 is also a disaster, as after is also a disaster, as after 15.Nc2 a5 16.Ne3 Black does not even manage to play the fundamental ...f5 break. Black does not even manage to play the fundamental ...f5 break. ]

This only leaves Black with sacrificing the b-pawn, which explains why the 14. c4 - or 13. c4 - line is the sharpest one in the main line. Black is giving away the queenside and goes all-in with his counterplay in the centre and kingside. **15.Qf3**

[White's main tries for an advantage are 15.Qh5 and this move. ]

[This only leaves Black with sacrificing the b-pawn, which explains why the 14. c4 - or 13. c4 - line is the sharpest one in the main line. Black is giving away the queenside and goes all-in with his counterplay in the centre and kingside. 15.cxb5 Taking on b5 is not a good idea. White is be able to defend in the coming lines, but it's not a fun task for a human player. d5 Black is forcing the long diagonal open with this standard pawn push. 16.exd5 e4 17.Qe2 The only move to cover b2 and defend the d3-bishop by tactical means. Black now has a plethora of good attacking ideas. I'll show a promising one. Qb4 18.Bc4 Qxb2 19.Nc2 axb5 20.Rab1 Qf6 21.Rxb5 f4 With excellent attacking chances for just one pawn. S&S Magnus Sicilian --Sveshnikov 9. Bxf6,1 S&S: The Magnus Sicilian ]

**15...d5**
[ We have seen this idea multiple times, so this should not come as a great surprise. In this particular case we can't play 15...fxe4 16.Qxe4 with a double threat, so ...d5 is played first in order to make ...fxe4 possible. ]
**16.cxd5 fxe4 17.Bxe4 Rb8∞**
[ We need to play this first. White was threatening d6, which even works after 17...f5? 18.d6! . The rook move is useful not only as prophylaxis, but also introduces active ideas into the position, in particular a rook lift with ...Rb6-h6 or to g6. We explore this position further in the main course. ]

Qd7 20.Rad1 Qf7 *( 20...e4 21.Nf4 Be5 22.Nxe6 Qxe6 23.f4 exf3 24.Bxf3 )* 21.b3 Na7 22.Kh1 Nc8 23.Na3 Na7 24.f4 Bxd5 25.Rxd5 exf4 26.gxf4 Bxc3 27.Qd3 Bb2 28.Nc2 ]
**16.0-0!** The goal of this exchange is to gain the d6-square for the knight, from where it can attack the pawn on b7. **16...Qd7**
[ The tempting continuation 16...a5 17.Qh5 f5 leads after 18.Rad1! Kh8 19.Nce3 to the loss of a pawn. In this game Black decides to destroy the nuisance on b5. It's possible to do so by a more exact order of moves: Ne7 20.Rd2 ]
**17.a4 a5**
[ 17...bxa4 18.Rxa4 Black was threatening the move 23...Nxe3!, and a5 was no good because of 19.Nce3 Rxb2 20.Rc4 . In turn, White is now threatening to sacrifice on e6. Rc8 21.Qh5 ]
[ 17...b4 18.Ncxb4 Nxb4 19.cxb4 Bxd5 20.Bxd5 etc leads to a difficult ending for Black. Rxb4 21.b3! ]
**18.Nce3 Kh8**
[ 18...b4 ]
**19.axb5** White has carried out his plan, but Black defends admirably. **19...Rxb5!**
**20.Qa4 Rfb8**
[ 20...Rxb2 21.Nc4 Rb7 White could keep an advantage. or 22.Ndb6 ]
**21.Qh4** An important preparation. White wants to push the knight away from d5, but 21 e4 allows 21...Nf4. **21...Qd8**
[ 21...Rxb2 22.Nf6 Bxf6 23.Qxf6+ Kg8 24.Ra4 Qe7 , winning a pawn. Black has defended very imaginatively until now. Here he had to play 25.Qh6 , but in this case by continuing Nd8! 26.Nd5 ]
**22.Qxd8+ Nxd8 23.Nc7 Rxb2 24.Nxe6 Nxe6 25.Nc4 Rc2 26.Nxd6 Kg8**
[ 26...Rxc3 27.Nxf7+ Kg8 28.Nd6 etc. Only Rd3! offers hopes of saving the game. It's difficult for Black to defend after 29.Nf5 Rb5 , with threats of 31 Nf5 or 31 e4. On 30.Rfc1 there could follow ]
**27.Ne4 Rb5 28.Rfd1 Kf8**
[ 28...Rbb2 29.Bf1 Ra2 30.Bc4 . But White is well aware that realizing his extra pawn in such an ending is not an easy task, so he prefers to keep the rooks on and increase the pressure. The transfer of the knight to the edge of the board is a serious mistake. Coming back to d5 leads to immediate defeat: Rxa1 31.Rxa1 ]
**29.Bf1 Rb7**
[ Here it's possible to win a pawn, playing 29...Rbb2 30.Bd3 ]

**30.Rxa5 Ke7? 31.Nd6 Rc7 32.Nf5+ Kf6 33.Ne3 R2xc3 34.Nd5+ Kg6 35.Nxc3 Rxc3 36.Ra6** It's hard to defend when you can't make a good move. White threatens 37 h5 followed by Nh4. The move Black chooses permits White to include the rook in the attack. **36...Bf8 37.Bh3! Kf6 38.Bxe6 fxe6 39.Ra7** White has successfully converted his early queenside activity into a devastating attack on the other wing. Equivalent to giving up. But after **39...h6 40.Rdd7!** Black has no defence to the threats of 40 Rxc5 or 40 Nxh6+. **40...Bc5 41.Rf7+ Kg6 42.Rg7+!** is destructive. **42...Kf5** is not good because of **43.Raf7+ Ke4 44.Rg6** .
**1-0**

**B33**

□ **Sveshnikov Nb8**
■ **Sveshnikov Nd7**

1.e4 c5 2.Nf3 Nc6 3.d4 cxd4 4.Nxd4 Nf6 5.Nc3 e5 After this move, we enter the Sveshnikov Sicilian. Black weakens their pawn structure (hole in d5, backward pawn on d6) (for dynamic assets) (gaining tempo misplacing White's Knight, pawn breaks on d5 and f5, and often times the Bishop pair. In my view, this is objectively the soundest Sicilian, together with the Najdorf.) 6.Ndb5 d6 Virtually the only move. If Black allows Nd6 their position is a disaster. 7.Nd5 Recently this move has become really popular. The 7.Bg5 lines are too studied and White doesn't seem to get anything out of it. Also, we are aiming again at the same structure we are going to play against other lines. 7...Nxd5 Forced. 8.exd5 Nb8 The move we are most likely to encounter on the board. We reach the typical structure in Which Black will seek some counterplay on the kingside, while we do the same on the queenside. 9.c4!? Reaching similar positions, is the most played. However, a4 has recently become very popular. 9.a4 The point of this early push is to retreat the knight to a3 in case of a6 and eventually play Nc4+a5. 9...Be7 The most flexible move, as e7 is the obvious destination for this bishop and Black is going to castle short. However, other moves like 9...Nd7 9...a6 or 9...f5 are more conditioned by White's reply. 10.Bd2
The most accurate move order to reach the position we want. Also, it's not as well-known as 10.Be2 , which its main drawback is 10...Nd7! This move order has barely been barely played compared to 10...O-O however, it is more accurate. 11.Bd2 11. O-O O-O 12.Bd2 a6 13.Na3 a5! reaches the position our move order is trying to avoid as in my view, Black manages to get the best version of this position. 11...Nf6! with complicated play. 10...Nd7 A correspondence move but one of the most interesting orders and maybe objectively the best one. Black wants to transpose by meeting 11. Be2 with 11...Nf6! 11.a5 a6 A very concrete attempt against White's move order. It is quite unnatural, so very unlikely to face on the board unless Black has prepared it in advance. 11...Nf6 12.Be3+- The key difference in this move order. a7 falls. 12.Na3 12.Nc3!? With the idea of playing Na4+c4 next. 12...Nf6 The point. Black is hitting the d5-pawn, as well as threatening a potential Ne4 or Bg4. 13.Bb4 b5 14.axb6

Qxb6 15.c3 Bg4 15...a5? 16.Nc4+- winning a5. 16.f3 Bd7 17.Nc4 Qb8 18.Be2 With a nice advantage. The weakness on a6 will be our main target. Our pressure on d6 makes it difficult to make progress with Black.

**B33**

□ **Sveshnikov Nb8**
■ **Sveshnikov Nd7**

1.e4 c5 2.Nf3 Nc6 3.d4 cxd4 4.Nxd4 Nf6 5.Nc3 e5 After this move, we enter the Sveshnikov Sicilian. Black weakens their pawn structure (hole in d5, backward pawn on d6) for dynamic assets (gaining tempo misplacing White's Knight, pawn breaks on d5 and f5, and often times the Bishop pair. In my view, this is objectively the soundest Sicilian, together with the Najdorf.) 6.Ndb5 d6 Virtually the only move. If Black allows Nd6 their position is a disaster. 7.Nd5 Recently this move has become really popular. The 7.Bg5 lines are too studied and White doesn't seem to get anything out of it. Also, we are aiming again at the same structure we are going to play against other lines. 7...Nxd5 Forced. 8.exd5 Nb8 The move we are most likely to encounter on the board. We reach the typical structure in Which Black will seek some counterplay on the kingside, while we do the same on the queenside. 9.c4!? Reaching similar positions, is the most played. However, a4 has recently become very popular. 9.a4 The point of this early push is to retreat the knight to a3 in case of a6 and eventually play Nc4+a5. 9...Be7 The most flexible move, as e7 is the obvious destination for this bishop and Black is going to castle short. However, other moves like 9...Nd7 9...a6 or 9...f5 are more conditioned by White's reply. 10.Bd2
The most accurate move order to reach the position we want. Also, it's not as well-known as 10.Be2 , which its main drawback is 10...Nd7! This move order has barely been barely played compared to 10...O-O however, it is more accurate. 11.Bd2 11. O-O O-O 12.Bd2 a6 13.Na3 a5! reaches the position our move order is trying to avoid as in my view, Black manages to get the best version of this position. 11...Nf6! with complicated play. 10...Nd7 A correspondence move but one of the most interesting orders and maybe objectively the best one. Black wants to transpose by meeting 11. Be2 with 11...Nf6! 11.a5 a6 A very concrete attempt against White's move order. It is quite unnatural, so very unlikely to face on the board unless Black has prepared it in advance. 12.Nc3!? With the idea of playing Na4+c4 next. 11...Nf6 12.Be3+- The key difference in this move order. a7 falls. 12.Na3 Nf6 The point. Black is hitting the d5-pawn, as well as threatening a potential Ne4 or Bg4. 13.Bb4 Bg4 Very concrete play again, trying to provoke new weaknesses 14.f3 Bf5 15.Nc4 Rc8 This move, putting indirect pressure on c2, is important to delay Nb6. This is one of the few occasions where I'll be offering two different lines, as I think this is one of Black's best replies and it will probably become trendy. 15...O-O 16.Nb6 Rb8 17.Bd3± Finishing development and aiming at castling. In these positions without f5, White is comfortably preparing their plan without much counterplay on Black's part. 16.c3

Guarding the bishop in order to play Bd3 without any Nxd5 shenanigans, as well as enabling Nb6. 16...0-0 17.Bd3 e4 The key. Black is just in time to liquidate the position towards a slightly worse endgame. 17...Nxd5 18.Bxf5 now b4 is defended. 17...Bxd3 18.Qxd3± 18.fxe4 Bxe4 19.0-0 Rc7 Again the most accurate. Black anticipates Nb6. 19...b5 20.Nb6± 19...Bxd5? 20.Nb6 Rc7 21.Rxf6+- Everything collapses. 20.Bxe4 Nxe4 21.Qe2 Rxc4 22.Qxc4 Nd2 23.Qf4 Nxf1 24.Kxf1
All these nuances have led us to this position. Black needs to be even more precise to get full equality. Our pressure on d6, combined with a rook quickly coming to e1, offer us this little plus.

**B33**

□ **Sveshnikov Nb8**
■ **Sveshnikov,Mainline With F4**

1.e4 c5 2.Nf3 Nc6 3.d4 cxd4 4.Nxd4 Nf6 5.Nc3 e5 After this move, we enter the Sveshnikov Sicilian. Black weakens their pawn structure (hole in d5, backward pawn on d6) for dynamic assets (gaining tempo misplacing White's Knight, pawn breaks on d5 and f5, and often times the Bishop pair. In my view, this is objectively the soundest Sicilian, together with the Najdorf.) 6.Ndb5 d6 Virtually the only move. If Black allows Nd6 their position is a disaster. 7.Nd5 Recently this move has become really popular. The 7.Bg5 lines are too studied and White doesn't seem to get anything out of it. Also, we are aiming again at the same structure we are going to play against other lines. 7...Nxd5 Forced. 8.exd5 Nb8 The move we are most likely to encounter on the board. We reach the typical structure in Which Black will seek some counterplay on the kingside, while we do the same on the queenside. 9.c4!? Reaching similar positions, is the most played. However, a4 has recently become very popular. 9.a4 The point of this early push is to retreat the knight to a3 in case of a6 and eventually play Nc4+a5. 9...Be7 The most flexible move, as e7 is the obvious destination for this bishop and Black is going to castle short. However, other moves like 9...Nd7 9...a6 or 9...f5 are more conditioned by White's reply. 10.Bd2
The most accurate move order to reach the position we want. Also, it's not as well-known as 10.Be2 , which its main drawback is 10...Nd7! This move order has barely been barely played compared to 10...O-O however, it is more accurate. 11.Bd2 11. O-O O-O 12.Bd2 a6 13.Na3 a5! reaches the position our move order is trying to avoid as in my view, Black manages to get the best version of this position. 11...Nf6! with complicated play. 10...0-0 Not committing to anything in the queenside. 11.Be2 11.a5 is also interesting, but this order is more flexible. 11...Nd7 12.a5 With this precise order we reach this position where we have avoided the best version of the a6+a5 line. If nothing else, this will allow us get our opponents out of the book, but also, of course, we avoid Black's best line 12...f5 13.0-0 With a direct transposition to one of the main lines. 13...a6 14.Na3 e4 15.Nc4 Ne5 16.Nb6 Not bringing their pawns to the center. 16...Rb8 One of the most important lines in this variation, so I'll

offer two options. 17.f4 exf3 18.Bxf3 f4 corr. Gaining some space and intending to develop the c8-bishop via f5. Again I'll offer two options for White, as I belive this line will become trendy 19.c4 We start our queenside push. 19...Bf6 19...Qc7 20.Be2± The queen belongs in the kingside and is not well placed on c7. 19... Nxf3+ 20.Qxf3 20.Bf6 21.Bc3± 20.Kh1 Sacrificing the pawn to get some activity 20...Nxf3 20...Bf5 21.c5!± 21.Qxf3 Bxb2 22.Rae1 All our pieces occupy very challenging squares, in striking contrast with our opponent's. Black will need to be very precise to avoid getting into serious trouble. 22...Qc7 23.Qb3 Be5 24.c5 f3 This leads to a very long and forcing line. 24...Qxc5 25.Rxe5 dxe5 26.d6+ Kh8 27.d7 winning. 25.c6 We ignore our castle for the sake of our passer. 25...Bg4 25...fxg2+ 26.Kxg2± The King is safe. 26.gxf3 Bh3 27.Rg1 Bd4 Black needs to find something concrete to justify their pawn sacrifice and White's passer. 28.Rg3 Bf5 29.Rg5 Bg6 29...Qf7 30. Bc3± 30.Rg4 The black bishop is left without good squares and Nd7 wins a prize. 30...Bf2 30...Bf6 31.Nd7± 31.Re2 Bc5 32.Nd7 Great square for the knight... 32...bxc6 33.Nxb8 Rxb8 34.Qc4 We are an exchange up and have a better endgame.

**B33**

□ **Sveshnikov Nb8**
■ **Sveshnikov O O ,A**

1.e4 c5 2.Nf3 Nc6 3.d4 cxd4 4.Nxd4 Nf6 5.Nc3 e5 After this move, we enter the Sveshnikov Sicilian. Black weakens their pawn structure (hole in d5, backward pawn on d6) for dynamic assets (gaining tempo misplacing White's Knight, pawn breaks on d5 and f5, and often times the Bishop pair. In my view, this is objectively the soundest Sicilian, together with the Najdorf.) 6.Ndb5 d6 Virtually the only move. If Black allows Nd6 their position is a disaster. 7.Nd5 Recently this move has become really popular. The 7.Bg5 lines are too studied and White doesn't seem to get anything out of it. Also, we are aiming again at the same structure we are going to play against other lines. 7...Nxd5 Forced. 8.exd5 Nb8 The move we are most likely to encounter on the board. We reach the typical structure in Which Black will seek some counterplay on the kingside, while we do the same on the queenside. 9.c4!? Reaching similar positions, is the most played. However, a4 has recently become very popular. 9.a4 The point of this early push is to retreat the knight to a3 in case of a6 and eventually play Nc4+a5. 9...Be7 The most flexible move, as e7 is the obvious destination for this bishop and Black is going to castle short. However, other moves like 9...Nd7 9...a6 or 9...f5 are more conditioned by White's reply. 10.Bd2
The most accurate move order to reach the position we want. Also, it's not as well-known as 10.Be2 , which its main drawback is 10...Nd7! This move order has barely been barely played compared to 10...O-O however, it is more accurate. 11.Bd2 11. O-O O-O 12.Bd2 a6 13.Na3 a5! reaches the position our move order is trying to avoid as in my view, Black manages to get the best version of this position. 11...Nf6! with

complicated play. 10...0-0 Not committing to anything in the queenside. 11.Be2 11.a5 is also interesting, but this order is more flexible. 11...a6 12.Na3 a5 This is still an attempt to transpose to the normal a5-line. However, since we are not castled it's a whole different story. In some lines we can even castle long. 13.Bb5 13...Bd7 14.O-O Bxb5 15.Nxb5± The absence of the light-squared bishop highlights the weaknesses of this color complex. 13...Nd7 13...f5 Model game <a class="commentMoveSmall" href="/variation/ (" target="_blank" rel="noopener" data-tippy-content="Link to variation">Anand-Baron.) 14.Nc4 f5 15.Qe2 Nf6 16.0-0-0 With the queenside frozen our hands are virtually free.

**B33**

□ **Sveshnikov Nb8**
■ **Sveshnikov,Alexander**

1.e4 c5 2.Nf3 Nc6 3.d4 cxd4 4.Nxd4 Nf6 5.Nc3 e5 After this move, we enter the Sveshnikov Sicilian. Black weakens their pawn structure (hole in d5, backward pawn on d6) for dynamic assets (gaining tempo misplacing White's Knight, pawn breaks on d5 and f5, and often times the Bishop pair. In my view, this is objectively the soundest Sicilian, together with the Najdorf.) 6.Ndb5 d6 Virtually the only move. □ **Sveshnikov Nb8**
■ **Sveshnikov,Alexander**

1.e4 c5 2.Nf3 Nc6 3.d4 cxd4 4.Nxd4 Nf6 5.Nc3 e5 After this move, we enter the Sveshnikov Sicilian. Black weakens their pawn structure (hole in d5, backward pawn on d6) for dynamic assets (gaining tempo misplacing White's Knight, pawn breaks on

d5 and f5, and often times the Bishop pair. In my view, this is objectively the soundest Sicilian, together with the Najdorf.) 6.Ndb5 d6 Virtually the only move. If Black allows Nd6 their position is a disaster. 7.Nd5 Recently this move has become really popular. The 7.Bg5 lines are too studied and White doesn't seem to get anything out of it. Also, we are aiming again at the same structure we are going to play against other lines. 7...Nxd5 Forced. 8.exd5 Nb8 The move we are most likely to encounter on the board. We reach the typical structure in Which Black will seek some counterplay on the kingside, while we do the same on the queenside. 9.c4!? Reaching similar positions, is the most played. However, a4 has recently become very popular. 9.a4 The point of this early push is to retreat the knight to a3 in case of a6 and eventually play Nc4+a5. 9...Be7 The most flexible move, as e7 is the obvious destination for this bishop and Black is going to castle short. However, other moves like 9...Nd7 9...a6 or 9...f5 are more conditioned by White's reply. 10.Bd2 The most accurate move order to reach the position we want. Also, it's not as well-known as 10.Be2 , which its main drawback is 10...Nd7! This move order has barely been barely played compared to 10...O-O however, it is more accurate. 11.Bd2 11. O-O O-O 12.Bd2 a6 13.Na3 a5! reaches the position our move order is trying to avoid as in my view, Black manages to get the best version of this position. 11...Nf6! with complicated play. 10...0-0 Not committing to anything in the queenside. 11.Be2 11.a5 is also interesting, but this order is more flexible. 11...Nd7 12.a5 With this precise order we reach this position where we have avoided the best version of the a6+a5 line. If nothing else, this will allow us get our opponents out of the book, but also, of course, we avoid Black's best line 12...a6 13.Na3 Nf6 A very interesting and concrete idea, still untested in over-the-board chess (so far only in correspondence chess) . Deep engine analysis indicates Black is very close to equalizing. However, in practical play Black's position is uncomfortable. 14.Bb4 13.c4?! 13...Ne4!= 14...b5 15.c4 15.axb6 Bb7 16.Ba5 Bxd5 17.O-O Bb7 18.c4 We reach a complex position where Black still has something to prove and our b6 pawn is annoying, but I think the text move is more challenging for Black. 15...Bb7 Far more accurate than the direct capture. Now White is forced to take on c4 with the bishop. 15... bxc4?! 16.Nxc4 Bb7 17.Nb6± This just helps White. 16.0-0 bxc4 17.Bxc4 Rc8 18.b3 Reaching a quite complex position: the weakness on a6 is more noticeable than ours on d5, as it is harder to defend. Our next step will be to reroute the a3-knight and centralize our rooks.

[ 6...Bc5?! 7.Be3! *( 7.Nd6+ Ke7* I find less clear *8.Nf5+ Kf8 )* 7...Bxe3? *( 7...Bb4 8.a3± )* 8.Nd6+

**A)** 8...Ke7 9.Nf5+ Kf8 10.Nxe3 *( 10.fxe3 )*;

**B)** 8...Kf8 9.fxe3 Is extremely good for white. For example: Ne8 *( 9...Qb6 10.Qd2 Qxb2 11.Rb1 Qa3 12.Bc4 Nd8 13.Rb3 Qc5 14.Rb5-+; 9...a6 10.Bc4 )* 10.Nxe8 Kxe8 *( 10...Qxe8 11.Nb5 )* 11.Bc4± ]

[ 6...a6?! 7.Nd6+ Bxd6 8.Qxd6 Qe7 9.Qxe7+ *( 9.Qd1* See Löwenthal *)* 9...Nxe7 *( 9...Kxe7?! 10.Bg5!± )* 10.Bg5 is clearly better for white b5 11.f3 Bb7 12.0-0-0 h6 13.Bh4 *( 13.Bxf6 gxf6 14.Rd6± )* 13...g5 14.Bf2± 1-0 (58) Jakovenko,D (2726)-Cuartas,J (2526) Khanty-Mansiysk 2010 ]

[ 6...Bb4?! 7.a3 *( 7.Nd6+ Ke7 8.Nf5+ Kf8∞ )* 7...Bxc3+ 8.Nxc3 d6 *( 8...0-0?! 9.Be3! d6 10.Qd2 )* 9.Bg5 *(* or *9.f3 0-0 10.Be3 Be6 11.Qd2± d5 12.exd5 Nxd5 13.Nxd5 Bxd5 14.0-0-0;* or *9.Be3 Ng4 10.Qd2± )* 9...h6

**A)** 10.Bxf6 Qxf6 11.Nd5 *( 11.Nb5 0-0 )* 11...Qd8 12.Ne3±;

**B)** 10.Bh4 0-0 *( 10...g5 11.Bg3± )* 11.Qd3! *( 11.Qd2? Nxe4!* is a trick to watch out for. *)* 11...Be6 12.0-0-0 ]

**7.Bg5**

[ 7.Nd5!? has been Caruana's choice against Carlsen in their recent match. But Carlsen showed that it's not at all clear if white is better there. And I really like the system that we are going to propose. Nxd5 8.exd5 Ne7 ]

**7...a6**

[ 7...Be6? 8.Nd5! Bxd5 9.exd5 Nb8 *( 9...Ne7 10.c3! a6 11.Qa4±; 9...Nb4 10.Bxf6 gxf6 11.c3 Na6 12.Bd3± )* 10.Bxf6 gxf6 11.Bd3± ]

[ 7...Be7?! 8.Bxf6 gxf6 9.Nd5± ]

**8.Na3** It doesn't make sense for black to allow the knight to c4, but there have been a number of games with other moves than 8...b5 **8...Be6** the more popular of the two

[ 8...b5 is of course the mainline, which we will take a look at in the next few chapters. ]

[ 8...Be7

**A)** 9.Bxf6!? Bxf6 10.Nc4 Be7 is a tempo down for white compared to the 8.. . Be6 9.Bxf6 Qxf6 line. But it's still pretty good *( 10...0-0 )* 11.Nd5 Be6 12.Ncb6 Rb8 13.c3±;

**B)** 9.Nc4

**B1)** 9...b5?! 10.Bxf6 gxf6 *( 10...bxc4 11.Bxe7 Nxe7 12.Bxc4±; 10...Bxf6 11.Nxd6+ )* 11.Ne3**±**;
**B2)** 9...Nd4?! Is the most played move according to my database, but I don't understand what the appeal would be. 10.Bxf6 Bxf6 *( 10...gxf6? 11.Nd5± )* 11.Nd5 Be6 12.Ncb6!? *( 12.Nxf6+!? Qxf6 13.Nxd6+ Ke7 14.c3± )* 12...Rb8 13.c3 Nc6 14.Nxf6+ Qxf6 15.Qxd6 Rd8 16.Qc5 Ne7 17.Be2**±**;
**B3)** 9...Be6?! 10.Bxf6 Bxf6 *( 10...gxf6? 11.Ne3± )* 11.Nxd6+ Kf8 12.Nc4 Is just a pawn up, although black does have some compensation after Qd4 *( 12...h5 13.Nd5±; 12...Qc7?! 13.Nd5 )* 13.Ne3
**B3a)** 13...Bg5 14.Ned5**±** *( 14.Qd2!? )*;
**B3b)** 13...Qb4 14.Qd2! Qxb2 *( 14...Rd8 15.Bd3± )* 15.Rb1 Qa3 16.Rxb7**±**;
**B4)** 9...0-0 A variation Radjabov tried, but it's not a great line for black. 10.Bxf6 Bxf6 transposes to 8...Be7 9.Nc4 0-0 10.Bxf6 Bxf6 *( 10...gxf6?! 11.Ne3± )*
**B4a)** 11.Nxd6?! Be6 12.Nc4 Qd4 Omdat zwart gerokkeerd heeft, is dit nu een stuk gevaarlijker in vergelijking met 9...Be6 Bijvoorbeeld: 13.Ne3 Qb4 14.Qc1 *( 14.Qd2?! Qxb2 15.Rb1 Qa3 16.Rxb7 Bg5→ )* 14...Bg5 15.Bd3 Rad8 16.0-0 g6;
**B4b)** 11.Qxd6 Be6 12.Nd5 most direct *( 12.0-0-0 Qe8; 12.Qxd8 Rfxd8 13.Bd3 Nb4 )* 12...Bg5 *( 12...Bxd5 13.exd5 Ne7 14.Rd1! b5 15.Qxd8 Raxd8 16.Ne3 e4 17.c3* And white is a healthy pawn up *b4? 18.d6 Nc6 19.Ng4± )*
**B4b1)** 13.Qxd8 Raxd8 14.Ncb6? 1/2-1/2 (24) Balogh,C (2608)-Radjabov, T (2748) Bastia 2010 *( 14.h4 Bh6 15.Rd1± )* 14...Nb4! with the idea of 15.Nxb4 Bd2+ 16.Ke2 Bxb4 would have given white a very hard time.;
**B4b2)** 13.c3**±** ]

**9.Nc4! Rb8** Had some following in recent years. The idea is that black get's a better version of the 9...Rc8 line after
[ 9...Rc8?! 10.Bxf6 *( 10.a4* scores well, but I don't really see the point.*; 10.Nd5?! Bxd5 11.exd5 Ne7! )*
**A)** 10...Qxf6
**A1)** 11.Nxd6+?! Bxd6 12.Qxd6 Rd8 13.Qc5 Nd4 *( 13...Qg5 14.Bd3 Qxg2 15.0-0-0± )* 14.Bd3 *( 14.Rc1? Qg5 )* 14...Qg5 and black has good compensation for the pawn.;
**A2)** 11.Nb6 Rb8 *( 11...Rd8?! 12.Ncd5 Qg6 13.Nc7+ Ke7* is just terrible . The king will we stuck in the centre for a while. *14.f3± )* 12.Ncd5
**A2a)** 12...Qg6?! 13.Qd3! Be7 Kamsky,G (2695)-Polgar,J (2630) Buenos Aires 1994 14.Nc7+ Kf8 *( 14...Kd8?! 15.Ncd5 Ke8 16.0-0-0± )* 15.Nxe6+ Qxe6 16.Nd5 and white is clearly on top;
**A2b)** 12...Qd8 13.c3!
**A2b1)** 13...Ne7 14.Bc4**±** *( 14.Qa4+* is another point of 13.c3 *Bd7*

*15.Qxd7+ Qxd7 16.Nxd7 Kxd7 17.Bc4±* I also a pretty nice ending for white *)*;

**A2b2)** 13...Be7 14.Bc4 *( 14.g3!? 0-0 15.Bg2± )* 14...0-0 *( 14...Bxd5 15.Nxd5± b5 16.Bb3 )* 15.0-0 Bg5 16.a4!± For example: Kh8 *( 16...Ne7 17.a5 )* 17.Qe2 g6 18.Kh1 Bh6 *( 18...h5 19.g3 )* 19.Rad1± *( 19.b4?!* was a very nice game of Karpov,A (2720)-Nunn,J (2590) London 1982. But unfortunately this is not a good move as black can play: *a5! 20.b5 Na7* followed by Nc8 with problems for white over the c-file. *)* 19...f5 *( 19...a5 20.Bb3 )* 20.exf5 gxf5 *( 20...Bxf5* 0-1 (40) Reinaldo Castineira,R (2265)-Garcia Melgar,J (2215) Nigran 1997 *21.Bd3± )* 21.Qh5 Bg7 22.Ne3±;

**B)** 10...gxf6

**B1)** 11.Ne3 Bh6 12.Bd3! Bxe3 13.fxe3 Qb6 14.Qc1 black can defend the pawn on f6 with: h5! *( 14...Na5?! 15.0-0 Ke7 16.Qe1! h5 17.b3! Qc5 18.Nd5+ Bxd5 19.exd5 Qxd5 20.Rd1 Rcg8 21.Qf2 Rh6 22.Bg6* was very beautiful in Georgiev,K (2610)-Shirov,A (2710) Biel 1992 *)* 15.0-0 Rh6;

**B2)** 11.Bd3! I find this a little more accurate than 11.Ne3 as after

☐ **Quickstarter Guide**
■ **Quickstarter Guide #21 - Sves,11. Bd3**

1.e4 c5 Hello and Welcome to 'Fight like Magnus: The Sicilian'! This opening course provides you with a full repertoire against 1. e4, based on the Sicilian Defense. I am a bit reluctant to write 'Defense', because in the Sicilian you don't intend to defend all that much, but rather want to 'fight fire with fire'!In the Sicilian Black immediately breaks the symmetry on move one, making it an ideal weapon to unbalance the game and play for a win. In the main lines of the Sveshnikov Black frequently sacrifices material to drum up an attack on the white king, which is fun to play and tricky for White to handle. If you are looking for an active and ambitious opening for Black, you are studying exactly the right course. As the title suggests our repertoire choices are based on the opening play of the current World Champion Magnus Carlsen. Through his whole career Magnus has mostly relied on two moves against 1. e4: the symmetrical 1...e5 and 1...c5 , the Sicilian. Over the years the mix between the two moves shifted back and forth. 1... c5 was a frequent choice in his younger years, but he played it less after he became World Champion in 2013. This changed in 2018, when Magnus returned to the Sicilian, making it his main weapon in his title match against Fabiano Caruana. In this match (including the tiebreak) (Magnus played seven games with the black pieces, and all of them featured the Sicilian. He managed to win the rapid game in the tiebreak after drawing all six classical time control games in the regular match.) As of today (Nov 11, 2019) Magnus Carlsen has not lost a single Sicilian in Classical time control not only since this match, but even since 2011! Admittedly, he did not play it that frequently between 2011 and 2018, but still a very impressive run.I am mentioning non-losing streaks, but what about wins ? Magnus has won many attractive games with the Sicilian, some of which are included as model games in this course. Alright, back to our repertoire concept. I have

compiled a full repertoire for Black, based on the World Champion's repertoire. This means that any major choice should be according to games that Magnus has played, showing his belief in the merit of the line. This works well with most lines, but some rarer continuations never featured in the World Champion's games, so I selected lines that matched the structure and spirit of the overall repertoire.There are some cases where I suggest to improve on Magnus' play. I only do that if thorough engine-assisted analysis suggests that my alternative is significantly better or preserves more winning chances, while being of equal quality. You have to take into account that he has played the opening not only in Classical time controls, but also in Rapid and Blitz games. It is perfectly possible that he plays a second-tier move in a Blitz game, because he does not want to show his main preparation or simply forgot the line. In those cases it makes sense to not blindly copy all moves, but see if there is room for improvement. These cases are rare, though - he knows his stuff, of course !This course consists of 12 main chapters and this 'Quickstarter Guide'. The 'Quickstarter Guide' is a selection of the 40 variations that you should learn first to get a full overview of the Sicilian. It has all the information that you need to play it in your games, as the most frequently played lines are selected. It also features extensive explanations about ideas and concepts, serving as an introduction to the typical middle games. I suggest to learn the Quickstarter Guide first, then go through the individual chapters one by one, deepening your knowledge. 2.Nf3 Nc6 3.d4 The open Sicilian will very likely always be the critical test of any Sicilian setup. Against the open Sicilian Magnus Carlsen's choice is the Sveshnikov Variation. After 3...cxd4 4.Nxd4 Nf6 5.Nc3 e5 the starting position of this variation arises. The Sveshnikov has three main lines: the first one arises after 5...e5 6.Ndb5 d6 7.Nd5 , which has become fashionable in the last year. The second one is 5...e5 6.Ndb5 d6 7.Bg5 a6 8.Na3 b5 9.Bxf6 gxf6 , which settles Black with doubled f-pawns early on. The third option is to play 6.Ndb5 d6 7.Bg5 a6 8.Na3 b5 9.Nd5 , after which Black plays 9...Be7 , avoiding the doubled pawns. These three main lines are covered in five chapters of this course. White also has some lines that are all sidelines for a reason, but still useful to study. In particular on the junior/amateur level it is not guaranteed that players on the white side go for the critical lines. If you study the sidelines, you will have no problems whatsoever and often Black is getting the better game early on. 3...cxd4 4.Nxd4 Nf6 5.Nc3 e5 This is the starting position of the Sveshnikov. Nowadays this name of the variation is widely accepted , but there have been many other names over the years. It was first used in a top level game by World Champion Emanuel Lasker against Carl Schlechter in 1910 , but Schlechter played the uncritical 6.Nb3 and Lasker obtained a good game easily. It was quite quickly figured out that 6. Ndb5 should be critical, and for a long while the structural weaknesses in Black's position were considered to be too severe. It took almost 50 years to put this line back on the map, when Jorge Pelikan and Herman Pilnik found some new ideas for Black. They mostly investigated 6.Ndb5 d6 7.Bg5 a6 8.Na3 Be6 and 6.Ndb5 d6 7.Bg5 a6 8.Bxf6 gxf6 9.Na3 d5 , lines that are still seen today occasionally. So in the late 1960s the move 5... e5 would be called the start of the

Lasker/Pelikan/Pilnik-Variation. Then in the early 1970s Evgeny Sveshnikov and some fellow master players from the Russian city of Chelyabinsk discovered that Black should play 8... b5, rather than 8... Be6. Sveshnikov and mostly Gennadi Timoshenko used their innovation successfully and quite quickly the variation was taken up by some more Russian players, most notably the winners of the World Junior Championships Valeri Chekhov, Sergei Dolmatov and Artur Jussupow, all students of the legendary chess trainer and author Mark Dvoretsky.Since these early days almost all of the World Champions and World Championship challengers have played the Sveshnikov (or Chelyabinsk variation, as it is often called in Russia) regularly or on occasion. We can list Kasparov, Anand (occasionally) , Kramnik, Topalov, Gelfand, Caruana and of course Magnus Carlsen employing the Sveshnikov on the highest level and even during World Championship clashes, as seen in the Carlsen-Caruana Match in London 2018.Now, what is so great about the Sveshnikov Variation ? In the early days of the Sveshnikov Black's weak d5-square and backward d-pawn were thought to be too much to handle - why has this assessment changed ? I think this actually needs to be explained combining some general points and some concrete lines. After 5... e5 White needs to move the knight and concrete lines show that the only challenging move is 6. Ndb5. In this chapter we will examine why 6. Nb3, 6. Nf3 etc. at best lead to equality for White, often less than that.  After 6.Ndb5 d6 is best, after which White has the option to enter the line 7. Nd5, as examined in a dedicated chapter. However, after 7.Nd5 Nxd5 8.exd5 we have to state that Black's structural problems - the d5-square and the d-pawn - are already solved. Only very recently this line has seen some new ideas for White, making it more interesting for White to try. Still Black retains fair chances, usually utilizing the pawn majority on the kingside.  The two other main lines of the Sveshnikov start after 6.Ndb5 d6 7.Bg5 a6 8.Na3 b5. Before we look at those concrete lines, I need to mention how important the bad position of the a3-knight is. White has lost quite a bit of time already with this piece and will move it again more often than not, trying to connect it with the d5-square. All these time losses with the knight make the position viable for Black. Just imagine the knight would be on e3 instead of a3 - this would be a terrible position for Black.  Back to the real position: after 8...b5 Black threatens ...b4, which leaves White with the choice between 9.Nd5 , usually followed by 9...Be7 10.Bxf6 Bxf6  or 8...b5 9.Bxf6 gxf6 10.Nd5. The evaluation of the Sveshnikov depends on the theoretical state of the earlier mentioned 7. Nd5 and these two traditional main lines. In both lines Black gains the bishop pair, which is a great asset to have that early in the game.  Now , the line 8. ..b5 9.Nd5 Be7 10.Bxf6 Bxf6 is White's more strategic choice, trying to exploit the static advantages - control over d5, d-pawn. We will see that Black is able to fight for control over d5, but in many cases does not need to focus on that. Often ignoring the knight and starting play with ...f5 or/and even on the queenside is possible. One point to understand is that it is almost impossible for White to BOTH use the d5-square and build up pressure on the d-file. A knight on d5 plugs the d-file, so White is not just attacking d6 and wins this pawn later. In fact the 'weak' d6-pawn almost never gets lost in any Sicilian. White also has the line 9.Bxf6

gxf6 forced , because 9...Qxf6 10.Nd5 Qd8 11.c4 is too bad 10.Nd5. In this line the play is more dynamic, because Black will play ...f5 quickly and tries to completely take over the centre. The position opens up, which is excellent for Black's bishop pair. Quite quickly tactics will become an important factor and the knowledge of concrete lines is more essential than in any other line of this repertoire. Before we continue to examine the sidelines, I'd like to mention one very important aspect of the Sveshnikov. Black very frequently will play the move .. .f5, starting play in the centre and on the kingside. Black has a central pawn majority since move 3 and ...f5 will even try to remove the e4-pawn to set the central pawn mass in motion.Contrary to Sicilians without ...e5, Black's play is mostly in the centre and on the kingside, while Black's king is perfectly safe. In lines like the Dragon or the Najdorf Black often loses due to mating attacks, which almost never happens in the Sveshnikov, quite the contrary. In some lines we have to abandon the queenside in order to throw the kitchen sink towards White's king, going for Checkmate ! This is an important practical consideration that often allows Black to score points from objectively dubious positions. 6.Ndb5 d6 7.Bg5 a6 8.Na3 b5 After 8... b5 Black threatens to fork the knights, so White does not have a wide range of moves. He either plays 9. Nd5 or 9. Bxf6 first, followed by 10. Nd5. The difference between the two options is substantial. After the immediate 9.Nd5 Black plays 9...Be7 , after which 10.Bxf6 Bxf6 is the usual follow up. In this line Black is able to recapture on f6 with the bishop , while after 9.Bxf6 you need to capture with the pawn, doubling the f-pawns. In this doubled f-pawn structure the play is considerably sharper early on, as Black is able to play ...f5 quickly to attack White's centre. The line 9. Nd5 Be7 10. Bxf6 Bxf6 is a slower, more strategic approach by White, trying to control the position, in particular the weak d5-square. In this chapter we will be examining all lines after 9. Nd5 except the main line 9.Nd5 Be7 10.Bxf6 Bxf6 11.c3 , which is examined in a dedicated chapter. By far the most important line besides the main line is 11. c4 , which is a popular alternative seen at all levels of play. 9.Bxf6 White has three mainlines in the Sveshnikov: 6. Ndb5 d6 7. Nd5, 6. Ndb5 d6 7. Bg5 a6 8. Na3 b5 9. Nd5 and this one, which is by far the sharpest and most tactical line of the three. 9...gxf6 This is forced. Black can't capture with the queen , because after 9...Qxf6 ? 10.Nd5 Qd8 White has many lines to give him a huge advantage. The brutal 11.Bxb5 and 11. c4 are terrible for Black. A good comparison to make: look at the very popular mainline 9. Nd5 Be7 10. Bxf6 Bxf6 (covered in 2 chapters of this course) , in which Black has the bishop on f6, while after 9... Qxf6 ? 10. Nd5 Qd8 it is on f8 !So long story short: take with the g-pawn and look forward to playing ...f5 even twice, if possible. 10.Nd5 Bg7 Black has two good moves in this position, the more traditional 10... f5 and the newer move 10... Bg7, the so-called Novosibirsk variation. Both lines have some overlap, because 10...Bg7 does only delay ...f5 for the moment. The main difference between the two lines is how the reply 11.Bd3 is handled. In the Novosibirsk you play 11...Ne7 to get rid of the Knight immediately , an approach that is clearly not possible after 10...f5 11.Bd3 , when 11...Ne7 12.Nf6# is a bit of a problem. Instead after 10...f5 11.Bd3 , 11...Be6 is the move , which leads

to completely different positions compared to the Novosibirsk. Our repertoire choice is quite easy , as the World Champion has always played 10...Bg7 , as far as I can see. After 10... Bg7 White has two main tries for an advantage. The first one and the sharpest line is 11. Bd3 which we examine in the subsequent chapter. The second approach is to simply play 11.c3 , after which 11...f5 12.exf5 Bxf5 leads to a position that is often reached via 10... f5 11. c3 Bg7 12. exf5 Bxf5. This line leads to interesting play and is considered to be leading to equal chances. It is obviously a critical line for the Sveshnikov, as White can basically force you to enter it. Even going 10... Bg7 or 10... f5 is not relevant, as you have no way to avoid it in both cases. So 11. c3 f5 is clearly the main chunk of this chapter, but we will also look a rare alternatives on move 11. 11.Bd3 After 11. Bd3 the game will become very sharp and tactical and Black needs to sacrifice pawns on a regular basis. In the main line of the 11. Bd3 complex we are three pawns down, but have great compensation !Of all the chapters in the whole course, the 11. Bd3 Sveshnikov is by far the one that requires move-by-move knowledge and precise calculation over the board. There is very little strategic content or 'plans' to guide you, it's just two sides engaging in a fight with clubs - and you better make sure to bring a huge club, meaning excellent preparation. It is definitely possible to work out some of the complications over the board, but this will be much more likely to be successful if you once had known them. It sounds odd, but it is true: study time is never wasted, even if you feel you have forgotten everything.The way to do it is to not try to remember as hard as you can, but rather think on your own and hope that you subconsciously piece it together. This works much better than sitting there and wracking your brain to recall concrete lines. One important point that also needs to be mentioned: Black is the side on the attack after 11. Bd3. If White only has vague knowledge about the complications he is very likely just getting killed quickly. If you screw something up, it might be bad in computer terms... but you still have chances, given the enormous activity that Black usually enjoys. 11...Ne7 The only good move after 11. Bd3. The bishop move prevents ...f5 and we need to get rid of the d5-knight right away. 12.Nxe7 White's choice is limited, because with 11... Ne7 we had threatened to take on d5. As usual it's very desirable for Black to take on d5 when White needs to recapture with a pawn. 12...Qxe7 After 12. .. Qxe7 White has two basic options. He can play c4, attacking the b5-pawn, or play c3, preparing to get the offside knight back into the game. White might play c4 or c3 right away or do it after castling kingside first. Castling is rather natural for both sides, so quite often this will be played quickly after a move of the c-pawn, for example 13.c4 f5 14.O-O O-O is just as common as 13.O-O O-O 14.c4 f5. I will examine 13.O-O O-O as the main line and then split the lines with 14.c4 or 14.c3. If White starts 13. c4, it will very likely transpose to 13. O-O O-O 14. c4, as the deviations are unattractive for White. 13.c3 is a different story. After 13...f5 the sequence 14.O-O O-O is possible and examined via 13. O-O O-O 14. c3 f5, but White often decides to not castle and then we will reach the only important independent line 13.c3 f5 14.Nc2 , when White's king will remain in the centre or castle queenside in some lines. Alright , let's check some moves to make things more

concrete. 13.0-0 0-0 It's also possible to play 13...f5 first , there is no drawback to this move order. I went for 13... O-O because this way you have the rule of thumb for move 13 and 14 in this line to play ...f5 against the c-pawn moves and just castle as well if White plays O-O first. 14.c4 f5 The best way to react to 14. c4. As usual taking on c4 is terrible, as it helps the knight far too much. 14...b4 is also a disaster , as after 15. Nc2 a5 16.Ne3 Black does not even manage to play the fundamental ...f5 break. This only leaves Black with sacrificing the b-pawn, which explains why the 14. c4 - or 13. c4 - line is the sharpest one in the main line. Black is giving away the queenside and goes All-In with his counterplay in the centre and kingside. After 14... f5 White's main lines are the queen moves to h5 and f3, but he has also tried other continuations without much success. 15.Qh5 Rb8 We would have liked to take on e4, but 15...fxe4 16.Bxe4 is a double threat on h7 and on the rook. This explains 15... Rb8 - now we are threatening to take on e4 and then play ...f5 a second time ! The move 15... Rb8 has been tested numerous times in over the board play and correspondence chess and it looks like Black is doing fine in the hair-raising complications. I need to mention that 15... Rb8 is not the only move, though. In fact only some days before these lines were written the World Champion went for a different move: he played 15... d5 !? in the Grand Swiss Isle of Man Tournament against Russian hopeful Alexey Sarana. 15... d5 is a rare move and was probably intended as a surprise, but Sarana had done his homework and blitzed out the following moves. 15...d5 16.cxd5 Qd8 17.exf5 Qxd5 18.Rad1 e4 19.Bxb5 Qxf5 20. Qxf5 Bxf5 21.Bd7 Bxd7 22.Rxd7 Bxb2 23.Nc4. Now, this sequence is in fact clearly best play after 15... d5 and the resulting position I don't want to recommend, even though Magnus played the line. Black is very close to equality, but it's a grovel and not fun at all. Magnus ultimately drew the game after some unpleasant moments. Maybe HE kept his cool, but I would have been concerned ! In any case, I don't want to play for two results just yet if a win is not among them. 16.exf5 A more or less forced decision. Otherwise we take on e4 and play ...f5 next. 16...e4 17.Rae1 We attacked both the bishop on d3 and the pawn on b2, so White needs a tactical solution. 17...Bb7 18.Qg4 Rfe8 We need to cover e4. 19.cxb5 Kh8 We can't play without this king move. Our bishop was pinned and ...Rg8 is an important option to gain. 20.bxa6 Ba8 This is a good moment to take stock. Black is three pawns down, but on all other accounts things are great ! The pieces are active and there are many weak pawns that we might win back soon, like b2 and a6. Remarkably the engine evaluation is 'equal' and in correspondence chess White has not won a single game out of the 43 games in my database ! This is amazing and an almost sure sign that purely from an analytical point of view Black is fine. This is not so important in a practical game, of course, but assuring to know. Given the choice, I'd take Black - our play is often directed against the king, which is always attractive.

☐ **Quickstarter Guide**

■ **Quickstarter Guide #20 - Sves,11. Bd3**

1.e4 c5 Hello and Welcome to 'Fight like Magnus: The Sicilian'! This opening course provides you with a full repertoire against 1. e4, based on the Sicilian Defense. I am a bit reluctant to write 'Defense', because in the Sicilian you don't intend to defend all that much, but rather want to 'fight fire with fire'!In the Sicilian Black immediately

breaks the symmetry on move one, making it an ideal weapon to unbalance the game and play for a win. In the main lines of the Sveshnikov Black frequently sacrifices material to drum up an attack on the white king, which is fun to play and tricky for White to handle. If you are looking for an active and ambitious opening for Black, you are studying exactly the right course. As the title suggests our repertoire choices are based on the opening play of the current World Champion Magnus Carlsen. Through his whole career Magnus has mostly relied on two moves against 1. e4: the symmetrical 1...e5 and 1...c5 , the Sicilian. Over the years the mix between the two moves shifted back and forth. 1... c5 was a frequent choice in his younger years, but he played it less after he became World Champion in 2013. This changed in 2018, when Magnus returned to the Sicilian, making it his main weapon in his title match against Fabiano Caruana. In this match (including the tiebreak) (Magnus played seven games with the black pieces, and all of them featured the Sicilian. He managed to win the rapid game in the tiebreak after drawing all six classical time control games in the regular match.) As of today (Nov 11, 2019) Magnus Carlsen has not lost a single Sicilian in Classical time control not only since this match, but even since 2011! Admittedly, he did not play it that frequently between 2011 and 2018, but still a very impressive run.I am mentioning non-losing streaks, but what about wins ? Magnus has won many attractive games with the Sicilian, some of which are included as model games in this course. Alright, back to our repertoire concept. I have compiled a full repertoire for Black, based on the World Champion's repertoire. This means that any major choice should be according to games that Magnus has played, showing his belief in the merit of the line. This works well with most lines, but some rarer continuations never featured in the World Champion's games, so I selected lines that matched the structure and spirit of the overall repertoire.There are some cases where I suggest to improve on Magnus' play. I only do that if thorough engine-assisted analysis suggests that my alternative is significantly better or preserves more winning chances, while being of equal quality. You have to take into account that he has played the opening not only in Classical time controls, but also in Rapid and Blitz games. It is perfectly possible that he plays a second-tier move in a Blitz game, because he does not want to show his main preparation or simply forgot the line. In those cases it makes sense to not blindly copy all moves, but see if there is room for improvement. These cases are rare, though - he knows his stuff, of course !This course consists of 12 main chapters and this 'Quickstarter Guide'. The 'Quickstarter Guide' is a selection of the 40 variations that you should learn first to get a full overview of the Sicilian. It has all the information that you need to play it in your games, as the most frequently played lines are selected. It also features extensive explanations about ideas and concepts, serving as an introduction to the typical middle games. I suggest to learn the Quickstarter Guide first, then go through the individual chapters one by one, deepening your knowledge. 2.Nf3 Nc6 3.d4
The open Sicilian will very likely always be the critical test of any Sicilian setup. Against the open Sicilian Magnus Carlsen's choice is the Sveshnikov Variation. After 3...cxd4 4.Nxd4 Nf6 5.Nc3 e5 the starting position of this variation arises. The

Sveshnikov has three main lines: the first one arises after 5...e5 6.Ndb5 d6 7.Nd5 , which has become fashionable in the last year. The second one is 5...e5 6.Ndb5 d6 7.Bg5 a6 8.Na3 b5 9.Bxf6 gxf6 , which settles Black with doubled f-pawns early on. The third option is to play 6.Ndb5 d6 7.Bg5 a6 8.Na3 b5 9.Nd5 , after which Black plays 9...Be7 , avoiding the doubled pawns. These three main lines are covered in five chapters of this course. White also has some lines that are all sidelines for a reason, but still useful to study. In particular on the junior/amateur level it is not guaranteed that players on the white side go for the critical lines. If you study the sidelines, you will have no problems whatsoever and often Black is getting the better game early on. 3...cxd4 4.Nxd4 Nf6 5.Nc3 e5 This is the starting position of the Sveshnikov. Nowadays this name of the variation is widely accepted , but there have been many other names over the years. It was first used in a top level game by World Champion Emanuel Lasker against Carl Schlechter in 1910 , but Schlechter played the uncritical 6.Nb3 and Lasker obtained a good game easily. It was quite quickly figured out that 6. Ndb5 should be critical, and for a long while the structural weaknesses in Black's position were considered to be too severe. It took almost 50 years to put this line back on the map, when Jorge Pelikan and Herman Pilnik found some new ideas for Black. They mostly investigated 6.Ndb5 d6 7.Bg5 a6 8.Na3 Be6 and 6.Ndb5 d6 7.Bg5 a6 8.Bxf6 gxf6 9.Na3 d5 , lines that are still seen today occasionally. So in the late 1960s the move 5... e5 would be called the start of the Lasker/Pelikan/Pilnik-Variation. Then in the early 1970s Evgeny Sveshnikov and some fellow master players from the Russian city of Chelyabinsk discovered that Black should play 8... b5, rather than 8... Be6. Sveshnikov and mostly Gennadi Timoshenko used their innovation successfully and quite quickly the variation was taken up by some more Russian players, most notably the winners of the World Junior Championships Valeri Chekhov, Sergei Dolmatov and Artur Jussupow, all students of the legendary chess trainer and author Mark Dvoretsky.Since these early days almost all of the World Champions and World Championship challengers have played the Sveshnikov (or Chelyabinsk variation, as it is often called in Russia) regularly or on occasion. We can list Kasparov, Anand (occasionally) , Kramnik, Topalov, Gelfand, Caruana and of course Magnus Carlsen employing the Sveshnikov on the highest level and even during World Championship clashes, as seen in the Carlsen-Caruana Match in London 2018.Now, what is so great about the Sveshnikov Variation ? In the early days of the Sveshnikov Black's weak d5-square and backward d-pawn were thought to be too much to handle - why has this assessment changed ? I think this actually needs to be explained combining some general points and some concrete lines. After 5... e5 White needs to move the knight and concrete lines show that the only challenging move is 6. Ndb5. In this chapter we will examine why 6. Nb3, 6. Nf3 etc. at best lead to equality for White, often less than that. After 6.Ndb5 d6 is best, after which White has the option to enter the line 7. Nd5, as examined in a dedicated chapter. However, after 7.Nd5 Nxd5 8.exd5 we have to state that Black's structural problems - the d5-square and the d-pawn - are already solved. Only very recently this line has seen some new ideas for White, making it more interesting for

White to try. Still Black retains fair chances, usually utilizing the pawn majority on the kingside. The two other main lines of the Sveshnikov start after 6.Ndb5 d6 7.Bg5 a6 8.Na3 b5. Before we look at those concrete lines, I need to mention how important the bad position of the a3-knight is. White has lost quite a bit of time already with this piece and will move it again more often than not, trying to connect it with the d5-square. All these time losses with the knight make the position viable for Black. Just imagine the knight would be on e3 instead of a3 - this would be a terrible position for Black. Back to the real position: after 8...b5 Black threatens ...b4, which leaves White with the choice between 9.Nd5 , usually followed by 9...Be7 10.Bxf6 Bxf6 or 8...b5 9.Bxf6 gxf6 10.Nd5. The evaluation of the Sveshnikov depends on the theoretical state of the earlier mentioned 7. Nd5 and these two traditional main lines. In both lines Black gains the bishop pair, which is a great asset to have that early in the game. Now , the line 8. ..b5 9.Nd5 Be7 10.Bxf6 Bxf6 is White's more strategic choice, trying to exploit the static advantages - control over d5, d-pawn. We will see that Black is able to fight for control over d5, but in many cases does not need to focus on that. Often ignoring the knight and starting play with ...f5 or/and even on the queenside is possible. One point to understand is that it is almost impossible for White to BOTH use the d5-square and build up pressure on the d-file. A knight on d5 plugs the d-file, so White is not just attacking d6 and wins this pawn later. In fact the 'weak' d6-pawn almost never gets lost in any Sicilian. White also has the line 9.Bxf6 gxf6 forced , because 9...Qxf6 10.Nd5 Qd8 11.c4 is too bad 10.Nd5. In this line the play is more dynamic, because Black will play ...f5 quickly and tries to completely take over the centre. The position opens up, which is excellent for Black's bishop pair. Quite quickly tactics will become an important factor and the knowledge of concrete lines is more essential than in any other line of this repertoire. Before we continue to examine the sidelines, I'd like to mention one very important aspect of the Sveshnikov. Black very frequently will play the move .. .f5, starting play in the centre and on the kingside. Black has a central pawn majority since move 3 and ...f5 will even try to remove the e4-pawn to set the central pawn mass in motion.Contrary to Sicilians without ...e5, Black's play is mostly in the centre and on the kingside, while Black's king is perfectly safe. In lines like the Dragon or the Najdorf Black often loses due to mating attacks, which almost never happens in the Sveshnikov, quite the contrary. In some lines we have to abandon the queenside in order to throw the kitchen sink towards White's king, going for Checkmate ! This is an important practical consideration that often allows Black to score points from objectively dubious positions. 6.Ndb5 d6 7.Bg5 a6 8.Na3 b5 After 8... b5 Black threatens to fork the knights, so White does not have a wide range of moves. He either plays 9. Nd5 or 9. Bxf6 first, followed by 10. Nd5. The difference between the two options is substantial. After the immediate 9.Nd5 Black plays 9...Be7 , after which 10.Bxf6 Bxf6 is the usual follow up. In this line Black is able to recapture on f6 with the bishop , while after 9.Bxf6 you need to capture with the pawn, doubling the f-pawns. In this doubled f-pawn structure the play is considerably sharper early on, as Black is able to play ...f5 quickly to attack White's centre. The line 9. Nd5 Be7 10. Bxf6 Bxf6 is a

slower, more strategic approach by White, trying to control the position, in particular the weak d5-square. In this chapter we will be examining all lines after 9. Nd5 except the main line 9.Nd5 Be7 10.Bxf6 Bxf6 11.c3 , which is examined in a dedicated chapter. By far the most important line besides the main line is 11. c4 , which is a popular alternative seen at all levels of play. 9.Bxf6 White has three mainlines in the Sveshnikov: 6. Ndb5 d6 7. Nd5, 6. Ndb5 d6 7. Bg5 a6 8. Na3 b5 9. Nd5 and this one, which is by far the sharpest and most tactical line of the three. 9...gxf6 This is forced. Black can't capture with the queen , because after 9...Qxf6 ? 10.Nd5 Qd8 White has many lines to give him a huge advantage. The brutal 11.Bxb5 and 11. c4 are terrible for Black. A good comparison to make: look at the very popular mainline 9. Nd5 Be7 10. Bxf6 Bxf6 (covered in 2 chapters of this course) , in which Black has the bishop on f6, while after 9... Qxf6 ? 10. Nd5 Qd8 it is on f8 !So long story short: take with the g-pawn and look forward to playing ...f5 even twice, if possible. 10.Nd5 Bg7 Black has two good moves in this position, the more traditional 10... f5 and the newer move 10... Bg7, the so-called Novosibirsk variation. Both lines have some overlap, because 10...Bg7 does only delay ...f5 for the moment. The main difference between the two lines is how the reply 11.Bd3 is handled. In the Novosibirsk you play 11...Ne7 to get rid of the Knight immediately , an approach that is clearly not possible after 10...f5 11.Bd3 , when 11...Ne7 12.Nf6# is a bit of a problem. Instead after 10...f5 11.Bd3 , 11...Be6 is the move , which leads to completely different positions compared to the Novosibirsk. Our repertoire choice is quite easy , as the World Champion has always played 10...Bg7 , as far as I can see. After 10... Bg7 White has two main tries for an advantage. The first one and the sharpest line is 11. Bd3 which we examine in the subsequent chapter. The second approach is to simply play 11.c3 , after which 11...f5 12.exf5 Bxf5 leads to a position that is often reached via 10... f5 11. c3 Bg7 12. exf5 Bxf5. This line leads to interesting play and is considered to be leading to equal chances. It is obviously a critical line for the Sveshnikov, as White can basically force you to enter it. Even going 10... Bg7 or 10... f5 is not relevant, as you have no way to avoid it in both cases. So 11. c3 f5 is clearly the main chunk of this chapter, but we will also look a rare alternatives on move 11. 11.Bd3 After 11. Bd3 the game will become very sharp and tactical and Black needs to sacrifice pawns on a regular basis. In the main line of the 11. Bd3 complex we are three pawns down, but have great compensation !Of all the chapters in the whole course, the 11. Bd3 Sveshnikov is by far the one that requires move-by-move knowledge and precise calculation over the board. There is very little strategic content or 'plans' to guide you, it's just two sides engaging in a fight with clubs - and you better make sure to bring a huge club, meaning excellent preparation. It is definitely possible to work out some of the complications over the board, but this will be much more likely to be successful if you once had known them. It sounds odd, but it is true: study time is never wasted, even if you feel you have forgotten everything.The way to do it is to not try to remember as hard as you can, but rather think on your own and hope that you subconsciously piece it together. This works much better than sitting there and wracking your brain to recall concrete lines.

One important point that also needs to be mentioned: Black is the side on the attack after 11. Bd3. If White only has vague knowledge about the complications he is very likely just getting killed quickly. If you screw something up, it might be bad in computer terms... but you still have chances, given the enormous activity that Black usually enjoys. 11...Ne7 The only good move after 11. Bd3. The bishop move prevents ...f5 and we need to get rid of the d5-knight right away. 12.Nxe7 White's choice is limited, because with 11... Ne7 we had threatened to take on d5. As usual it's very desirable for Black to take on d5 when White needs to recapture with a pawn. 12...Qxe7 After 12. .. Qxe7 White has two basic options. He can play c4, attacking the b5-pawn, or play c3, preparing to get the offside knight back into the game. White might play c4 or c3 right away or do it after castling kingside first. Castling is rather natural for both sides, so quite often this will be played quickly after a move of the c-pawn, for example 13.c4 f5 14.O-O O-O is just as common as 13.O-O O-O 14.c4 f5. I will examine 13.O-O O-O as the main line and then split the lines with 14.c4 or 14.c3. If White starts 13. c4, it will very likely transpose to 13. O-O O-O 14. c4, as the deviations are unattractive for White. 13.c3 is a different story. After 13...f5 the sequence 14.O-O O-O is possible and examined via 13. O-O O-O 14. c3 f5, but White often decides to not castle and then we will reach the only important independent line 13.c3 f5 14.Nc2 , when White's king will remain in the centre or castle queenside in some lines. Alright , let's check some moves to make things more concrete. 13.0-0 0-0 It's also possible to play 13...f5 first , there is no drawback to this move order. I went for 13... O-O because this way you have the rule of thumb for move 13 and 14 in this line to play ...f5 against the c-pawn moves and just castle as well if White plays O-O first. 14.c4 f5 The best way to react to 14. c4. As usual taking on c4 is terrible, as it helps the knight far too much. 14...b4 is also a disaster , as after 15. Nc2 a5 16.Ne3 Black does not even manage to play the fundamental ...f5 break. This only leaves Black with sacrificing the b-pawn, which explains why the 14. c4 - or 13. c4 - line is the sharpest one in the main line. Black is giving away the queenside and goes All-In with his counterplay in the centre and kingside. After 14... f5 White's main lines are the queen moves to h5 and f3, but he has also tried other continuations without much success. 15.cxb5 This is not a good idea. White is be able to defend in the coming lines, but it's not a fun task for a human player. 15...d5 Black is forcing the long diagonal open with this standard pawn push. 16.exd5 e4 17.Qe2 The only move to cover b2 and defend the d3-bishop by tactical means. Black now has a plethora of good attacking ideas. I'll show a promising one. 17...Qb4 18.Bc4 Qxb2 19.Nc2 axb5 20.Rab1 Qf6 21.Rxb5 f4 With excellent attacking chances for just one pawn.

**B33**

☐ **Quickstarter Guide**
■ **Quickstarter Guide #13 - Sves,11. c3**

1.e4  c5 Hello and Welcome to 'Fight like Magnus: The Sicilian'! This opening course provides you with a full repertoire against 1. e4, based on the Sicilian Defense. I am a bit reluctant to write 'Defense', because in the Sicilian you don't intend to defend all that much, but rather want to 'fight fire with fire'!In the Sicilian Black immediately breaks the symmetry on move one, making it an ideal weapon to unbalance the game and play for a win. In the main lines of the Sveshnikov Black frequently sacrifices material to drum up an attack on the white king, which is fun to play and tricky for White to handle. If you are looking for an active and ambitious opening for Black, you are studying exactly the right course. As the title suggests our repertoire choices are based on the opening play of the current World Champion Magnus Carlsen. Through his whole career Magnus has mostly relied on two moves against 1. e4: the symmetrical  1...e5  and 1...c5 , the Sicilian. Over the years the mix between the two moves shifted back and forth. 1... c5 was a frequent choice in his younger years, but he played it less after he became World Champion in 2013. This changed in 2018, when Magnus returned to the Sicilian, making it his main weapon in his title match against Fabiano Caruana. In this match (including the tiebreak) (Magnus played seven games with the black pieces, and all of them featured the Sicilian. He managed to win the rapid game in the tiebreak after drawing all six classical time control games in the regular match.) As of today (Nov 11, 2019) Magnus Carlsen has not lost a single Sicilian in Classical time control not only since this match, but even since 2011! Admittedly, he did not play it that frequently between 2011 and 2018, but still a very impressive run.I am mentioning non-losing streaks, but what about wins ? Magnus has won many attractive games with the Sicilian, some of which are included as model games in this course. Alright, back to our repertoire concept. I have compiled a full repertoire for Black, based on the World Champion's repertoire. This means that any major choice should be according to games that Magnus has played, showing his belief in the merit of the line. This works well with most lines, but some rarer continuations never featured in the World Champion's games, so I selected lines that matched the structure and spirit of the overall repertoire.There are some cases where I suggest to improve on Magnus' play. I only do that if thorough engine-assisted analysis suggests that my alternative is significantly better or preserves more winning chances, while being of equal quality. You have to take into account that he has played the opening not only in Classical time controls, but also in Rapid and Blitz games. It is perfectly possible that he plays a second-tier move in a Blitz game, because he does not want to show his main preparation or simply forgot the line. In those cases it makes sense to not blindly copy all moves, but see if there is room for improvement. These cases are rare, though - he knows his stuff, of course !This course consists of 12 main chapters and this 'Quickstarter Guide'. The 'Quickstarter Guide' is a selection of the 40 variations that you should learn first to get

a full overview of the Sicilian. It has all the information that you need to play it in your games, as the most frequently played lines are selected. It also features extensive explanations about ideas and concepts, serving as an introduction to the typical middle games. I suggest to learn the Quickstarter Guide first, then go through the individual chapters one by one, deepening your knowledge. 2.Nf3 Nc6 3.d4 The open Sicilian will very likely always be the critical test of any Sicilian setup. Against the open Sicilian Magnus Carlsen's choice is the Sveshnikov Variation. After 3...cxd4 4.Nxd4 Nf6 5.Nc3 e5 the starting position of this variation arises. The Sveshnikov has three main lines: the first one arises after 5...e5 6.Ndb5 d6 7.Nd5 , which has become fashionable in the last year. The second one is 5...e5 6.Ndb5 d6 7.Bg5 a6 8.Na3 b5 9.Bxf6 gxf6 , which settles Black with doubled f-pawns early on. The third option is to play 6.Ndb5 d6 7.Bg5 a6 8.Na3 b5 9.Nd5 , after which Black plays 9...Be7 , avoiding the doubled pawns. These three main lines are covered in five chapters of this course. White also has some lines that are all sidelines for a reason, but still useful to study. In particular on the junior/amateur level it is not guaranteed that players on the white side go for the critical lines. If you study the sidelines, you will have no problems whatsoever and often Black is getting the better game early on. 3...cxd4 4.Nxd4 Nf6 5.Nc3 e5 This is the starting position of the Sveshnikov. Nowadays this name of the variation is widely accepted , but there have been many other names over the years. It was first used in a top level game by World Champion Emanuel Lasker against Carl Schlechter in 1910 , but Schlechter played the uncritical 6.Nb3 and Lasker obtained a good game easily. It was quite quickly figured out that 6. Ndb5 should be critical, and for a long while the structural weaknesses in Black's position were considered to be too severe. It took almost 50 years to put this line back on the map, when Jorge Pelikan and Herman Pilnik found some new ideas for Black. They mostly investigated 6.Ndb5 d6 7.Bg5 a6 8.Na3 Be6 and 6.Ndb5 d6 7.Bg5 a6 8.Bxf6 gxf6 9.Na3 d5 , lines that are still seen today occasionally. So in the late 1960s the move 5... e5 would be called the start of the Lasker/Pelikan/Pilnik-Variation. Then in the early 1970s Evgeny Sveshnikov and some fellow master players from the Russian city of Chelyabinsk discovered that Black should play 8... b5, rather than 8... Be6. Sveshnikov and mostly Gennadi Timoshenko used their innovation successfully and quite quickly the variation was taken up by some more Russian players, most notably the winners of the World Junior Championships Valeri Chekhov, Sergei Dolmatov and Artur Jussupow, all students of the legendary chess trainer and author Mark Dvoretsky.Since these early days almost all of the World Champions and World Championship challengers have played the Sveshnikov (or Chelyabinsk variation, as it is often called in Russia) regularly or on occasion. We can list Kasparov, Anand (occasionally) , Kramnik, Topalov, Gelfand, Caruana and of course Magnus Carlsen employing the Sveshnikov on the highest level and even during World Championship clashes, as seen in the Carlsen-Caruana Match in London 2018.Now, what is so great about the Sveshnikov Variation ? In the early days of the Sveshnikov Black's weak d5-square and backward d-pawn were thought to be too much to handle - why has this assessment changed ?

I think this actually needs to be explained combining some general points and some concrete lines. After 5... e5 White needs to move the knight and concrete lines show that the only challenging move is 6. Ndb5. In this chapter we will examine why 6. Nb3, 6. Nf3 etc. at best lead to equality for White, often less than that. After 6.Ndb5 d6 is best, after which White has the option to enter the line 7. Nd5, as examined in a dedicated chapter. However, after 7.Nd5 Nxd5 8.exd5 we have to state that Black's structural problems - the d5-square and the d-pawn - are already solved. Only very recently this line has seen some new ideas for White, making it more interesting for White to try. Still Black retains fair chances, usually utilizing the pawn majority on the kingside. The two other main lines of the Sveshnikov start after 6.Ndb5 d6 7.Bg5 a6 8.Na3 b5. Before we look at those concrete lines, I need to mention how important the bad position of the a3-knight is. White has lost quite a bit of time already with this piece and will move it again more often than not, trying to connect it with the d5-square. All these time losses with the knight make the position viable for Black. Just imagine the knight would be on e3 instead of a3 - this would be a terrible position for Black. Back to the real position: after 8...b5 Black threatens ...b4, which leaves White with the choice between 9.Nd5 , usually followed by 9...Be7 10.Bxf6 Bxf6 or 8...b5 9.Bxf6 gxf6 10.Nd5. The evaluation of the Sveshnikov depends on the theoretical state of the earlier mentioned 7. Nd5 and these two traditional main lines. In both lines Black gains the bishop pair, which is a great asset to have that early in the game. Now , the line 8. ..b5 9.Nd5 Be7 10.Bxf6 Bxf6 is White's more strategic choice, trying to exploit the static advantages - control over d5, d-pawn. We will see that Black is able to fight for control over d5, but in many cases does not need to focus on that. Often ignoring the knight and starting play with ...f5 or/and even on the queenside is possible. One point to understand is that it is almost impossible for White to BOTH use the d5-square and build up pressure on the d-file. A knight on d5 plugs the d-file, so White is not just attacking d6 and wins this pawn later. In fact the 'weak' d6-pawn almost never gets lost in any Sicilian. White also has the line 9.Bxf6 gxf6 forced , because 9...Qxf6 10.Nd5 Qd8 11.c4 is too bad 10.Nd5. In this line the play is more dynamic, because Black will play ...f5 quickly and tries to completely take over the centre. The position opens up, which is excellent for Black's bishop pair. Quite quickly tactics will become an important factor and the knowledge of concrete lines is more essential than in any other line of this repertoire. Before we continue to examine the sidelines, I'd like to mention one very important aspect of the Sveshnikov. Black very frequently will play the move .. .f5, starting play in the centre and on the kingside. Black has a central pawn majority since move 3 and ...f5 will even try to remove the e4-pawn to set the central pawn mass in motion.Contrary to Sicilians without ...e5, Black's play is mostly in the centre and on the kingside, while Black's king is perfectly safe. In lines like the Dragon or the Najdorf Black often loses due to mating attacks, which almost never happens in the Sveshnikov, quite the contrary. In some lines we have to abandon the queenside in order to throw the kitchen sink towards White's king, going for Checkmate ! This is an important practical consideration that often allows Black to score points from objectively

dubious positions. 6.Ndb5 d6 7.Bg5 a6 8.Na3 b5 After 8... b5 Black threatens to fork the knights, so White does not have a wide range of moves. He either plays 9. Nd5 or 9. Bxf6 first, followed by 10. Nd5. The difference between the two options is substantial. After the immediate 9.Nd5 Black plays 9...Be7 , after which 10.Bxf6 Bxf6 is the usual follow up. In this line Black is able to recapture on f6 with the bishop , while after 9.Bxf6 you need to capture with the pawn, doubling the f-pawns. In this doubled f-pawn structure the play is considerably sharper early on, as Black is able to play ...f5 quickly to attack White's centre. The line 9. Nd5 Be7 10. Bxf6 Bxf6 is a slower, more strategic approach by White, trying to control the position, in particular the weak d5-square. In this chapter we will be examining all lines after 9. Nd5 except the main line 9.Nd5 Be7 10.Bxf6 Bxf6 11.c3 , which is examined in a dedicated chapter. By far the most important line besides the main line is 11. c4 , which is a popular alternative seen at all levels of play. 9.Bxf6 White has three mainlines in the Sveshnikov: 6. Ndb5 d6 7. Nd5, 6. Ndb5 d6 7. Bg5 a6 8. Na3 b5 9. Nd5 and this one, which is by far the sharpest and most tactical line of the three. 9...gxf6 This is forced. Black can't capture with the queen , because after 9...Qxf6 ? 10.Nd5 Qd8 White has many lines to give him a huge advantage. The brutal 11.Bxb5 and 11. c4 are terrible for Black. A good comparison to make: look at the very popular mainline 9. Nd5 Be7 10. Bxf6 Bxf6 (covered in 2 chapters of this course) , in which Black has the bishop on f6, while after 9... Qxf6 ? 10. Nd5 Qd8 it is on f8 !So long story short: take with the g-pawn and look forward to playing ...f5 even twice, if possible. 10.Nd5 Bg7 Black has two good moves in this position, the more traditional 10... f5 and the newer move 10... Bg7, the so-called Novosibirsk variation. Both lines have some overlap, because 10...Bg7 does only delay ...f5 for the moment. The main difference between the two lines is how the reply 11.Bd3 is handled. In the Novosibirsk you play 11...Ne7 to get rid of the Knight immediately , an approach that is clearly not possible after 10...f5 11.Bd3 , when 11...Ne7 12.Nf6# is a bit of a problem. Instead after 10...f5 11.Bd3 , 11...Be6 is the move , which leads to completely different positions compared to the Novosibirsk. Our repertoire choice is quite easy , as the World Champion has always played 10...Bg7 , as far as I can see. After 10... Bg7 White has two main tries for an advantage. The first one and the sharpest line is 11. Bd3 which we examine in the subsequent chapter. The second approach is to simply play 11.c3 , after which 11...f5 12.exf5 Bxf5 leads to a position that is often reached via 10... f5 11. c3 Bg7 12. exf5 Bxf5. This line leads to interesting play and is considered to be leading to equal chances. It is obviously a critical line for the Sveshnikov, as White can basically force you to enter it. Even going 10... Bg7 or 10... f5 is not relevant, as you have no way to avoid it in both cases. So 11. c3 f5 is clearly the main chunk of this chapter, but we will also look a rare alternatives on move 11. 11.c3 This is White's more strategic choice at this point , compared to 11.Bd3. White intends to improve the Knight as quickly as possible. 11...f5 This is a lot better than 11... Ne7. Playing ...Ne7 is much more pointed after 11. Bd3, because Black in this case immediately threatens to take on d5, forcing the pawn recapture. Therefore after 11. Bd3 Ne7 White has to take on e7,

which is not the case here as the queen is still able to take on d5. An example line would be 11...Ne7 12.Nc2 Nxd5 13.Qxd5 Rb8 14.Ne3 , when Black is more or less busted - you can't even get in ...f5 in the first place. 12.exf5 The simplest and most popular choice for White. 12...Bxf5 13.Nc2 0-0 14.Nce3 Be6 A very natural sequence so far. White has gotten his problem piece back in the centre and now needs to make a decision how to proceed. By far White's most popular move is 15. Bd3 , but there are some offbeat tries worth checking. 15.g4 'No ... f5 for you !' - White stops the-f-pawn, but weakens his position a lot in the process. In particular ... Qh4 can be an annoying move for him to face. First of all we have a good opportunity on the queenside that we should use. 15...b4 A strong resource that we need to keep in mind. This move is strong here and even more so against 15. a4. The idea is to either get the d4-square after cxb4 or to get the centre into motion after Nxb4, which is already quite bad for White. 16.cxb4 This gives Black great play, but 16. Nxb4 Nxb4 17. cxb4 d5 is even worse. 16...Rb8 The Rook move is a bit better than 16...Nd4 - it's not a huge difference , though. 17.a3 Nd4 Compared to the position without ...Rb8 and a3 we have provoked the weakness on b3. 18.h4 Played to prevent a line like 18.Bg2 Qh4 , which looks very annoying. 18...e4 19.Bg2 f5 Black's attack is already very dangerous. 20.gxf5 Bxd5 21.Nxd5 Rxf5 White's king is under heavy fire and has no safe place to go to. The engines already see a win for Black, which is not a surprise.

☐ **Quickstarter Guide**
■ **Quickstarter Guide #11 - Sves,11. c4**

1.e4 c5 Hello and Welcome to 'Fight like Magnus: The Sicilian'! This opening course provides you with a full repertoire against 1. e4, based on the Sicilian Defense. I am a bit reluctant to write 'Defense', because in the Sicilian you don't intend to defend all that much, but rather want to 'fight fire with fire'!In the Sicilian Black immediately breaks the symmetry on move one, making it an ideal weapon to unbalance the game and play for a win. In the main lines of the Sveshnikov Black frequently sacrifices material to drum up an attack on the white king, which is fun to play and tricky for White to handle. If you are looking for an active and ambitious opening for Black, you are studying exactly the right course. As the title suggests our repertoire choices are based on the opening play of the current World Champion Magnus Carlsen. Through his whole career Magnus has mostly relied on two moves against 1. e4: the symmetrical 1...e5 and 1...c5 , the Sicilian. Over the years the mix between the two moves shifted back and forth. 1... c5 was a frequent choice in his younger years, but he played it less after he became World Champion in 2013. This changed in 2018, when Magnus returned to the Sicilian, making it his main weapon in his title match against Fabiano Caruana. In this match (including the tiebreak) (Magnus played seven games with the black pieces, and all of them featured the Sicilian. He

managed to win the rapid game in the tiebreak after drawing all six classical time control games in the regular match.) As of today (Nov 11, 2019) Magnus Carlsen has not lost a single Sicilian in Classical time control not only since this match, but even since 2011! Admittedly, he did not play it that frequently between 2011 and 2018, but still a very impressive run.I am mentioning non-losing streaks, but what about wins ? Magnus has won many attractive games with the Sicilian, some of which are included as model games in this course. Alright, back to our repertoire concept. I have compiled a full repertoire for Black, based on the World Champion's repertoire. This means that any major choice should be according to games that Magnus has played, showing his belief in the merit of the line. This works well with most lines, but some rarer continuations never featured in the World Champion's games, so I selected lines that matched the structure and spirit of the overall repertoire.There are some cases where I suggest to improve on Magnus' play. I only do that if thorough engine-assisted analysis suggests that my alternative is significantly better or preserves more winning chances, while being of equal quality. You have to take into account that he has played the opening not only in Classical time controls, but also in Rapid and Blitz games. It is perfectly possible that he plays a second-tier move in a Blitz game, because he does not want to show his main preparation or simply forgot the line. In those cases it makes sense to not blindly copy all moves, but see if there is room for improvement. These cases are rare, though - he knows his stuff, of course !This course consists of 12 main chapters and this 'Quickstarter Guide'. The 'Quickstarter Guide' is a selection of the 40 variations that you should learn first to get a full overview of the Sicilian. It has all the information that you need to play it in your games, as the most frequently played lines are selected. It also features extensive explanations about ideas and concepts, serving as an introduction to the typical middle games. I suggest to learn the Quickstarter Guide first, then go through the individual chapters one by one, deepening your knowledge. 2.Nf3 Nc6 3.d4 The open Sicilian will very likely always be the critical test of any Sicilian setup. Against the open Sicilian Magnus Carlsen's choice is the Sveshnikov Variation. After 3...cxd4 4.Nxd4 Nf6 5.Nc3 e5 the starting position of this variation arises. The Sveshnikov has three main lines: the first one arises after 5...e5 6.Ndb5 d6 7.Nd5 , which has become fashionable in the last year. The second one is 5...e5 6.Ndb5 d6 7.Bg5 a6 8.Na3 b5 9.Bxf6 gxf6 , which settles Black with doubled f-pawns early on. The third option is to play 6.Ndb5 d6 7.Bg5 a6 8.Na3 b5 9.Nd5 , after which Black plays 9...Be7 , avoiding the doubled pawns. These three main lines are covered in five chapters of this course. White also has some lines that are all sidelines for a reason, but still useful to study. In particular on the junior/amateur level it is not guaranteed that players on the white side go for the critical lines. If you study the sidelines, you will have no problems whatsoever and often Black is getting the better game early on. 3...cxd4 4.Nxd4 Nf6 5.Nc3 e5 This is the starting position of the Sveshnikov. Nowadays this name of the variation is widely accepted , but there have been many other names over the years. It was first used in a top level game by World Champion Emanuel Lasker against Carl Schlechter in 1910 , but Schlechter played

the uncritical 6.Nb3 and Lasker obtained a good game easily. It was quite quickly figured out that 6. Ndb5 should be critical, and for a long while the structural weaknesses in Black's position were considered to be too severe. It took almost 50 years to put this line back on the map, when Jorge Pelikan and Herman Pilnik found some new ideas for Black. They mostly investigated 6.Ndb5 d6 7.Bg5 a6 8.Na3 Be6 and 6.Ndb5 d6 7.Bg5 a6 8.Bxf6 gxf6 9.Na3 d5 , lines that are still seen today occasionally. So in the late 1960s the move 5... e5 would be called the start of the Lasker/Pelikan/Pilnik-Variation. Then in the early 1970s Evgeny Sveshnikov and some fellow master players from the Russian city of Chelyabinsk discovered that Black should play 8... b5, rather than 8... Be6. Sveshnikov and mostly Gennadi Timoshenko used their innovation successfully and quite quickly the variation was taken up by some more Russian players, most notably the winners of the World Junior Championships Valeri Chekhov, Sergei Dolmatov and Artur Jussupow, all students of the legendary chess trainer and author Mark Dvoretsky.Since these early days almost all of the World Champions and World Championship challengers have played the Sveshnikov (or Chelyabinsk variation, as it is often called in Russia) regularly or on occasion. We can list Kasparov, Anand (occasionally) , Kramnik, Topalov, Gelfand, Caruana and of course Magnus Carlsen employing the Sveshnikov on the highest level and even during World Championship clashes, as seen in the Carlsen-Caruana Match in London 2018.Now, what is so great about the Sveshnikov Variation ? In the early days of the Sveshnikov Black's weak d5-square and backward d-pawn were thought to be too much to handle - why has this assessment changed ? I think this actually needs to be explained combining some general points and some concrete lines. After 5... e5 White needs to move the knight and concrete lines show that the only challenging move is 6. Ndb5. In this chapter we will examine why 6. Nb3, 6. Nf3 etc. at best lead to equality for White, often less than that. After 6.Ndb5 d6 is best, after which White has the option to enter the line 7. Nd5, as examined in a dedicated chapter. However, after 7.Nd5 Nxd5 8.exd5 we have to state that Black's structural problems - the d5-square and the d-pawn - are already solved. Only very recently this line has seen some new ideas for White, making it more interesting for White to try. Still Black retains fair chances, usually utilizing the pawn majority on the kingside. The two other main lines of the Sveshnikov start after 6.Ndb5 d6 7.Bg5 a6 8.Na3 b5. Before we look at those concrete lines, I need to mention how important the bad position of the a3-knight is. White has lost quite a bit of time already with this piece and will move it again more often than not, trying to connect it with the d5-square. All these time losses with the knight make the position viable for Black. Just imagine the knight would be on e3 instead of a3 - this would be a terrible position for Black. Back to the real position: after 8...b5 Black threatens ...b4, which leaves White with the choice between 9.Nd5 , usually followed by 9...Be7 10.Bxf6 Bxf6 or 8...b5 9.Bxf6 gxf6 10.Nd5. The evaluation of the Sveshnikov depends on the theoretical state of the earlier mentioned 7. Nd5 and these two traditional main lines. In both lines Black gains the bishop pair, which is a great asset to have that early in the game. Now , the line 8. ..b5 9.Nd5 Be7 10.Bxf6 Bxf6 is White's more strategic

choice, trying to exploit the static advantages - control over d5, d-pawn. We will see that Black is able to fight for control over d5, but in many cases does not need to focus on that. Often ignoring the knight and starting play with ...f5 or/and even on the queenside is possible. One point to understand is that it is almost impossible for White to BOTH use the d5-square and build up pressure on the d-file. A knight on d5 plugs the d-file, so White is not just attacking d6 and wins this pawn later. In fact the 'weak' d6-pawn almost never gets lost in any Sicilian. White also has the line 9.Bxf6 gxf6 forced , because 9...Qxf6 10.Nd5 Qd8 11.c4 is too bad 10.Nd5. In this line the play is more dynamic, because Black will play ...f5 quickly and tries to completely take over the centre. The position opens up, which is excellent for Black's bishop pair. Quite quickly tactics will become an important factor and the knowledge of concrete lines is more essential than in any other line of this repertoire. Before we continue to examine the sidelines, I'd like to mention one very important aspect of the Sveshnikov. Black very frequently will play the move .. .f5, starting play in the centre and on the kingside. Black has a central pawn majority since move 3 and ...f5 will even try to remove the e4-pawn to set the central pawn mass in motion.Contrary to Sicilians without ...e5, Black's play is mostly in the centre and on the kingside, while Black's king is perfectly safe. In lines like the Dragon or the Najdorf Black often loses due to mating attacks, which almost never happens in the Sveshnikov, quite the contrary. In some lines we have to abandon the queenside in order to throw the kitchen sink towards White's king, going for Checkmate ! This is an important practical consideration that often allows Black to score points from objectively dubious positions. 6.Ndb5 d6 7.Bg5 a6 8.Na3 b5 After 8... b5 Black threatens to fork the knights, so White does not have a wide range of moves. He either plays 9. Nd5 or 9. Bxf6 first, followed by 10. Nd5. The difference between the two options is substantial. After the immediate 9.Nd5 Black plays 9...Be7 , after which 10.Bxf6 Bxf6 is the usual follow up. In this line Black is able to recapture on f6 with the bishop , while after 9.Bxf6 you need to capture with the pawn, doubling the f-pawns. In this doubled f-pawn structure the play is considerably sharper early on, as Black is able to play ...f5 quickly to attack White's centre. The line 9. Nd5 Be7 10. Bxf6 Bxf6 is a slower, more strategic approach by White, trying to control the position, in particular the weak d5-square. In this chapter we will be examining all lines after 9. Nd5 except the main line 9.Nd5 Be7 10.Bxf6 Bxf6 11.c3 , which is examined in a dedicated chapter. By far the most important line besides the main line is 11. c4 , which is a popular alternative seen at all levels of play. 9.Bxf6 White has three mainlines in the Sveshnikov: 6. Ndb5 d6 7. Nd5, 6. Ndb5 d6 7. Bg5 a6 8. Na3 b5 9. Nd5 and this one, which is by far the sharpest and most tactical line of the three. 9...gxf6 This is forced. Black can't capture with the queen , because after 9...Qxf6 ? 10.Nd5 Qd8 White has many lines to give him a huge advantage. The brutal 11.Bxb5 and 11. c4 are terrible for Black. A good comparison to make: look at the very popular mainline 9. Nd5 Be7 10. Bxf6 Bxf6 (covered in 2 chapters of this course) , in which Black has the bishop on f6, while after 9... Qxf6 ? 10. Nd5 Qd8 it is on f8 !So long story short: take with the g-pawn and look forward to playing ...f5 even twice, if

possible. 10.Nd5 Bg7 Black has two good moves in this position, the more traditional 10... f5 and the newer move 10... Bg7, the so-called Novosibirsk variation. Both lines have some overlap, because 10...Bg7 does only delay ...f5 for the moment. The main difference between the two lines is how the reply 11.Bd3 is handled. In the Novosibirsk you play 11...Ne7 to get rid of the Knight immediately , an approach that is clearly not possible after 10...f5 11.Bd3 , when 11...Ne7 12.Nf6# is a bit of a problem. Instead after 10...f5 11.Bd3 , 11...Be6 is the move , which leads to completely different positions compared to the Novosibirsk. Our repertoire choice is quite easy , as the World Champion has always played 10...Bg7 , as far as I can see. After 10... Bg7 White has two main tries for an advantage. The first one and the sharpest line is 11. Bd3 which we examine in the subsequent chapter. The second approach is to simply play 11.c3 , after which 11...f5 12.exf5 Bxf5 leads to a position that is often reached via 10... f5 11. c3 Bg7 12. exf5 Bxf5. This line leads to interesting play and is considered to be leading to equal chances. It is obviously a critical line for the Sveshnikov, as White can basically force you to enter it. Even going 10... Bg7 or 10... f5 is not relevant, as you have no way to avoid it in both cases. So 11. c3 f5 is clearly the main chunk of this chapter, but we will also look at rare alternatives on move 11. 11.c4 A sharp alternative to the mainlines. Similarly to 11.Bd3 Ne7 12.Nxe7 Qxe7 13. c4 White attacks Black's queenside pawns and we have no good alternative to sacrificing the b-pawn. As usual Black gets excellent compensation and quite often manages to win attractive attacking games. The resulting positions are much easier to handle for Black, in particular if you know what to do. In many cases White does not, because if he had known that after 11. c4 he's be on the defensive the whole time he wouldn't have played into the line in the first place. After perfect play White is still OK after 11. c4, but you will not encounter that against a human opponent. 11...f5 We have to give up the b-pawn. As mentioned several times throughout the course, taking on c4 is always (99. 9% of the time) bad in such a structure. On very few occasions ...b4 is playable , but this is not one of them , as 11...b4 12.Nc2 a5 13.Nce3 is terrible for Black. We are happy to sacrifice the pawn , luring the c-pawn away from the centre. 12.cxb5 Nd4 13.Bd3 The most reasonable move, preparing to play O-O next. 13...fxe4 Here and on the next moves Black has more than one promising way to play and this is the most straightforward one. I also like 13...Be6 14.O-O Bxd5 , which is completely fine. 14.Bxe4 0-0 15.Nf6+ This loses immediately. 15...Qxf6 16.Bxa8 Qg6 Black's threat of ...Bg4 is extremely strong. A possible line is 17.Bd5 Bg4 18.Qd2 Bh6 19.Qb4 Qd3 and Black is winning.

This works well with most lines, but some rarer continuations never featured in the World Champion's games, so I selected lines that matched the structure and spirit of the overall repertoire.There are some cases where I suggest to improve on Magnus' play. I only do that if thorough engine-assisted analysis suggests that my alternative is significantly better or preserves more winning chances, while being of equal quality. You have to take into account that he has played the opening not only in Classical time controls, but also in Rapid and Blitz games. It is perfectly possible that he plays a second-tier move in a Blitz game, because he does not want to show his main preparation or simply forgot the line. In those cases it makes sense to not blindly copy all moves, but see if there is room for improvement. These cases are rare, though - he knows his stuff, of course !This course consists of 12 main chapters and this 'Quickstarter Guide'. The 'Quickstarter Guide' is a selection of the 40 variations that you should learn first to get

a full overview of the Sicilian. It has all the information that you need to play it in your games, as the most frequently played lines are selected. It also features extensive explanations about ideas and concepts, serving as an introduction to the typical middle games. I suggest to learn the Quickstarter Guide first, then go through the individual chapters one by one, deepening your knowledge. 2.Nf3 Nc6 3.d4 The open Sicilian will very likely always be the critical test of any Sicilian setup. Against the open Sicilian Magnus Carlsen's choice is the Sveshnikov Variation. After 3...cxd4 4.Nxd4 Nf6 5.Nc3 e5 the starting position of this variation arises. The Sveshnikov has three main lines: the first one arises after 5...e5 6.Ndb5 d6 7.Nd5 , which has become fashionable in the last year. The second one is 5...e5 6.Ndb5 d6 7.Bg5 a6 8.Na3 b5 9.Bxf6 gxf6 , which settles Black with doubled f-pawns early on. The third option is to play 6.Ndb5 d6 7.Bg5 a6 8.Na3 b5 9.Nd5 , after which Black plays 9...Be7 , avoiding the doubled pawns. These three main lines are covered in five chapters of this course. White also has some lines that are all sidelines for a reason, but still useful to study. In particular on the junior/amateur level it is not guaranteed that players on the white side go for the critical lines. If you study the sidelines, you will have no problems whatsoever and often Black is getting the better game early on. 3...cxd4 4.Nxd4 Nf6 5.Nc3 e5 This is the starting position of the Sveshnikov. Nowadays this name of the variation is widely accepted , but there have been many other names over the years. It was first used in a top level game by World Champion Emanuel Lasker against Carl Schlechter in 1910 , but Schlechter played the uncritical 6.Nb3 and Lasker obtained a good game easily. It was quite quickly figured out that 6. Ndb5 should be critical, and for a long while the structural weaknesses in Black's position were considered to be too severe. It took almost 50 years to put this line back on the map, when Jorge Pelikan and Herman Pilnik found some new ideas for Black. They mostly investigated 6.Ndb5 d6 7.Bg5 a6 8.Na3 Be6 and 6.Ndb5 d6 7.Bg5 a6 8.Bxf6 gxf6 9.Na3 d5 , lines that are still seen today occasionally. So in the late 1960s the move 5... e5 would be called the start of the Lasker/Pelikan/Pilnik-Variation. Then in the early 1970s Evgeny Sveshnikov and some fellow master players from the Russian city of Chelyabinsk discovered that Black should play 8... b5, rather than 8... Be6. Sveshnikov and mostly Gennadi Timoshenko used their innovation successfully and quite quickly the variation was taken up by some more Russian players, most notably the winners of the World Junior Championships Valeri Chekhov, Sergei Dolmatov and Artur Jussupow, all students of the legendary chess trainer and author Mark Dvoretsky.Since these early days almost all of the World Champions and World Championship challengers have played the Sveshnikov (or Chelyabinsk variation, as it is often called in Russia) regularly or on occasion. We can list Kasparov, Anand (occasionally) , Kramnik, Topalov, Gelfand, Caruana and of course Magnus Carlsen employing the Sveshnikov on the highest level and even during World Championship clashes, as seen in the Carlsen-Caruana Match in London 2018.Now, what is so great about the Sveshnikov Variation ? In the early days of the Sveshnikov Black's weak d5-square and backward d-pawn were thought to be too much to handle - why has this assessment changed ?

I think this actually needs to be explained combining some general points and some concrete lines. After 5... e5 White needs to move the knight and concrete lines show that the only challenging move is 6. Ndb5. In this chapter we will examine why 6. Nb3, 6. Nf3 etc. at best lead to equality for White, often less than that. After 6.Ndb5 d6 is best, after which White has the option to enter the line 7. Nd5, as examined in a dedicated chapter. However, after 7.Nd5 Nxd5 8.exd5 we have to state that Black's structural problems - the d5-square and the d-pawn - are already solved. Only very recently this line has seen some new ideas for White, making it more interesting for White to try. Still Black retains fair chances, usually utilizing the pawn majority on the kingside. The two other main lines of the Sveshnikov start after 6.Ndb5 d6 7.Bg5 a6 8.Na3 b5. Before we look at those concrete lines, I need to mention how important the bad position of the a3-knight is. White has lost quite a bit of time already with this piece and will move it again more often than not, trying to connect it with the d5-square. All these time losses with the knight make the position viable for Black. Just imagine the knight would be on e3 instead of a3 - this would be a terrible position for Black. Back to the real position: after 8...b5 Black threatens ...b4, which leaves White with the choice between 9.Nd5 , usually followed by 9...Be7 10.Bxf6 Bxf6 or 8...b5 9.Bxf6 gxf6 10.Nd5. The evaluation of the Sveshnikov depends on the theoretical state of the earlier mentioned 7. Nd5 and these two traditional main lines. In both lines Black gains the bishop pair, which is a great asset to have that early in the game. Now , the line 8. ..b5 9.Nd5 Be7 10.Bxf6 Bxf6 is White's more strategic choice, trying to exploit the static advantages - control over d5, d-pawn. We will see that Black is able to fight for control over d5, but in many cases does not need to focus on that. Often ignoring the knight and starting play with ...f5 or/and even on the queenside is possible. One point to understand is that it is almost impossible for White to BOTH use the d5-square and build up pressure on the d-file. A knight on d5 plugs the d-file, so White is not just attacking d6 and wins this pawn later. In fact the 'weak' d6-pawn almost never gets lost in any Sicilian. White also has the line 9.Bxf6 gxf6 forced , because 9...Qxf6 10.Nd5 Qd8 11.c4 is too bad 10.Nd5. In this line the play is more dynamic, because Black will play ...f5 quickly and tries to completely take over the centre. The position opens up, which is excellent for Black's bishop pair. Quite quickly tactics will become an important factor and the knowledge of concrete lines is more essential than in any other line of this repertoire. Before we continue to examine the sidelines, I'd like to mention one very important aspect of the Sveshnikov. Black very frequently will play the move .. .f5, starting play in the centre and on the kingside. Black has a central pawn majority since move 3 and ...f5 will even try to remove the e4-pawn to set the central pawn mass in motion.Contrary to Sicilians without ...e5, Black's play is mostly in the centre and on the kingside, while Black's king is perfectly safe. In lines like the Dragon or the Najdorf Black often loses due to mating attacks, which almost never happens in the Sveshnikov, quite the contrary. In some lines we have to abandon the queenside in order to throw the kitchen sink towards White's king, going for Checkmate ! This is an important practical consideration that often allows Black to score points from objectively

dubious positions. 6.Ndb5 d6 7.Bg5 a6 8.Na3 b5 After 8... b5 Black threatens to fork the knights, so White does not have a wide range of moves. He either plays 9. Nd5 or 9. Bxf6 first, followed by 10. Nd5. The difference between the two options is substantial. After the immediate 9.Nd5 Black plays 9...Be7 , after which 10.Bxf6 Bxf6 is the usual follow up. In this line Black is able to recapture on f6 with the bishop , while after 9.Bxf6 you need to capture with the pawn, doubling the f-pawns. In this doubled f-pawn structure the play is considerably sharper early on, as Black is able to play ...f5 quickly to attack White's centre. The line 9. Nd5 Be7 10. Bxf6 Bxf6 is a slower, more strategic approach by White, trying to control the position, in particular the weak d5-square. In this chapter we will be examining all lines after 9. Nd5 except the main line 9.Nd5 Be7 10.Bxf6 Bxf6 11.c3 , which is examined in a dedicated chapter. By far the most important line besides the main line is 11. c4 , which is a popular alternative seen at all levels of play. 9.Bxf6 White has three mainlines in the Sveshnikov: 6. Ndb5 d6 7. Nd5, 6. Ndb5 d6 7. Bg5 a6 8. Na3 b5 9. Nd5 and this one, which is by far the sharpest and most tactical line of the three. 9...gxf6 This is forced. Black can't capture with the queen , because after 9...Qxf6 ? 10.Nd5 Qd8 White has many lines to give him a huge advantage. The brutal 11.Bxb5 and 11. c4 are terrible for Black. A good comparison to make: look at the very popular mainline 9. Nd5 Be7 10. Bxf6 Bxf6 (covered in 2 chapters of this course) , in which Black has the bishop on f6, while after 9... Qxf6 ? 10. Nd5 Qd8 it is on f8 !So long story short: take with the g-pawn and look forward to playing ...f5 even twice, if possible. 10.Nd5 Bg7 Black has two good moves in this position, the more traditional 10... f5 and the newer move 10... Bg7, the so-called Novosibirsk variation. Both lines have some overlap, because 10...Bg7 does only delay ...f5 for the moment. The main difference between the two lines is how the reply 11.Bd3 is handled. In the Novosibirsk you play 11...Ne7 to get rid of the Knight immediately , an approach that is clearly not possible after 10...f5 11.Bd3 , when 11...Ne7 12.Nf6# is a bit of a problem. Instead after 10...f5 11.Bd3 , 11...Be6 is the move , which leads to completely different positions compared to the Novosibirsk. Our repertoire choice is quite easy , as the World Champion has always played 10...Bg7 , as far as I can see. After 10... Bg7 White has two main tries for an advantage. The first one and the sharpest line is 11. Bd3 which we examine in the subsequent chapter. The second approach is to simply play 11.c3 , after which 11...f5 12.exf5 Bxf5 leads to a position that is often reached via 10... f5 11. c3 Bg7 12. exf5 Bxf5. This line leads to interesting play and is considered to be leading to equal chances. It is obviously a critical line for the Sveshnikov, as White can basically force you to enter it. Even going 10... Bg7 or 10... f5 is not relevant, as you have no way to avoid it in both cases. So 11. c3 f5 is clearly the main chunk of this chapter, but we will also look a rare alternatives on move 11. 11.Bd3 After 11. Bd3 the game will become very sharp and tactical and Black needs to sacrifice pawns on a regular basis. In the main line of the 11. Bd3 complex we are three pawns down, but have great compensation !Of all the chapters in the whole course, the 11. Bd3 Sveshnikov is by far the one that requires move-by-move knowledge and precise calculation over the board. There is

very little strategic content or 'plans' to guide you, it's just two sides engaging in a fight with clubs - and you better make sure to bring a huge club, meaning excellent preparation. It is definitely possible to work out some of the complications over the board, but this will be much more likely to be successful if you once had known them. It sounds odd, but it is true: study time is never wasted, even if you feel you have forgotten everything.The way to do it is to not try to remember as hard as you can, but rather think on your own and hope that you subconsciously piece it together. This works much better than sitting there and wracking your brain to recall concrete lines. One important point that also needs to be mentioned: Black is the side on the attack after 11. Bd3. If White only has vague knowledge about the complications he is very likely just getting killed quickly. If you screw something up, it might be bad in computer terms... but you still have chances, given the enormous activity that Black usually enjoys. 11...Ne7 The only good move after 11. Bd3. The bishop move prevents ...f5 and we need to get rid of the d5-knight right away. 12.Nxe7 White's choice is limited, because with 11... Ne7 we had threatened to take on d5. As usual it's very desirable for Black to take on d5 when White needs to recapture with a pawn. 12...Qxe7 After 12. .. Qxe7 White has two basic options. He can play c4, attacking the b5-pawn, or play c3, preparing to get the offside knight back into the game. White might play c4 or c3 right away or do it after castling kingside first. Castling is rather natural for both sides, so quite often this will be played quickly after a move of the c-pawn, for example 13.c4 f5 14.O-O O-O is just as common as 13.O-O O-O 14.c4 f5. I will examine 13.O-O O-O as the main line and then split the lines with 14.c4 or 14.c3. If White starts 13. c4, it will very likely transpose to 13. O-O O-O 14. c4, as the deviations are unattractive for White. 13.c3 is a different story. After 13...f5 the sequence 14.O-O O-O is possible and examined via 13. O-O O-O 14. c3 f5, but White often decides to not castle and then we will reach the only important independent line 13.c3 f5 14.Nc2 , when White's king will remain in the centre or castle queenside in some lines. Alright , let's check some moves to make things more concrete. 13.0-0 0-0 It's also possible to play 13...f5 first , there is no drawback to this move order. I went for 13... O-O because this way you have the rule of thumb for move 13 and 14 in this line to play ...f5 against the c-pawn moves and just castle as well if White plays O-O first. 14.c3 A more restrained way to play for White. He prepares Nc2-e3, improving the misplaced knight on a3. 14...f5 15.Nc2 d5 Always an attractive option if it works out tactically. Here it does ! 16.exf5 e4 17.Be2 Rd8 Black needs to cover d5 first. 18.Nd4 Qf6 19.f3 White needs to play this move or 19.g4 to keep the f5-pawn. If we just get to take this pawn we are fine. Now after 19. f3 - or 19. g4 - White has weakened the dark squares and we immediately start play on them. 19...b4 This is a key move to destabilize the knight on d4. We will play ...Bd7 and ...Rac8 to increase the pressure on the c-pawn. We have full compensation.

**B33**

☐ **Quickstarter Guide**
■ **Quickstarter Guide #14 - Sves,11. c3**

1.e4  c5 Hello and Welcome to 'Fight like Magnus: The Sicilian'! This opening course provides you with a full repertoire against 1. e4, based on the Sicilian Defense. I am a bit reluctant to write 'Defense', because in the Sicilian you don't intend to defend all that much, but rather want to 'fight fire with fire'!In the Sicilian Black immediately breaks the symmetry on move one, making it an ideal weapon to unbalance the game and play for a win. In the main lines of the Sveshnikov Black frequently sacrifices material to drum up an attack on the white king, which is fun to play and tricky for White to handle. If you are looking for an active and ambitious opening for Black, you are studying exactly the right course. As the title suggests our repertoire choices are based on the opening play of the current World Champion Magnus Carlsen. Through his whole career Magnus has mostly relied on two moves against 1. e4: the symmetrical  1...e5  and 1...c5 , the Sicilian. Over the years the mix between the two moves shifted back and forth. 1... c5 was a frequent choice in his younger years, but he played it less after he became World Champion in 2013. This changed in 2018, when Magnus returned to the Sicilian, making it his main weapon in his title match against Fabiano Caruana. In this match (including the tiebreak) (Magnus played seven games with the black pieces, and all of them featured the Sicilian. He managed to win the rapid game in the tiebreak after drawing all six classical time control games in the regular match.) As of today (Nov 11, 2019) Magnus Carlsen has not lost a single Sicilian in Classical time control not only since this match, but even since 2011! Admittedly, he did not play it that frequently between 2011 and 2018, but still a very impressive run.I am mentioning non-losing streaks, but what about wins ? Magnus has won many attractive games with the Sicilian, some of which are included as model games in this course. Alright, back to our repertoire concept. I have compiled a full repertoire for Black, based on the World Champion's repertoire. This means that any major choice should be according to games that Magnus has played, showing his belief in the merit of the line. This works well with most lines, but some rarer continuations never featured in the World Champion's games, so I selected lines that matched the structure and spirit of the overall repertoire.There are some cases where I suggest to improve on Magnus' play. I only do that if thorough engine-assisted analysis suggests that my alternative is significantly better or preserves more winning chances, while being of equal quality. You have to take into account that he has played the opening not only in Classical time controls, but also in Rapid and Blitz games. It is perfectly possible that he plays a second-tier move in a Blitz game, because he does not want to show his main preparation or simply forgot the line. In those cases it makes sense to not blindly copy all moves, but see if there is room for improvement. These cases are rare, though - he knows his stuff, of course !This course consists of 12 main chapters and this 'Quickstarter Guide'. The 'Quickstarter Guide' is a selection of the 40 variations that you should learn first to get

a full overview of the Sicilian. It has all the information that you need to play it in your games, as the most frequently played lines are selected. It also features extensive explanations about ideas and concepts, serving as an introduction to the typical middle games. I suggest to learn the Quickstarter Guide first, then go through the individual chapters one by one, deepening your knowledge. 2.Nf3 Nc6 3.d4 The open Sicilian will very likely always be the critical test of any Sicilian setup. Against the open Sicilian Magnus Carlsen's choice is the Sveshnikov Variation. After 3...cxd4 4.Nxd4 Nf6 5.Nc3 e5 the starting position of this variation arises. The Sveshnikov has three main lines: the first one arises after 5...e5 6.Ndb5 d6 7.Nd5 , which has become fashionable in the last year. The second one is 5...e5 6.Ndb5 d6 7.Bg5 a6 8.Na3 b5 9.Bxf6 gxf6 , which settles Black with doubled f-pawns early on. The third option is to play 6.Ndb5 d6 7.Bg5 a6 8.Na3 b5 9.Nd5 , after which Black plays 9...Be7 , avoiding the doubled pawns. These three main lines are covered in five chapters of this course. White also has some lines that are all sidelines for a reason, but still useful to study. In particular on the junior/amateur level it is not guaranteed that players on the white side go for the critical lines. If you study the sidelines, you will have no problems whatsoever and often Black is getting the better game early on. 3...cxd4 4.Nxd4 Nf6 5.Nc3 e5 This is the starting position of the Sveshnikov. Nowadays this name of the variation is widely accepted , but there have been many other names over the years. It was first used in a top level game by World Champion Emanuel Lasker against Carl Schlechter in 1910 , but Schlechter played the uncritical 6.Nb3 and Lasker obtained a good game easily. It was quite quickly figured out that 6. Ndb5 should be critical, and for a long while the structural weaknesses in Black's position were considered to be too severe. It took almost 50 years to put this line back on the map, when Jorge Pelikan and Herman Pilnik found some new ideas for Black. They mostly investigated 6.Ndb5 d6 7.Bg5 a6 8.Na3 Be6 and 6.Ndb5 d6 7.Bg5 a6 8.Bxf6 gxf6 9.Na3 d5 , lines that are still seen today occasionally. So in the late 1960s the move 5... e5 would be called the start of the Lasker/Pelikan/Pilnik-Variation. Then in the early 1970s Evgeny Sveshnikov and some fellow master players from the Russian city of Chelyabinsk discovered that Black should play 8... b5, rather than 8... Be6. Sveshnikov and mostly Gennadi Timoshenko used their innovation successfully and quite quickly the variation was taken up by some more Russian players, most notably the winners of the World Junior Championships Valeri Chekhov, Sergei Dolmatov and Artur Jussupow, all students of the legendary chess trainer and author Mark Dvoretsky.Since these early days almost all of the World Champions and World Championship challengers have played the Sveshnikov (or Chelyabinsk variation, as it is often called in Russia) regularly or on occasion. We can list Kasparov, Anand (occasionally) , Kramnik, Topalov, Gelfand, Caruana and of course Magnus Carlsen employing the Sveshnikov on the highest level and even during World Championship clashes, as seen in the Carlsen-Caruana Match in London 2018.Now, what is so great about the Sveshnikov Variation ? In the early days of the Sveshnikov Black's weak d5-square and backward d-pawn were thought to be too much to handle - why has this assessment changed ?

I think this actually needs to be explained combining some general points and some concrete lines. After 5... e5 White needs to move the knight and concrete lines show that the only challenging move is 6. Ndb5. In this chapter we will examine why 6. Nb3, 6. Nf3 etc. at best lead to equality for White, often less than that. After 6.Ndb5 d6 is best, after which White has the option to enter the line 7. Nd5, as examined in a dedicated chapter. However, after 7.Nd5 Nxd5 8.exd5 we have to state that Black's structural problems - the d5-square and the d-pawn - are already solved. Only very recently this line has seen some new ideas for White, making it more interesting for White to try. Still Black retains fair chances, usually utilizing the pawn majority on the kingside. The two other main lines of the Sveshnikov start after 6.Ndb5 d6 7.Bg5 a6 8.Na3 b5. Before we look at those concrete lines, I need to mention how important the bad position of the a3-knight is. White has lost quite a bit of time already with this piece and will move it again more often than not, trying to connect it with the d5-square. All these time losses with the knight make the position viable for Black. Just imagine the knight would be on e3 instead of a3 - this would be a terrible position for Black. Back to the real position: after 8...b5 Black threatens ...b4, which leaves White with the choice between 9.Nd5 , usually followed by 9...Be7 10.Bxf6 Bxf6 or 8...b5 9.Bxf6 gxf6 10.Nd5. The evaluation of the Sveshnikov depends on the theoretical state of the earlier mentioned 7. Nd5 and these two traditional main lines. In both lines Black gains the bishop pair, which is a great asset to have that early in the game. Now , the line 8. ..b5 9.Nd5 Be7 10.Bxf6 Bxf6 is White's more strategic choice, trying to exploit the static advantages - control over d5, d-pawn. We will see that Black is able to fight for control over d5, but in many cases does not need to focus on that. Often ignoring the knight and starting play with ...f5 or/and even on the queenside is possible. One point to understand is that it is almost impossible for White to BOTH use the d5-square and build up pressure on the d-file. A knight on d5 plugs the d-file, so White is not just attacking d6 and wins this pawn later. In fact the 'weak' d6-pawn almost never gets lost in any Sicilian. White also has the line 9.Bxf6 gxf6 forced , because 9...Qxf6 10.Nd5 Qd8 11.c4 is too bad 10.Nd5. In this line the play is more dynamic, because Black will play ...f5 quickly and tries to completely take over the centre. The position opens up, which is excellent for Black's bishop pair. Quite quickly tactics will become an important factor and the knowledge of concrete lines is more essential than in any other line of this repertoire. Before we continue to examine the sidelines, I'd like to mention one very important aspect of the Sveshnikov. Black very frequently will play the move .. .f5, starting play in the centre and on the kingside. Black has a central pawn majority since move 3 and ...f5 will even try to remove the e4-pawn to set the central pawn mass in motion.Contrary to Sicilians without ...e5, Black's play is mostly in the centre and on the kingside, while Black's king is perfectly safe. In lines like the Dragon or the Najdorf Black often loses due to mating attacks, which almost never happens in the Sveshnikov, quite the contrary. In some lines we have to abandon the queenside in order to throw the kitchen sink towards White's king, going for Checkmate ! This is an important practical consideration that often allows Black to score points from objectively

dubious positions. 6.Ndb5 d6 7.Bg5 a6 8.Na3 b5 After 8... b5 Black threatens to fork the knights, so White does not have a wide range of moves. He either plays 9. Nd5 or 9. Bxf6 first, followed by 10. Nd5. The difference between the two options is substantial. After the immediate 9.Nd5 Black plays 9...Be7 , after which 10.Bxf6 Bxf6 is the usual follow up. In this line Black is able to recapture on f6 with the bishop , while after 9.Bxf6 you need to capture with the pawn, doubling the f-pawns. In this doubled f-pawn structure the play is considerably sharper early on, as Black is able to play ...f5 quickly to attack White's centre. The line 9. Nd5 Be7 10. Bxf6 Bxf6 is a slower, more strategic approach by White, trying to control the position, in particular the weak d5-square. In this chapter we will be examining all lines after 9. Nd5 except the main line 9.Nd5 Be7 10.Bxf6 Bxf6 11.c3 , which is examined in a dedicated chapter. By far the most important line besides the main line is 11. c4 , which is a popular alternative seen at all levels of play. 9.Bxf6 White has three mainlines in the Sveshnikov: 6. Ndb5 d6 7. Nd5, 6. Ndb5 d6 7. Bg5 a6 8. Na3 b5 9. Nd5 and this one, which is by far the sharpest and most tactical line of the three. 9...gxf6 This is forced. Black can't capture with the queen , because after 9...Qxf6 ? 10.Nd5 Qd8 White has many lines to give him a huge advantage. The brutal 11.Bxb5 and 11. c4 are terrible for Black. A good comparison to make: look at the very popular mainline 9. Nd5 Be7 10. Bxf6 Bxf6 (covered in 2 chapters of this course) , in which Black has the bishop on f6, while after 9... Qxf6 ? 10. Nd5 Qd8 it is on f8 !So long story short: take with the g-pawn and look forward to playing ...f5 even twice, if possible. 10.Nd5 Bg7 Black has two good moves in this position, the more traditional 10... f5 and the newer move 10... Bg7, the so-called Novosibirsk variation. Both lines have some overlap, because 10...Bg7 does only delay ...f5 for the moment. The main difference between the two lines is how the reply 11.Bd3 is handled. In the Novosibirsk you play 11...Ne7 to get rid of the Knight immediately , an approach that is clearly not possible after 10...f5 11.Bd3 , when 11...Ne7 12.Nf6# is a bit of a problem. Instead after 10...f5 11.Bd3 , 11...Be6 is the move , which leads to completely different positions compared to the Novosibirsk. Our repertoire choice is quite easy , as the World Champion has always played 10...Bg7 , as far as I can see. After 10... Bg7 White has two main tries for an advantage. The first one and the sharpest line is 11. Bd3 which we examine in the subsequent chapter. The second approach is to simply play 11.c3 , after which 11...f5 12.exf5 Bxf5 leads to a position that is often reached via 10... f5 11. c3 Bg7 12. exf5 Bxf5. This line leads to interesting play and is considered to be leading to equal chances. It is obviously a critical line for the Sveshnikov, as White can basically force you to enter it. Even going 10... Bg7 or 10... f5 is not relevant, as you have no way to avoid it in both cases. So 11. c3 f5 is clearly the main chunk of this chapter, but we will also look a rare alternatives on move 11. 11.c3 This is White's more strategic choice at this point , compared to 11.Bd3. White intends to improve the Knight as quickly as possible. 11...f5 This is a lot better than 11... Ne7. Playing ...Ne7 is much more pointed after 11. Bd3, because Black in this case immediately threatens to take on d5, forcing the pawn recapture. Therefore after 11. Bd3 Ne7 White has to take on e7,

which is not the case here as the queen is still able to take on d5. An example line would be 11...Ne7 12.Nc2 Nxd5 13.Qxd5 Rb8 14.Ne3 , when Black is more or less busted - you can't even get in ...f5 in the first place. 12.exf5 The simplest and most popular choice for White. 12...Bxf5 13.Nc2 0-0 14.Nce3 Be6 A very natural sequence so far. White has gotten his problem piece back in the centre and now needs to make a decision how to proceed. By far White's most popular move is 15. Bd3 , but there are some offbeat tries worth checking. 15.Bd3 A natural and popular move, angling for piece play against the centre and Kingside, often connected with Qh5. 15...f5 After our natural move 15...f5 White now chooses between 16.O-O , 16. Qh5 and 16.Bc2. 16.0-0 In some of the sharp lines White does not manage to castle, so this solid move is certainly a reasonable choice. 16...e4 We usually play ...e4 in these lines in reply to Qh5, so we will choose a similar approach here. Note that 16... f4 fails to 17.Qh5 and 16...Ne7 is refuted by 17.Nxe7+ Qxe7 18.Bxf5 ! , which amounts to a disaster as well. 17.Nf4 The only move, otherwise we'd have ... f4 next. 17...Bf7 18.Bc2 Be5 As played by Magnus Carlsen , so we'll follow the Champion's example. Black has some decent alternatives here , like 18...Qd7 and 18...Qg5. 19.Nfd5 Qg5 I suggest to play this move instead of Carlsen's 19...Kh8. He got into some trouble against V.Topalov in Abidjan 2019. He still won this Blitz game quickly after Topalov misplayed it soon after. The move 19... Qg5 is the recommendation of both the engines and the correspondence players and looks attractive, so we'll go for it. Our threats are now ...f4 and ...Bh5.

**B33**

☐ **Sicilian Theory**
■ **Sveshnikov: 8...b5 9.Nd5 main**

1.e4 c5 2.Nf3 Nc6 3.d4 cxd4 4.Nxd4 Nf6 5.Nc3 e5 Black gains space in the center at the cost of weakening the d5-square. This variation is known as the Sveshnikov. 6.Ndb5 White threatens Nd6+, forcing Black to play ...d6. 6. Nb3 ?! Bb4 ! 7.Bd3 d5 ! Black has at least equality and excellent center control. 6.Nf5 d5 ! Black strikes back in the center with at least equality. 6...d6 Black prevents Nd6+. 7.Bg5 White begins the fight for the d5-square. White's threat is Bxf6 followed by Nd5. Since Nd5 combined with Nb5 would threaten Nc7+ with a decisive advantage, Black is essentially forced to play 7. ..a6, kicking back White's b5-knight. 7...a6 8.Na3 b5 Black aims to force Na3 to stay out of play and threatens to fork both of White's knights with ...b4. 9.Nd5 White prevents ...b4 from being a fork and occupies the key d5-square. He intends on consolidating this control with Bxf6 on the next move. 9...Be7 Black blocks with his bishop in order to avoid doubling his f-pawns when White captures on f6. 10.Bxf6 White loses the bishop pair, but increases his control over the key d5-square. 10...Bxf6 11.c3 'White does not aim for a direct refutation of the variation, but plans to slowly build up the pressure, after weakening the opponent's queenside by Nc2 and a2-a4. But, as experience has shown, Black

retains considerable possibilities for counter-action thanks to his two bishops and the move ...f7-f5. Moreover, he can employ various arrangements of his forces: 1 11.0-0 12.Nc2 Bg5 is the most obvious, and this is how the theory of the variation began. But then White is able to play a2-a4 unhindered. 2 11.0-0 12.Nc2 Rb8, preventing a2-a4. But then with 13.h4 White can restrict the bishop at f6 and secure the e3-square for his c2-knight to control the outpost at d5; 3 11.Bg5 12.Nc2 Rb8, activating the bishop and preventing a2-a4 before castling.' - GM Garry Kasparov (Revolution in the 70s) 11...0-0 12.Nc2 Bg5 Black activates his bishop. The downside of this variation is that Black does nothing to prevent a4. 13.a4 White threatens to capture on b5, virtually forcing 13...bxa4. 13...bxa4 14.Rxa4 Black now has an isolated a6-pawn. 14...a5 Black almost always plays 14...a5 (placing his a-pawn on a more protected square) in order to prepare ...Rb8. His position would be more passive in other lines. 15.Bc4 White develops his last minor piece and controls the d5-square. 15...Rb8 16.b3 White places his b-pawn on a protected square. Since White has firm control over the d5-square and a superior pawn structure, the onus is on Black to prove some compensation. 16...Kh8 Black wants to play ...f5 in order to open the position for his bishop pair. This is his most aggressive plan and the only realistic attempt to fight for equality. 17.Nce3 White supports his d5-knight and hinders ...f5. 17...Ne7 Black controls the d5-square, but he is playing too slowly. Black needs to prepare ...f5 with ... g6 (in order to impede White from capturing on f5) if he wants to get any counterplay. 18.Nxe7 Black was applying pressure on d5, so White exchanges Black's e7-knight, preparing to place his other knight on d5. 18...Qxe7 19.Nd5 Qd8 20.0-0 White's position is slightly better due to his superior pawn structure and control over the d5-square. White can target Black's a5-pawn with Qe2 (Qa1 is also good) , Rfa1. If Black self-pins with ...Ra8, White is able to play b4 to increase the pressure (even if b4 doesn't win the pawn, it allows White to create a passed pawn on the queenside) .

■ **Sveshnikov: 8...b5 9.Nd5 main**

1.e4 c5 2.Nf3 Nc6 3.d4 cxd4 4.Nxd4 Nf6 5.Nc3 e5 Black gains space in the center at the cost of weakening the d5-square. This variation is known as the Sveshnikov. 6.Ndb5 White threatens Nd6+, forcing Black to play ...d6. 6. Nb3 ?! Bb4 ! 7.Bd3 d5 ! Black has at least equality and excellent center control. 6.Nf5 d5 ! Black strikes back in the center with at least equality. 6...d6 Black prevents Nd6+. 7.Bg5 White begins the fight for the d5-square. White's threat is Bxf6 followed by Nd5. Since Nd5 combined with Nb5 would threaten Nc7+ with a decisive advantage, Black is essentially forced to play 7. ..a6, kicking back White's b5-knight. 7...a6 8.Na3 b5 Black aims to force Na3 to stay out of play and threatens to fork both of White's knights with ...b4. 9.Nd5 White prevents ...b4 from being a fork and occupies the key

d5-square. He intends on consolidating this control with Bxf6 on the next move. 9...Be7 Black blocks with his bishop in order to avoid doubling his f-pawns when White captures on f6. 10.Bxf6 White loses the bishop pair, but increases his control over the key d5-square. 10...Bxf6 11.c3 'White does not aim for a direct refutation of the variation, but plans to slowly build up the pressure, after weakening the opponent's queenside by Nc2 and a2-a4. But, as experience has shown, Black retains considerable possibilities for counter-action thanks to his two bishops and the move ...f7-f5. Moreover, he can employ various arrangements of his forces: 1 11.0-0 12.Nc2 Bg5 is the most obvious, and this is how the theory of the variation began. But then White is able to play a2-a4 unhindered. 2 11.0-0 12.Nc2 Rb8, preventing a2-a4. But then with 13.h4 White can restrict the bishop at f6 and secure the e3-square for his c2-knight to control the outpost at d5; 3 11.Bg5 12.Nc2 Rb8, activating the bishop and preventing a2-a4 before castling.' - GM Garry Kasparov (Revolution in the 70s) 11...0-0 12.Nc2 Rb8 Black aims to prevent a4. On the other hand, he hasn't played ...Bg5 to activate his dark-squared bishop yet, now White can prevent this. 13.h4 White prevents Bg5. Black can't take the h4-pawn because of Qh5, and White's gained kingside space can help him fight for the initiative. White can use this h-pawn to strengthen his initiative or to prepare a positional idea: g3 with Bh3 (trading light-squared bishops in order to strengthen White's control over the d5-square) . 13...Ne7 îC€C^StartBlockQuoteîî'Immediately initiating a fierce struggle for the d5-point.' - GM Garry KasparovîîEndBlockQuoteîî 14.Nxf6+ gxf6 îC€C^StartBlockQuoteîî'A crucially important position. The weakening of his king's defenses is the only drawback for Black, who is well developed and ready to advance his d- and f-pawns. But the king - that is a serious matter !' - GM Garry KasparovîîEndBlockQuoteîî 15.Bd3 White intends to play Ne3, Qh5, and O-O-O in order to fight for the initiative. 15...d5 16.exd5 Qxd5 17.Ne3 White will follow up with Qh5 (Black usually retreats with ...Qe6, relieving the pressure on White's d3-bishop) and O-O-O with a powerful initiative (Garry Kasparov vs. Joel Lautier, Moscow Olympiad, 1994) .

■ **Sveshnikov: 8...b5 9.Nd5 main**

1.e4 c5 2.Nf3 Nc6 3.d4 cxd4 4.Nxd4 Nf6 5.Nc3 e5 Black gains space in the center at the cost of weakening the d5-square. This variation is known as the Sveshnikov. 6.Ndb5 White threatens Nd6+, forcing Black to play ...d6. 6. Nb3 ?! Bb4 ! 7.Bd3 d5 ! Black has at least equality and excellent center control. 6.Nf5 d5 ! Black strikes back in the center with at least equality. 6...d6 Black prevents Nd6+. 7.Bg5 White begins the fight for the d5-square. White's threat is Bxf6 followed by Nd5. Since Nd5 combined with Nb5 would threaten Nc7+ with a decisive advantage, Black is essentially forced to play 7. ..a6, kicking back White's b5-knight. 7...a6 8.Na3 b5 Black aims to force Na3 to stay out of play and threatens to fork both of White's knights with ...b4. 9.Nd5 White prevents ...b4 from being a fork and occupies the key d5-square. He intends on consolidating this control with Bxf6 on the next move. 9...Be7 Black blocks with his bishop in order to avoid doubling his f-pawns when White captures on f6. 10.Bxf6 White loses the bishop pair, but increases his control over the key d5-square. 10...Bxf6 11.c3 'White does not aim for a direct refutation of the variation, but plans to slowly build up the pressure, after weakening the opponent's queenside by Nc2 and a2-a4. But, as experience has shown, Black retains considerable possibilities for counter-action thanks to his two bishops and the move ...f7-f5. Moreover, he can employ various arrangements of his forces: 1 11.0-0 12.Nc2 Bg5 is the most obvious, and this is how the theory of the variation began. But then White is able to play a2-a4 unhindered. 2 11.0-0 12.Nc2 Rb8, preventing a2-a4. But then with 13.h4 White can restrict the bishop at f6 and secure the e3-square for his c2-knight to control the outpost at d5; 3 11.Bg5 12.Nc2 Rb8, activating the bishop and preventing a2-a4 before castling.' - GM Garry Kasparov (Revolution in the 70s) 11...Bg5 12.Nc2 Rb8 Since 11...0-0 12.Nc2 Rb8 allows 13.h4 ! restricting Black's dark-squared bishop, and 11...0-0 12.Nc2 Bg5 allows 13.a4 ! fighting for a queenside initiative, Black aims to neutralize both a4 and h4. 13.a4 Regardless of Black's counterefforts, a4 is still possible. 13...bxa4 14.Ncb4 This is the in-between move which makes 13.a4 work. White isn't losing his b2-pawn, and White can

capture one of Black's a-pawns soon. 14...Nxb4 Black usually exchanges this knight off in preparation for ...Bd7 (protecting his a4-pawn) . 15.Nxb4 Bd7 Black wants to hang on to his a4-pawn. If he doesn't, White will simply have a better position due to the d5-square and Black's weak a6-pawn. 16.Bxa6 White wins his pawn back. If Black plays slowly, White could easily obtain an advantage by castling, occupying the d5-square Nd5 and targetting Black's weak a4-pawn (Bd3-c2) . 16...Qa5 Black sacrifices his d6-pawn in order to fight for the initiative. His threat is ...Rxb4, so White should play energetically. 17.Qxd6 White grabs the d6-pawn, adding support to his a6-bishop and b4-knight. 17...Rb6 Black gains a tempo on White's queen and attacks White's a3-bishop. 18.Qd3 White retreats his queen to a square which protects his a6-bishop, preventing Black from playing ...Rxb4 followed by ...Qxa6. 18...Rxb4 This sacrifice is unsound. 19.cxb4 Qxb4+ 20.Kf1 White's king is safe on f1. 20...Bc6 White can play similarily against other moves. 21.h4 White gains a tempo on Black's dark-squared bishop and intends to activate his rook with Rh3. White can also aim for a queen trade with Qc4. Black has insufficient compensation for the sacrificed material.

**B33**

■ **Sveshnikov: 8...b5 9.Nd5 main**

1.e4 c5 2.Nf3 Nc6 3.d4 cxd4 4.Nxd4 Nf6 5.Nc3 e5 Black gains space in the center at the cost of weakening the d5-square. This variation is known as the Sveshnikov. 6.Ndb5 White threatens Nd6+, forcing Black to play ...d6. 6. Nb3 ?! Bb4 ! 7.Bd3 d5 ! Black has at least equality and excellent center control. 6.Nf5 d5 ! Black strikes back in the center with at least equality. 6...d6 Black prevents Nd6+. 7.Bg5 White begins the fight for the d5-square. White's threat is Bxf6 followed by Nd5. Since Nd5 combined with Nb5 would threaten Nc7+ with a decisive advantage, Black is essentially forced to play 7. ..a6, kicking back White's b5-knight. 7...a6 8.Na3 b5 Black aims to force Na3 to stay out of play and threatens to fork both of White's knights with ...b4. 9.Nd5 White prevents ...b4 from being a fork and occupies the key d5-square. He intends on consolidating this control with Bxf6 on the next move. 9...Be7 Black blocks with his bishop in order to avoid doubling his f-pawns when White captures on f6. 10.Bxf6 White loses the bishop pair, but increases his control over the key d5-square. 10...Bxf6 11.c3 'White does not aim for a direct refutation of the variation, but plans to slowly build up the pressure, after weakening the opponent's queenside by Nc2 and a2-a4. But, as experience has shown, Black retains considerable possibilities for counter-action thanks to his two bishops and the move ...f7-f5. Moreover, he can employ various arrangements of his forces: 1 11.0-0 12.Nc2 Bg5 is the most obvious, and this is how the theory of the variation began. But then White is able to play a2-a4 unhindered. 2 11.0-0 12.Nc2 Rb8, preventing a2-a4. But then with 13.h4 White can restrict the bishop at f6 and secure the e3-square

for his c2-knight to control the outpost at d5; 3 11.Bg5 12.Nc2 Rb8, activating the bishop and preventing a2-a4 before castling.' - GM Garry Kasparov (Revolution in the 70s) 11...0-0 12.Nc2 Bg5 Black activates his bishop. The downside of this variation is that Black does nothing to prevent a4. 13.a4 White threatens to capture on b5, virtually forcing 13...bxa4. 13...bxa4 14.Rxa4 Black now has an isolated a6-pawn. 14...a5 Black almost always plays 14...a5 (placing his a-pawn on a more protected square) in order to prepare ...Rb8. His position would be more passive in other lines. 15.Bc4 White develops his last minor piece and controls the d5-square. 15...Rb8 16.b3 White places his b-pawn on a protected square. Since White has firm control over the d5-square and a superior pawn structure, the onus is on Black to prove some compensation. 16...Kh8 Black wants to play ...f5 in order to open the position for his bishop pair. This is his most aggressive plan and the only realistic attempt to fight for equality. 17.Nce3 White supports his d5-knight and hinders ...f5. 17...g6 Black prepares ... f5. 18.h4 An aggressive attempt to fight for the initiative ! If White wanted to keep things calm, he could have castled on move 17 with a slight advantage, but this approach is more ambitious. White wants to open the h-file. 18...Bxh4 Black is virtually forced to accept the sacrificed pawn because White would have played h5-xg6 opening the h-file if it was declined, obtaining the initiative without losing a pawn. 19.g3 White's main idea is to open the h-file, gain kingside space with tempo (g3 and f4) , as give his a4-rook a way to enter the action (Ra2-h2 is possible after f4) . 19...Bg5 20.f4 exf4 Black forces White to recapture with his g-pawn, allowing Black to insert a check on h4 before retreating (and allows Black to play ...f5 before ...Bf6) . This prevents White from castling, not that he wanted to do that anyways. 21.gxf4 Bh4+ This check is best because it temporarily blocks the h-file, giving Black time to play ...f5. 22.Kd2 White could save a tempo with 22.Kf1 , but his king might be more exposed after Black plays 22...f5. White's king heads to the queenside, his plan is Kc1 with Ra2-h2. The position is very complicated, but from the practical point of view, White has easier play because he has the initiative.

■ **Sveshnikov: 8...b5 9.Nd5 main**

1.e4 c5 2.Nf3 Nc6 3.d4 cxd4 4.Nxd4 Nf6 5.Nc3 e5 Black gains space in the center at the cost of weakening the d5-square. This variation is known as the Sveshnikov. 6.Ndb5 White threatens Nd6+, forcing Black to play ...d6. 6. Nb3 ?! Bb4 ! 7.Bd3 d5 ! Black has at least equality and excellent center control. 6.Nf5 d5 ! Black strikes back in the center with at least equality. 6...d6 Black prevents Nd6+. 7.Bg5 White begins the fight for the d5-square. White's threat is Bxf6 followed by Nd5. Since Nd5 combined with Nb5 would threaten Nc7+ with a decisive advantage, Black is essentially forced to play 7. ..a6, kicking back White's b5-knight. 7...a6 8.Na3 b5

Black aims to force Na3 to stay out of play and threatens to fork both of White's knights with ...b4. 9.Nd5 White prevents ...b4 from being a fork and occupies the key d5-square. He intends on consolidating this control with Bxf6 on the next move. 9...Be7 Black blocks with his bishop in order to avoid doubling his f-pawns when White captures on f6. 10.Bxf6 White loses the bishop pair, but increases his control over the key d5-square. 10...Bxf6 11.c3 'White does not aim for a direct refutation of the variation, but plans to slowly build up the pressure, after weakening the opponent's queenside by Nc2 and a2-a4. But, as experience has shown, Black retains considerable possibilities for counter-action thanks to his two bishops and the move ...f7-f5. Moreover, he can employ various arrangements of his forces: 1 11.0-0 12.Nc2 Bg5 is the most obvious, and this is how the theory of the variation began. But then White is able to play a2-a4 unhindered. 2 11.0-0 12.Nc2 Rb8, preventing a2-a4. But then with 13.h4 White can restrict the bishop at f6 and secure the e3-square for his c2-knight to control the outpost at d5; 3 11.Bg5 12.Nc2 Rb8, activating the bishop and preventing a2-a4 before castling.' - GM Garry Kasparov (Revolution in the 70s) 11...0-0 12.Nc2 Rb8 Black aims to prevent a4. On the other hand, he hasn't played ...Bg5 to activate his dark-squared bishop yet, now White can prevent this. 13.h4 White prevents Bg5. Black can't take the h4-pawn because of Qh5, and White's gained kingside space can help him fight for the initiative. White can use this h-pawn to strengthen his initiative or to prepare a positional idea: g3 with Bh3 (trading light-squared bishops in order to strengthen White's control over the d5-square) . 13...Be7 Black wants to play ...Ne7 without allowing White to double his f-pawns with ...Be6. His plan is ...Be6, ...Qd7, . ..Bd8, and ...Ne7. ...Be7 is necessary for this plan because if Black's bishop was still on f6 when Black played ...Qd7 (undefending Bf6) , White would still be able to capture on f6 and double Black's f-pawns. 14.Nce3 White strengthens his d5-knight. 14...Be6 15.Qf3 White decides to fight for a kingside initiative. His king is safe in the center and can castle queenside if nessisary. White's h4-pawn could be used as a lever in the long-run, h5-h6 is an idea for after White finishes his development. 15...Qd7 16.Rd1 White makes a non-commital developing move, strengthening his control over the d5-square. White can finish his development with Be2 or Bd3 next followed by fighting for a kingside initiative. Nf5 is an idea (sometimes prepared by g4) , White sometimes follows Nf5 with Rh3-g3, White can also gain space with h5 (threatening h6) . If needed, White's king can walk to g1 without castling, White's h1 rook is well placed. Due to White's initiative, he has better chances in the resulting middlegame.

**B33**

☐ **Sicilian Theory**
■ **Sveshnikov: 8...b5 9.Nd5 main**

1.e4 c5 2.Nf3 Nc6 3.d4 cxd4 4.Nxd4 Nf6 5.Nc3 e5 Black gains space in the center at the cost of weakening the d5-square. This variation is known as the

Sveshnikov. 6.Ndb5 White threatens Nd6+, forcing Black to play ...d6. 6. Nb3 ?! Bb4 ! 7.Bd3 d5 ! Black has at least equality and excellent center control. 6.Nf5 d5 ! Black strikes back in the center with at least equality. 6...d6 Black prevents Nd6+. 7.Bg5 White begins the fight for the d5-square. White's threat is Bxf6 followed by Nd5. Since Nd5 combined with Nb5 would threaten Nc7+ with a decisive advantage, Black is essentially forced to play 7. ..a6, kicking back White's b5-knight. 7...a6 8.Na3 b5 Black aims to force Na3 to stay out of play and threatens to fork both of White's knights with ...b4. 9.Nd5 White prevents ...b4 from being a fork and occupies the key d5-square. He intends on consolidating this control with Bxf6 on the next move. 9...Be7 Black blocks with his bishop in order to avoid doubling his f-pawns when White captures on f6. 10.Bxf6 White loses the bishop pair, but increases his control over the key d5-square. 10...Bxf6 11.c3 'White does not aim for a direct refutation of the variation, but plans to slowly build up the pressure, after weakening the opponent's queenside by Nc2 and a2-a4. But, as experience has shown, Black retains considerable possibilities for counter-action thanks to his two bishops and the move ...f7-f5. Moreover, he can employ various arrangements of his forces: 1 11.0-0 12.Nc2 Bg5 is the most obvious, and this is how the theory of the variation began. But then White is able to play a2-a4 unhindered. 2 11.0-0 12.Nc2 Rb8, preventing a2-a4. But then with 13.h4 White can restrict the bishop at f6 and secure the e3-square for his c2-knight to control the outpost at d5; 3 11.Bg5 12.Nc2 Rb8, activating the bishop and preventing a2-a4 before castling.' - GM Garry Kasparov (Revolution in the 70s) 11...Bg5 12.Nc2 Rb8 Since 11...0-0 12.Nc2 Rb8 allows 13.h4 ! restricting Black's dark-squared bishop, and 11...0-0 12.Nc2 Bg5 allows 13.a4 ! fighting for a queenside initiative, Black aims to neutralize both a4 and h4. 13.a4 Regardless of Black's counterefforts, a4 is still possible. 13...bxa4 14.Ncb4 This is the in-between move which makes 13.a4 work. White isn't losing his b2-pawn, and White can capture one of Black's a-pawns soon. 14...Nxb4 Black usually exchanges this knight off in preparation for ...Bd7 (protecting his a4-pawn) . 15.Nxb4 Bd7 Black wants to hang on to his a4-pawn. If he doesn't, White will simply have a better position due to the d5-square and Black's weak a6-pawn. 16.Bxa6 White wins his pawn back. If Black plays slowly, White could easily obtain an advantage by castling, occupying the d5-square Nd5 and targetting Black's weak a4-pawn (Bd3-c2) . 16...Qa5 Black sacrifices his d6-pawn in order to fight for the initiative. His threat is ...Rxb4, so White should play energetically. 17.Qxd6 White grabs the d6-pawn, adding support to his a6-bishop and b4-knight. 17...Rb6 Black gains a tempo on White's queen and attacks White's a3-bishop. 18.Qd3 White retreats his queen to a square which protects his a6-bishop, preventing Black from playing ...Rxb4 followed by ...Qxa6. 18...Be7 îĊ€Ċ^StartBlockQuoteîî'It is obvious that Black will regain his pawn and he may even obtain a passed pawn on the a-file. But the question is whether the activity of the White pieces will prove more important.' - GM Garry KasparovîîEndBlockQuoteîî 19.Nd5 Rxb2 20.0-0 BlaĊk should prepare to castle with 20...Qc5, defending his e7-bishop. îîStartBlockQuoteîî'Nowadays many games beginîîStartBracketîî!îîEndBracketîî from this position, and Black usually, although

not without difficulty, maintains the balance.' - GM Garry KasparovîîEndBlockQuoteîî 20...Qc5 21.Rab1 White wants to trade rooks to gain control over the open file. 21...Rxb1 Black has no good alternatives. 22.Rxb1 0-0 23.Nxe7+ White trades his active knight in order to get the initiative on the 7th rank. 23.Bb5 is the mainline. White aims to trade light-squared bishops, getting a good knight vs. bad bishop minor piece battle. However, since Black doesn't have a d6-pawn to restrict his dark-squared bishop and Black's passed a-pawn can start running down the board, Black has enough counterplay for equality. Therefore, I'd like to propose an innovation with 23. Nxe7+ in order to change the nature of the position. 23...Qxe7 24.Rb7 White pins and attacks Black's light-squared bishop. 24...Rd8 25.Bc4 White has a slightly better position due to his superior piece coordination and Black's pinned bishop. White can strengthen his position with h3 (creating luft) , target Black's a-pawn with Ra7, and improve his pieces with Bd5 and Qf3. Black has to figure out how he will protect his a-pawn and unpin his bishop.

**B33**

☐ **Sveshnikov 9. Bxf6,11. Bd3**
■ **Sveshnikov 9. Bxf6,11. Bd3 #7**

1.e4 c5 2.Nf3 Nc6 3.d4 cxd4 4.Nxd4 Nf6 5.Nc3 e5 6.Ndb5 d6 7.Bg5 a6 8.Na3 b5 9.Bxf6 gxf6 10.Nd5 Bg7 11.Bd3 In this chapter we will examine the lines starting with this move. All other variations after 9. Bxf6 are covered in the previous chapter. After 11. Bd3 the game will become very sharp and tactical and Black needs to sacrifice pawns on a regular basis. In the main line of the 11. Bd3 complex we are three pawns down, but have great compensation !Of all the chapters in the whole course this is by far the one that requires move-by-move knowledge and precise calculation over the board. There is very little strategic content or 'plans' to guide you, it's just two sides engaging in a fight with clubs - and you better make sure to bring a huge club, meaning excellent preparation. It is definitely possible to work out some of the complications over the board, but this will be much more likely to be successful if you once had known them. It sounds odd, but it is true: study time is never wasted, even if you feel you have forgotten everything.The way to do it is to not try to remember as hard as you can, but rather think on your own and hope that you subconsciously piece it together. This works much better than sitting there and wrecking your brain to recall concrete lines.One important point that also needs to be mentioned: Black is the side on the attack after 11. Bd3. If White only has vague knowledge about the complications he is very likely just getting killed quickly. If you screw something up, it might be bad in computer terms... but you still have chances, given the enormous activity that Black usually enjoys. 11...Ne7 The only good move after 11. Bd3. The bishop move prevents ...f5 and we need to get rid of the d5-knight right away. 12.Nxe7 White's choice is limited, because with 11... Ne7 we had threatened to take on d5. As usual it's very desirable for Black to take on d5 when

White needs to recapture with a pawn. 12...Qxe7 After 12. .. Qxe7 White has two basic options. He can play c4, attacking the b5-pawn, or play c3, preparing to get the offside knight back into the game. White might play c4 or c3 right away or do it after castling kingside first. Castling is rather natural for both sides, so quite often this will be played quickly after a move of the c-pawn, for example 13.c4 f5 14.O-O O-O is just as common as 13.O-O O-O 14.c4 f5. I will examine 13.O-O O-O as the main line and then split the lines with 14.c4 or 14.c3. If White starts 13. c4, it will very likely transpose to 13. O-O O-O 14. c4, as the deviations are unattractive for White. 13.c3 is a different story. After 13...f5 the sequence 14.O-O O-O is possible and examined via 13. O-O O-O 14. c3 f5, but White often decides to not castle and then we will reach the only important independent line 13.c3 f5 14.Nc2 , when White's king will remain in the centre or castle queenside in some lines. Alright , let's check some moves to make things more concrete. 13.c4 After 13. c4 or 13. O-O O-O 14. c4 the game gets very sharp. After any c4 move by White in the Sveshnikov you need to decide what to do with the b-pawn. Taking on c4 is bad 99.9% of the time, as it helps the knight on a3 far too much. In some cases you can play ...b4, but here it would blunder the pawn due to 13...b4 14.Qa4+. This leads to the third option to just ignore the threat to the pawn and allow White to take on b5. This is why the c4-line is the sharpest one: White will win material and Black throws the kitchen sink to claim compensation. 13...f5 After 13...f5 White should play 14.O-O and after 14...O-O we will transpose to the mainline of this chapter - line #34 and further. Other moves are bad , ranging from dubious to downright losing ! 14.exf5 This looks bad, but there is a small point that you should know. 14...e4 With a double attack on d3 and b2. Black is winning material. 15.0-0 exd3 16.Re1 Be5 17.f4 This is worth checking. White getting the piece back on the e-file. 17...b4 This is the most convincing reply. We needed to return the pieces, but now the sad knight on a3 has no good square to go to. 18.fxe5 dxe5 19.Nb1 Qc5+ 20.Kh1 Bb7 After the coming ...Rg8 Black wins easily.

**B33**

☐ **The Sveshnikov Attacking**
■ **The Novosibirsk Variation 11.,13.c3 with 14.Nc2**

1.e4 c5 2.Nf3 Nc6 3.d4 cxd4 4.Nxd4 Nf6 5.Nc3 e5 6.Ndb5 d6 7.Bg5 a6 8.Na3 b5 9.Bxf6 This is, in my opinion, the only move that white can play to try and get an advantage. White wants to double black's pawns on the f file and secure a nice home for his knight on d5. Now, the positions that occur here are fighting and double-edged and just like white, black also has a lot of chances to play for equality but also for the advantage and the initiative. 9...gxf6 10.Nd5 Bg7 Here I preferred to play this instead of f5. I think that both moves are playable but this is the move that has caught my attention, after having all kinds of problems with sacrifices on b5. When you want to fight for the initiative, giving white two possible sacrifices after f5

is something that I'd like to avoid (on b5 with Bb5 and also Nb5) . This is the so-called Novosibirsk variation where black has nice and rich possibilities. The first idea is to not allow white sacrifices on b5 because you can your king to f8, and also this bishop will be on great diagonal after the next move, f5. Also after Bg7 you will have the extra option to play Ne7 as I will show you in the next position. 11.Bd3 This today remains the main move and does not allow f5 but allows Ne7, an exchange that is in black's favor. The knight on d5 is the best white piece, and black wants to exchange it. 11...Ne7 Black now exchanges his worst piece for the best white piece. 12.Nxe7 Qxe7 Now white has two plan as in the positional line with 9. Nd5. The ideas are the same but the position is slightly deferent. Black has a nice position. 13.c3 This is the first idea. A positional approach with the idea of Nc2 - e3. 13...f5 Again, again and again, the same strong break in the center. White wants to slowly build up the center and black cannot allow this. It is important to understand that with black you can not allow white to bring the knight to e3 before you push the pawn on f5, because then you will not be able to do this. For example: 14.Nc2 Qb7 Remember here that if white does not castle that this is a very strong move because now the g2 pawn is not protected and white cannot take on f5. After Qb7 black reaches equality and can hope for more. 15.Qf3 0-0 16.Ne3 f4 17.Nd5 Be6 18.g4 a5 With an equal position where all three results are possible. I would only slightly prefer black.

**B33**

☐ **The Sveshnikov Attacking**
■ **The Novosibirsk Variation 11.,12.exf5**

1.e4 c5 2.Nf3 Nc6 3.d4 cxd4 4.Nxd4 Nf6 5.Nc3 e5 6.Ndb5 d6 7.Bg5 a6 8.Na3 b5 9.Bxf6 This is, in my opinion, the only move that white can play to try and get an advantage. White wants to double black's pawns on the f file and secure a nice home for his knight on d5. Now, the positions that occur here are fighting and double-edged and just like white, black also has a lot of chances to play for equality but also for the advantage and the initiative. 9...gxf6 10.Nd5 Bg7 Here I preferred to play this instead of f5. I think that both moves are playable but this is the move that has caught my attention, after having all kinds of problems with sacrifices on b5. When you want to fight for the initiative, giving white two possible sacrifices after f5 is something that I'd like to avoid (on b5 with Bb5 and also Nb5) . This is the so-called Novosibirsk variation where black has nice and rich possibilities. The first idea is to not allow white sacrifices on b5 because you can your king to f8, and also this bishop will be on great diagonal after the next move, f5. Also after Bg7 you will have the extra option to play Ne7 as I will show you in the next position. 11.c3 This here is also one of the main ideas for white. Now as in the line with the positional 9. Nd5 white has a plan with Nc2 - Ne3 and then a4. But here you can see that white does not control the central square e4 well, because black can push f5 immediately and

open the position in the center. That is exactly what black needs to do here, now ! 11...f5 And again. Black wants to open position when his bishop pair will compensate for his pawn structure disadvantage. 12.exf5 Bxf5 13.Nc2 0-0 Now white will have two options, but black is fine after both of them. 14.a4 Ne7 15.Bd3 e4 16.Be2 Be6 17.Nxe7+ Qxe7 18.0-0 Bb3 19.axb5 axb5 20.Qd2 Bxc2 21.Qxc2 b4 22.Rxa8 Rxa8 23.cxb4 d5 After a lot of play, another equal position. Here the possibilities are enormous, but they are all reduced to fundamental ideas. Fight for the initiative, open the position and break in the center with d5. If black manages to do that he will be fine or even better.

**B33**

☐ **The Sveshnikov Attacking**
■ **The Novosibirsk Variation 11.,12.exf5 and 13.g3**

1.e4 c5 2.Nf3 Nc6 3.d4 cxd4 4.Nxd4 Nf6 5.Nc3 e5 6.Ndb5 d6 7.Bg5 a6 8.Na3 b5 9.Bxf6 This is, in my opinion, the only move that white can play to try and get an advantage. White wants to double black's pawns on the f file and secure a nice home for his knight on d5. Now, the positions that occur here are fighting and double-edged and just like white, black also has a lot of chances to play for equality but also for the advantage and the initiative. 9...gxf6 10.Nd5 Bg7 Here I preferred to play this instead of f5. I think that both moves are playable but this is the move that has caught my attention, after having all kinds of problems with sacrifices on b5. When you want to fight for the initiative, giving white two possible sacrifices after f5 is something that I'd like to avoid (on b5 with Bb5 and also Nb5) . This is the so-called Novosibirsk variation where black has nice and rich possibilities. The first idea is to not allow white sacrifices on b5 because you can your king to f8, and also this bishop will be on great diagonal after the next move, f5. Also after Bg7 you will have the extra option to play Ne7 as I will show you in the next position. 11.c3 This here is also one of the main ideas for white. Now as in the line with the positional 9. Nd5 white has a plan with Nc2 - Ne3 and then a4. But here you can see that white does not control the central square e4 well, because black can push f5 immediately and open the position in the center. That is exactly what black needs to do here, now ! 11...f5 And again. Black wants to open position when his bishop pair will compensate for his pawn structure disadvantage. 12.exf5 Bxf5 13.g3 This is a slow move that allows Be4. 13...Be4 14.f3 Bxd5 15.Qxd5 Ne7 16.Qd3 d5 Although the position is objectively equal; the white king will not be so safe and black has an advantage in the center. I prefer black here.

**B33**

☐ **The Sveshnikov Attacking**
■ **The Novosibirsk Variation 11.,14.0-0.**

1.e4 c5 2.Nf3 Nc6 3.d4 cxd4 4.Nxd4 Nf6 5.Nc3 e5 6.Ndb5 d6 7.Bg5 a6 8.Na3 b5 9.Bxf6 This is, in my opinion, the only move that white can play to try and get an advantage. White wants to double black's pawns on the f file and secure a nice home for his knight on d5. Now, the positions that occur here are fighting and double-edged and just like white, black also has a lot of chances to play for equality but also for the advantage and the initiative. 9...gxf6 10.Nd5 Bg7 Here I preferred to play this instead of f5. I think that both moves are playable but this is the move that has caught my attention, after having all kinds of problems with sacrifices on b5. When you want to fight for the initiative, giving white two possible sacrifices after f5 is something that I'd like to avoid (on b5 with Bb5 and also Nb5) . This is the so-called Novosibirsk variation where black has nice and rich possibilities. The first idea is to not allow white sacrifices on b5 because you can your king to f8, and also this bishop will be on great diagonal after the next move, f5. Also after Bg7 you will have the extra option to play Ne7 as I will show you in the next position. 11.Bd3 This today remains the main move and does not allow f5 but allows Ne7, an exchange that is in black's favor. The knight on d5 is the best white piece, and black wants to exchange it. 11...Ne7 Black now exchanges his worst piece for the best white piece. 12.Nxe7 Qxe7 Now white has two plan as in the positional line with 9. Nd5. The ideas are the same but the position is slightly deferent. Black has a nice position. 13.c4 This is the more aggressive approach. White immediately wants to attack the exposed black pawns on the queenside. 13...f5 14.0-0 0-0 Black moves his king to a safe place on the kingside and now white has a few possible continuations. Let's go through all of them. 15.Qe2 This queen move is harmless and black has a nice game after few easy moves. 15...Bb7 16.Rad1 Rad8 17.cxb5 If white once again takes this extra pawn, black's activity and the bishop pair are more than enough for at least an equal game. 17...axb5 18.Nxb5 fxe4 19.Bxe4 d5 20.Bf5 Qg5 21.Qf3 h6 22.Bh3 Qe7 We have again a typical position. The extra pawn for white, but the initiative is on the black side. Black has the bishop pair and a great pawn center. When black takes one of the pawns on the queenside, and if white does not manage to exchange at least one black bishop, black will be better. Even with both pawns on a2 and b2, it is hard for white to do anything. The black position is in my view better here.

1.e4 c5 2.Nf3 Nc6 3.d4 cxd4 4.Nxd4 Nf6 5.Nc3 e5 6.Ndb5 d6 7.Bg5 a6 8.Na3 b5 9.Bxf6 This is, in my opinion, the only move that white can play to try and get an advantage. White wants to double black's pawns on the f file and secure a nice home for his knight on d5. Now, the positions that occur here are fighting and double-edged and just like white, black also has a lot of chances to play for equality but also for the advantage and the initiative. 9...gxf6 10.Nd5 Bg7 Here I preferred to play this instead of f5. I think that both moves are playable but this is the move that

has caught my attention, after having all kinds of problems with sacrifices on b5. When you want to fight for the initiative, giving white two possible sacrifices after f5 is something that I'd like to avoid (on b5 with Bb5 and also Nb5) . This is the so-called Novosibirsk variation where black has nice and rich possibilities. The first idea is to not allow white sacrifices on b5 because you can your king to f8, and also this bishop will be on great diagonal after the next move, f5. Also after Bg7 you will have the extra option to play Ne7 as I will show you in the next position. 11.Bd3 This today remains the main move and does not allow f5 but allows Ne7, an exchange that is in black's favor. The knight on d5 is the best white piece, and black wants to exchange it. 11...Ne7 Black now exchanges his worst piece for the best white piece. 12.Nxe7 Qxe7 Now white has two plan as in the positional line with 9. Nd5. The ideas are the same but the position is slightly deferent. Black has a nice position. 13.c4 This is the more aggressive approach. White immediately wants to attack the exposed black pawns on the queenside. 13...f5 14.0-0 0-0 Black moves his king to a safe place on the kingside and now white has a few possible continuations. Let's go through all of them. 15.Qf3 d5 Again, the same idea. White sacrifices a pawn for the initiative. The positions that come now after this, are double-edged and great for anyone who loves to play aggressive chess. 16.cxd5 fxe4 17.Bxe4 Rb8 Before black pushes f5 he need to remove the a8 rook because of d6. 18.Rac1 f5 19.Rxc8 Rbxc8 20.Bxf5 Qg5 21.Be6+ Kh8 white has two pawns for the exchange but all black pieces are very active and black is in my opinion just slightly better.

☐ **The Sveshnikov Attacking**
■ **The Novosibirsk Variation 11.,14.0-0.**

1.e4 c5 2.Nf3 Nc6 3.d4 cxd4 4.Nxd4 Nf6 5.Nc3 e5 6.Ndb5 d6 7.Bg5 a6 8.Na3 b5 9.Bxf6 This is, in my opinion, the only move that white can play to try and get an advantage. White wants to double black's pawns on the f file and secure a nice home for his knight on d5. Now, the positions that occur here are fighting and double-edged and just like white, black also has a lot of chances to play for equality but also for the advantage and the initiative. 9...gxf6 10.Nd5 Bg7 Here I preferred to play this instead of f5. I think that both moves are playable but this is the move that has caught my attention, after having all kinds of problems with sacrifices on b5. When you want to fight for the initiative, giving white two possible sacrifices after f5 is something that I'd like to avoid (on b5 with Bb5 and also Nb5) . This is the so-called Novosibirsk variation where black has nice and rich possibilities. The first idea is to not allow white sacrifices on b5 because you can your king to f8, and also this bishop will be on great diagonal after the next move, f5. Also after Bg7 you will have the extra option to play Ne7 as I will show you in the next position. 11.Bd3 This today remains the main move and does not allow f5 but allows Ne7, an

exchange that is in black's favor. The knight on d5 is the best white piece, and black wants to exchange it. 11...Ne7 Black now exchanges his worst piece for the best white piece. 12.Nxe7 Qxe7 Now white has two plan as in the positional line with 9. Nd5. The ideas are the same but the position is slightly deferent. Black has a nice position. 13.c4 This is the more aggressive approach. White immediately wants to attack the exposed black pawns on the queenside. 13...f5 14.0-0 0-0 Black moves his king to a safe place on the kingside and now white has a few possible continuations. Let's go through all of them. 15.Qf3 d5 Again, the same idea. White sacrifices a pawn for the initiative. The positions that come now after this, are double-edged and great for anyone who loves to play aggressive chess. 16.cxd5 fxe4 17.Bxe4 Rb8 Before black pushes f5 he need to remove the a8 rook because of d6. 18.Rad1 Rb6 The star move. This rook is perfectly placed on b6 where it control the d6 square and can easily be switched through the 6th rank to the kingside. Every single black piece is better placed than white and black has a nice position and clear compensation for the sacrificed pawn. 19.Qd3 Qd7 Do not be afraid of white capturing on h7. This pawn does not have enormous value and you will get an important tempo for an attack on the white king with Rh6. 20.Bxh7+ Kh8 21.d6 White attempts to prevent the black pieces an attack on the kingside. But now this pawn on d6 will be lost. 21...Rd8 22.Qb1 f5 With an equal position. Black will have more than enough compensation for the sacrificed pawn. For instance: 23.Bg6 Qe6 24.d7 Qxg6 25.dxc8Q Rxc8 26.Nc2 f4 27.Nb4 Qxb1 28.Rxb1 Rd6 29.Rfd1 Rcd8 30.Rxd6 Rxd6 31.Kf1 a5 32.Nc2 Rd2 Black has more than enough compensation here. The potential maneuver Bf8 - c5 and e4 give him a great position.

**B33**

☐ **The Sveshnikov Attacking**
■ **The Novosibirsk Variation 11.,14.0-0.**

1.e4 c5 2.Nf3 Nc6 3.d4 cxd4 4.Nxd4 Nf6 5.Nc3 e5 6.Ndb5 d6 7.Bg5 a6 8.Na3 b5 9.Bxf6 gxf6 10.Nd5 Bg7 11.Bd3 Ne7 12.Nxe7 Qxe7 13.c4 f5 14.0-0 0-0 15.Qh5 Rb8 16.exf5 e4 17.Rae1 Bb7 18.Kh1 Here white's idea is to remove the king and protect him from checks and potentially create the threat of Bxe4 with the idea of f2-f3. 18...bxc4 I have analyzed this game for a week now. This line was brought to my attention due to a great comment by student Feingeist. Now, in the original game that has been played, black (GM Sibenik) played Rfe8. I don't like that move. First because white exerts pressure in the center and black needs to play aggressively in order not to lose active play, and second because white is preparing an assault on the kingside with move Kh1. Now black immediately needs to play on the other side. Ths Rook is nicely placed on b8 and can give black nice counterplay there. 19.Bxe4 Bxe4 20.f3 Rfc8 The second part of a black's plan. Now even the other rook comes into play on the queenside. It is very important to answer the

opponent's activity on the kingside, with play on the queenside. 21.Rxe4 Qf6 22.Rxc4 Qxb2 And the position is equal. Black managed to get more play on the queenside than white on the kingside. For a moment white is a pawn up but the knight is on a bad square and the a2 pawn will fall in the next move. The position is balanced.

**B33**

☐ **The Sveshnikov Attacking**
■ **The Novosibirsk Variation 11.,12.exf5**

1.e4 c5 2.Nf3 Nc6 3.d4 cxd4 4.Nxd4 Nf6 5.Nc3 e5 6.Ndb5 d6 7.Bg5 a6 8.Na3 b5 9.Bxf6 This is, in my opinion, the only move that white can play to try and get an advantage. White wants to double black's pawns on the f file and secure a nice home for his knight on d5. Now, the positions that occur here are fighting and double-edged and just like white, black also has a lot of chances to play for equality but also for the advantage and the initiative. 9...gxf6 10.Nd5 Bg7 Here I preferred to play this instead of f5. I think that both moves are playable but this is the move that has caught my attention, after having all kinds of problems with sacrifices on b5. When you want to fight for the initiative, giving white two possible sacrifices after f5 is something that I'd like to avoid (on b5 with Bb5 and also Nb5) . This is the so-called Novosibirsk variation where black has nice and rich possibilities. The first idea is to not allow white sacrifices on b5 because you can your king to f8, and also this bishop will be on great diagonal after the next move, f5. Also after Bg7 you will have the extra option to play Ne7 as I will show you in the next position. 11.c3 This here is also one of the main ideas for white. Now as in the line with the positional 9. Nd5 white has a plan with Nc2 - Ne3 and then a4. But here you can see that white does not control the central square e4 well, because black can push f5 immediately and open the position in the center. That is exactly what black needs to do here, now ! 11...f5 And again. Black wants to open position when his bishop pair will compensate for his pawn structure disadvantage. 12.exf5 Bxf5 13.Nc2 0-0 Now white will have two options, but black is fine after both of them. 14.a4 Ne7 15.Nce3 Be6 16.Be2 Nxd5 17.Nxd5 bxa4 18.Rxa4 a5 19.0-0 Rb8 20.b3 Kh8 21.g3 f5
Black's position is fine. The white b3 and c3 pawns compensate for black's a5 weakness. The bishop pair and strong central pawns on e5 and f5 give black nice play.

1.e4 c5 2.Nf3 Nc6 3.d4 cxd4 4.Nxd4 Nf6 5.Nc3 e5 6.Ndb5 d6 7.Bg5 a6 8.Na3 b5 9.Bxf6 This is, in my opinion, the only move that white can play to try and get an advantage. White wants to double black's pawns on the f file and secure a nice home for his knight on d5. Now, the positions that occur here are fighting and double-edged and just like white, black also has a lot of chances to play for equality but also for the advantage and the initiative. 9...gxf6 10.Nd5 Bg7 Here I preferred to play this instead of f5. I think that both moves are playable but this is the move that has caught my attention, after having all kinds of problems with sacrifices on b5. When you want to fight for the initiative, giving white two possible sacrifices after f5 is something that I'd like to avoid (on b5 with Bb5 and also Nb5) . This is the so-called Novosibirsk variation where black has nice and rich possibilities. The first idea is to not allow white sacrifices on b5 because you can your king to f8, and also this bishop will be on great diagonal after the next move, f5. Also after Bg7 you will have the extra option to play Ne7 as I will show you in the next position. 11.Bd3 This today remains the main move and does not allow f5 but allows Ne7, an exchange that is in black's favor. The knight on d5 is the best white piece, and black wants to exchange it. 11...Ne7 Black now exchanges his worst piece for the best white piece. 12.Nxe7 Qxe7 Now white has two plan as in the positional line with 9. Nd5. The ideas are the same but the position is slightly deferent. Black has a nice position. 13.c3 This is the first idea. A positional approach with the idea of Nc2 - e3. 13...f5 Again, again and again, the same strong break in the center. White wants to slowly build up the center and black cannot allow this. It is important to understand that with black you can not allow white to bring the knight to e3 before you push the pawn on f5, because then you will not be able to do this. For example: 14.0-0 0-0 15.Nc2 d5 In my opinion this is the best idea and move from black. White's idea with Nc2 and Ne3 is a positional one, and black needs to be fast. 16.exf5 e4 17.Be2 Rd8 18.Nd4 Qf6 And again we get a very messy position. White is a pawn up and black has nice central pawns and the bishop pair. The position is close to equal.

**B33**

☐ **The Sveshnikov Attacking**
■ **The Novosibirsk Variation 11.,14.0-0.**

1.e4 c5 2.Nf3 Nc6 3.d4 cxd4 4.Nxd4 Nf6 5.Nc3 e5 6.Ndb5 d6 7.Bg5 a6 8.Na3 b5 9.Bxf6 This is, in my opinion, the only move that white can play to try and get an advantage. White wants to double black's pawns on the f file and secure a nice home for his knight on d5. Now, the positions that occur here are fighting and double-edged and just like white, black also has a lot of chances to play for equality

but also for the advantage and the initiative. 9...gxf6 10.Nd5 Bg7 Here I preferred to play this instead of f5. I think that both moves are playable but this is the move that has caught my attention, after having all kinds of problems with sacrifices on b5. Nd5. The ideas are the same but the position is slightly deferent. Black has a nice position. 13.c4 This is the more aggressive approach. White immediately wants to attack the exposed black pawns on the queenside. 13...f5 14.0-0 0-0 Black moves his king to a safe place on the kingside and now white has a few possible continuations. Let's go through all of them. 15.Qh5 With this move white wants to control the f5 square rather than taking with the pawn on b5. 15...Rb8 16.exf5 e4 17.Rae1 Bb7 This is the critical variation where white has a couple of options. 18.Nc2 With this move, white wants to get the knight into play as soon as possible. Black needs to organize a break in the center fast in order to get a nice position. 18...bxc4 Bc4 and d5 here arrive right on time. After that the position will be equal. 19.Bxc4 d5 20.Bxd5 Bxd5 21.f6 Qxf6 22.Qxd5 Rxb2 23.Ne3 Qe6 24.Qxe6 fxe6 This position is somehow similar with the one before with slight differences. The queens are not on the board and that is in black's favor. Now it is important to understand that if black manages to take the white a2 pawn and defend his pawn on a6, he will have a position that he can try to play for a win. Both black pawns on the e-file are meaningless and black can sacrifice them for the white a-pawn

**B33**

☐ **The Sveshnikov Attacking**
■ **The Novosibirsk Variation 11.,13.c3 with 14.Nc2**

1.e4 c5 2.Nf3 Nc6 3.d4 cxd4 4.Nxd4 Nf6 5.Nc3 e5 6.Ndb5 d6 7.Bg5 a6 8.Na3 b5 9.Bxf6 This is, in my opinion, the only move that white can play to try and get an advantage. White wants to double black's pawns on the f file and secure a nice home for his knight on d5. Now, the positions that occur here are fighting and double-edged and just like white, black also has a lot of chances to play for equality but also for the advantage and the initiative. 9...gxf6 10.Nd5 Bg7 Here I preferred to play this instead of f5. I think that both moves are playable but this is the move that has caught my attention, after having all kinds of problems with sacrifices on b5.

When you want to fight for the initiative, giving white two possible sacrifices after f5 is something that I'd like to avoid (on b5 with Bb5 and also Nb5) . This is the so-called Novosibirsk variation where black has nice and rich possibilities. The first idea is to not allow white sacrifices on b5 because you can your king to f8, and also this bishop will be on great diagonal after the next move, f5. Also after Bg7 you will have the extra option to play Ne7 as I will show you in the next position. 11.Bd3 This today remains the main move and does not allow f5 but allows Ne7, an exchange that is in black's favor. The knight on d5 is the best white piece, and black wants to exchange it. 11...Ne7 Black now exchanges his worst piece for the best white piece. 12.Nxe7 Qxe7 Now white has two plan as in the positional line with 9. Nd5. The ideas are the same but the position is slightly deferent. Black has a nice position. 13.c3 This is the first idea. A positional approach with the idea of Nc2 - e3. 13...f5 Again, again and again, the same strong break in the center. White wants to slowly build up the center and black cannot allow this. It is important to understand that with black you can not allow white to bring the knight to e3 before you push the pawn on f5, because then you will not be able to do this. For example: 14.Nc2 Qb7 Remember here that if white does not castle that this is a very strong move because now the g2 pawn is not protected and white cannot take on f5. After Qb7 black reaches equality and can hope for more. 15.Qf3 0-0 16.0-0 d5 And now as in many another lines black once again breaks with this strong move d5. 17.exd5 This is the wrong capture after which black gets a big advantage. 17...e4 18.Bxe4 fxe4 19.Qxe4 Qd7 20.Rad1 Bb7 White gets three pawns for a piece but in this open position the black bishop pair is much stronger than three white pawns.

**B33**

Also after Bg7 you will have the extra option to play Ne7 as I will show you in the next position. 11.Bd3
This today remains the main move and does not allow f5 but allows Ne7, an exchange that is in black's favor. The knight on d5 is the best white piece, and black wants to exchange it. 11...Ne7 Black now exchanges his worst piece for the best white piece. 12.Nxe7 Qxe7 Now white has two plan as in the positional line with 9. Nd5. The ideas are the same but the position is slightly deferent. Black has a nice position. 13.c4 This is the more aggressive approach. White immediately wants to attack the exposed black pawns on the queenside. 13...f5 14.0-0 0-0 Black moves his king to a safe place on the kingside and now white has a few possible continuations. Let's go through all of them. 15.Qe2 This queen move is harmless and black has a nice game after few easy moves. 15...Bb7 16.Rad1 Rad8 17.f3 fxe4 18.fxe4 f5 19.cxb5 axb5 20.Nxb5 fxe4 21.Rxf8+ Bxf8 22.Bxe4 d5 Here is a slightly better position for white than the one before, because here he manages to open the position of the black king. Now with an extra pawn and an open position of the black king I believe the position is equal.

**B33**

☐ **The Sveshnikov Attacking**
■ **The Novosibirsk Variation 11.,14.0-0.**

1.e4 c5 2.Nf3 Nc6 3.d4 cxd4 4.Nxd4 Nf6 5.Nc3 e5 6.Ndb5 d6 7.Bg5 a6 8.Na3 b5 9.Bxf6 This is, in my opinion, the only move that white can play to try and get an advantage. White wants to double black's pawns on the f file and secure a nice home for his knight on d5. Now, the positions that occur here are fighting and double-edged and just like white, black also has a lot of chances to play for equality but also for the advantage and the initiative. 9...gxf6 10.Nd5 Bg7 Here I preferred to play this instead of f5. I think that both moves are playable but this is the move that has caught my attention, after having all kinds of problems with sacrifices on b5. When you want to fight for the initiative, giving white two possible sacrifices after f5 is something that I'd like to avoid (on b5 with Bb5 and also Nb5) . This is the so-called Novosibirsk variation where black has nice and rich possibilities. The first idea is to not allow white sacrifices on b5 because you can your king to f8, and also this bishop will be on great diagonal after the next move, f5. Also after Bg7 you will have the extra option to play Ne7 as I will show you in the next position. 11.Bd3 This today remains the main move and does not allow f5 but allows Ne7, an exchange that is in black's favor. The knight on d5 is the best white piece, and black wants to exchange it. 11...Ne7 Black now exchanges his worst piece for the best white piece. 12.Nxe7 Qxe7 Now white has two plan as in the positional line with 9. Nd5. The ideas are the same but the position is slightly deferent. Black has a nice position. 13.c4 This is the more aggressive approach. White immediately wants to attack the exposed black pawns on the queenside. 13...f5 14.0-0 0-0 Black moves his king to a safe place on the kingside and now white has a few possible continuations. Let's go through all of them. 15.Qf3 d5 Again, the same idea. White sacrifices a pawn for the initiative. The positions that come now after this, are double-edged and great for anyone who loves to play aggressive chess. 16.cxd5 fxe4 17.Bxe4 Rb8 Before black pushes f5 he need to remove the a8 rook because of d6. 18.Rfd1 Qg5 There are more good-looking moves but I prefer this one. Now black wants to break with f5. 19.d6 Bg4 20.Qg3 Qf4 21.f3 Be6 22.Nc2 Qxg3 23.hxg3 Rfd8 And as in the line before, with next move Rb6 black will take the extra pawn and the position will be about equal.

**B33**

☐ **The Sveshnikov Attacking**
■ **The Novosibirsk Variation 11.,13.Bd3**

1.e4 c5 2.Nf3 Nc6 3.d4 cxd4 4.Nxd4 Nf6 5.Nc3 e5 6.Ndb5 d6 7.Bg5 a6 8.Na3 b5 9.Bxf6 This is, in my opinion, the only move that white can play to try and get an advantage. White wants to double black's pawns on the f file and secure a

nice home for his knight on d5. Now, the positions that occur here are fighting and double-edged and just like white, black also has a lot of chances to play for equality but also for the advantage and the initiative. 9...gxf6 10.Nd5 Bg7 Here I preferred to play this instead of f5. I think that both moves are playable but this is the move that has caught my attention, after having all kinds of problems with sacrifices on b5. When you want to fight for the initiative, giving white two possible sacrifices after f5 is something that I'd like to avoid (on b5 with Bb5 and also Nb5) . This is the so-called Novosibirsk variation where black has nice and rich possibilities. The first idea is to not allow white sacrifices on b5 because you can your king to f8, and also this bishop will be on great diagonal after the next move, f5. Also after Bg7 you will have the extra option to play Ne7 as I will show you in the next position. 11.c4 This is the main alternative to 11. Bd3. Now white wants to immediately play for the advantage, attacking the exposed black pawns on the queenside. In many lines Black sacrifices a pawn or even two for the open position with two bishops and the initiative. 11...f5 You do not want to be afraid of the white capture on b5. Much more important is to open the position where the bishop pair will be a big advantage for black. 12.cxb5 Nd4 And again, sacrificing the pawn and bringing another piece into play. Black has a lot of play for a pawn. 13.Bd3 This is the most critical move. White does not want to take pawns but to consolidate the position. 13...0-0 I preferred this move over Be6. I believe it is better to castle first, and not show white where we want to develop the bishop. 14.Nc2 fxe4 15.Bxe4 Rb8 16.0-0 Rxb5 Black takes the pawn and attacks b2. Here you need to remember the next few things: The knight on d5 is not so stable, so with Be6 you will attack it as the rook on b5 will be helping him. The rook on b5 also attacks the b2 pawn. Black also has the bishop pair, so you do not need to be afraid of the open the position arising with f5 and e4, if white allows you that. 17.Nxd4 exd4 18.b4 Bb7 19.Qb3 Qg5 Here you can see that black has the initiative. Move after move, black attacks and white defends his piece on d5. 20.f4 Bxd5 21.fxg5 Bxb3 22.axb3 d5 23.Bf3 d3 24.Rad1 Bd4+ 25.Kh1 Be3 26.Rxd3 d4
And the position is equal.

1.e4 c5 2.Nf3 Nc6 3.d4 cxd4 4.Nxd4 Nf6 5.Nc3 e5 6.Ndb5 d6 7.Bg5 a6 8.Na3 b5 9.Bxf6 This is, in my opinion, the only move that white can play to try and get an advantage. White wants to double black's pawns on the f file and secure a nice home for his knight on d5. Now, the positions that occur here are fighting and double-edged and just like white, black also has a lot of chances to play for equality but also for the advantage and the initiative. 9...gxf6 10.Nd5 Bg7 Here I preferred to play this instead of f5. I think that both moves are playable but this is the move that has caught my attention, after having all kinds of problems with sacrifices on b5.

When you want to fight for the initiative, giving white two possible sacrifices after f5 is something that I'd like to avoid (on b5 with Bb5 and also Nb5) . This is the so-called Novosibirsk variation where black has nice and rich possibilities. The first idea is to not allow white sacrifices on b5 because you can your king to f8, and also this bishop will be on great diagonal after the next move, f5. Also after Bg7 you will have the extra option to play Ne7 as I will show you in the next position. 11.Bd3 This today remains the main move and does not allow f5 but allows Ne7, an exchange that is in black's favor. The knight on d5 is the best white piece, and black wants to exchange it. 11...Ne7 Black now exchanges his worst piece for the best white piece. 12.Nxe7 Qxe7 Now white has two plan as in the positional line with 9. Nd5. The ideas are the same but the position is slightly deferent. Black has a nice position. 13.c4 This is the more aggressive approach. White immediately wants to attack the exposed black pawns on the queenside. 13...f5 14.0-0 0-0 Black moves his king to a safe place on the kingside and now white has a few possible continuations. Let's go through all of them. 15.Qf3 d5 Again, the same idea. White sacrifices a pawn for the initiative. The positions that come now after this, are double-edged and great for anyone who loves to play aggressive chess. 16.cxd5 fxe4 17.Bxe4 Rb8 Before black pushes f5 he need to remove the a8 rook because of d6. 18.Rad1 Rb6 The star move. This rook is perfectly placed on b6 where it control the d6 square and can easily be switched through the 6th rank to the kingside. Every single black piece is better placed than white and black has a nice position and clear compensation for the sacrificed pawn. 19.Qd3 Qd7 Do not be afraid of white capturing on h7. This pawn does not have enormous value and you will get an important tempo for an attack on the white king with Rh6. 20.Bxh7+ Kh8 21.Qe3 Rh6 22.Bb1 Qd6 23.Nc2 e4 24.g3 Bh3 25.Rfe1 f5 I have analyzed this position for a long time and have come to the conclusion that black has more than enough compensation to sacrifice two pawns. The problem for white here is in the fact that he does not have any kind of active play and all the black pieces attack the white king on g1. Black has enormous pressure.

Nd5. The ideas are the same but the position is slightly deferent. Black has a nice position. 13.c4 This is the more aggressive approach. White immediately wants to attack the exposed black pawns on the queenside. 13...f5 14.0-0 0-0 Black moves his king to a safe place on the kingside and now white has a few possible continuations. Let's go through all of them. 15.Qh5 With this move white wants to control the f5 square rather than taking with the pawn on b5. 15...Rb8 16.exf5 e4 17.Rae1 Bb7 This is the critical variation where white has a couple of options. 18.f3 This is not good here because it allows d5 which is a typical break after which black is better. 18...d5 19.fxe4 dxc4 20.Bc2 Bd4+ 21.Kh1 f6 Black is much better. All of white's pieces are now in the wrong positions. The rook does not do anything on the f and e file, the bishop is badly placed on c2 because it attacks it's own pawn on e4 and the knight is still on a3 completely out of play.

□ **The Scheveningens**
■ **Marc Esserman Vs John Fedoro**

Perhaps more than any other Morra variation, the main line contains themes that will directly enrich your Open Sicilian play. When my coach, IM Blocker, first taught me the Morra, he placed particular emphasis on the main line and the fight for the d5-square, using it (and the entire opening) as a stepping stone to more fully appreciate the vast Open Sicilian. He never anticipated that I would become such a Morra maniac. Sorry, Calvin, I apologize, but in the following game I hope to vindicate your teaching philosophy. Observe the striking similarities between this game, which I leave largely unannotated for your quiet study, and the ideas we have just absorbed. Marc Esserman - John Fedorowicz, US Chess League, Internet 2011 1.e4 c5 2.Nf3 Nc6 3.d4 cxd4 4.Nxd4 Nf6 5.Nc3 e5 6.Ndb5 d6 7.Bg5 a6 8.Na3 b5 9.Nd5 Be7 10.Bxf6 Bxf6 11.c3 0-0 12.Nc2 Bg5 13.a4 bxa4 14.Rxa4 a5 15.Bc4 Rb8 16.Ra2 Kh8 17.Nce3 g6 18.h4 Bxh4 19.g3 Bg5 20.f4 exf4 21.gxf4 Bh4+ 22.Kf1 f5 23.b4 fxe4 24.Rah2 g5 25.Ke2 Rb7 26.b5 Ne5 27.fxe5 dxe5 28.Qb1 Qd6 28...Rf4 !? 29.Nxf4 exf4 30.Qxe4 Re7 31.Rxh4 ! gxh4 31...Rxe4 32.Rxh7# 32. ■ **Wolff,Patrick Vs Bronste**

1.e4 c5 2.Nf3 Nc6 3.d4 cxd4 4.Nxd4 Nf6 5.Nc3 e5 6.Ndb5 d6 7.Bg5 a6 8.Na3 b5 9.Bxf6 gxf6 10.Nd5 f5 11.Bd3 Be6 12.0-0 Bg7 13.Qh5 f4 14.c4 bxc4 15.Bxc4 0-0 16.Rac1 Rb8 17.b3 Bxd5 18.Bxd5 Nb4 19.Rfd1 Nxa2 20.Rc6 Qe7 21.Nc4 Nb4 22.Rxd6 Nxd5 23.R6xd5 Rxb3 Evaluate the situation. White is a pawn down but can help himself to the one on e5. That would, however, solve Black's main problem of the bad bishop on g7. An aspect which basically has to be taken into account. Frequently more can be achieved on the weakened squares of the other colour. After 23... Rb5 the position would in no way be clear. A good moment to be keeping an eye open for alternatives. Knights need outposts! This statement has been attributed to the first official chess World Champion, Wilhelm Steinitz (1836-1900, World Champion 1886-1894) . What he meant are the squares on which the short-range piece can find solid support from its own troops, usually pawns. Exchanging it or driving it away ought to be difficult for the opponent or only possible under unfavourable circumstances. The search for such a square in the position in the diagram quickly leads us to f5, and the game continuation suddenly appears easy to understand. No doubt Patrick Wolff, twice US-Champion, had also looked into the capture on e5. So it is important first of all to spot the sensible moves, called in chess jargon 'candidate moves', and to work through them in order of priority: firstly those options which require a forced reply, such as capturing or giving check. One then turns to the alternatives, takes them quickly into account, compares them one with the other, rejects some options, goes more deeply into others and finally selects one of them. A diffuse process, which is not always well structured even in the case of top grandmasters. Alexander Kotov (1913-1981) , one of the best players in the world during the post-war era and a representative of the much-praised Russian school of chess, suggested another way of proceeding: look for the candidate moves, calculate the first one out till you get a result, go to the second and calculate, go to the third, etc. At the end you choose the move with the best evaluation. Like that there are no cross-links and no jumping about between individual candidate moves. That appears to be a desirable plan which saves time, however it is not a very human way of going about things. One frequently does not discover till candidate move three tactical possibilities or positional subtleties which require a change in or a re-evaluation of the first two moves. Nobody, except perhaps a computer, can calculate like that ! But many club players fail before they get there because of a certain tunnel vision. One discovers an impressive move and on doing so forgets the rest of the world. If the result of the calculation is satisfactory, the move is made. Thus, presented in exaggerated fashion, candidate move one can win us a pawn, candidate move two a piece and candidate move three is mate. But if numbers two and three are not considered because we are euphoric about the result of move one, many good possibilities will remain unexamined. But back to our exercise. The correct

evaluation of the significance of an outpost means that the gain of material resulting from the first candidate move can quickly fade into the background. 24.Nd6 h6 With the clear intention of continuing with the relieving 25... Qg5. 25.h4 Prevents Black's plan and removes from the position a possible back-rank mate (an important concern with major pieces on the board) . 25...Rfb8 The decisive error. The only way to defend the kingside was with 25...Qf6 26.Nf5 Re8. 26.Nf5 Qf8 26...Qf6 27.Rd6. 27.Qg4 This threatens not only to take the pawn on h6, but also the immediately decisive 28. Rd8. 27...Rb1 28.Nxh6+ Kh7 29.Nf5 Bf6 30.Rxb1 Rxb1+ 31.Kh2 Rb7 Black prevents White's idea of hitting on the f7-pawn with Rd7, Qh5 and Nh6, but there is already no longer a way to save the game. 32.Rd6 Bg7 And we now have the motif we already know: 33.Rd8 1-0.

**B33**

☐ **The Sveshnikov Attacking**
■ **The Novosibirsk Variation 11.,14.0-0.**

1.e4 c5 2.Nf3 Nc6 3.d4 cxd4 4.Nxd4 Nf6 5.Nc3 e5 6.Ndb5 d6 7.Bg5 a6 8.Na3 b5 9.Bxf6 This is, in my opinion, the only move that white can play to try and get an advantage. White wants to double black's pawns on the f file and secure a nice home for his knight on d5. Now, the positions that occur here are fighting and double-edged and just like white, black also has a lot of chances to play for equality but also for the advantage and the initiative. 9...gxf6 10.Nd5 Bg7 Here I preferred to play this instead of f5. I think that both moves are playable but this is the move that has caught my attention, after having all kinds of problems with sacrifices on b5. When you want to fight for the initiative, giving white two possible sacrifices after f5 is something that I'd like to avoid (on b5 with Bb5 and also Nb5) . This is the so-called Novosibirsk variation where black has nice and rich possibilities. The first idea is to not allow white sacrifices on b5 because you can your king to f8, and also this bishop will be on great diagonal after the next move, f5. Also after Bg7 you will have the extra option to play Ne7 as I will show you in the next position. 11.Bd3 This today remains the main move and does not allow f5 but allows Ne7, an exchange that is in black's favor. The knight on d5 is the best white piece, and black wants to exchange it. 11...Ne7 Black now exchanges his worst piece for the best white piece. 12.Nxe7 Qxe7 Now white has two plan as in the positional line with 9. Nd5. The ideas are the same but the position is slightly deferent. Black has a nice position. 13.c4 This is the more aggressive approach. White immediately wants to attack the exposed black pawns on the queenside. 13...f5 14.0-0 0-0 Black moves his king to a safe place on the kingside and now white has a few possible continuations. Let's go through all of them. 15.Qh5 With this move white wants to control the f5 square rather than taking with the pawn on b5. 15...Rb8 16.exf5 e4 17.Rae1 Bb7 This is the critical variation where white has a couple of options. 18.Qg4 This is the best white try in the whole system. This is a nice move from white

with a clear idea of taking the e4 pawn. Black needs to be careful not to get into a bad position. 18...Kh8 First, black wants to get the king out of the g file but also potentially later the rook can use it. 19.Bxe4 Bxb2 20.Re3 This is the last white try. White brings all of his pieces in to play and now black needs to be precise. 20...Bxe4 21.Rxe4 Qf6 Here the position is a total mess. Everything is hanging and it is very hard to evaluate the position. I analyze this position with strong chess engines and they judge that the position is slightly better for white, because for now white is a pawn up. As I analyze further, the black position becomes closer to equal. This position needs to be tested in practice but I believe in black here. For example: 22.Nc2 bxc4 23.Rxc4 d5 24.Rb4 Bc3 25.Rxb8 Rxb8 26.Rd1 d4 27.Qe4 Kg7 28.g3 Rd8 It is hard for white to improve the position of the kingside and the strong black d pawn with his nicely developed pieces secure him equal chances. Nevertheless, this position needs further testing in practice.

**B33**

☐ **The Sveshnikov Attacking**
■ **The Novosibirsk Variation**

1.e4 c5 2.Nf3 Nc6 3.d4 cxd4 4.Nxd4 Nf6 5.Nc3 e5 6.Ndb5 d6 7.Bg5 a6 8.Na3 b5 9.Bxf6 gxf6 10.Nd5 Bg7 11.g3 This is white's positional try to play against the Novosibirsk Variation. With the development of the light-squared bishop on g2, white wants to secure his king and get a solid position. The problem with this move is the fact that this bishop belongs on the f1 - a6 diagonal in order to play aggressively on the queenside against the exposed black pawn structure due to a6 and b5. After this move white gets a solid position but without an advantage. 11...Ne7 I believe this is a more natural move than f5 immediately. If white brings the bishop to g2 and doesn't open the diagonal a8 - h1 immediately. Also, with this move black wants to exchange white's best piece, the knight on d5, for his worst piece, a knight on c6. 12.Nxe7 Qxe7 13.Bg2 d5 The key move here that gives black a great position. With this temporary pawn sacrifice, black gets a great position. 14.Qxd5 Rb8 15.c3 0-0 And black has great compensation for the sacrificed pawn. White can't castle on the queenside because of Be6, and he will lose his pawn on a2 and in other variations with the bishop pair and the misplaced white minor pieces, black has great compensation. White is without a clear plan, and it is hard for him to handle this position. 16.0-0 This is the most natural move after which black get tremendous play. 16...Rd8 17.Qb3 Be6 18.Qc2 b4 And black gets a few tempi and incredible activity for just a pawn. I prefer black here.

Kg7 16.b4 Bb6 17.Rad1* would have been much more incisive *)* 15...Kg7 16.Kh1?! Be6 17.Qd2 Rhd8 18.Nc3 Bd4! .;

**C)** 9.-- and now: ]

[ 8...a6 9.0-0 h6! *(*Van Wely's choice, wisely preventing Bg5 since *9...Be6 10.Bg5 h6 11.Bxf6 Qxf6 12.Nd5 Qd8 13.c3* gave White an edge in S.Nikolov-D. Pantaleev, Primorsko 1970 *)*

**A)** 10.Nh5 Nxh5 11.Bxh5 0-0 , when White might prefer the more challenging and unclear 12.Kh1!? *( 12.Nd5 Qh4! 13.Bf3 Nd4 14.Ne3 b5* was quite comfortable for Black in A.Rodriguez-L.Van Wely, Minneapolis 2005 *)* 12...Qh4 13.f4 .;

**B)** 10.Nd5 Nxd5 11.exd5 Ne7 12.Kh1!? 0-0 13.c3 *( 13.f4 f5 14.Bh5* , preventing ...Ng6, also deserves consideration *)* 13...f5 14.f4 Ng6 15.Nh5 is fairly unbalanced, but roughly equal: White has managed to hold Black up on the kingside but will not find it so easy to advance on the queenside, as Black's dark-squared bishop is outside his pawn chain.;

**C)** 10.-- and then: ]

**9.Bg5! Qb6?!** This fails to convince.

[ Black might have tried 9...h4!? , although after 10.Nh5 h3 11.g3 Kf8 12.Qd2 White can safely castle on either side, may look to advance with f4 and retains the advantage. ]

**10.Bxf6!**

[ Presumably Richter had underestimated this and had only really focused on 10.0-0 h4 11.Nh5 Nxh5 12.Nd5 Qxb2 which offers a promising exchange sacrifice, although White can retain a pull by declining the rook with 13.Bxh5 Rb8 14.Qf3 . ]

**10...Bxf2+ 11.Kf1 Bxg3 12.hxg3 gxf6 13.Qxd6** DANGEROUS WEAPON! Direct and effective play from Teschner has netted a clear advantage, since Black's weaknesses on the kingside are far more vulnerable than White's. **13...Nd4**

[ Black might have preferred to cover the d5-square, but 13...Be6 14.Nd5 Bxd5 15.Qxf6 Rg8 16.exd5 Nd4 17.Qxe5+ Kf8 18.Bd3 Re8 19.Qxh5 Qf6+ 20.Kg1

would also have been far from ideal for him. ]
[ Perhaps relatively best was 13...Ne7 , aiming to grovel a pawn down in an ending, such as after 14.Nb5 Qxd6 15.Nxd6+ Kf8 16.Rxh5 Rxh5 17.Bxh5 Be6 18.Rd1 b6 19.Ke2 . ]
**14.Qxb6 axb6 15.Nd5** Black's structure is a complete mess here and Teschner soon picked up a pawn which he went on to convert: **15...Nxe2 16.Kxe2 Ra4 17.Nxf6+ Ke7 18.Nd5+ Kd6 19.Ke3 Bg4 20.Nf6 Rc8 21.Nxg4 hxg4 22.Rh6+ Ke7 23.c3 Rcc4 24.Rxb6 Rxe4+ 25.Kd3 f5 26.Rh1 Ra5 27.Rh7+ Kd8 28.Rbxb7 Rd5+ 29.Kc2 Kc8 30.Ra7 Kb8 31.Rhb7+ Kc8 32.Rf7 Kb8 33.Rae7 Re2+ 34.Kb3 Kc8 35.Rxf5 Kd8 36.Rg7 Rd7 37.Rxd7+ Kxd7 38.Rg5 Ke6 39.a4 e4 40.Rxg4 Kf5 41.Rg8 Rxg2 42.a5 Rg1 43.Kc4 Rd1 44.Re8 Rd6 45.b4 Rc6+ 46.Kb3**
**1-0**

**B33**

□ **Sveshnikov Variation Chelyab**
■ **Chelyabinsk Variation Main,L**

1.e4 c5 2.Nf3 Nc6 3.d4 cxd4 4.Nxd4 Nf6 Black puts immediate pressure on White's e4-pawn. 5.Nc3 e5 Black finally puts a pawn in the center. The downside of this move is that it weakens the d6-square significantly and creates a backward pawn on the d-file. Black will have some dynamic compensation however. 6.Ndb5 White eyes the weak d6-square. 6...d6 Black does not want to allow White to occupy the d6-square with his knight. 7.Bg5 White is fighting for the d5-square. Bg5 indirectly pressures that square because the knight on f6 is a key defender of d5. By nullifying the knights control of d5, White will be able to occupy the square himself in the future. 7...a6 Black attacks the knight 8.Na3 b5 Black continues to play very dynamically, but he is lagging behind in development. 9.Nd5 This one of two main lines, the other being 9. Bxf6. I have chosen this move however because there has been a fairly recent theoretical development in this line that promises White a very nice position. 9...Be7 Black prepares to castle and breaks the pin on the f6-knight. 10.Bxf6 White is giving up his bishop pair for a greater cause: absolute control of the d5-square. 10...Bxf6 11.c4 This is the new theoretical development that I mentioned earlier and is quickly becoming the new main line as White has excellent results in this position. The old main line is 11. c3 followed by Nc2 and Nce3. However, that promises Black good chances. 11...b4 This move is practically forced. 12.Nc2 White retreats his knight. 12...0-0 White should not grab the pawn on b5. 13.g3 White prepares to fianchetto his bishop. 13...Bg5 14.Bg2 Qa5 15.0-0 Black is trying to activate his pieces, but White has an excellent knight on d5 that is not so easy to get rid of without making positional concessions. 15...Qc5 16.b3 White cements the c4-pawn. 16...a5 17.Qd3 Now White can continue in logical

fashion by piling up on Black's backward d6-pawn. White seems to have all the chances in this position.

■ **Chelyabinsk Variation Be6**

1.e4 c5 2.Nf3 Nc6 3.d4 cxd4 4.Nxd4 Nf6 Black puts immediate pressure on White's e4-pawn. 5.Nc3 e5 Black finally puts a pawn in the center. The downside of this move is that it weakens the d6-square significantly and creates a backward pawn on the d-file. Black will have some dynamic compensation however. 6.Ndb5 White eyes the weak d6-square. 6...d6 Black does not want to allow White to occupy the d6-square with his knight. 7.Bg5 White is fighting for the d5-square. Bg5 indirectly pressures that square because the knight on f6 is a key defender of d5. By nullifying the knights control of d5, White will be able to occupy the square himself in the future. 7...a6 Black attacks the knight 8.Na3 Be6 This is Black's much less common alternative. 9.Nc4 White takes advantage of the fact that Black has not played b5, which controls the c4-square. 9...Rc8 10.Bxf6 White increases his control over d5. 10...gxf6 This is the first way that Black can recapture the pawn. 11.Nd5 White immediately grabs the d5-square. 11...Bxd5 12.Qxd5 White still has firm control over d5. Now White has two main options. 12...Nb4 Black plays agressively, hitting the queen and the pawn on c2. 13.Qd2 Everything is defended. 13...d5 A critical move that frees Black's position at the price of a pawn. 14.exd5 Nxc2+ An interesting tactical idea, but White emerges with an advantage. 15.Qxc2 Bb4+ 16.Kd1 White's king appears to be in trouble but the reality is that he is doing fine. The computer evaluates this position as +0.6 for White. 16...b5 Black wants to win back the knight. 17.Qe4 A nice, centralizing move. 17...bxc4 18.Bxc4 Qb6 19.Ke2 White has a nice material advantage and his king is surprisingly safe.

■ **Chelyabinsk Variation Main,L**

1.e4 c5 2.Nf3 Nc6 3.d4 cxd4 4.Nxd4 Nf6 Black puts immediate pressure on White's e4-pawn. 5.Nc3 e5 Black finally puts a pawn in the center. The downside of this move is that it weakens the d6-square significantly and creates a backward pawn on the d-file. Black will have some dynamic compensation however. 6.Ndb5 White eyes the weak d6-square. 6...d6 Black does not want to allow White to occupy the d6-square with his knight. 7.Bg5 White is fighting for the d5-square. Bg5 indirectly pressures that square because the knight on f6 is a key defender of d5. By nullifying the knights control of d5, White will be able to occupy the square himself in

the future. 7...a6 Black attacks the knight 8.Na3 b5 Black continues to play very dynamically, but he is lagging behind in development. 9.Nd5 This one of two main lines, the other being 9. Bxf6. I have chosen this move however because there has been a fairly recent theoretical development in this line that promises White a very nice position. 9...Be7 Black prepares to castle and breaks the pin on the f6-knight. 10.Bxf6 White is giving up his bishop pair for a greater cause: absolute control of the d5-square. 10...Bxf6 11.c4 This is the new theoretical development that I mentioned earlier and is quickly becoming the new main line as White has excellent results in this position. The old main line is 11. c3 followed by Nc2 and Nce3. However, that promises Black good chances. 11...b4 This move is practically forced. 12.Nc2 White retreats his knight. 12...a5 Black supports his pawn on b5. This is the main move, but Black certainly has other options. 13.g3 It is important to remember to fianchetto the light-squared bishop in this line. 13...0-0 14.Bg2 Bg5 15.0-0 Ne7 Black wants to get rid of the d5-knight. This is the main line. 16.Nce3 Bxe3 Black wants to get rid of White's dominating knights. 17.Nxe3 Be6 18.Qd3 Qc7 19.Rac1 White is beginning to pile up on Black's weaknesses. 19...Rac8 20.Rfd1 Rfd8 21.b3 Nc6 22.Rd2 A nice move, preparing to triple on the d-file. Black will have to worry about his d6-pawn for the rest of the game.

☐ **The Sveshnikov Attacking**
■ **The Novosibirsk Variation 11.,12.exf5**

1.e4 c5 2.Nf3 Nc6 3.d4 cxd4 4.Nxd4 Nf6 5.Nc3 e5 6.Ndb5 d6 7.Bg5 a6 8.Na3 b5 9.Bxf6 This is, in my opinion, the only move that white can play to try and get an advantage. White wants to double black's pawns on the f file and secure a nice home for his knight on d5. Now, the positions that occur here are fighting and double-edged and just like white, black also has a lot of chances to play for equality but also for the advantage and the initiative. 9...gxf6 10.Nd5 Bg7 Here I preferred to play this instead of f5. I think that both moves are playable but this is the move that has caught my attention, after having all kinds of problems with sacrifices on b5. When you want to fight for the initiative, giving white two possible sacrifices after f5 is something that I'd like to avoid (on b5 with Bb5 and also Nb5) . This is the so-called Novosibirsk variation where black has nice and rich possibilities. The first idea is to not allow white sacrifices on b5 because you can your king to f8, and also this bishop will be on great diagonal after the next move, f5. Also after Bg7 you will have the extra option to play Ne7 as I will show you in the next position. 11.c3 This here is also one of the main ideas for white. Now as in the line with the positional 9. Nd5 white has a plan with Nc2 - Ne3 and then a4. But here you can see that white does not control the central square e4 well, because black can push f5 immediately and open the position in the center. That is exactly what black needs to do here, now ! 11...f5 And again. Black wants to open position when his bishop pair will compensate for his pawn structure disadvantage. 12.exf5 Bxf5 13.Nc2 0-0 Now white will have two options, but black is fine after both of them. 14.Nce3 Bd7 I prefer this move over Be6 and Bg6 because here the bishop will not be hanging and white will not have a chance to exchange it. 15.Bd3 f5 Again and again, typical ideas and moves from black ! 16.0-0 e4 17.Bc2 f4 Here the position is very double-edged but black has the nice initiative here. Also white needs to sacrifice a piece here. For instance: 18.Bxe4 Qe8 19.Qd3 fxe3 20.Bxh7+ Kh8 And here white gets three pawns for the piece but all of black's pieces are on great squares and I will always play black here.

■ **The Novosibirsk Variation 11.,14.0-0.**

1.e4 c5 2.Nf3 Nc6 3.d4 cxd4 4.Nxd4 Nf6 5.Nc3 e5 6.Ndb5 d6 7.Bg5 a6 8.Na3 b5 9.Bxf6 This is, in my opinion, the only move that white can play to try and get an advantage. White wants to double black's pawns on the f file and secure a nice home for his knight on d5. Now, the positions that occur here are fighting and double-edged and just like white, black also has a lot of chances to play for equality but also for the advantage and the initiative. 9...gxf6 10.Nd5 Bg7 Here I preferred to play this instead of f5. I think that both moves are playable but this is the move that has caught my attention, after having all kinds of problems with sacrifices on b5. When you want to fight for the initiative, giving white two possible sacrifices after f5 is something that I'd like to avoid (on b5 with Bb5 and also Nb5) . This is the so-called Novosibirsk variation where black has nice and rich possibilities. The first idea is to not allow white sacrifices on b5 because you can your king to f8, and also this bishop will be on great diagonal after the next move, f5. Also after Bg7 you will have the extra option to play Ne7 as I will show you in the next position. 11.Bd3 This today remains the main move and does not allow f5 but allows Ne7, an exchange that is in black's favor. The knight on d5 is the best white piece, and black wants to exchange it. 11...Ne7 Black now exchanges his worst piece for the best white piece. 12.Nxe7 Qxe7 Now white has two plan as in the positional line with 9. Nd5. The ideas are the same but the position is slightly deferent. Black has a nice position. 13.c4 This is the more aggressive approach. White immediately wants to attack the exposed black pawns on the queenside. 13...f5 14.0-0 0-0 Black moves his king to a safe place on the kingside and now white has a few possible continuations. Let's go through all of them. 15.Qh5 With this move white wants to control the f5 square rather than taking with the pawn on b5. 15...Rb8 16.exf5 e4 17.Rae1 Bb7 This is the critical variation where white has a couple of options. 18.Qg4 This is the best white try in the whole system. This is a nice move from white with a clear idea of taking the e4 pawn. Black needs to be careful not to get into a bad position. 18...Kh8 First, black wants to get the king out of the g file but also potentially later the rook can use it. 19.Bxe4 Bxb2 20.Nc2 Rg8 21.Bd5 Bxd5 22.cxd5 Rxg4 23.Rxe7 Ra4 With an equal position. Black manages to activate the rook and now has the possibility to start advancing with his a and b pawns. On the other hand, white will try to push his d pawn. The position is complicated but black is not worse. Objectively position is equal but with lot of play.

**B33**

☐ **The Sveshnikov Attacking**
■ **The Novosibirsk Variation 11.,14.0-0.**

1.e4 c5 2.Nf3 Nc6 3.d4 cxd4 4.Nxd4 Nf6 5.Nc3 e5 6.Ndb5 d6 7.Bg5 a6 8.Na3 b5 9.Bxf6 This is, in my opinion, the only move that white can play to try and get an advantage. White wants to double black's pawns on the f file and secure a nice home for his knight on d5. Now, the positions that occur here are fighting and double-edged and just like white, black also has a lot of chances to play for equality but also for the advantage and the initiative. 9...gxf6 10.Nd5 Bg7 Here I preferred to play this instead of f5. I think that both moves are playable but this is the move that has caught my attention, after having all kinds of problems with sacrifices on b5. When you want to fight for the initiative, giving white two possible sacrifices after f5 is something that I'd like to avoid (on b5 with Bb5 and also Nb5) . This is the so-called Novosibirsk variation where black has nice and rich possibilities. The first idea is to not allow white sacrifices on b5 because you can your king to f8, and also this bishop will be on great diagonal after the next move, f5. Also after Bg7 you will have the extra option to play Ne7 as I will show you in the next position. 11.Bd3 This today remains the main move and does not allow f5 but allows Ne7, an exchange that is in black's favor. The knight on d5 is the best white piece, and black wants to exchange it. 11...Ne7 Black now exchanges his worst piece for the best white piece. 12.Nxe7 Qxe7 Now white has two plan as in the positional line with 9. Nd5. The ideas are the same but the position is slightly deferent. Black has a nice position. 13.c4 This is the more aggressive approach. White immediately wants to attack the exposed black pawns on the queenside. 13...f5 14.0-0 0-0 Black moves his king to a safe place on the kingside and now white has a few possible continuations. Let's go through all of them. 15.Qh5 With this move white wants to control the f5 square rather than taking with the pawn on b5. 15...Rb8 16.exf5 e4 17.Rae1 Bb7 This is the critical variation where white has a couple of options. 18.b3 This is a much better try than 18. f3. 18...bxc4 19.bxc4 Rfe8 20.Nc2 Bc6 21.a3 a5 22.Be2 Rb2 23.Ne3 Bd4 With once again the position where black sacrifices the pawn for the initiative. Here white manages not to give black many options to attack his king, but the rook on f1 is not playing and the a3 pawn is almost lost. So black will return the pawn and with the two bishops if manages to defend his a pawn, he can try to play for more than a draw.

Also after Bg7 you will have the extra option to play Ne7 as I will show you in the next position. 11.Bd3 This today remains the main move and does not allow f5 but allows Ne7, an exchange that is in black's favor. The knight on d5 is the best white piece, and black wants to exchange it. 11...Ne7 Black now exchanges his worst piece for the best white piece. 12.Nxe7 Qxe7 Now white has two plan as in the positional line with 9. Nd5. The ideas are the same but the position is slightly deferent. Black has a nice position. 13.c4 This is the more aggressive approach. White immediately wants to attack the exposed black pawns on the queenside. 13...f5 14.0-0 0-0 Black moves his king to a safe place on the kingside and now white has a few possible continuations. Let's go through all of them. 15.Re1 This move just like Qf3 achieves nothing. Black easily gets a nice position. 15...fxe4 16.Bxe4 Rb8 17.cxb5 axb5 18.Nxb5 This is a bad move. Black is now better. 18...Rxb5 19.Bxh7+ Kxh7 20.Qd3+ e4 21.Qxb5 Be5 The bishop pair offers incredible attacking chances, securing black the better position.

**B33**

☐ **The Sveshnikov Attacking**
■ **The Novosibirsk Variation 11.,13.c3 with 14.Nc2**

1.e4 c5 2.Nf3 Nc6 3.d4 cxd4 4.Nxd4 Nf6 5.Nc3 e5 6.Ndb5 d6 7.Bg5 a6 8.Na3 b5 9.Bxf6 This is, in my opinion, the only move that white can play to try and get an advantage. White wants to double black's pawns on the f file and secure a nice home for his knight on d5. Now, the positions that occur here are fighting and double-edged and just like white, black also has a lot of chances to play for equality but also for the advantage and the initiative. 9...gxf6 10.Nd5 Bg7 Here I preferred to play this instead of f5. I think that both moves are playable but this is the move that has caught my attention, after having all kinds of problems with sacrifices on b5. When you want to fight for the initiative, giving white two possible sacrifices after f5 is something that I'd like to avoid (on b5 with Bb5 and also Nb5) . This is the so-called Novosibirsk variation where black has nice and rich possibilities. The first idea is to not allow white sacrifices on b5 because you can your king to f8, and also this bishop will be on great diagonal after the next move, f5. Also after Bg7 you will have the extra option to play Ne7 as I will show you in the next position. 11.Bd3 This today remains the main move and does not allow f5 but allows Ne7, an exchange that is in black's favor. The knight on d5 is the best white piece, and black wants to exchange it. 11...Ne7 Black now exchanges his worst piece for the best white piece. 12.Nxe7 Qxe7 Now white has two plan as in the positional line with 9. Nd5. The ideas are the same but the position is slightly deferent. Black has a nice position. 13.c3 This is the first idea. A positional approach with the idea of Nc2 - e3.

13...f5 Again, again and again, the same strong break in the center. White wants to slowly build up the center and black cannot allow this. It is important to understand that with black you can not allow white to bring the knight to e3 before you push the pawn on f5, because then you will not be able to do this. For example: 14.Nc2 Qb7 Remember here that if white does not castle that this is a very strong move because now the g2 pawn is not protected and white cannot take on f5. After Qb7 black reaches equality and can hope for more. 15.f3 f4 Now black gets space on the kingside and also has another pawn to break on f5. 16.Nb4 0-0 17.0-0 a5 18.Nd5 Be6 19.Kh1 b4 20.c4 Qa7 21.Qe2 Qc5 And the position is similar to many others, objectively equal, but I would just slightly prefer black because of the bishop pair and a little more space.

**B33**

☐ **The Sveshnikov Attacking**
■ **The Novosibirsk Variation 11.,14.0-0.**

1.e4 c5 2.Nf3 Nc6 3.d4 cxd4 4.Nxd4 Nf6 5.Nc3 e5 6.Ndb5 d6 7.Bg5 a6 8.Na3 b5 9.Bxf6 This is, in my opinion, the only move that white can play to try and get an advantage. White wants to double black's pawns on the f file and secure a nice home for his knight on d5. Now, the positions that occur here are fighting and double-edged and just like white, black also has a lot of chances to play for equality but also for the advantage and the initiative. 9...gxf6 10.Nd5 Bg7 Here I preferred to play this instead of f5. I think that both moves are playable but this is the move that has caught my attention, after having all kinds of problems with sacrifices on b5. When you want to fight for the initiative, giving white two possible sacrifices after f5 is something that I'd like to avoid (on b5 with Bb5 and also Nb5) . This is the so-called Novosibirsk variation where black has nice and rich possibilities. The first idea is to not allow white sacrifices on b5 because you can your king to f8, and also this bishop will be on great diagonal after the next move, f5. The first idea is to not allow white sacrifices on b5 because you can your king to f8, and also this bishop will be on great diagonal after the next move, f5. Also after Bg7 you will have the extra option to play Ne7 as I will show you in the next position. 11.c4 This is the main alternative to 11. Bd3. Now white wants to immediately play for the advantage, attacking the exposed black pawns on the queenside. In many lines Black sacrifices a pawn or even two for the open position with two bishops and the initiative. 11...f5 You do not want to be afraid of the white capture on b5. Much more important is to open the position where the bishop pair will be a big advantage for black. 12.cxb5 Nd4 And again, sacrificing the pawn and bringing another piece into play. Black has a lot of play for a pawn. 13.Bd3 This is the most critical move. White does not want to take pawns but to consolidate the position. 13...0-0 I preferred this move over Be6. I believe it is better to castle first, and not show white where we want to develop the bishop. 14.Nc2 fxe4 15.Bxe4 Rb8 16.Qh5 h6 17.b6 Bb7 18.Nxd4 exd4 19.0-0 Re8 20.Qf3 Qg5 21.Nf6+ Qxf6 22.Bxb7 Qxf3 23.Bxf3 Rxb6 And after complications the position is once again equal.

**B33**

☐ **Warm Up**
■ **William Rubino Vs Serge Stan**

1.e4 c5 2.Nf3 Nc6 3.d4 cxd4 4.Nxd4 Nf6 5.Nc3 e5 6.Ndb5 d6 7.Bg5 a6 8.Na3 b5 9.Bxf6 gxf6 10.Nd5 f5 11.exf5 Bxf5 12.c3 Bg7 13.Nc2 0-0 14.Nce3 Be6 15.Bd3 Ne7 16.Be4 Nxd5 17.Bxd5 Rb8 18.0-0 Qe7 19.Qb3 a5 20.Rfd1 b4 21.c4 Bh6 22.Qd3 Bxe3 23.Qxe3 Rbc8 24.f4 Bxd5 25.Rxd5 Rxc4 26.fxe5 dxe5 27.Rxe5 Qd8 In the game, Black didn't spot the checkmate tactic and played 27...Qc7. White won by 28.Qg5+ Kh8 29.Qf6+ Kg8 30.Rg5# (Pillsbury's mate) .

Instead, it is key to understand that the tactic above doesn't work as long as Black covers f6 with the Queen. 27...Qd8 is the most accurate way to do that.

**B33**

☐ **The Sveshnikov Positional**
■ **Positional main line 10.Bxf6,13.a4**

1.e4 c5 2.Nf3 Nc6 3.d4 cxd4 4.Nxd4 Nf6 5.Nc3 e5 This is the starting position of the Sveshnikov. Black plays aggressively and wants to fight for the initiative right from the start. This gives him enough time for quick development and a safe position for the king. But by playing e5 black accepts a backward pawn on d6 and a potentially weak square on d5. This is one of the most uncompromising openings in chess. With this opening, you do not need to fight for equality and instead can play for initiative right from the start. Today this is the opening of choice for many leading players in the world. Ex-world champion Vladimir Kramnik plays it with great success. Here I will try to explain not only the forced lines but also the often complex strategy that is behind the ideas. 6.Ndb5 This is white's positional approach. With this move, white wants to force black to play d6 without time to develop the dark-squared bishop and then he can occupy the weak square on d5. Alternatives will be explained in the other chapters. Black has a few nice ideas here that will give him great positions. 6...d6 7.Bg5 This is the second part of white's idea. After taking the knight on f6, the square on d5 will be even weaker. The drawback is in the fact that black will have the two bishops and great activity. 7...a6 Black needs to bring back this knight to a3 and after that seize the initiative and space on the queenside with b5. 8.Na3 b5 9.Nd5 This is one of two main lines or positions in Sveshnikov Sicilian. White now takes over control over the d5 square. In return, black gets the bishop pair and a lot of activity. 9. Nd5 is a more positional line where white will not double Black's f pawns. Because of this, the position will be much more closed, and there will be plenty of time for improving the positions of pieces and pawns. Mainly white will try to play on the queenside and try to take advantage of the potentially exposed pawns on a6 and b5. Black will have a very solid pawn structure on the kingside and the bishop pair. This will be enough for equality. The positions that arise after this move are very rich and playable for both sides. Once again you can see how simply you can play with the Sveshnikov. The positions you get will be equal but far from a draw ! 9...Be7 10.Bxf6 With the capture on f6 white gets control over d5. 10...Bxf6 11.c3 After this move, it is clear what white wants. First, he wants to secure the d5 square, then to transfer his worst piece, the knight on a3 to the more active square on c2, and then e3 or even b4. Only then he wants to start activity on the queenside. This is a much more solid way to play than the illogical 10. Ne7. It is important to remember something White now has a great looking knight on d5. This knight is strong on d5, and you need to be careful, especially so when you try to exchange it. Now there are two possible ways to exchange it, one for the knight and the second for the light-

squared bishop. In most of the situations, you want to exchange it for the knight on c6 because if you look at the position, this knight is black's worst piece on the board. Nc6 cannot jump to any vital square and also if you can exchange it and keep the bishop pair it will be perfect for black. Also, I want to tell you a secret, the white knight on d5 is a great piece but does not do anything in the attack for now, and black can easily play around this knight as I will show you in the next lines. The pawn structure in the center is for the time being slightly better for white, but the weak d6 pawn is hard to get at because the white knight on d5 protects it and on the d file white does not have the possibility to attack it. So you do not need to be afraid of losing it. If white tries to do it, you can easily protect the pawn with Be7. Also when one day you exchange the knight on d5, and white takes back with the e4 pawn, black will have a perfect pawn structure. 11...Bg5 Black has here a few promising lines, but I will recommend this one. As I mentioned in the previous move, white's idea is to play on the queenside but only after he stabilizes the position in the center. Because of this, black has to first get his bishop on the most active square possible, and then decide what he wants to do next. I like the bishop pair and here with Bg5 black's bishop will stay alive. I think that there is no need to rush with castles because the black king is safe in the center, and when he needs to he can castle in just one move. Another great thing about this move is that now the bishop controls the e3 square, where white was planning to place his knight from a3 via c2. 12.Nc2 Rb8 After 12. Nc2 white prepares himself for activity on the queenside. The next white move will be a4, with an attack on black's queenside pawns. Now black has a few options, but I will recommend the one with Rb8. Black supports his pawn on b5, moves the rook from the a file and after the exchange on a4, the rook may be able to take the vital pawn on b2. 13.a4 The only move that gives white some chance for play. White has a secure center and a great knight on d5 but if you look a little bit more carefully you will see that this knight does not do anything special and because of him white cannot attack the weak pawn on d6. Also, the position will open up, and then black bishop pair can play a big role. So, white needs to open lines on the queenside because this is the only play that he has. One more thing that I believe is important here, is the move order. You see that position in the center is closed, and the black king stays in the center without any possibility for white to attack him. Because of this white also needs to wait before castling and first needs to improve the position on the queenside. If white does not move this pawn to a4 now, he will never be able to do it later. 13...bxa4 Now black cannot hold on b5 and needs to take on a4. Now it is also clear why the black rook is nicely placed on the b file because the pawn on b2 is hanging. 14.Ncb4 Bd7 Here you need to remember a few precise moves. Bd7 is one of them. You need to defend Nc6 and control the c6 square. 15.Bxa6 Nxb4 A second important move which exchanges one minor piece and allows the bishop to defend the pawn on a4. 16.cxb4 This is the alternative to 16. Nb4. It is also a playable move that will lead to an equal position. 16...0-0 17.0-0 Bc6 18.Rxa4 Here white sacrifices the exchange just to keep this passed pawn on b4. Now you need to objectively evaluate the position as equal and play according to

this. Just remember here that the key is to bring the bishop to b6 or the c5 square via d8 and black will be fine. 18...Bxa4 19.Qxa4 Kh8 20.b5 Qd7 21.Qc4 Bd8 22.Qc6 Qa7 23.Qxd6 Re8 24.Qc6 Bb6 And once again, black transfers his dark-squared bishop to a great diagonal where he can control the b6 break. White has one pawn for the exchange (because the doubled b pawns are worth one pawn only) and the position is equal.

**B33**

☐ **The Sveshnikov - 7th move alt**
■ **The Sicilian Sveshnikov 7.a4,13.0-0.**

1.e4 c5 2.Nf3 Nc6 3.d4 cxd4 4.Nxd4 Nf6 5.Nc3 e5 6.Ndb5 This is the only move that makes sense here. With this move, white gets a knight on the most active square and does not allow black to develop the dark square bishop before he plays d6. White needs to be careful not to allow black to play d5. Here d5 is not possible because white controls it with the pawn, the knight, and the queen. 6...d6 This is the only move for now. Black needs to play d6 and not to allow white to play Nd6. After this, black will try to play a6 and b5 and expand on the queenside, removing white's knight from the b5 square. 7.a4 This is the third alternative to 7. Bg5. With this move, white wants to prevent black from playing a6 - b5. But now white loses control over the d5 square. With next sequence of moves, Black takes over the initiative. Also, it's very important to understand why 7. Bg5 is the only good move for white. On any other alternative black can easily take over control over the position. 7...a6 8.Na3 Bg4 Great move. With this precise move, Black takes over control over the light squares and the vital d5 square. 9.Be2 Bxe2 10.Qxe2 d5 Now it is clear what happens. Black breaks through with d5 and takes over the initiative. 11.Bg5 Nd4 12.Qd3 Bb4 13.0-0 Bxc3 14.bxc3 dxe4 15.Qe3 Nf5 16.Qh3 Nd6 Black once again breaks white's pawn structure on the queenside and for now, even has one extra pawn. The position is better for black.

**B33**

☐ **The Sveshnikov - 7th move alt**
■ **The Sicilian Sveshnikov 7.a4,13.Bxf6**

1.e4 c5 2.Nf3 Nc6 3.d4 cxd4 4.Nxd4 Nf6 5.Nc3 e5 6.Ndb5 This is the only move that makes sense here. With this move, white gets a knight on the most active square and does not allow black to develop the dark square bishop before he plays d6. White needs to be careful not to allow black to play d5. Here d5 is not possible because white controls it with the pawn, the knight, and the queen. 6...d6 This is the only move for now. Black needs to play d6 and not to allow white to play Nd6. After this, black will try to play a6 and b5 and expand on the queenside, removing white's

knight from the b5 square. 7.a4 This is the third alternative to 7. Bg5. With this move, white wants to prevent black from playing a6 - b5. But now white loses control over the d5 square. With next sequence of moves, Black takes over the initiative. Also, it's very important to understand why 7. Bg5 is the only good move for white. On any other alternative black can easily take over control over the position. 7...a6 8.Na3 Bg4 Great move. With this precise move, Black takes over control over the light squares and the vital d5 square. 9.Be2 Bxe2 10.Qxe2 d5 Now it is clear what happens. Black breaks through with d5 and takes over the initiative. 11.Bg5 Nd4 12.Qd3 Bb4 13.Bxf6 Qxf6 14.0-0 Bxc3 15.bxc3 dxe4 16.Qxe4 Nc6 17.Nc4 0-0 And as in the line before, white's pawn structure on the queenside is very bad and because of that black's position is better. A possible plan is to consolidate the e5 pawn and after that to start to attack white's bad pawns on the c file.

**B33**

☐ **The Sveshnikov Positional**
■ **Positional main line 10.Bxf6,13.a4**

1.e4 c5 2.Nf3 Nc6 3.d4 cxd4 4.Nxd4 Nf6 5.Nc3 e5 This is the starting position of the Sveshnikov. Black plays aggressively and wants to fight for the initiative right from the start. This gives him enough time for quick development and a safe position for the king. But by playing e5 black accepts a backward pawn on d6 and a potentially weak square on d5. This is one of the most uncompromising openings in chess. With this opening, you do not need to fight for equality and instead can play for initiative right from the start. Today this is the opening of choice for many leading players in the world. Ex-world champion Vladimir Kramnik plays it with great success. Here I will try to explain not only the forced lines but also the often complex strategy that is behind the ideas. 6.Ndb5 This is white's positional approach. With this move, white wants to force black to play d6 without time to develop the dark-squared bishop and then he can occupy the weak square on d5. Alternatives will be explained in the other chapters. Black has a few nice ideas here that will give him great positions. 6...d6 7.Bg5 This is the second part of white's idea. After taking the knight on f6, the square on d5 will be even weaker. The drawback is in the fact that black will have the two bishops and great activity. 7...a6 Black needs to bring back this knight to a3 and after that seize the initiative and space on the queenside with b5. 8.Na3 b5 9.Nd5 This is one of two main lines or positions in Sveshnikov Sicilian. White now takes over control over the d5 square. In return, black gets the bishop pair and a lot of activity. 9. Nd5 is a more positional line where white will not double Black's f pawns. Because of this, the position will be much more closed, and there will be plenty of time for improving the positions of pieces and pawns. Mainly white will try to play on the queenside and try to take advantage of the potentially exposed pawns on a6 and b5. Black will have a very solid pawn structure on the kingside and the bishop pair. This will be enough for equality. The positions that arise after this move are very rich

and playable for both sides. Once again you can see how simply you can play with the Sveshnikov. The positions you get will be equal but far from a draw ! 9...Be7 10.Bxf6 With the capture on f6 white gets control over d5. 10...Bxf6 11.c3 After this move, it is clear what white wants. First, he wants to secure the d5 square, then to transfer his worst piece, the knight on a3 to the more active square on c2, and then e3 or even b4. Only then he wants to start activity on the queenside. This is a much more solid way to play than the illogical 10. Ne7. It is important to remember something White now has a great looking knight on d5. This knight is strong on d5, and you need to be careful, especially so when you try to exchange it. Now there are two possible ways to exchange it, one for the knight and the second for the light-squared bishop. In most of the situations, you want to exchange it for the knight on c6 because if you look at the position, this knight is black's worst piece on the board. Nc6 cannot jump to any vital square and also if you can exchange it and keep the bishop pair it will be perfect for black. Also, I want to tell you a secret, the white knight on d5 is a great piece but does not do anything in the attack for now, and black can easily play around this knight as I will show you in the next lines. The pawn structure in the center is for the time being slightly better for white, but the weak d6 pawn is hard to get at because the white knight on d5 protects it and on the d file white does not have the possibility to attack it. So you do not need to be afraid of losing it. If white tries to do it, you can easily protect the pawn with Be7. Also when one day you exchange the knight on d5, and white takes back with the e4 pawn, black will have a perfect pawn structure. 11...Bg5 Black has here a few promising lines, but I will recommend this one. As I mentioned in the previous move, white's idea is to play on the queenside but only after he stabilizes the position in the center. Because of this, black has to first get his bishop on the most active square possible, and then decide what he wants to do next. I like the bishop pair and here with Bg5 black's bishop will stay alive. I think that there is no need to rush with castles because the black king is safe in the center, and when he needs to he can castle in just one move. Another great thing about this move is that now the bishop controls the e3 square, where white was planning to place his knight from a3 via c2. 12.Nc2 Rb8 After 12. Nc2 white prepares himself for activity on the queenside. The next white move will be a4, with an attack on black's queenside pawns. Now black has a few options, but I will recommend the one with Rb8. Black supports his pawn on b5, moves the rook from the a file and after the exchange on a4, the rook may be able to take the vital pawn on b2. 13.a4 The only move that gives white some chance for play. White has a secure center and a great knight on d5 but if you look a little bit more carefully you will see that this knight does not do anything special and because of him white cannot attack the weak pawn on d6. Also, the position will open up, and then black bishop pair can play a big role. So, white needs to open lines on the queenside because this is the only play that he has. One more thing that I believe is important here, is the move order. You see that position in the center is closed, and the black king stays in the center without any possibility for white to attack him. Because of this white also needs to wait before castling and first needs to improve

the position on the queenside. If white does not move this pawn to a4 now, he will never be able to do it later. 13...bxa4 Now black cannot hold on b5 and needs to take on a4. Now it is also clear why the black rook is nicely placed on the b file because the pawn on b2 is hanging. 14.Ncb4 Bd7 Here you need to remember a few precise moves. Bd7 is one of them. You need to defend Nc6 and control the c6 square. 15.Bxa6 Nxb4 A second important move which exchanges one minor piece and allows the bishop to defend the pawn on a4. 16.cxb4 This is the alternative to 16. Nb4. It is also a playable move that will lead to an equal position. 16...0-0 17.0-0 Bc6 18.Rxa4 Here white sacrifices the exchange just to keep this passed pawn on b4. Now you need to objectively evaluate the position as equal and play according to this. Just remember here that the key is to bring the bishop to b6 or the c5 square via d8 and black will be fine. 18...Bxa4 19.Qxa4 Kh8 20.b5 Qd7 21.Qc4 Bd8 22.Rc1 Bb6 23.Nxb6 Rxb6 24.Qd5 Rfb8 And after an exchange of the knight for the light square bishop, the position is equal.

**B33**

☐ **The Sveshnikov Positional**
■ **Positional main line 10.Bxf6,13.a4**

1.e4 c5 2.Nf3 Nc6 3.d4 cxd4 4.Nxd4 Nf6 5.Nc3 e5 This is the starting position of the Sveshnikov. Black plays aggressively and wants to fight for the initiative right from the start. This gives him enough time for quick development and a safe position for the king. But by playing e5 black accepts a backward pawn on d6 and a potentially weak square on d5. This is one of the most uncompromising openings in chess. With this opening, you do not need to fight for equality and instead can play for initiative right from the start. Today this is the opening of choice for many leading players in the world. Ex-world champion Vladimir Kramnik plays it with great success. Here I will try to explain not only the forced lines but also the often complex strategy that is behind the ideas. 6.Ndb5 This is white's positional approach. With this move, white wants to force black to play d6 without time to develop the dark-squared bishop and then he can occupy the weak square on d5. Alternatives will be explained in the other chapters. Black has a few nice ideas here that will give him great positions. 6...d6 7.Bg5 This is the second part of white's idea. After taking the knight on f6, the square on d5 will be even weaker. The drawback is in the fact that black will have the two bishops and great activity. 7...a6 Black needs to bring back this knight to a3 and after that seize the initiative and space on the queenside with b5. 8.Na3 b5 9.Nd5 This is one of two main lines or positions in Sveshnikov Sicilian. White now takes over control over the d5 square. In return, black gets the bishop pair and a lot of activity. 9. Nd5 is a more positional line where white will not double Black's f pawns. Because of this, the position will be much more closed, and there will be plenty of time for improving the positions of pieces and pawns. Mainly white will try to play on the queenside and try to take advantage of the potentially exposed pawns on a6 and

b5. Black will have a very solid pawn structure on the kingside and the bishop pair. This will be enough for equality. The positions that arise after this move are very rich and playable for both sides. Once again you can see how simply you can play with the Sveshnikov. The positions you get will be equal but far from a draw ! 9...Be7 10.Bxf6 With the capture on f6 white gets control over d5. 10...Bxf6 11.c3 After this move, it is clear what white wants. First, he wants to secure the d5 square, then to transfer his worst piece, the knight on a3 to the more active square on c2, and then e3 or even b4. Only then he wants to start activity on the queenside. This is a much more solid way to play than the illogical 10. Ne7. It is important to remember something White now has a great looking knight on d5. This knight is strong on d5, and you need to be careful, especially so when you try to exchange it. Now there are two possible ways to exchange it, one for the knight and the second for the light-squared bishop. In most of the situations, you want to exchange it for the knight on c6 because if you look at the position, this knight is black's worst piece on the board. Nc6 cannot jump to any vital square and also if you can exchange it and keep the bishop pair it will be perfect for black. Also, I want to tell you a secret, the white knight on d5 is a great piece but does not do anything in the attack for now, and black can easily play around this knight as I will show you in the next lines. The pawn structure in the center is for the time being slightly better for white, but the weak d6 pawn is hard to get at because the white knight on d5 protects it and on the d file white does not have the possibility to attack it. So you do not need to be afraid of losing it. If white tries to do it, you can easily protect the pawn with Be7. Also when one day you exchange the knight on d5, and white takes back with the e4 pawn, black will have a perfect pawn structure. 11...Bg5 Black has here a few promising lines, but I will recommend this one. As I mentioned in the previous move, white's idea is to play on the queenside but only after he stabilizes the position in the center. Because of this, black has to first get his bishop on the most active square possible, and then decide what he wants to do next. I like the bishop pair and here with Bg5 black's bishop will stay alive. I think that there is no need to rush with castles because the black king is safe in the center, and when he needs to he can castle in just one move. Another great thing about this move is that now the bishop controls the e3 square, where white was planning to place his knight from a3 via c2. 12.Nc2 Rb8 After 12. Nc2 white prepares himself for activity on the queenside. The next white move will be a4, with an attack on black's queenside pawns. Now black has a few options, but I will recommend the one with Rb8. Black supports his pawn on b5, moves the rook from the a file and after the exchange on a4, the rook may be able to take the vital pawn on b2. 13.a4 The only move that gives white some chance for play. White has a secure center and a great knight on d5 but if you look a little bit more carefully you will see that this knight does not do anything special and because of him white cannot attack the weak pawn on d6. Also, the position will open up, and then black bishop pair can play a big role. So, white needs to open lines on the queenside because this is the only play that he has. One more thing that I believe is important here, is the move order. You see that position in the center is closed, and

the black king stays in the center without any possibility for white to attack him. Because of this white also needs to wait before castling and first needs to improve the position on the queenside. If white does not move this pawn to a4 now, he will never be able to do it later. 13...bxa4 Now black cannot hold on b5 and needs to take on a4. Now it is also clear why the black rook is nicely placed on the b file because the pawn on b2 is hanging. 14.Ncb4 Bd7 Here you need to remember a few precise moves. Bd7 is one of them. You need to defend Nc6 and control the c6 square. 15.Bxa6 Nxb4 A second important move which exchanges one minor piece and allows the bishop to defend the pawn on a4. 16.Nxb4 Qa5 And here is the next important move to remember. Now you can see what I was talking about. Here black needs to play accurately to maintain an equal position. 17.Qxd6 This is the best and the only move that gives white equality. All other options are better for black. Let's look at them. 17...Rb6 18.Qd3 Be7 19.Nd5 Rxb2 20.0-0 Qc5 Another strong thematic move that you need to remember. The queen on c5 controls the dark squares that the white knight on d5 attacks, and also attacks the weak pawn on c3. It also supports black's potential break with a3. Great positional move ! 21.Rad1 This is a nice alternative to 21. Rb1. It leads to an equal position. 21...Bc6 22.Nc7+ Kf8 23.Bc4 g6 An important move to secure the square for the king on g7. 24.Na6 Qa7 25.Nb4 Qc7 26.Nd5 Bxd5 27.Qxd5 Bc5 And the position is equal. Black has a passed pawn on the a file, but white has a small lead in development. Also, we have opposite colored bishops. All in all, the position is about equal.

**B33**

☐ **The Sveshnikov Positional**
■ **Positional main line 10.Bxf6,13.a4**

1.e4 c5 2.Nf3 Nc6 3.d4 cxd4 4.Nxd4 Nf6 5.Nc3 e5 This is the starting position of the Sveshnikov. Black plays aggressively and wants to fight for the initiative right from the start. This gives him enough time for quick development and a safe position for the king. But by playing e5 black accepts a backward pawn on d6 and a potentially weak square on d5. This is one of the most uncompromising openings in chess. With this opening, you do not need to fight for equality and instead can play for initiative right from the start. Today this is the opening of choice for many leading players in the world. Ex-world champion Vladimir Kramnik plays it with great success. Here I will try to explain not only the forced lines but also the often complex strategy that is behind the ideas. 6.Ndb5 This is white's positional approach. With this move, white wants to force black to play d6 without time to develop the dark-squared bishop and then he can occupy the weak square on d5. Alternatives will be explained in the other chapters. Black has a few nice ideas here that will give him great positions. 6...d6 7.Bg5 This is the second part of white's idea. After taking the knight on f6, the square on d5 will be even weaker. The drawback is in the fact that black will have the two bishops and great activity. 7...a6 Black needs to bring back this knight to a3 and

after that seize the initiative and space on the queenside with b5. 8.Na3 b5 9.Nd5 This is one of two main lines or positions in Sveshnikov Sicilian. White now takes over control over the d5 square. In return, black gets the bishop pair and a lot of activity. 9. Nd5 is a more positional line where white will not double Black's f pawns. Because of this, the position will be much more closed, and there will be plenty of time for improving the positions of pieces and pawns. Mainly white will try to play on the queenside and try to take advantage of the potentially exposed pawns on a6 and b5. Black will have a very solid pawn structure on the kingside and the bishop pair. This will be enough for equality. The positions that arise after this move are very rich and playable for both sides. Once again you can see how simply you can play with the Sveshnikov. The positions you get will be equal but far from a draw ! 9...Be7 10.Bxf6 With the capture on f6 white gets control over d5. 10...Bxf6 11.c3 After this move, it is clear what white wants. First, he wants to secure the d5 square, then to transfer his worst piece, the knight on a3 to the more active square on c2, and then e3 or even b4. Only then he wants to start activity on the queenside. This is a much more solid way to play than the illogical 10. Ne7. It is important to remember something White now has a great looking knight on d5. This knight is strong on d5, and you need to be careful, especially so when you try to exchange it. Now there are two possible ways to exchange it, one for the knight and the second for the light-squared bishop. In most of the situations, you want to exchange it for the knight on c6 because if you look at the position, this knight is black's worst piece on the board. Nc6 cannot jump to any vital square and also if you can exchange it and keep the bishop pair it will be perfect for black. Also, I want to tell you a secret, the white knight on d5 is a great piece but does not do anything in the attack for now, and black can easily play around this knight as I will show you in the next lines. The pawn structure in the center is for the time being slightly better for white, but the weak d6 pawn is hard to get at because the white knight on d5 protects it and on the d file white does not have the possibility to attack it. So you do not need to be afraid of losing it. If white tries to do it, you can easily protect the pawn with Be7. Also when one day you exchange the knight on d5, and white takes back with the e4 pawn, black will have a perfect pawn structure. 11...Bg5 Black has here a few promising lines, but I will recommend this one. As I mentioned in the previous move, white's idea is to play on the queenside but only after he stabilizes the position in the center. Because of this, black has to first get his bishop on the most active square possible, and then decide what he wants to do next. I like the bishop pair and here with Bg5 black's bishop will stay alive. I think that there is no need to rush with castles because the black king is safe in the center, and when he needs to he can castle in just one move. Another great thing about this move is that now the bishop controls the e3 square, where white was planning to place his knight from a3 via c2. 12.Nc2 Rb8 After 12. Nc2 white prepares himself for activity on the queenside. The next white move will be a4, with an attack on black's queenside pawns. Now black has a few options, but I will recommend the one with Rb8. Black supports his pawn on b5, moves the rook from the a file and after the exchange on a4, the rook may be able to

take the vital pawn on b2. 13.a4 The only move that gives white some chance for play. White has a secure center and a great knight on d5 but if you look a little bit more carefully you will see that this knight does not do anything special and because of him white cannot attack the weak pawn on d6. Also, the position will open up, and then black bishop pair can play a big role. So, white needs to open lines on the queenside because this is the only play that he has. One more thing that I believe is important here, is the move order. You see that position in the center is closed, and the black king stays in the center without any possibility for white to attack him. Because of this white also needs to wait before castling and first needs to improve the position on the queenside. If white does not move this pawn to a4 now, he will never be able to do it later. 13...bxa4 Now black cannot hold on b5 and needs to take on a4. Now it is also clear why the black rook is nicely placed on the b file because the pawn on b2 is hanging. 14.Ncb4 Bd7 Here you need to remember a few precise moves. Bd7 is one of them. You need to defend Nc6 and control the c6 square. 15.Bxa6 Nxb4 A second important move which exchanges one minor piece and allows the bishop to defend the pawn on a4. 16.Nxb4 Qa5 And here is the next important move to remember. Now you can see what I was talking about. Here black needs to play accurately to maintain an equal position. 17.Bd3 This once again allows the exchange sacrifice and a better position for black as 17. Qe2. 17...Rxb4 18.cxb4 Qxb4+ 19.Ke2 d5 20.Qc2 dxe4 21.Bxe4 0-0 22.Rhd1 Rc8 This is a better scenario where the white king is on e2, and now black has an almost winning situation. The plan is very simple with the next move, Bb5, get the king on f3 and then start chasing him with moves like Qb3. The position is almost winning for black.

**B33**

☐ **The Sveshnikov Positional**
■ **Positional main line 10.Bxf6,13.a4**

1.e4 c5 2.Nf3 Nc6 3.d4 cxd4 4.Nxd4 Nf6 5.Nc3 e5 This is the starting position of the Sveshnikov. Black plays aggressively and wants to fight for the initiative right from the start. This gives him enough time for quick development and a safe position for the king. But by playing e5 black accepts a backward pawn on d6 and a potentially weak square on d5. This is one of the most uncompromising openings in chess. With this opening, you do not need to fight for equality and instead can play for initiative right from the start. Today this is the opening of choice for many leading players in the world. Ex-world champion Vladimir Kramnik plays it with great success. Here I will try to explain not only the forced lines but also the often complex strategy that is behind the ideas. 6.Ndb5 This is white's positional approach. With this move, white wants to force black to play d6 without time to develop the dark-squared bishop and then he can occupy the weak square on d5. Alternatives will be explained in the other chapters. Black has a few nice ideas here that will give him great positions. 6...d6 7.Bg5 This is the second part of white's idea. After taking the knight on f6, the

square on d5 will be even weaker. The drawback is in the fact that black will have the two bishops and great activity. 7...a6 Black needs to bring back this knight to a3 and after that seize the initiative and space on the queenside with b5. 8.Na3 b5 9.Nd5 This is one of two main lines or positions in Sveshnikov Sicilian. White now takes over control over the d5 square. In return, black gets the bishop pair and a lot of activity. 9. Nd5 is a more positional line where white will not double Black's f pawns. Because of this, the position will be much more closed, and there will be plenty of time for improving the positions of pieces and pawns. Mainly white will try to play on the queenside and try to take advantage of the potentially exposed pawns on a6 and b5. Black will have a very solid pawn structure on the kingside and the bishop pair. This will be enough for equality. The positions that arise after this move are very rich and playable for both sides. Once again you can see how simply you can play with the Sveshnikov. The positions you get will be equal but far from a draw ! 9...Be7 10.Bxf6 With the capture on f6 white gets control over d5. 10...Bxf6 11.c3 After this move, it is clear what white wants. First, he wants to secure the d5 square, then to transfer his worst piece, the knight on a3 to the more active square on c2, and then e3 or even b4. Only then he wants to start activity on the queenside. This is a much more solid way to play than the illogical 10. Ne7. It is important to remember something White now has a great looking knight on d5. This knight is strong on d5, and you need to be careful, especially so when you try to exchange it. Now there are two possible ways to exchange it, one for the knight and the second for the light-squared bishop. In most of the situations, you want to exchange it for the knight on c6 because if you look at the position, this knight is black's worst piece on the board. Nc6 cannot jump to any vital square and also if you can exchange it and keep the bishop pair it will be perfect for black. Also, I want to tell you a secret, the white knight on d5 is a great piece but does not do anything in the attack for now, and black can easily play around this knight as I will show you in the next lines. The pawn structure in the center is for the time being slightly better for white, but the weak d6 pawn is hard to get at because the white knight on d5 protects it and on the d file white does not have the possibility to attack it. So you do not need to be afraid of losing it. If white tries to do it, you can easily protect the pawn with Be7. Also when one day you exchange the knight on d5, and white takes back with the e4 pawn, black will have a perfect pawn structure. 11...Bg5 Black has here a few promising lines, but I will recommend this one. As I mentioned in the previous move, white's idea is to play on the queenside but only after he stabilizes the position in the center. Because of this, black has to first get his bishop on the most active square possible, and then decide what he wants to do next. I like the bishop pair and here with Bg5 black's bishop will stay alive. I think that there is no need to rush with castles because the black king is safe in the center, and when he needs to he can castle in just one move. Another great thing about this move is that now the bishop controls the e3 square, where white was planning to place his knight from a3 via c2. 12.Nc2 Rb8 After 12. Nc2 white prepares himself for activity on the queenside. The next white move will be a4, with an attack on black's queenside pawns. Now black has a

few options, but I will recommend the one with Rb8. Black supports his pawn on b5, moves the rook from the a file and after the exchange on a4, the rook may be able to take the vital pawn on b2. 13.a4 The only move that gives white some chance for play. White has a secure center and a great knight on d5 but if you look a little bit more carefully you will see that this knight does not do anything special and because of him white cannot attack the weak pawn on d6. Also, the position will open up, and then black bishop pair can play a big role. So, white needs to open lines on the queenside because this is the only play that he has. One more thing that I believe is important here, is the move order. You see that position in the center is closed, and the black king stays in the center without any possibility for white to attack him. Because of this white also needs to wait before castling and first needs to improve the position on the queenside. If white does not move this pawn to a4 now, he will never be able to do it later. 13...bxa4 Now black cannot hold on b5 and needs to take on a4. Now it is also clear why the black rook is nicely placed on the b file because the pawn on b2 is hanging. 14.Ncb4 Bd7 Here you need to remember a few precise moves. Bd7 is one of them. You need to defend Nc6 and control the c6 square. 15.Bxa6 Nxb4 A second important move which exchanges one minor piece and allows the bishop to defend the pawn on a4. 16.Nxb4 Qa5 And here is the next important move to remember. Now you can see what I was talking about. Here black needs to play accurately to maintain an equal position. 17.Qxd6 This is the best and the only move that gives white equality. All other options are better for black. Let's look at them. 17...Rb6 18.Qd3 Be7 19.Nd5 Rxb2 20.0-0 Qc5 Another strong thematic move that you need to remember. The queen on c5 controls the dark squares that the white knight on d5 attacks, and also attacks the weak pawn on c3. It also supports black's potential break with a3. Great positional move ! 21.Rad1 This is a nice alternative to 21. Rb1. It leads to an equal position. 21...Bc6 22.Nc7+ Kf8 23.Qf3 Kg8 24.Rb1 a3 25.Rxb2 axb2 26.Rb1 g6 27.Bf1 Kg7 With an equal position.

**B33**

☐ **The Sveshnikov Positional**
■ **Positional main line 10.Bxf6,13.a4**

1.e4 c5 2.Nf3 Nc6 3.d4 cxd4 4.Nxd4 Nf6 5.Nc3 e5 This is the starting position of the Sveshnikov. Black plays aggressively and wants to fight for the initiative right from the start. This gives him enough time for quick development and a safe position for the king. But by playing e5 black accepts a backward pawn on d6 and a potentially weak square on d5. This is one of the most uncompromising openings in chess. With this opening, you do not need to fight for equality and instead can play for initiative right from the start. Today this is the opening of choice for many leading players in the world. Ex-world champion Vladimir Kramnik plays it with great success. Here I will try to explain not only the forced lines but also the often complex strategy

that is behind the ideas. 6.Ndb5 This is white's positional approach. With this move, white wants to force black to play d6 without time to develop the dark-squared bishop and then he can occupy the weak square on d5. Alternatives will be explained in the other chapters. Black has a few nice ideas here that will give him great positions. 6...d6 7.Bg5 This is the second part of white's idea. After taking the knight on f6, the square on d5 will be even weaker. The drawback is in the fact that black will have the two bishops and great activity. 7...a6 Black needs to bring back this knight to a3 and after that seize the initiative and space on the queenside with b5. 8.Na3 b5 9.Nd5 This is one of two main lines or positions in Sveshnikov Sicilian. White now takes over control over the d5 square. In return, black gets the bishop pair and a lot of activity. 9. Nd5 is a more positional line where white will not double Black's f pawns. Because of this, the position will be much more closed, and there will be plenty of time for improving the positions of pieces and pawns. Mainly white will try to play on the queenside and try to take advantage of the potentially exposed pawns on a6 and b5. Black will have a very solid pawn structure on the kingside and the bishop pair. This will be enough for equality. The positions that arise after this move are very rich and playable for both sides. Once again you can see how simply you can play with the Sveshnikov. The positions you get will be equal but far from a draw ! 9...Be7 10.Bxf6 With the capture on f6 white gets control over d5. 10...Bxf6 11.c3 After this move, it is clear what white wants. First, he wants to secure the d5 square, then to transfer his worst piece, the knight on a3 to the more active square on c2, and then e3 or even b4. Only then he wants to start activity on the queenside. This is a much more solid way to play than the illogical 10. Ne7. It is important to remember something White now has a great looking knight on d5. This knight is strong on d5, and you need to be careful, especially so when you try to exchange it. Now there are two possible ways to exchange it, one for the knight and the second for the light-squared bishop. In most of the situations, you want to exchange it for the knight on c6 because if you look at the position, this knight is black's worst piece on the board. Nc6 cannot jump to any vital square and also if you can exchange it and keep the bishop pair it will be perfect for black. Also, I want to tell you a secret, the white knight on d5 is a great piece but does not do anything in the attack for now, and black can easily play around this knight as I will show you in the next lines. The pawn structure in the center is for the time being slightly better for white, but the weak d6 pawn is hard to get at because the white knight on d5 protects it and on the d file white does not have the possibility to attack it. So you do not need to be afraid of losing it. If white tries to do it, you can easily protect the pawn with Be7. Also when one day you exchange the knight on d5, and white takes back with the e4 pawn, black will have a perfect pawn structure. 11...Bg5 Black has here a few promising lines, but I will recommend this one. As I mentioned in the previous move, white's idea is to play on the queenside but only after he stabilizes the position in the center. Because of this, black has to first get his bishop on the most active square possible, and then decide what he wants to do next. I like the bishop pair and here with Bg5 black's bishop will stay alive. I think that there is no need to rush with castles

because the black king is safe in the center, and when he needs to he can castle in just one move. Another great thing about this move is that now the bishop controls the e3 square, where white was planning to place his knight from a3 via c2. 12.Nc2 Rb8 After 12. Nc2 white prepares himself for activity on the queenside. The next white move will be a4, with an attack on black's queenside pawns. Now black has a few options, but I will recommend the one with Rb8. Black supports his pawn on b5, moves the rook from the a file and after the exchange on a4, the rook may be able to take the vital pawn on b2. 13.a4 The only move that gives white some chance for play. White has a secure center and a great knight on d5 but if you look a little bit more carefully you will see that this knight does not do anything special and because of him white cannot attack the weak pawn on d6. Also, the position will open up, and then black bishop pair can play a big role. So, white needs to open lines on the queenside because this is the only play that he has. One more thing that I believe is important here, is the move order. You see that position in the center is closed, and the black king stays in the center without any possibility for white to attack him. Because of this white also needs to wait before castling and first needs to improve the position on the queenside. If white does not move this pawn to a4 now, he will never be able to do it later. 13...bxa4 Now black cannot hold on b5 and needs to take on a4. Now it is also clear why the black rook is nicely placed on the b file because the pawn on b2 is hanging. 14.Ncb4 Bd7 Here you need to remember a few precise moves. Bd7 is one of them. You need to defend Nc6 and control the c6 square. 15.Bxa6 Nxb4 A second important move which exchanges one minor piece and allows the bishop to defend the pawn on a4. 16.Nxb4 Qa5 And here is the next important move to remember. Now you can see what I was talking about. Here black needs to play accurately to maintain an equal position. 17.Qxd6 This is the best and the only move that gives white equality. All other options are better for black. Let's look at them. 17...Rb6 18.Qd3 Be7 19.Nd5 Rxb2 20.0-0 Qc5 Another strong thematic move that you need to remember. The queen on c5 controls the dark squares that the white knight on d5 attacks, and also attacks the weak pawn on c3. It also supports black's potential break with a3. Great positional move ! 21.Rab1 Rxb1 22.Rxb1 0-0 23.Bb5 Be8 24.Bxe8 Rxe8 25.Rb7 Bd6 26.Qa6 a3
And the position is equal. This position arises after 25 moves, but before this, both players will have had plenty of possibilities to deviate. In most of the alternatives, black will be better. Just look at all the notes I have written, they will help you remember the basic plans and ideas as well as the tactical blows that I have shown you.

**B33**

☐ **The Sveshnikov - 6th move alt**
■ **The Sicilian Sveshnikov 6.Nf5,7.exd5**

1.e4 c5 2.Nf3 Nc6 This is the only move that leads to the Sveshnikov Sicilian. It is important to understand that since white can play 3. Bb5, a move that cant be played if black had played e6. This is not a disaster, but you need to know that this move order gives white this opportunity. In one of the following chapters, I will show you how to play against that. Also, 3. c3 is the Alapin variation where I will also cover the line using this move order Nc6. In the Sicilian you need to be prepared for all possible scenarios and move orders. 3.d4 cxd4 4.Nxd4 Nf6 5.Nc3 e5 This is the starting position of the Sveshnikov. The Sveshnikov is a unique opening where black plays aggressively and wants to fight for the initiative right from the start. This gives him enough time for quick development and a safe position for the king. But, by playing e5 black accepts a backward pawn on d6 and potentially a weak square on d5. This is one of the most uncompromising openings in chess. With this opening, you do not need to fight for equality, with this opening you can play for initiative right from the start ! Today this is the opening choice for many leading players in the world. Ex-world champion Vladimir Kramnik plays it with great success. Here I will try to explain not only the forced lines but also the very complex strategy that is behind it. Let start first with the unusual 6th moves by white. 6.Nf5 On first sight it looks like this is a nice move, because compared to all other 6th white moves, beside Ndb5, this move somehow attacks the d6 square. But the knight on f5 is more exposed than on b5, and this gives black an easy breakthrough in the center and nice play. 6...d5 An instant breakthrough with the thematic d5 ! Now the white knight on f5 is attacked by black's light-squared bishop on c8. 7.exd5 Bxf5 8.dxc6 bxc6 9.Qf3 Qd7 Here black needs to be precise. It is important to know that here you need to play Qd7.Qc8 will allow white 10. Ba6 with a nice tempo gaining move and slight initiative. 10.Bg5 e4 11.Qe2 Nice and precise move. The alternative 11. Qg3 is no good. 11...Be7 12.Rd1 Qe6 13.Qc4 Rb8 14.Qxe6 fxe6 15.Bc1 White needs to defend his position first, his pawn on b2. 15...Nd5 16.Bc4 e3 Great move. Black pushes the e pawn to attack the c2 pawn, break white's pawn structure and the bishop on c1 will now not get to play for quite some time. 17.fxe3 Bxc2 18.Rd2 Bg6 Black is better. White's pieces are in the wrong places, and black is superior. White will have a hard time to fight for equality.

**B33**

☐ **The Sveshnikov - 7th move alt**
■ **Move Alternative**

1.e4 c5 2.Nf3 Nc6 3.d4 cxd4 4.Nxd4 Nf6 5.Nc3 e5 6.Ndb5 d6 7.Nd5 Nxd5 8.exd5 Nb8 9.a4 Be7 10.Be2 0-0 11.0-0 Nd7 This is the starting position from the

WCC 2018 and there Caruana and Carlsen play this position twice in the match. In one game Fabi goes for the 12. Bd2 and then in the next one 12. b4. Let's see both options. 12.Bd2 Before we go any further, I would like to say a few words about this position in general and the plans for both players. This is a strategically very complex position where both players have to work in offense and on defense. Now, white has the more space in the center and on the queenside and there he wants to play, but also has to be careful on the kingside not to get under the big pressure from black. So, he likes to go for the moves like a4-a5 and then b4, c4 -c5 and on the kingside after black move f5, he likes to go for the f4 to stop the further black advance. Black for that time wants to play on the kingside with the f5-f4 move and start an attack there. On the other side, he has to be careful on the queenside and not allow white a4 - a5. 12...a6 Magnus plays here 12... f5 in game 8 and allows Fabi a5 after which was behind in the game later on. The game eventually ended as a draw, but white was better. Fabi didn't repeat this move in the game 10 and we didn't see what will Magnus make to improve the variation. Nevertheless, I believe that the best way how lack can play this position is just not to allow white the a4 - a5 with the idea to reroute the knight to c4 square later on. My recommendation is here to go for the a6 and then a5 idea. 13.Na3 a5 So, the idea is first to remove the knight from b5 with a6 and then to go a5 and prevent white to play it. 14.Nb5 White can go here back to b5 or to c4. Both options are possible but black has enough counterplay. 14...f5 Hereafter Nb5, black pawn on a5 is not under attack and black immediately again goes for the play on the kingside. 15.c3 This move allow the f4. 15...f4 16.Bf3 Nf6 17.Re1 Bf5 And black develop all the pieces with an immediate initiative on the kingside. I think that white is here slower on the queenside. The positions remain unclear and sharp but looks like black first get the initiative on the kingside.

**B33**

☐ **The Sveshnikov Positional**
■ **Positional main line 10.Bxf6,13.a4**

1.e4 c5 2.Nf3 Nc6 3.d4 cxd4 4.Nxd4 Nf6 5.Nc3 e5 This is the starting position of the Sveshnikov. Black plays aggressively and wants to fight for the initiative right from the start. This gives him enough time for quick development and a safe position for the king. But by playing e5 black accepts a backward pawn on d6 and a potentially weak square on d5. This is one of the most uncompromising openings in chess. With this opening, you do not need to fight for equality and instead can play for initiative right from the start. Today this is the opening of choice for many leading players in the world. Ex-world champion Vladimir Kramnik plays it with great success. Here I will try to explain not only the forced lines but also the often complex strategy that is behind the ideas. 6.Ndb5 This is white's positional approach. With this move, white wants to force black to play d6 without time to develop the dark-squared bishop and then he can occupy the weak square on d5. Alternatives will be explained in the

other chapters. Black has a few nice ideas here that will give him great positions. 6...d6 7.Bg5 This is the second part of white's idea. After taking the knight on f6, the square on d5 will be even weaker. The drawback is in the fact that black will have the two bishops and great activity. 7...a6 Black needs to bring back this knight to a3 and after that seize the initiative and space on the queenside with b5. 8.Na3 b5 9.Nd5 This is one of two main lines or positions in Sveshnikov Sicilian. White now takes over control over the d5 square. In return, black gets the bishop pair and a lot of activity. 9. Nd5 is a more positional line where white will not double Black's f pawns. Because of this, the position will be much more closed, and there will be plenty of time for improving the positions of pieces and pawns. Mainly white will try to play on the queenside and try to take advantage of the potentially exposed pawns on a6 and b5. Black will have a very solid pawn structure on the kingside and the bishop pair. This will be enough for equality. The positions that arise after this move are very rich and playable for both sides. Once again you can see how simply you can play with the Sveshnikov. The positions you get will be equal but far from a draw ! 9...Be7 10.Bxf6 With the capture on f6 white gets control over d5. 10...Bxf6 11.c3 After this move, it is clear what white wants. First, he wants to secure the d5 square, then to transfer his worst piece, the knight on a3 to the more active square on c2, and then e3 or even b4. Only then he wants to start activity on the queenside. This is a much more solid way to play than the illogical 10. Ne7. It is important to remember something White now has a great looking knight on d5. This knight is strong on d5, and you need to be careful, especially so when you try to exchange it. Now there are two possible ways to exchange it, one for the knight and the second for the light-squared bishop. In most of the situations, you want to exchange it for the knight on c6 because if you look at the position, this knight is black's worst piece on the board. Nc6 cannot jump to any vital square and also if you can exchange it and keep the bishop pair it will be perfect for black. Also, I want to tell you a secret, the white knight on d5 is a great piece but does not do anything in the attack for now, and black can easily play around this knight as I will show you in the next lines. The pawn structure in the center is for the time being slightly better for white, but the weak d6 pawn is hard to get at because the white knight on d5 protects it and on the d file white does not have the possibility to attack it. So you do not need to be afraid of losing it. If white tries to do it, you can easily protect the pawn with Be7. Also when one day you exchange the knight on d5, and white takes back with the e4 pawn, black will have a perfect pawn structure. 11...Bg5 Black has here a few promising lines, but I will recommend this one. As I mentioned in the previous move, white's idea is to play on the queenside but only after he stabilizes the position in the center. Because of this, black has to first get his bishop on the most active square possible, and then decide what he wants to do next. I like the bishop pair and here with Bg5 black's bishop will stay alive. I think that there is no need to rush with castles because the black king is safe in the center, and when he needs to he can castle in just one move. Another great thing about this move is that now the bishop controls the e3 square, where white was planning to place his knight from a3 via c2. 12.Nc2

Rb8 After 12. Nc2 white prepares himself for activity on the queenside. The next white move will be a4, with an attack on black's queenside pawns. Now black has a few options, but I will recommend the one with Rb8. Black supports his pawn on b5, moves the rook from the a file and after the exchange on a4, the rook may be able to take the vital pawn on b2. 13.a4 The only move that gives white some chance for play. White has a secure center and a great knight on d5 but if you look a little bit more carefully you will see that this knight does not do anything special and because of him white cannot attack the weak pawn on d6. Also, the position will open up, and then black bishop pair can play a big role. So, white needs to open lines on the queenside because this is the only play that he has. One more thing that I believe is important here, is the move order. You see that position in the center is closed, and the black king stays in the center without any possibility for white to attack him. Because of this white also needs to wait before castling and first needs to improve the position on the queenside. If white does not move this pawn to a4 now, he will never be able to do it later. 13...bxa4 Now black cannot hold on b5 and needs to take on a4. Now it is also clear why the black rook is nicely placed on the b file because the pawn on b2 is hanging. 14.Ncb4 Bd7 Here you need to remember a few precise moves. Bd7 is one of them. You need to defend Nc6 and control the c6 square. 15.Bxa6 Nxb4 A second important move which exchanges one minor piece and allows the bishop to defend the pawn on a4. 16.Nxb4 Qa5 And here is the next important move to remember. Now you can see what I was talking about. Here black needs to play accurately to maintain an equal position. 17.Qd5 Qxd5 18.exd5 0-0 19.0-0 e4 20.Ra2 Rb6 21.Be2 f5 Now you can see another situation. White's exchanged the queen on d5 and brings his e4 pawn to d5. Now black does not have any more problems with a weak pawn on d6. Also now black can open the position in the canter and push e4 himself. Objectively the position is approximately equal, but black has better prospects because of more space and a great bishop pair.

**B33**

☐ **The Sveshnikov Positional**
■ **Positional side line 10.Nxe7,13.Bd3**

1.e4 c5 2.Nf3 Nc6 3.d4 cxd4 4.Nxd4 Nf6 5.Nc3 e5 This is the starting position of the Sveshnikov. Black plays aggressively and wants to fight for the initiative right from the start. This gives him enough time for quick development and a safe position for the king. But by playing e5 black accepts a backward pawn on d6 and a potentially weak square on d5. This is one of the most uncompromising openings in chess. With this opening, you do not need to fight for equality and instead can play for initiative right from the start. Today this is the opening of choice for many leading players in the world. Ex-world champion Vladimir Kramnik plays it with great success. Here I will try to explain not only the forced lines but also the often complex strategy that is behind the ideas. 6.Ndb5 This is white's positional approach. With this move,

white wants to force black to play d6 without time to develop the dark-squared bishop and then he can occupy the weak square on d5. Alternatives will be explained in the other chapters. Black has a few nice ideas here that will give him great positions. 6...d6 7.Bg5 This is the second part of white's idea. After taking the knight on f6, the square on d5 will be even weaker. The drawback is in the fact that black will have the two bishops and great activity. 7...a6 Black needs to bring back this knight to a3 and after that seize the initiative and space on the queenside with b5. 8.Na3 b5 9.Nd5 This is one of two main lines or positions in Sveshnikov Sicilian. White now takes over control over the d5 square. In return, black gets the bishop pair and a lot of activity. 9. Nd5 is a more positional line where white will not double Black's f pawns. Because of this, the position will be much more closed, and there will be plenty of time for improving the positions of pieces and pawns. Mainly white will try to play on the queenside and try to take advantage of the potentially exposed pawns on a6 and b5. Black will have a very solid pawn structure on the kingside and the bishop pair. This will be enough for equality. The positions that arise after this move are very rich and playable for both sides. Once again you can see how simply you can play with the Sveshnikov. The positions you get will be equal but far from a draw ! 9...Be7 10.Nxe7 This is not such a bad move, but it is not in the spirit of the position and the plan that white started with 7. Bg5. With this move, white loses control over the d5 square. The position is immediately equal and easy to play for black. 10...Nxe7 11.Bxf6 gxf6 12.c4 Bb7 13.Bd3 f5 Here is another typical move from black, but the idea is the same, fight for the d5 square. With a decoy on f5, black will take advantage over the d5 square. This f5 move is typical for many lines in the Sveshnikov. 14.exf5 Rg8 15.cxb5 Qa5+ 16.Qd2 Qxd2+ 17.Kxd2 Rxg2 This final position is similar to all the other ones with 10. Ne7. White plays without a plan, just random developing moves and tries to expose the black pawns in the queenside. Black can with concrete play, and the idea of securing the d5 square, reach a very promising position. I believe that black is slightly better because of the potential of the center pawns. This is not a line that you will see too often.

**B33**

☐ **The Sveshnikov - 7th move alt**
■ **Move Alternative**

1.e4 c5 2.Nf3 Nc6 3.d4 cxd4 4.Nxd4 Nf6 5.Nc3 e5 6.Ndb5 d6 7.Nd5 Nxd5 8.exd5 Nb8 9.a4 Be7 10.Be2 0-0 11.0-0 Nd7 This is the starting position from the WCC 2018 and there Caruana and Carlsen play this position twice in the match. In one game Fabi goes for the 12. Bd2 and then in the next one 12. b4. Let's see both options. 12.Bd2 Before we go any further, I would like to say a few words about this position in general and the plans for both players. This is a strategically very complex position where both players have to work in offense and on defense. Now, white has the more space in the center and on the queenside and there he wants to play, but

also has to be careful on the kingside not to get under the big pressure from black. So, he likes to go for the moves like a4-a5 and then b4, c4 -c5 and on the kingside after black move f5, he likes to go for the f4 to stop the further black advance. Black for that time wants to play on the kingside with the f5-f4 move and start an attack there. On the other side, he has to be careful on the queenside and not allow white a4 - a5. 12...a6 Magnus plays here 12... f5 in game 8 and allows Fabi a5 after which was behind in the game later on. The game eventually ended as a draw, but white was better. Fabi didn't repeat this move in the game 10 and we didn't see what will Magnus make to improve the variation. Nevertheless, I believe that the best way how black can play this position is just not to allow white the a4 - a5 with the idea to reroute the knight to c4 square later on. My recommendation is here to go for the a6 and then a5 idea. 13.Na3 a5 So, the idea is first to remove the knight from b5 with a6 and then to go a5 and prevent white to play it. 14.Nc4 b6 This is the move that I like here. Black defend the pawn on a5, secure the c5 square and make the blockade on the dark squares. After that, black will go for his plan with the f5. 15.c3 f5 And black manage to get nice play on the kingside. 16.f4 As I mentioned before, white doesn't allow that and stop black from advancing with the f5 -f4. 16...Bb7 17.Be3 Rc8 White and black for now develop all the pieces and work in the offense and defense. The game is very sharp and now white will try to do something on the queenside and black on the kingside.

**B33**

☐ **The Sveshnikov - 7th move alt**
■ **The Sicilian Sveshnikov 7.Nd5,14.Kh1**

1.e4 c5 2.Nf3 Nc6 3.d4 cxd4 4.Nxd4 Nf6 5.Nc3 e5 6.Ndb5 This is the only move that makes sense here. With this move, white gets a knight on the most active square and does not allow black to develop the dark square bishop before he plays d6. White needs to be careful not to allow black to play d5. Here d5 is not possible because white controls it with the pawn, the knight, and the queen. 6...d6 This is the only move for now. Black needs to play d6 and not to allow white to play Nd6. After this, black will try to play a6 and b5 and expand on the queenside, removing white's knight from the b5 square. 7.Nd5 The Mainline for white is 7. Bg5. Here I will show you three main alternatives. The first one is 7. Nd5. This is the move where white tries to get out of the many possibilities in the main line. With this move as in the other two options, I believe that white cannot manage to get an advantage out of the opening. Nevertheless here Black has an easy plan. He wants to get a small space advantage on the queenside and the upper hand for play there. The problem for black is that this takes too much time and allows white to counterattack him on the kingside. Also, this move allows black an exchange, after which there is no more potential pawn weakness on d6. 7...Nxd5 8.exd5 Nb8 I give that move the examine mark not because it is a good move, but because I believe it is superior to alternative

Ne7. The knight belongs on the d7 square and maybe on f6. From those squares, he will protect the c5 and e5 squares and potentially support a pawn storm on the kingside. If black moves the knight to e7 it will be hard to improve his position, and from e7 he does not defend or support any square or piece. 9.c4 The second move of the white plan. He tries to get space and a potential break on the queenside. Now after a6, his knight can retreat to c3 when the pawn is already on c4, and he does not lose time for it. 9...Be7 10.Bd3 This is the best square for the light-squared bishop. If white wants to have an equal position he needs to have pieces on the best possible squares. Let see what happens after 10. Be2 10...0-0 11.0-0 a6 12.Nc3 f5 Up to here the position is the same as in the line with Be2. 13.f3 This is clearly a superior move to white's f4. Now white wants to control black's kingside pawn expansion and then create play on the queenside. Here black cannot break easily in the center, and the e5 square will not be available for the knight. Nevertheless here black has another very nice plan. 13...Bg5 This is the key move here in this position. Now the black pawns will stay and control the dark squares, and the dark square bishop is not such a useful piece. Also, it is not such a problem for the black bishop; it would be much worse for black if white keeps his dark square bishop because he will be the best white piece. Remember that in this scenario black needs to exchange it. 14.Kh1 White removes the king from a possible check on b6. 14...Nd7 15.Bxg5 Qxg5 16.Qe2 Qf6 Again with the same position and idea as in the lines before. Black will first secure his position on the dark squares, and after he exchanges dark-squared bishops, then his better pawn structure in the center and on kingside will secure a slight advantage in the long run. 17.Rfe1 Nc5 18.Bc2 a5 19.Qd2 Bd7 20.b3 b6 Black has a nice position and a slight edge.

**B33**

☐ **The Sveshnikov - 7th move alt**
■ **The Sicilian Sveshnikov 7.Nd5,13.f3 and 14.Qc2**

1.e4 c5 2.Nf3 Nc6 3.d4 cxd4 4.Nxd4 Nf6 5.Nc3 e5 6.Ndb5 This is the only move that makes sense here. With this move, white gets a knight on the most active square and does not allow black to develop the dark square bishop before he plays d6. White needs to be careful not to allow black to play d5. Here d5 is not possible because white controls it with the pawn, the knight, and the queen. 6...d6 This is the only move for now. Black needs to play d6 and not to allow white to play Nd6. After this, black will try to play a6 and b5 and expand on the queenside, removing white's knight from the b5 square. 7.Nd5 The Mainline for white is 7. Bg5. Here I will show you three main alternatives. The first one is 7. Nd5. This is the move where white tries to get out of the many possibilities in the main line. With this move as in the other two options, I believe that white cannot manage to get an advantage out of the opening. Nevertheless here Black has an easy plan. He wants to get a small space advantage on the queenside and the upper hand for play there. The problem for

black is that this takes too much time and allows white to counterattack him on the kingside. Also, this move allows black an exchange, after which there is no more potential pawn weakness on d6. 7...Nxd5 8.exd5 Nb8 I give that move the examine mark not because it is a good move, but because I believe it is superior to alternative Ne7. The knight belongs on the d7 square and maybe on f6. From those squares, he will protect the c5 and e5 squares and potentially support a pawn storm on the kingside. If black moves the knight to e7 it will be hard to improve his position, and from e7 he does not defend or support any square or piece. 9.c4 The second move of the white plan. He tries to get space and a potential break on the queenside. Now after a6, his knight can retreat to c3 when the pawn is already on c4, and he does not lose time for it. 9...Be7 10.Bd3 This is the best square for the light-squared bishop. If white wants to have an equal position he needs to have pieces on the best possible squares. Let see what happens after 10. Be2 10...0-0 11.0-0 a6 12.Nc3 f5 Up to here the position is the same as in the line with Be2. 13.f3 This is clearly a superior move to white's f4. Now white wants to control black's kingside pawn expansion and then create play on the queenside. Here black cannot break easily in the center, and the e5 square will not be available for the knight. Nevertheless here black has another very nice plan. 13...Bg5 14.Qc2 This is white's try to exert pressure on the black f5 pawn. This is a tempo, but the queen is somehow misplaced on the c2 square and white will need to move it later. 14...g6 15.Bxg5 Qxg5 16.Kh1 Nd7 17.b4 b6 The position is equal. Black makes a blockade on the dark squares and neutralizes white's pressure on the queen side.

**B33**

☐ **The Sveshnikov - 7th move alt**
■ **Move Alternative**

1.e4 c5 2.Nf3 Nc6 3.d4 cxd4 4.Nxd4 Nf6 5.Nc3 e5 6.Ndb5 d6 7.Nd5 Nxd5 8.exd5 Nb8 9.a4 Be7 10.Be2 0-0 11.0-0 Nd7 This is the starting position from the WCC 2018 and there Caruana and Carlsen play this position twice in the match. In one game Fabi goes for the 12. Bd2 and then in the next one 12. b4. Let's see both options. 12.Bd2 Before we go any further, I would like to say a few words about this position in general and the plans for both players. This is a strategically very complex position where both players have to work in offense and on defense. Now, white has the more space in the center and on the queenside and there he wants to play, but also has to be careful on the kingside not to get under the big pressure from black. So, he likes to go for the moves like a4-a5 and then b4, c4 -c5 and on the kingside after black move f5, he likes to go for the f4 to stop the further black advance. Black for that time wants to play on the kingside with the f5-f4 move and start an attack there. On the other side, he has to be careful on the queenside and not allow white a4 - a5. 12...a6 Magnus plays here 12... f5 in game 8 and allows Fabi a5 after which was behind in the game later on. The game eventually ended as a draw, but white

was better. Fabi didn't repeat this move in the game 10 and we didn't see what will Magnus make to improve the variation. Nevertheless, I believe that the best way how Iack can play this position is just not to allow white the a4 - a5 with the idea to reroute the knight to c4 square later on. My recommendation is here to go for the a6 and then a5 idea. 13.Na3 a5 So, the idea is first to remove the knight from b5 with a6 and then to go a5 and prevent white to play it. 14.Nb5 White can go here back to b5 or to c4. Both options are possible but black has enough counterplay. 14...f5 Hereafter Nb5, black pawn on a5 is not under attack and black immediately again goes for the play on the kingside. 15.f4 Again the best white move. 15...Bf6 And black develop all the pieces with an immediate initiative on the kingside. I think that white is here slower on the queenside. The positions remain unclear and sharp but looks like black first get the initiative on the kingside. 16.c3 exf4 17.Bxf4 Be5 18.Bxe5 Nxe5 19.Qd2 Bd7 With again nice position for black. He manages to prevent white from fast play on the queenside, exchanges two minor pieces and place the knight on the dominate e5 square. The position is still unclear, but black chances are by no means worst.

**B33**

☐ **The Sveshnikov - 7th move alt**
■ **The Sicilian Sveshnikov 7.Nd5**

1.e4 c5 2.Nf3 Nc6 3.d4 cxd4 4.Nxd4 Nf6 5.Nc3 e5 6.Ndb5 This is the only move that makes sense here. With this move, white gets a knight on the most active square and does not allow black to develop the dark square bishop before he plays d6. White needs to be careful not to allow black to play d5. Here d5 is not possible because white controls it with the pawn, the knight, and the queen. 6...d6 This is the only move for now. Black needs to play d6 and not to allow white to play Nd6. After this, black will try to play a6 and b5 and expand on the queenside, removing white's knight from the b5 square. 7.Nd5 The Mainline for white is 7. Bg5. Here I will show you three main alternatives. The first one is 7. Nd5. This is the move where white tries to get out of the many possibilities in the main line. With this move as in the other two options, I believe that white cannot manage to get an advantage out of the opening. Nevertheless here White has an easy plan. He wants to get a small space advantage on the queenside and the upper hand for play there. The problem for White is that this takes too much time and allows Black to counterattack him on the kingside. Also, this move allows black an exchange, after which there is no more potential pawn weakness on d6. 7...Nxd5 8.exd5 Nb8 I give that move the examine mark not because it is a good move, but because I believe it is superior to alternative Ne7. The knight belongs on the d7 square and maybe on f6. From those squares, he will protect the c5 and e5 squares and potentially support a pawn storm on the kingside. If black moves the knight to e7 it will be hard to improve his position, and from e7 he does not defend or support any square or piece. 9.c4 The second move

of the white plan. He tries to get space and a potential break on the queenside. Now after a6, his knight can retreat to c3 when the pawn is already on c4, and he does not lose time for it. 9...Be7 10.Be2 0-0 11.0-0 a6 12.Nc3 f5 Here black kicks away white's knight from b5 starts advancing with the pawns in the center and the kingside. The e5 and f5 pawns are much better than all of white's pawns on the queenside. 13.f4 This is the last stage of the white plan with Be2. Now when white gets the bishop on e2 in this position, he wants to play f4 and then if black play e4 his bishop will not be under attack. But this is the only white idea. Remember that here black does not want to play e4. e4 looks like a great move, black has a protected passed pawn on e4, but white has a nice grip on the position and gets the blocking square e3 for his pieces. Also, white's pawns on f4 and d5 control too many vital squares in the center. What black wants to do here is to develop all his pieces and at the right moment take the pawn on f4. 13...Nd7 As we mentioned before, the knight is perfectly placed on d7. He slows down white's possible breaks on the queenside with c5, and after a later exchange on f4 this knight will come to the great e5 square. 14.Kh1 White removes the king from the possible threat Qb6. 14...Bf6 15.Be3 exf4 Now when black develops all of his pieces onto the best squares, he can take on f4 and then will try to take the advantage over the dark squares in the center. 16.Bxf4 Ne5 17.Rc1 Bd7 18.b4 a5 19.a3 axb4 20.axb4 Qb6 A nice picture after only 20 moves. You can see how the black idea was the better one. All of black's pieces are better placed than whites and white needs to protect his queenside pawns instead of trying to attack black with them. Black's knight on e5 is a monster, and together with both active bishops controlling the hole in the position, Black has the initiative and stands better.

**B33**

## ☐ The Sveshnikov Positional
## ■ Positional main line 10.Bxf6,13.Ncxb4 and 15.Bg2

1.e4 c5 2.Nf3 Nc6 3.d4 cxd4 4.Nxd4 Nf6 5.Nc3 e5 This is the starting position of the Sveshnikov. Black plays aggressively and wants to fight for the initiative right from the start. This gives him enough time for quick development and a safe position for the king. But by playing e5 black accepts a backward pawn on d6 and a potentially weak square on d5. This is one of the most uncompromising openings in chess. With this opening, you do not need to fight for equality and instead can play for initiative right from the start. Today this is the opening of choice for many leading players in the world. Ex-world champion Vladimir Kramnik plays it with great success. Here I will try to explain not only the forced lines but also the often complex strategy that is behind the ideas. 6.Ndb5 This is white's positional approach. With this move, white wants to force black to play d6 without time to develop the dark-squared bishop and then he can occupy the weak square on d5. Alternatives will be explained in the other chapters. Black has a few nice ideas here that will give him great positions.

6...d6 7.Bg5 This is the second part of white's idea. After taking the knight on f6, the square on d5 will be even weaker. The drawback is in the fact that black will have the two bishops and great activity. 7...a6 Black needs to bring back this knight to a3 and after that seize the initiative and space on the queenside with b5. 8.Na3 b5 9.Nd5 This is one of two main lines or positions in Sveshnikov Sicilian. White now takes over control over the d5 square. In return, black gets the bishop pair and a lot of activity. 9. Nd5 is a more positional line where white will not double Black's f pawns. Because of this, the position will be much more closed, and there will be plenty of time for improving the positions of pieces and pawns. Mainly white will try to play on the queenside and try to take advantage of the potentially exposed pawns on a6 and b5. Black will have a very solid pawn structure on the kingside and the bishop pair. This will be enough for equality. The positions that arise after this move are very rich and playable for both sides. Once again you can see how simply you can play with the Sveshnikov. The positions you get will be equal but far from a draw ! 9...Be7 10.Bxf6 With the capture on f6 white gets control over d5. 10...Bxf6 11.c4 This is an alternative to c3. White does not want to lose time bringing the knight from a3 into the game and immediately starts to fight on the queenside and attack the exposed black pawns there. 11...b4 Now black can push b4 and a5, and after that reposition his knight and bishop from f6 to g1 - a7 diagonal. 12.Nc2 0-0 There is no need to rush with a5 because white cannot take on b4 for now. This is one of the most positional ideas that white can try against the Sveshnikov. The position will now be closed, and it is important to understand the ideas. Black's idea is to bring the dark-squared bishop onto the best diagonal c1 - h6, play Qc5 via a5 when possible, and get the knight on d4 or even c5 via b8 and d7. If you want to get the rook onto the c file, then you will have to use the a7 square for that idea, because in most lines white will play Bh3 and the c8 square will be not available for it. In these positions black is at least equal. 13.g3 This is white's main idea. To get some space on the kingside with his next move h4 and to get this bad bishop from f1 to a natural square in h3. 13...a5 14.h4 Be6 15.Bg2 This move is not so bad, but the bishop on g2 is even worse than on e2, and this is not what white wants. 15...Bxd5 16.cxd5 Nd4 17.Nxd4 exd4 18.0-0 Rc8 19.Qd3 Qc7 With an equal position as in the line before.

**B33**

☐ **The Sveshnikov Positional**
■ **Positional main line 10.Bxf6,13.a4**

1.e4 c5 2.Nf3 Nc6 3.d4 cxd4 4.Nxd4 Nf6 5.Nc3 e5 This is the starting position of the Sveshnikov. Black plays aggressively and wants to fight for the initiative right from the start. This gives him enough time for quick development and a safe position for the king. But by playing e5 black accepts a backward pawn on d6 and a potentially weak square on d5. This is one of the most uncompromising openings in chess. With this opening, you do not need to fight for equality and instead can play

for initiative right from the start. Today this is the opening of choice for many leading players in the world. Ex-world champion Vladimir Kramnik plays it with great success. Here I will try to explain not only the forced lines but also the often complex strategy that is behind the ideas. 6.Ndb5 This is white's positional approach. With this move, white wants to force black to play d6 without time to develop the dark-squared bishop and then he can occupy the weak square on d5. Alternatives will be explained in the other chapters. Black has a few nice ideas here that will give him great positions. 6...d6 7.Bg5 This is the second part of white's idea. After taking the knight on f6, the square on d5 will be even weaker. The drawback is in the fact that black will have the two bishops and great activity. 7...a6 Black needs to bring back this knight to a3 and after that seize the initiative and space on the queenside with b5. 8.Na3 b5 9.Nd5 This is one of two main lines or positions in Sveshnikov Sicilian. White now takes over control over the d5 square. In return, black gets the bishop pair and a lot of activity. 9. Nd5 is a more positional line where white will not double Black's f pawns. Because of this, the position will be much more closed, and there will be plenty of time for improving the positions of pieces and pawns. Mainly white will try to play on the queenside and try to take advantage of the potentially exposed pawns on a6 and b5. Black will have a very solid pawn structure on the kingside and the bishop pair. This will be enough for equality. The positions that arise after this move are very rich and playable for both sides. Once again you can see how simply you can play with the Sveshnikov. The positions you get will be equal but far from a draw ! 9...Be7 10.Bxf6 With the capture on f6 white gets control over d5. 10...Bxf6 11.c3 After this move, it is clear what white wants. First, he wants to secure the d5 square, then to transfer his worst piece, the knight on a3 to the more active square on c2, and then e3 or even b4. Only then he wants to start activity on the queenside. This is a much more solid way to play than the illogical 10. Ne7. It is important to remember something White now has a great looking knight on d5. This knight is strong on d5, and you need to be careful, especially so when you try to exchange it. Now there are two possible ways to exchange it, one for the knight and the second for the light-squared bishop. In most of the situations, you want to exchange it for the knight on c6 because if you look at the position, this knight is black's worst piece on the board. Nc6 cannot jump to any vital square and also if you can exchange it and keep the bishop pair it will be perfect for black. Also, I want to tell you a secret, the white knight on d5 is a great piece but does not do anything in the attack for now, and black can easily play around this knight as I will show you in the next lines. The pawn structure in the center is for the time being slightly better for white, but the weak d6 pawn is hard to get at because the white knight on d5 protects it and on the d file white does not have the possibility to attack it. So you do not need to be afraid of losing it. If white tries to do it, you can easily protect the pawn with Be7. Also when one day you exchange the knight on d5, and white takes back with the e4 pawn, black will have a perfect pawn structure. 11...Bg5 Black has here a few promising lines, but I will recommend this one. As I mentioned in the previous move, white's idea is to play on the queenside but only after he stabilizes the position in the center.

Because of this, black has to first get his bishop on the most active square possible, and then decide what he wants to do next. I like the bishop pair and here with Bg5 black's bishop will stay alive. I think that there is no need to rush with castles because the black king is safe in the center, and when he needs to he can castle in just one move. Another great thing about this move is that now the bishop controls the e3 square, where white was planning to place his knight from a3 via c2. 12.Nc2 Rb8 After 12. Nc2 white prepares himself for activity on the queenside. The next white move will be a4, with an attack on black's queenside pawns. Now black has a few options, but I will recommend the one with Rb8. Black supports his pawn on b5, moves the rook from the a file and after the exchange on a4, the rook may be able to take the vital pawn on b2. 13.a4 The only move that gives white some chance for play. White has a secure center and a great knight on d5 but if you look a little bit more carefully you will see that this knight does not do anything special and because of him white cannot attack the weak pawn on d6. Also, the position will open up, and then black bishop pair can play a big role. So, white needs to open lines on the queenside because this is the only play that he has. One more thing that I believe is important here, is the move order. You see that position in the center is closed, and the black king stays in the center without any possibility for white to attack him. Because of this white also needs to wait before castling and first needs to improve the position on the queenside. If white does not move this pawn to a4 now, he will never be able to do it later. 13...bxa4 Now black cannot hold on b5 and needs to take on a4. Now it is also clear why the black rook is nicely placed on the b file because the pawn on b2 is hanging. 14.Ncb4 Bd7 Here you need to remember a few precise moves. Bd7 is one of them. You need to defend Nc6 and control the c6 square. 15.Bxa6 Nxb4 A second important move which exchanges one minor piece and allows the bishop to defend the pawn on a4. 16.Nxb4 Qa5 And here is the next important move to remember. Now you can see what I was talking about. Here black needs to play accurately to maintain an equal position. 17.Qxd6 This is the best and the only move that gives white equality. All other options are better for black. Let's look at them. 17...Rb6 18.Qd3 Be7 19.Rd1 Bg4 Black attacks the light-squared bishop with tempo. Now white has only one good continuation. The other two will be better for black. 20.Nc6 This is an inaccurate move that allows black after a few forcing moves to play a3, with the much better position for black. 20...Rxc6 21.Bb5 0-0 22.Bxc6 Bxd1 23.Qxd1 a3 Black's lead in development, the white king in the center and a3, secure black the much better position.

**B33**

☐ **The Sveshnikov Positional**
■ **Positional main line 10.Bxf6,13.a4**

1.e4 c5 2.Nf3 Nc6 3.d4 cxd4 4.Nxd4 Nf6 5.Nc3 e5 This is the starting position of the Sveshnikov. Black plays aggressively and wants to fight for the initiative right

from the start. This gives him enough time for quick development and a safe position for the king. But by playing e5 black accepts a backward pawn on d6 and a potentially weak square on d5. This is one of the most uncompromising openings in chess. With this opening, you do not need to fight for equality and instead can play for initiative right from the start. Today this is the opening of choice for many leading players in the world. Ex-world champion Vladimir Kramnik plays it with great success. Here I will try to explain not only the forced lines but also the often complex strategy that is behind the ideas. 6.Ndb5 This is white's positional approach. With this move, white wants to force black to play d6 without time to develop the dark-squared bishop and then he can occupy the weak square on d5. Alternatives will be explained in the other chapters. Black has a few nice ideas here that will give him great positions. 6...d6 7.Bg5 This is the second part of white's idea. After taking the knight on f6, the square on d5 will be even weaker. The drawback is in the fact that black will have the two bishops and great activity. 7...a6 Black needs to bring back this knight to a3 and after that seize the initiative and space on the queenside with b5. 8.Na3 b5 9.Nd5 This is one of two main lines or positions in Sveshnikov Sicilian. White now takes over control over the d5 square. In return, black gets the bishop pair and a lot of activity. 9. Nd5 is a more positional line where white will not double Black's f pawns. Because of this, the position will be much more closed, and there will be plenty of time for improving the positions of pieces and pawns. Mainly white will try to play on the queenside and try to take advantage of the potentially exposed pawns on a6 and b5. Black will have a very solid pawn structure on the kingside and the bishop pair. This will be enough for equality. The positions that arise after this move are very rich and playable for both sides. Once again you can see how simply you can play with the Sveshnikov. The positions you get will be equal but far from a draw ! 9...Be7 10.Bxf6 With the capture on f6 white gets control over d5. 10...Bxf6 11.c3 After this move, it is clear what white wants. First, he wants to secure the d5 square, then to transfer his worst piece, the knight on a3 to the more active square on c2, and then e3 or even b4. Only then he wants to start activity on the queenside. This is a much more solid way to play than the illogical 10. Ne7. It is important to remember something White now has a great looking knight on d5. This knight is strong on d5, and you need to be careful, especially so when you try to exchange it. Now there are two possible ways to exchange it, one for the knight and the second for the light-squared bishop. In most of the situations, you want to exchange it for the knight on c6 because if you look at the position, this knight is black's worst piece on the board. Nc6 cannot jump to any vital square and also if you can exchange it and keep the bishop pair it will be perfect for black. Also, I want to tell you a secret, the white knight on d5 is a great piece but does not do anything in the attack for now, and black can easily play around this knight as I will show you in the next lines. The pawn structure in the center is for the time being slightly better for white, but the weak d6 pawn is hard to get at because the white knight on d5 protects it and on the d file white does not have the possibility to attack it. So you do not need to be afraid of losing it. If white tries to do it, you can easily protect the pawn with Be7. Also when

one day you exchange the knight on d5, and white takes back with the e4 pawn, black will have a perfect pawn structure. 11...Bg5 Black has here a few promising lines, but I will recommend this one. As I mentioned in the previous move, white's idea is to play on the queenside but only after he stabilizes the position in the center. Because of this, black has to first get his bishop on the most active square possible, and then decide what he wants to do next. I like the bishop pair and here with Bg5 black's bishop will stay alive. I think that there is no need to rush with castles because the black king is safe in the center, and when he needs to he can castle in just one move. Another great thing about this move is that now the bishop controls the e3 square, where white was planning to place his knight from a3 via c2. 12.Nc2 Rb8 After 12. Nc2 white prepares himself for activity on the queenside. The next white move will be a4, with an attack on black's queenside pawns. Now black has a few options, but I will recommend the one with Rb8. Black supports his pawn on b5, moves the rook from the a file and after the exchange on a4, the rook may be able to take the vital pawn on b2. 13.a4 The only move that gives white some chance for play. White has a secure center and a great knight on d5 but if you look a little bit more carefully you will see that this knight does not do anything special and because of him white cannot attack the weak pawn on d6. Also, the position will open up, and then black bishop pair can play a big role. So, white needs to open lines on the queenside because this is the only play that he has. One more thing that I believe is important here, is the move order. You see that position in the center is closed, and the black king stays in the center without any possibility for white to attack him. Because of this white also needs to wait before castling and first needs to improve the position on the queenside. If white does not move this pawn to a4 now, he will never be able to do it later. 13...bxa4 Now black cannot hold on b5 and needs to take on a4. Now it is also clear why the black rook is nicely placed on the b file because the pawn on b2 is hanging. 14.Ncb4 Bd7 Here you need to remember a few precise moves. Bd7 is one of them. You need to defend Nc6 and control the c6 square. 15.Bxa6 Nxb4 A second important move which exchanges one minor piece and allows the bishop to defend the pawn on a4. 16.Nxb4 Qa5 And here is the next important move to remember. Now you can see what I was talking about. Here black needs to play accurately to maintain an equal position. 17.Qxd6 This is the best and the only move that gives white equality. All other options are better for black. Let's look at them. 17...Rb6 18.Qd3 Be7 19.Rd1 Bg4 Black attacks the light-squared bishop with tempo. Now white has only one good continuation. The other two will be better for black. 20.Rd2 This move once again, and now when the light-squared bishop is not on d7, allows black the exchange sacrifice with a better position. 20...Rxb4 21.cxb4 Bxb4 22.h3 Bxd2+ 23.Qxd2 Qxa6 24.hxg4 0-0 And again with a better position for black.

**B33**

## ☐ The Sveshnikov Positional
## ■ Positional main line 10.Bxf6,13.Bd3

1.e4 c5 2.Nf3 Nc6 3.d4 cxd4 4.Nxd4 Nf6 5.Nc3 e5 This is the starting position of the Sveshnikov. Black plays aggressively and wants to fight for the initiative right from the start. This gives him enough time for quick development and a safe position for the king. But by playing e5 black accepts a backward pawn on d6 and a potentially weak square on d5. This is one of the most uncompromising openings in chess. With this opening, you do not need to fight for equality and instead can play for initiative right from the start. Today this is the opening of choice for many leading players in the world. Ex-world champion Vladimir Kramnik plays it with great success. Here I will try to explain not only the forced lines but also the often complex strategy that is behind the ideas. 6.Ndb5 This is white's positional approach. With this move, white wants to force black to play d6 without time to develop the dark-squared bishop and then he can occupy the weak square on d5. Alternatives will be explained in the other chapters. Black has a few nice ideas here that will give him great positions. 6...d6 7.Bg5 This is the second part of white's idea. After taking the knight on f6, the square on d5 will be even weaker. The drawback is in the fact that black will have the two bishops and great activity. 7...a6 Black needs to bring back this knight to a3 and after that seize the initiative and space on the queenside with b5. 8.Na3 b5 9.Nd5 This is one of two main lines or positions in Sveshnikov Sicilian. White now takes over control over the d5 square. In return, black gets the bishop pair and a lot of activity. 9. Nd5 is a more positional line where white will not double Black's f pawns. Because of this, the position will be much more closed, and there will be plenty of time for improving the positions of pieces and pawns. Mainly white will try to play on the queenside and try to take advantage of the potentially exposed pawns on a6 and b5. Black will have a very solid pawn structure on the kingside and the bishop pair. This will be enough for equality. The positions that arise after this move are very rich and playable for both sides. Once again you can see how simply you can play with the Sveshnikov. The positions you get will be equal but far from a draw ! 9...Be7 10.Bxf6 With the capture on f6 white gets control over d5. 10...Bxf6 11.c3 After this move, it is clear what white wants. First, he wants to secure the d5 square, then to transfer his worst piece, the knight on a3 to the more active square on c2, and then e3 or even b4. Only then he wants to start activity on the queenside. This is a much more solid way to play than the illogical 10. Ne7. It is important to remember something White now has a great looking knight on d5. This knight is strong on d5, and you need to be careful, especially so when you try to exchange it. Now there are two possible ways to exchange it, one for the knight and the second for the light-squared bishop. In most of the situations, you want to exchange it for the knight on c6 because if you look at the position, this knight is black's worst piece on the board. Nc6 cannot jump to any vital square and also if you can exchange it and keep the bishop pair it will be perfect for black. Also, I want to tell you a secret, the white

knight on d5 is a great piece but does not do anything in the attack for now, and black can easily play around this knight as I will show you in the next lines. The pawn structure in the center is for the time being slightly better for white, but the weak d6 pawn is hard to get at because the white knight on d5 protects it and on the d file white does not have the possibility to attack it. So you do not need to be afraid of losing it. If white tries to do it, you can easily protect the pawn with Be7. Also when one day you exchange the knight on d5, and white takes back with the e4 pawn, black will have a perfect pawn structure. 11...Bg5 Black has here a few promising lines, but I will recommend this one. As I mentioned in the previous move, white's idea is to play on the queenside but only after he stabilizes the position in the center. Because of this, black has to first get his bishop on the most active square possible, and then decide what he wants to do next. I like the bishop pair and here with Bg5 black's bishop will stay alive. I think that there is no need to rush with castles because the black king is safe in the center, and when he needs to he can castle in just one move. Another great thing about this move is that now the bishop controls the e3 square, where white was planning to place his knight from a3 via c2. 12.Nc2 Rb8 After 12. Nc2 white prepares himself for activity on the queenside. The next white move will be a4, with an attack on black's queenside pawns. Now black has a few options, but I will recommend the one with Rb8. Black supports his pawn on b5, moves the rook from the a file and after the exchange on a4, the rook may be able to take the vital pawn on b2. 13.Bd3 I'm sure you heard about how playing according to a bad plan is better than to play without any plan. 13. Bd3 is a good looking developing move that does not do anything. It is the same for now to have the bishop on f1 or d3. He needs to attack those black pawns on a6 and b5. Now after this move black will have time to play the strong move a5 and take over control of the queenside. 13...Bd7 14.0-0 Ne7 15.Nxe7 Qxe7 16.Nb4 a5 17.Nd5 Qd8 18.Qe2 0-0 Here we have a position with the typical piece arrangement and pawn structure for this variation. It is in black's favor. Now, objectively the position is close to equal, but let's try to see the potential for both sides. Black's only weakness is the pawn on d6, but white has such badly placed pieces to play against it that it is hard to believe that he can even get a chance to attack it. The knight on d5 and bishop on d3 are on the way of the rooks and the queen on the d file. Let's see black's pluses, the bishop pair, and nicely placed pieces. Black has the potential of playing on the queenside with b4, and the kingside with Kh8, g6, f5. The White knight is a great looking piece, but black can easily play around it.

**B33**

☐ **The Sveshnikov Positional**
■ **Positional main line 10.Bxf6,13.a4**

1.e4 c5 2.Nf3 Nc6 3.d4 cxd4 4.Nxd4 Nf6 5.Nc3 e5 This is the starting position of the Sveshnikov. Black plays aggressively and wants to fight for the initiative right

from the start. This gives him enough time for quick development and a safe position for the king. But by playing e5 black accepts a backward pawn on d6 and a potentially weak square on d5. This is one of the most uncompromising openings in chess. With this opening, you do not need to fight for equality and instead can play for initiative right from the start. Today this is the opening of choice for many leading players in the world. Ex-world champion Vladimir Kramnik plays it with great success. Here I will try to explain not only the forced lines but also the often complex strategy that is behind the ideas. 6.Ndb5 This is white's positional approach. With this move, white wants to force black to play d6 without time to develop the dark-squared bishop and then he can occupy the weak square on d5. Alternatives will be explained in the other chapters. Black has a few nice ideas here that will give him great positions. 6...d6 7.Bg5 This is the second part of white's idea. After taking the knight on f6, the square on d5 will be even weaker. The drawback is in the fact that black will have the two bishops and great activity. 7...a6 Black needs to bring back this knight to a3 and after that seize the initiative and space on the queenside with b5. 8.Na3 b5 9.Nd5 This is one of two main lines or positions in Sveshnikov Sicilian. White now takes over control over the d5 square. In return, black gets the bishop pair and a lot of activity. 9. Nd5 is a more positional line where white will not double Black's f pawns. Because of this, the position will be much more closed, and there will be plenty of time for improving the positions of pieces and pawns. Mainly white will try to play on the queenside and try to take advantage of the potentially exposed pawns on a6 and b5. Black will have a very solid pawn structure on the kingside and the bishop pair. This will be enough for equality. The positions that arise after this move are very rich and playable for both sides. Once again you can see how simply you can play with the Sveshnikov. The positions you get will be equal but far from a draw ! 9...Be7 10.Bxf6 With the capture on f6 white gets control over d5. 10...Bxf6 11.c3 After this move, it is clear what white wants. First, he wants to secure the d5 square, then to transfer his worst piece, the knight on a3 to the more active square on c2, and then e3 or even b4. Only then he wants to start activity on the queenside. This is a much more solid way to play than the illogical 10. Ne7. It is important to remember something White now has a great looking knight on d5. This knight is strong on d5, and you need to be careful, especially so when you try to exchange it. Now there are two possible ways to exchange it, one for the knight and the second for the light-squared bishop. In most of the situations, you want to exchange it for the knight on c6 because if you look at the position, this knight is black's worst piece on the board. Nc6 cannot jump to any vital square and also if you can exchange it and keep the bishop pair it will be perfect for black. Also, I want to tell you a secret, the white knight on d5 is a great piece but does not do anything in the attack for now, and black can easily play around this knight as I will show you in the next lines. The pawn structure in the center is for the time being slightly better for white, but the weak d6 pawn is hard to get at because the white knight on d5 protects it and on the d file white does not have the possibility to attack it. So you do not need to be afraid of losing it. If white tries to do it, you can easily protect the pawn with Be7. Also when

one day you exchange the knight on d5, and white takes back with the e4 pawn, black will have a perfect pawn structure. 11...Bg5 Black has here a few promising lines, but I will recommend this one. As I mentioned in the previous move, white's idea is to play on the queenside but only after he stabilizes the position in the center. Because of this, black has to first get his bishop on the most active square possible, and then decide what he wants to do next. I like the bishop pair and here with Bg5 black's bishop will stay alive. I think that there is no need to rush with castles because the black king is safe in the center, and when he needs to he can castle in just one move. Another great thing about this move is that now the bishop controls the e3 square, where white was planning to place his knight from a3 via c2. 12.Nc2 Rb8 After 12. Nc2 white prepares himself for activity on the queenside. The next white move will be a4, with an attack on black's queenside pawns. Now black has a few options, but I will recommend the one with Rb8. Black supports his pawn on b5, moves the rook from the a file and after the exchange on a4, the rook may be able to take the vital pawn on b2. 13.a4 The only move that gives white some chance for play. White has a secure center and a great knight on d5 but if you look a little bit more carefully you will see that this knight does not do anything special and because of him white cannot attack the weak pawn on d6. Also, the position will open up, and then black bishop pair can play a big role. So, white needs to open lines on the queenside because this is the only play that he has. One more thing that I believe is important here, is the move order. You see that position in the center is closed, and the black king stays in the center without any possibility for white to attack him. Because of this white also needs to wait before castling and first needs to improve the position on the queenside. If white does not move this pawn to a4 now, he will never be able to do it later. 13...bxa4 Now black cannot hold on b5 and needs to take on a4. Now it is also clear why the black rook is nicely placed on the b file because the pawn on b2 is hanging. 14.Ncb4 Bd7 Here you need to remember a few precise moves. Bd7 is one of them. You need to defend Nc6 and control the c6 square. 15.Nxa6 That move is a mistake. This allows black to take the pawn on b2 and get a better position. 15...Rxb2 16.Nac7+ Kf8 17.Bb5 Bd2+ 18.Kf1 Bxc3 19.Nxc3 Nd4 And after a last few almost forced moves we have a position where white is currently a piece up, but many of his pieces are under attack and he can't defend all of them. Whatever white does, black can take the piece back, when the white king will still be under the pressure after that. Black is now much better.

**B33**

☐ **The Sveshnikov Positional**
■ **Main positional line 9.Nd5**

1.e4 c5 2.Nf3 Nc6 3.d4 cxd4 4.Nxd4 Nf6 5.Nc3 e5 6.Ndb5 d6 7.Bg5 a6 8.Na3 b5 9.Nd5 Be7 10.Bxf6 Bxf6 11.c3 Bg5 12.Nc2 Rb8 13.a4 bxa4 14.Ncb4 Bd7 15.Bxa6 Nxb4 16.Nxb4 Qa5 17.Qxd6 Rb6 18.Qd3 Be7 19.Nd5 Rxb2

20.0-0 Qc5 21.Rab1 Rxb1 22.Rxb1 0-0 23.Nxe7+ This is the move that was suggested in the book about the opening from a white perspective against the Sveshnikov. Author Logozar makes this variation and suggests the move Ne7 here with the evaluation as the slightly better for white. In my view is always difficult to evaluate the slight advantage for each side, but here I don't think that white has any advantage at all. First, this is the variation that white playin order to get the better position based on the better knight on d5 against the black dark square bishop. In order to do that, he exchage this knight only if he gets the material advantage. Here, unfortunately for him this will not happens and I will show you a direct line which is completely equal. 23...Qxe7 24.Rb7 Rd8 25.Bc4 Qe8 And black manage to unpin the pieces and now the next move is Be6. 26.Ra7 Be6 27.Bd5 Bxd5 28.exd5 e4 29.Qd4 h5 30.c4 Rb8 31.h3 Rb3 32.d6 Rd3 33.Qc5 e3 And after some forced moves, we have a drawish position.

**B33**

☐ **The Sveshnikov Attacking**
■ **The Novosibirsk Variation 11.,14.0-0.**

1.e4 c5 2.Nf3 Nc6 3.d4 cxd4 4.Nxd4 Nf6 5.Nc3 e5 6.Ndb5 d6 7.Bg5 a6 8.Na3 b5 9.Bxf6 This is, in my opinion, the only move that white can play to try and get an advantage. White wants to double black's pawns on the f file and secure a nice home for his knight on d5. Now, the positions that occur here are fighting and double-edged and just like white, black also has a lot of chances to play for equality but also for the advantage and the initiative. 9...gxf6 10.Nd5 Bg7 Here I preferred to play this instead of f5. I think that both moves are playable but this is the move that has caught my attention, after having all kinds of problems with sacrifices on b5. When you want to fight for the initiative, giving white two possible sacrifices after f5 is something that I'd like to avoid (on b5 with Bb5 and also Nb5) . This is the so-called Novosibirsk variation where black has nice and rich possibilities. The first idea is to not allow white sacrifices on b5 because you can your king to f8, and also this bishop will be on great diagonal after the next move, f5. Also after Bg7 you will have the extra option to play Ne7 as I will show you in the next position. 11.Bd3
This today remains the main move and does not allow f5 but allows Ne7, an exchange that is in black's favor. The knight on d5 is the best white piece, and black wants to exchange it. 11...Ne7 Black now exchanges his worst piece for the best white piece. 12.Nxe7 Qxe7 Now white has two plan as in the positional line with 9. Nd5. The ideas are the same but the position is slightly deferent. Black has a nice position. 13.c4 This is the more aggressive approach. White immediately wants to attack the exposed black pawns on the queenside. 13...f5 14.0-0 0-0 Black moves his king to a safe place on the kingside and now white has a few possible continuations. Let's go through all of them. 15.Re1 This move just like Qf3 achieves nothing. Black easily gets a nice position. 15...fxe4 16.Bxe4 Rb8 17.cxb5 axb5

18.Qd3 f5 19.Bd5+ Kh8 20.Nxb5 e4 21.Qb3 Bd7 22.a4 Qf6 For the sacrificed pawn black has the bishop pair, the better position in the center and a potential attack on the white king.

**B33**

## ☐ The Sveshnikov Positional
## ■ Positional main line 10.Bxf6,13.g3

1.e4 c5 2.Nf3 Nc6 3.d4 cxd4 4.Nxd4 Nf6 5.Nc3 e5 This is the starting position of the Sveshnikov. Black plays aggressively and wants to fight for the initiative right from the start. This gives him enough time for quick development and a safe position for the king. But by playing e5 black accepts a backward pawn on d6 and a potentially weak square on d5. This is one of the most uncompromising openings in chess. With this opening, you do not need to fight for equality and instead can play for initiative right from the start. Today this is the opening of choice for many leading players in the world. Ex-world champion Vladimir Kramnik plays it with great success. Here I will try to explain not only the forced lines but also the often complex strategy that is behind the ideas. 6.Ndb5 This is white's positional approach. With this move, white wants to force black to play d6 without time to develop the dark-squared bishop and then he can occupy the weak square on d5. Alternatives will be explained in the other chapters. Black has a few nice ideas here that will give him great positions. 6...d6 7.Bg5 This is the second part of white's idea. After taking the knight on f6, the square on d5 will be even weaker. The drawback is in the fact that black will have the two bishops and great activity. 7...a6 Black needs to bring back this knight to a3 and after that seize the initiative and space on the queenside with b5. 8.Na3 b5 9.Nd5 This is one of two main lines or positions in Sveshnikov Sicilian. White now takes over control over the d5 square. In return, black gets the bishop pair and a lot of activity. 9. Nd5 is a more positional line where white will not double Black's f pawns. Because of this, the position will be much more closed, and there will be plenty of time for improving the positions of pieces and pawns. Mainly white will try to play on the queenside and try to take advantage of the potentially exposed pawns on a6 and b5. Black will have a very solid pawn structure on the kingside and the bishop pair. This will be enough for equality. The positions that arise after this move are very rich and playable for both sides. Once again you can see how simply you can play with the Sveshnikov. The positions you get will be equal but far from a draw ! 9...Be7 10.Bxf6 With the capture on f6 white gets control over d5. 10...Bxf6 11.c3 After this move, it is clear what white wants. First, he wants to secure the d5 square, then to transfer his worst piece, the knight on a3 to the more active square on c2, and then e3 or even b4. Only then he wants to start activity on the queenside. This is a much more solid way to play than the illogical 10. Ne7. It is important to remember something White now has a great looking knight on d5. This knight is strong on d5, and you need to be careful, especially so when you try to exchange it. Now there are

two possible ways to exchange it, one for the knight and the second for the light-squared bishop. In most of the situations, you want to exchange it for the knight on c6 because if you look at the position, this knight is black's worst piece on the board. Nc6 cannot jump to any vital square and also if you can exchange it and keep the bishop pair it will be perfect for black. Also, I want to tell you a secret, the white knight on d5 is a great piece but does not do anything in the attack for now, and black can easily play around this knight as I will show you in the next lines. The pawn structure in the center is for the time being slightly better for white, but the weak d6 pawn is hard to get at because the white knight on d5 protects it and on the d file white does not have the possibility to attack it. So you do not need to be afraid of losing it. If white tries to do it, you can easily protect the pawn with Be7. Also when one day you exchange the knight on d5, and white takes back with the e4 pawn, black will have a perfect pawn structure. 11...Bg5 Black has here a few promising lines, but I will recommend this one. As I mentioned in the previous move, white's idea is to play on the queenside but only after he stabilizes the position in the center. Because of this, black has to first get his bishop on the most active square possible, and then decide what he wants to do next. I like the bishop pair and here with Bg5 black's bishop will stay alive. I think that there is no need to rush with castles because the black king is safe in the center, and when he needs to he can castle in just one move. Another great thing about this move is that now the bishop controls the e3 square, where white was planning to place his knight from a3 via c2. 12.Nc2 Rb8 After 12. Nc2 white prepares himself for activity on the queenside. The next white move will be a4, with an attack on black's queenside pawns. Now black has a few options, but I will recommend the one with Rb8. Black supports his pawn on b5, moves the rook from the a file and after the exchange on a4, the rook may be able to take the vital pawn on b2. 13.g3 As I mentioned before, every move other than 13. a4 is not in the spirit of this position. White's only real chance is active play on the queenside. Here the bishop will go on the bad g2 square and without a4 white does not have any real active play. In the long run, if black gets time to open the position he can easily be better with the strong bishop pair. 13...0-0 14.Bg2 a5 Now black takes over the initiative on the queenside. White's passive play allows him that. 15.a3 I give this move a dubious mark I think it's wrong. White's major idea is to fight for an advantage on the queenside, and not to defend his position on the queenside ! Now black has the upper hand to play where he likes. 15...Ne7 A classic move for black. Exchange the only active white piece. 16.Nce3 Bxe3 Again as before, a strong positional move. 17.Nxe3 b4 18.axb4 axb4 19.0-0 Be6 20.Qd3 bxc3 21.bxc3 Qc7 This position is equal, but black manages to secure the d5 square and the pawn on d6. Now both pawns, the white one on c3 and the black one on d6 are weak. The side who manages to attack the pawn first will get the initiative. Because of the passive white light-squared bishop, black has more of a chance to do that.

**B33**

## ☐ The Sveshnikov Positional
## ■ Positional main line 10.Bxf6,13.a4

1.e4 c5 2.Nf3 Nc6 3.d4 cxd4 4.Nxd4 Nf6 5.Nc3 e5 This is the starting position of the Sveshnikov. Black plays aggressively and wants to fight for the initiative right from the start. This gives him enough time for quick development and a safe position for the king. But by playing e5 black accepts a backward pawn on d6 and a potentially weak square on d5. This is one of the most uncompromising openings in chess. With this opening, you do not need to fight for equality and instead can play for initiative right from the start. Today this is the opening of choice for many leading players in the world. Ex-world champion Vladimir Kramnik plays it with great success. Here I will try to explain not only the forced lines but also the often complex strategy that is behind the ideas. 6.Ndb5 This is white's positional approach. With this move, white wants to force black to play d6 without time to develop the dark-squared bishop and then he can occupy the weak square on d5. Alternatives will be explained in the other chapters. Black has a few nice ideas here that will give him great positions. 6...d6 7.Bg5 This is the second part of white's idea. After taking the knight on f6, the square on d5 will be even weaker. The drawback is in the fact that black will have the two bishops and great activity. 7...a6 Black needs to bring back this knight to a3 and after that seize the initiative and space on the queenside with b5. 8.Na3 b5 9.Nd5 This is one of two main lines or positions in Sveshnikov Sicilian. White now takes over control over the d5 square. In return, black gets the bishop pair and a lot of activity. 9. Nd5 is a more positional line where white will not double Black's f pawns. Because of this, the position will be much more closed, and there will be plenty of time for improving the positions of pieces and pawns. Mainly white will try to play on the queenside and try to take advantage of the potentially exposed pawns on a6 and b5. Black will have a very solid pawn structure on the kingside and the bishop pair. This will be enough for equality. The positions that arise after this move are very rich and playable for both sides. Once again you can see how simply you can play with the Sveshnikov. The positions you get will be equal but far from a draw ! 9...Be7 10.Bxf6 With the capture on f6 white gets control over d5. 10...Bxf6 11.c3 After this move, it is clear what white wants. First, he wants to secure the d5 square, then to transfer his worst piece, the knight on a3 to the more active square on c2, and then e3 or even b4. Only then he wants to start activity on the queenside. This is a much more solid way to play than the illogical 10. Ne7. It is important to remember something White now has a great looking knight on d5. This knight is strong on d5, and you need to be careful, especially so when you try to exchange it. Now there are two possible ways to exchange it, one for the knight and the second for the light-squared bishop. In most of the situations, you want to exchange it for the knight on c6 because if you look at the position, this knight is black's worst piece on the board. Nc6 cannot jump to any vital square and also if you can exchange it and keep the bishop pair it will be perfect for black. Also, I want to tell you a secret, the white

knight on d5 is a great piece but does not do anything in the attack for now, and black can easily play around this knight as I will show you in the next lines. The pawn structure in the center is for the time being slightly better for white, but the weak d6 pawn is hard to get at because the white knight on d5 protects it and on the d file white does not have the possibility to attack it. So you do not need to be afraid of losing it. If white tries to do it, you can easily protect the pawn with Be7. Also when one day you exchange the knight on d5, and white takes back with the e4 pawn, black will have a perfect pawn structure. 11...Bg5 Black has here a few promising lines, but I will recommend this one. As I mentioned in the previous move, white's idea is to play on the queenside but only after he stabilizes the position in the center. Because of this, black has to first get his bishop on the most active square possible, and then decide what he wants to do next. I like the bishop pair and here with Bg5 black's bishop will stay alive. I think that there is no need to rush with castles because the black king is safe in the center, and when he needs to he can castle in just one move. Another great thing about this move is that now the bishop controls the e3 square, where white was planning to place his knight from a3 via c2. 12.Nc2 Rb8 After 12. Nc2 white prepares himself for activity on the queenside. The next white move will be a4, with an attack on black's queenside pawns. Now black has a few options, but I will recommend the one with Rb8. Black supports his pawn on b5, moves the rook from the a file and after the exchange on a4, the rook may be able to take the vital pawn on b2. 13.a4 The only move that gives white some chance for play. White has a secure center and a great knight on d5 but if you look a little bit more carefully you will see that this knight does not do anything special and because of him white cannot attack the weak pawn on d6. Also, the position will open up, and then black bishop pair can play a big role. So, white needs to open lines on the queenside because this is the only play that he has. One more thing that I believe is important here, is the move order. You see that position in the center is closed, and the black king stays in the center without any possibility for white to attack him. Because of this white also needs to wait before castling and first needs to improve the position on the queenside. If white does not move this pawn to a4 now, he will never be able to do it later. 13...bxa4 Now black cannot hold on b5 and needs to take on a4. Now it is also clear why the black rook is nicely placed on the b file because the pawn on b2 is hanging. 14.Ncb4 Bd7 Here you need to remember a few precise moves. Bd7 is one of them. You need to defend Nc6 and control the c6 square. 15.Bxa6 Nxb4 A second important move which exchanges one minor piece and allows the bishop to defend the pawn on a4. 16.cxb4 This is the alternative to 16. Nb4. It is also a playable move that will lead to an equal position. 16...0-0 17.0-0 Bc6 18.Bc4 Bxd5 19.Bxd5 Rxb4 20.Rxa4 Rxb2 With an equal position.

**B33**

## ☐ The Sveshnikov Positional
## ■ Positional main line 10.Bxf6,13.a4

1.e4 c5 2.Nf3 Nc6 3.d4 cxd4 4.Nxd4 Nf6 5.Nc3 e5 This is the starting position of the Sveshnikov. Black plays aggressively and wants to fight for the initiative right from the start. This gives him enough time for quick development and a safe position for the king. But by playing e5 black accepts a backward pawn on d6 and a potentially weak square on d5. This is one of the most uncompromising openings in chess. With this opening, you do not need to fight for equality and instead can play for initiative right from the start. Today this is the opening of choice for many leading players in the world. Ex-world champion Vladimir Kramnik plays it with great success. Here I will try to explain not only the forced lines but also the often complex strategy that is behind the ideas. 6.Ndb5 This is white's positional approach. With this move, white wants to force black to play d6 without time to develop the dark-squared bishop and then he can occupy the weak square on d5. Alternatives will be explained in the other chapters. Black has a few nice ideas here that will give him great positions. 6...d6 7.Bg5 This is the second part of white's idea. After taking the knight on f6, the square on d5 will be even weaker. The drawback is in the fact that black will have the two bishops and great activity. 7...a6 Black needs to bring back this knight to a3 and after that seize the initiative and space on the queenside with b5. 8.Na3 b5 9.Nd5 This is one of two main lines or positions in Sveshnikov Sicilian. White now takes over control over the d5 square. In return, black gets the bishop pair and a lot of activity. 9. Nd5 is a more positional line where white will not double Black's f pawns. Because of this, the position will be much more closed, and there will be plenty of time for improving the positions of pieces and pawns. Mainly white will try to play on the queenside and try to take advantage of the potentially exposed pawns on a6 and b5. Black will have a very solid pawn structure on the kingside and the bishop pair. This will be enough for equality. The positions that arise after this move are very rich and playable for both sides. Once again you can see how simply you can play with the Sveshnikov. The positions you get will be equal but far from a draw ! 9...Be7 10.Bxf6 With the capture on f6 white gets control over d5. 10...Bxf6 11.c3 After this move, it is clear what white wants. First, he wants to secure the d5 square, then to transfer his worst piece, the knight on a3 to the more active square on c2, and then e3 or even b4. Only then he wants to start activity on the queenside. This is a much more solid way to play than the illogical 10. Ne7. It is important to remember something White now has a great looking knight on d5. This knight is strong on d5, and you need to be careful, especially so when you try to exchange it. Now there are two possible ways to exchange it, one for the knight and the second for the light-squared bishop. In most of the situations, you want to exchange it for the knight on c6 because if you look at the position, this knight is black's worst piece on the board. Nc6 cannot jump to any vital square and also if you can exchange it and keep the bishop pair it will be perfect for black. Also, I want to tell you a secret, the white

knight on d5 is a great piece but does not do anything in the attack for now, and black can easily play around this knight as I will show you in the next lines. The pawn structure in the center is for the time being slightly better for white, but the weak d6 pawn is hard to get at because the white knight on d5 protects it and on the d file white does not have the possibility to attack it. So you do not need to be afraid of losing it. If white tries to do it, you can easily protect the pawn with Be7. Also when one day you exchange the knight on d5, and white takes back with the e4 pawn, black will have a perfect pawn structure. 11...Bg5 Black has here a few promising lines, but I will recommend this one. As I mentioned in the previous move, white's idea is to play on the queenside but only after he stabilizes the position in the center. Because of this, black has to first get his bishop on the most active square possible, and then decide what he wants to do next. I like the bishop pair and here with Bg5 black's bishop will stay alive. I think that there is no need to rush with castles because the black king is safe in the center, and when he needs to he can castle in just one move. Another great thing about this move is that now the bishop controls the e3 square, where white was planning to place his knight from a3 via c2. 12.Nc2 Rb8 After 12. Nc2 white prepares himself for activity on the queenside. The next white move will be a4, with an attack on black's queenside pawns. Now black has a few options, but I will recommend the one with Rb8. Black supports his pawn on b5, moves the rook from the a file and after the exchange on a4, the rook may be able to take the vital pawn on b2. 13.a4 The only move that gives white some chance for play. White has a secure center and a great knight on d5 but if you look a little bit more carefully you will see that this knight does not do anything special and because of him white cannot attack the weak pawn on d6. Also, the position will open up, and then black bishop pair can play a big role. So, white needs to open lines on the queenside because this is the only play that he has. One more thing that I believe is important here, is the move order. You see that position in the center is closed, and the black king stays in the center without any possibility for white to attack him. Because of this white also needs to wait before castling and first needs to improve the position on the queenside. If white does not move this pawn to a4 now, he will never be able to do it later. 13...bxa4 Now black cannot hold on b5 and needs to take on a4. Now it is also clear why the black rook is nicely placed on the b file because the pawn on b2 is hanging. 14.Ncb4 Bd7 Here you need to remember a few precise moves. Bd7 is one of them. You need to defend Nc6 and control the c6 square. 15.Bxa6 Nxb4 A second important move which exchanges one minor piece and allows the bishop to defend the pawn on a4. 16.Nxb4 Qa5 And here is the next important move to remember. Now you can see what I was talking about. Here black needs to play accurately to maintain an equal position. 17.Qxd6 This is the best and the only move that gives white equality. All other options are better for black. Let's look at them. 17...Rb6 18.Qc7 An inaccurate move that gives black the better position. 18...Rxa6 19.Nxa6 Qxa6 20.Qxe5+ Be7 21.Qxg7 Bf6 22.Qg3 Qc4 Now white has three pawns for the bishop pair, but those pawns will never start

advancing because they are not mobile. All the black pieces will join in the action, and it will be hard for white to defend his king in the center. Black is better.

**B33**

☐ **The Sveshnikov Positional**
■ **Positional main line 10.Bxf6,13.a4**

1.e4 c5 2.Nf3 Nc6 3.d4 cxd4 4.Nxd4 Nf6 5.Nc3 e5 This is the starting position of the Sveshnikov. Black plays aggressively and wants to fight for the initiative right from the start. This gives him enough time for quick development and a safe position for the king. But by playing e5 black accepts a backward pawn on d6 and a potentially weak square on d5. This is one of the most uncompromising openings in chess. With this opening, you do not need to fight for equality and instead can play for initiative right from the start. Because of this, the position will be much more closed, and there will be plenty of time for improving the positions of pieces and pawns. Mainly white will try to play on the queenside and try to take advantage of the potentially exposed pawns on a6 and b5. Black will have a very solid pawn structure on the kingside and the bishop pair. This will be enough for equality. The positions that arise after this move are very rich and playable for both sides. Once again you can see how simply you can play with the Sveshnikov. The positions you get will be equal but far from a draw ! 9...Be7 10.Bxf6 With the capture on f6 white gets control over d5. 10...Bxf6 11.c3 After this move, it is clear what white wants. First, he wants to secure the d5 square, then to transfer his worst piece, the knight on a3 to the more active square on c2, and then e3 or even b4. Only then he wants to start activity on the queenside. This is a much more solid way to play than the illogical 10. Ne7. It is important to remember something White now has a great looking knight on d5. This knight is strong on d5, and you need to be careful, especially so when you try to exchange it. Now there are two possible ways to exchange it, one for the knight and the second for the light-

squared bishop. In most of the situations, you want to exchange it for the knight on c6 because if you look at the position, this knight is black's worst piece on the board. Nc6 cannot jump to any vital square and also if you can exchange it and keep the bishop pair it will be perfect for black. Also, I want to tell you a secret, the white knight on d5 is a great piece but does not do anything in the attack for now, and black can easily play around this knight as I will show you in the next lines. The pawn structure in the center is for the time being slightly better for white, but the weak d6 pawn is hard to get at because the white knight on d5 protects it and on the d file white does not have the possibility to attack it. So you do not need to be afraid of losing it. If white tries to do it, you can easily protect the pawn with Be7. Also when one day you exchange the knight on d5, and white takes back with the e4 pawn, black will have a perfect pawn structure. 11...Bg5 Black has here a few promising lines, but I will recommend this one. As I mentioned in the previous move, white's idea is to play on the queenside but only after he stabilizes the position in the center. Because of this, black has to first get his bishop on the most active square possible, and then decide what he wants to do next. I like the bishop pair and here with Bg5 black's bishop will stay alive. I think that there is no need to rush with castles because the black king is safe in the center, and when he needs to he can castle in just one move. Another great thing about this move is that now the bishop controls the e3 square, where white was planning to place his knight from a3 via c2. 12.Nc2 Rb8 After 12. Nc2 white prepares himself for activity on the queenside. The next white move will be a4, with an attack on black's queenside pawns. Now black has a few options, but I will recommend the one with Rb8. Black supports his pawn on b5, moves the rook from the a file and after the exchange on a4, the rook may be able to take the vital pawn on b2. 13.a4 The only move that gives white some chance for play. White has a secure center and a great knight on d5 but if you look a little bit more carefully you will see that this knight does not do anything special and because of him white cannot attack the weak pawn on d6. Also, the position will open up, and then black bishop pair can play a big role. So, white needs to open lines on the queenside because this is the only play that he has. One more thing that I believe is important here, is the move order. You see that position in the center is closed, and the black king stays in the center without any possibility for white to attack him. Because of this white also needs to wait before castling and first needs to improve the position on the queenside. If white does not move this pawn to a4 now, he will never be able to do it later. 13...bxa4 Now black cannot hold on b5 and needs to take on a4. Now it is also clear why the black rook is nicely placed on the b file because the pawn on b2 is hanging. 14.Ncb4 Bd7 Here you need to remember a few precise moves. Bd7 is one of them. You need to defend Nc6 and control the c6 square. 15.Bxa6 Nxb4 A second important move which exchanges one minor piece and allows the bishop to defend the pawn on a4. 16.Nxb4 Qa5 And here is the next important move to remember. Now you can see what I was talking about. Here black needs to play accurately to maintain an equal position. 17.Qxd6 This is the best and the only move that gives white equality. All other options are better for black. Let's

look at them. 17...Rb6 18.Qd3 Be7 19.Nd5 Rxb2 20.0-0 Qc5 Another strong thematic move that you need to remember. The queen on c5 controls the dark squares that the white knight on d5 attacks, and also attacks the weak pawn on c3. It also supports black's potential break with a3. Great positional move ! 21.Qg3 This is a slow move that will give black a better position. 21...0-0 22.Qxe5 Bd6 23.Qd4 Ra8 24.Bc4 a3 And now although White is a pawn up, black has a monster pawn on a3, and all of his pieces are better than white. Black is much better.

**B33**

☐ **The Sveshnikov Positional**
■ **Positional main line 10.Bxf6,13.a4**

1.e4 c5 2.Nf3 Nc6 3.d4 cxd4 4.Nxd4 Nf6 5.Nc3 e5 This is the starting position of the Sveshnikov. Black plays aggressively and wants to fight for the initiative right from the start. This gives him enough time for quick development and a safe position for the king. But by playing e5 black accepts a backward pawn on d6 and a potentially weak square on d5. This is one of the most uncompromising openings in chess. With this opening, you do not need to fight for equality and instead can play for initiative right from the start. Today this is the opening of choice for many leading players in the world. Ex-world champion Vladimir Kramnik plays it with great success. Here I will try to explain not only the forced lines but also the often complex strategy that is behind the ideas. 6.Ndb5 This is white's positional approach. With this move, white wants to force black to play d6 without time to develop the dark-squared bishop and then he can occupy the weak square on d5. Alternatives will be explained in the other chapters. Black has a few nice ideas here that will give him great positions. 6...d6 7.Bg5 This is the second part of white's idea. After taking the knight on f6, the square on d5 will be even weaker. The drawback is in the fact that black will have the two bishops and great activity. 7...a6 Black needs to bring back this knight to a3 and after that seize the initiative and space on the queenside with b5. 8.Na3 b5 9.Nd5 This is one of two main lines or positions in Sveshnikov Sicilian. White now takes over control over the d5 square. In return, black gets the bishop pair and a lot of activity. 9. Nd5 is a more positional line where white will not double Black's f pawns. Because of this, the position will be much more closed, and there will be plenty of time for improving the positions of pieces and pawns. Mainly white will try to play on the queenside and try to take advantage of the potentially exposed pawns on a6 and b5. Black will have a very solid pawn structure on the kingside and the bishop pair. This will be enough for equality. The positions that arise after this move are very rich and playable for both sides. Once again you can see how simply you can play with the Sveshnikov. The positions you get will be equal but far from a draw ! 9...Be7 10.Bxf6 With the capture on f6 white gets control over d5. 10...Bxf6 11.c3 After this move, it is clear what white wants. First, he wants to secure the d5 square, then to transfer his worst piece, the knight on a3 to the more active square on c2,

and then e3 or even b4. Only then he wants to start activity on the queenside. This is a much more solid way to play than the illogical 10. Ne7. It is important to remember something White now has a great looking knight on d5. This knight is strong on d5, and you need to be careful, especially so when you try to exchange it. Now there are two possible ways to exchange it, one for the knight and the second for the light-squared bishop. In most of the situations, you want to exchange it for the knight on c6 because if you look at the position, this knight is black's worst piece on the board. Nc6 cannot jump to any vital square and also if you can exchange it and keep the bishop pair it will be perfect for black. Also, I want to tell you a secret, the white knight on d5 is a great piece but does not do anything in the attack for now, and black can easily play around this knight as I will show you in the next lines. The pawn structure in the center is for the time being slightly better for white, but the weak d6 pawn is hard to get at because the white knight on d5 protects it and on the d file white does not have the possibility to attack it. So you do not need to be afraid of losing it. If white tries to do it, you can easily protect the pawn with Be7. Also when one day you exchange the knight on d5, and white takes back with the e4 pawn, black will have a perfect pawn structure. 11...Bg5 Black has here a few promising lines, but I will recommend this one. As I mentioned in the previous move, white's idea is to play on the queenside but only after he stabilizes the position in the center. Because of this, black has to first get his bishop on the most active square possible, and then decide what he wants to do next. I like the bishop pair and here with Bg5 black's bishop will stay alive. I think that there is no need to rush with castles because the black king is safe in the center, and when he needs to he can castle in just one move. Another great thing about this move is that now the bishop controls the e3 square, where white was planning to place his knight from a3 via c2. 12.Nc2 Rb8 After 12. Nc2 white prepares himself for activity on the queenside. The next white move will be a4, with an attack on black's queenside pawns. Now black has a few options, but I will recommend the one with Rb8. Black supports his pawn on b5, moves the rook from the a file and after the exchange on a4, the rook may be able to take the vital pawn on b2. 13.a4 The only move that gives white some chance for play. White has a secure center and a great knight on d5 but if you look a little bit more carefully you will see that this knight does not do anything special and because of him white cannot attack the weak pawn on d6. Also, the position will open up, and then black bishop pair can play a big role. So, white needs to open lines on the queenside because this is the only play that he has. One more thing that I believe is important here, is the move order. You see that position in the center is closed, and the black king stays in the center without any possibility for white to attack him. Because of this white also needs to wait before castling and first needs to improve the position on the queenside. If white does not move this pawn to a4 now, he will never be able to do it later. 13...bxa4 Now black cannot hold on b5 and needs to take on a4. Now it is also clear why the black rook is nicely placed on the b file because the pawn on b2 is hanging. 14.Ncb4 Bd7 Here you need to remember a few precise moves. Bd7 is one of them. You need to defend Nc6 and control the c6

square. 15.Bxa6 Nxb4 A second important move which exchanges one minor piece and allows the bishop to defend the pawn on a4. 16.Nxb4 Qa5 And here is the next important move to remember. Now you can see what I was talking about. Here black needs to play accurately to maintain an equal position. 17.Qxd6 This is the best and the only move that gives white equality. All other options are better for black. Let's look at them. 17...Rb6 18.Qd3 Be7 19.Rd1 Bg4 Black attacks the light-squared bishop with tempo. Now white has only one good continuation. The other two will be better for black. 20.Nd5 Rxb2 21.Rd2 Rxd2 22.Qb5+ Qxb5 23.Bxb5+ Bd7 24.Bxd7+ Kxd7 25.Kxd2 Bc5 And after few forced moves we come to this equal position. Now, it is important to understand that the white knight on d5 is not superior to the black dark-squared bishop because the pawns are on both wings and black has a great passed a pawn. Only black can play here for a win because the white c pawn under control.

**B33**

## ☐ The Sveshnikov Positional
## ■ Positional main line 10.Bxf6,13.Be2

1.e4 c5 2.Nf3 Nc6 3.d4 cxd4 4.Nxd4 Nf6 5.Nc3 e5 This is the starting position of the Sveshnikov. Black plays aggressively and wants to fight for the initiative right from the start. This gives him enough time for quick development and a safe position for the king. But by playing e5 black accepts a backward pawn on d6 and a potentially weak square on d5. This is one of the most uncompromising openings in chess. With this opening, you do not need to fight for equality and instead can play for initiative right from the start. Today this is the opening of choice for many leading players in the world. Ex-world champion Vladimir Kramnik plays it with great success. Here I will try to explain not only the forced lines but also the often complex strategy that is behind the ideas. 6.Ndb5 This is white's positional approach. With this move, white wants to force black to play d6 without time to develop the dark-squared bishop and then he can occupy the weak square on d5. Alternatives will be explained in the other chapters. Black has a few nice ideas here that will give him great positions. 6...d6 7.Bg5 This is the second part of white's idea. After taking the knight on f6, the square on d5 will be even weaker. The drawback is in the fact that black will have the two bishops and great activity. 7...a6 Black needs to bring back this knight to a3 and after that seize the initiative and space on the queenside with b5. 8.Na3 b5 9.Nd5 This is one of two main lines or positions in Sveshnikov Sicilian. White now takes over control over the d5 square. In return, black gets the bishop pair and a lot of activity. 9. Nd5 is a more positional line where white will not double Black's f pawns. Because of this, the position will be much more closed, and there will be plenty of time for improving the positions of pieces and pawns. Mainly white will try to play on the queenside and try to take advantage of the potentially exposed pawns on a6 and b5. Black will have a very solid pawn structure on the kingside and the bishop pair.

This will be enough for equality. The positions that arise after this move are very rich and playable for both sides. Once again you can see how simply you can play with the Sveshnikov. The positions you get will be equal but far from a draw ! 9...Be7 10.Bxf6 With the capture on f6 white gets control over d5. 10...Bxf6 11.c4 This is an alternative to c3. White does not want to lose time bringing the knight from a3 into the game and immediately starts to fight on the queenside and attack the exposed black pawns there. 11...b4 Now black can push b4 and a5, and after that reposition his knight and bishop from f6 to g1 - a7 diagonal. 12.Nc2 0-0 There is no need to rush with a5 because white cannot take on b4 for now. This is one of the most positional ideas that white can try against the Sveshnikov. The position will now be closed, and it is important to understand the ideas. Black's idea is to bring the dark-squared bishop onto the best diagonal c1 - h6, play Qc5 via a5 when possible, and get the knight on d4 or even c5 via b8 and d7. If you want to get the rook onto the c file, then you will have to use the a7 square for that idea, because in most lines white will play Bh3 and the c8 square will be not available for it. In these positions black is at least equal. 13.Be2 Now it is clear that Bh3 is a superior move to this one. Here on e2, the bishop is very passive and black can play whatever he wants. Even Rc8 will be possible because there is no bishop on h3. 13...a5 14.0-0 Bg5 15.Qd3 Be6 16.Rad1 Ra7 17.b3 Qb8 With an equal position. This does not mean that this is a draw. All pieces are on the board and black can with his last move Qb8, support the pawn on b4 and prepare a4. Here you can also try the idea of Ne7, and then rook to d8 or even c8. This is a rich position with clear ideas for black with play on the queenside.

**B33**

☐ **The Sveshnikov Positional**
■ **Positional main line 10.Bxf6,13.g3**

1.e4 c5 2.Nf3 Nc6 3.d4 cxd4 4.Nxd4 Nf6 5.Nc3 e5 This is the starting position of the Sveshnikov. Black plays aggressively and wants to fight for the initiative right from the start. This gives him enough time for quick development and a safe position for the king. But by playing e5 black accepts a backward pawn on d6 and a potentially weak square on d5. This is one of the most uncompromising openings in chess. With this opening, you do not need to fight for equality and instead can play for initiative right from the start. Today this is the opening of choice for many leading players in the world. Ex-world champion Vladimir Kramnik plays it with great success. Here I will try to explain not only the forced lines but also the often complex strategy that is behind the ideas. 6.Ndb5 This is white's positional approach. With this move, white wants to force black to play d6 without time to develop the dark-squared bishop and then he can occupy the weak square on d5. Alternatives will be explained in the other chapters. Black has a few nice ideas here that will give him great positions. 6...d6 7.Bg5 This is the second part of white's idea. After taking the knight on f6, the

square on d5 will be even weaker. The drawback is in the fact that black will have the two bishops and great activity. 7...a6 Black needs to bring back this knight to a3 and after that seize the initiative and space on the queenside with b5. 8.Na3 b5 9.Nd5 This is one of two main lines or positions in Sveshnikov Sicilian. White now takes over control over the d5 square. In return, black gets the bishop pair and a lot of activity. 9. Nd5 is a more positional line where white will not double Black's f pawns. Because of this, the position will be much more closed, and there will be plenty of time for improving the positions of pieces and pawns. Mainly white will try to play on the queenside and try to take advantage of the potentially exposed pawns on a6 and b5. Black will have a very solid pawn structure on the kingside and the bishop pair. This will be enough for equality. The positions that arise after this move are very rich and playable for both sides. Once again you can see how simply you can play with the Sveshnikov. The positions you get will be equal but far from a draw ! 9...Be7 10.Bxf6 With the capture on f6 white gets control over d5. 10...Bxf6 11.c3 After this move, it is clear what white wants. First, he wants to secure the d5 square, then to transfer his worst piece, the knight on a3 to the more active square on c2, and then e3 or even b4. Only then he wants to start activity on the queenside. This is a much more solid way to play than the illogical 10. Ne7. It is important to remember something White now has a great looking knight on d5. This knight is strong on d5, and you need to be careful, especially so when you try to exchange it. Now there are two possible ways to exchange it, one for the knight and the second for the light-squared bishop. In most of the situations, you want to exchange it for the knight on c6 because if you look at the position, this knight is black's worst piece on the board. Nc6 cannot jump to any vital square and also if you can exchange it and keep the bishop pair it will be perfect for black. Also, I want to tell you a secret, the white knight on d5 is a great piece but does not do anything in the attack for now, and black can easily play around this knight as I will show you in the next lines. The pawn structure in the center is for the time being slightly better for white, but the weak d6 pawn is hard to get at because the white knight on d5 protects it and on the d file white does not have the possibility to attack it. So you do not need to be afraid of losing it. If white tries to do it, you can easily protect the pawn with Be7. Also when one day you exchange the knight on d5, and white takes back with the e4 pawn, black will have a perfect pawn structure. 11...Bg5 Black has here a few promising lines, but I will recommend this one. As I mentioned in the previous move, white's idea is to play on the queenside but only after he stabilizes the position in the center. Because of this, black has to first get his bishop on the most active square possible, and then decide what he wants to do next. I like the bishop pair and here with Bg5 black's bishop will stay alive. I think that there is no need to rush with castles because the black king is safe in the center, and when he needs to he can castle in just one move. Another great thing about this move is that now the bishop controls the e3 square, where white was planning to place his knight from a3 via c2. 12.Nc2 Rb8 After 12. Nc2 white prepares himself for activity on the queenside. The next white move will be a4, with an attack on black's queenside pawns. Now black has a

few options, but I will recommend the one with Rb8. Black supports his pawn on b5, moves the rook from the a file and after the exchange on a4, the rook may be able to take the vital pawn on b2. 13.g3 As I mentioned before, every move other than 13. a4 is not in the spirit of this position. White's only real chance is active play on the queenside. Here the bishop will go on the bad g2 square and without a4 white does not have any real active play. In the long run, if black gets time to open the position he can easily be better with the strong bishop pair. 13...0-0 14.Bg2 a5 Now black takes over the initiative on the queenside. White's passive play allows him that. 15.0-0 Be6 16.Qd3 Ne7 The only nice white piece is the knight on d5, and black's worst piece is the knight on c6. This is a nice trade for black. 17.Nce3 Bxe3 A strong positional move. 18.Nxe3 Qb6 19.Rfd1 Rfd8 20.Rd2 b4 Black develops all of his pieces, easily secures the d6 pawn and also the d5 square, because now a white knight cannot get there. Also if you look at this position, you can see that white does not get any chance of active play. Now the play on the queenside is in black's control, and the d6 pawn is very easily defensible. The position is about equal, but it is much easier to play with black.

**B33**

## ☐ The Sveshnikov Positional
## ■ Positional main line 10.Bxf6,13.a4

1.e4 c5 2.Nf3 Nc6 3.d4 cxd4 4.Nxd4 Nf6 5.Nc3 e5 This is the starting position of the Sveshnikov. Black plays aggressively and wants to fight for the initiative right from the start. This gives him enough time for quick development and a safe position for the king. But by playing e5 black accepts a backward pawn on d6 and a potentially weak square on d5. This is one of the most uncompromising openings in chess. With this opening, you do not need to fight for equality and instead can play for initiative right from the start. Today this is the opening of choice for many leading players in the world. Ex-world champion Vladimir Kramnik plays it with great success. Here I will try to explain not only the forced lines but also the often complex strategy that is behind the ideas. 6.Ndb5 This is white's positional approach. With this move, white wants to force black to play d6 without time to develop the dark-squared bishop and then he can occupy the weak square on d5. Alternatives will be explained in the other chapters. Black has a few nice ideas here that will give him great positions. 6...d6 7.Bg5 This is the second part of white's idea. After taking the knight on f6, the square on d5 will be even weaker. The drawback is in the fact that black will have the two bishops and great activity. 7...a6 Black needs to bring back this knight to a3 and after that seize the initiative and space on the queenside with b5. 8.Na3 b5 9.Nd5 This is one of two main lines or positions in Sveshnikov Sicilian. White now takes over control over the d5 square. In return, black gets the bishop pair and a lot of activity. 9. Nd5 is a more positional line where white will not double Black's f pawns. Because of this, the position will be much more closed, and there will be plenty of

time for improving the positions of pieces and pawns. Mainly white will try to play on the queenside and try to take advantage of the potentially exposed pawns on a6 and b5. Black will have a very solid pawn structure on the kingside and the bishop pair. This will be enough for equality. The positions that arise after this move are very rich and playable for both sides. Once again you can see how simply you can play with the Sveshnikov. The positions you get will be equal but far from a draw ! 9...Be7 10.Bxf6 With the capture on f6 white gets control over d5. 10...Bxf6 11.c3 After this move, it is clear what white wants. First, he wants to secure the d5 square, then to transfer his worst piece, the knight on a3 to the more active square on c2, and then e3 or even b4. Only then he wants to start activity on the queenside. This is a much more solid way to play than the illogical 10. Ne7. It is important to remember something White now has a great looking knight on d5. This knight is strong on d5, and you need to be careful, especially so when you try to exchange it. Now there are two possible ways to exchange it, one for the knight and the second for the light-squared bishop. In most of the situations, you want to exchange it for the knight on c6 because if you look at the position, this knight is black's worst piece on the board. Nc6 cannot jump to any vital square and also if you can exchange it and keep the bishop pair it will be perfect for black. Also, I want to tell you a secret, the white knight on d5 is a great piece but does not do anything in the attack for now, and black can easily play around this knight as I will show you in the next lines. The pawn structure in the center is for the time being slightly better for white, but the weak d6 pawn is hard to get at because the white knight on d5 protects it and on the d file white does not have the possibility to attack it. So you do not need to be afraid of losing it. If white tries to do it, you can easily protect the pawn with Be7. Also when one day you exchange the knight on d5, and white takes back with the e4 pawn, black will have a perfect pawn structure. 11...Bg5 Black has here a few promising lines, but I will recommend this one. As I mentioned in the previous move, white's idea is to play on the queenside but only after he stabilizes the position in the center. Because of this, black has to first get his bishop on the most active square possible, and then decide what he wants to do next. I like the bishop pair and here with Bg5 black's bishop will stay alive. I think that there is no need to rush with castles because the black king is safe in the center, and when he needs to he can castle in just one move. Another great thing about this move is that now the bishop controls the e3 square, where white was planning to place his knight from a3 via c2. 12.Nc2 Rb8 After 12. Nc2 white prepares himself for activity on the queenside. The next white move will be a4, with an attack on black's queenside pawns. Now black has a few options, but I will recommend the one with Rb8. Black supports his pawn on b5, moves the rook from the a file and after the exchange on a4, the rook may be able to take the vital pawn on b2. 13.a4 The only move that gives white some chance for play. White has a secure center and a great knight on d5 but if you look a little bit more carefully you will see that this knight does not do anything special and because of him white cannot attack the weak pawn on d6. Also, the position will open up, and then black bishop pair can play a big role. So, white needs to open lines on the

queenside because this is the only play that he has. One more thing that I believe is important here, is the move order. You see that position in the center is closed, and the black king stays in the center without any possibility for white to attack him. Because of this white also needs to wait before castling and first needs to improve the position on the queenside. If white does not move this pawn to a4 now, he will never be able to do it later. 13...bxa4 Now black cannot hold on b5 and needs to take on a4. Now it is also clear why the black rook is nicely placed on the b file because the pawn on b2 is hanging. 14.Ncb4 Bd7 Here you need to remember a few precise moves. Bd7 is one of them. You need to defend Nc6 and control the c6 square. 15.Bxa6 Nxb4 A second important move which exchanges one minor piece and allows the bishop to defend the pawn on a4. 16.Nxb4 Qa5 And here is the next important move to remember. Now you can see what I was talking about. Here black needs to play accurately to maintain an equal position. 17.Qxd6 This is the best and the only move that gives white equality. All other options are better for black. Let's look at them. 17...Rb6 18.Qd3 Be7 19.Nd5 Rxb2 20.Nxe7 This is the wrong exchange that will bring a better position for black. 20...Kxe7 21.0-0-0 This is nice but not good enough a move even for equality. After a few forced moves black is much better. 21...Rhb8 22.Qxd7+ Kf8 23.Qd6+ Kg8 And black is winning. 24.Qc6 R2b6 25.Qc4 Rb1+ 26.Kd2 R1b2+ 27.Kc1 Qb6 28.Rhf1 a3

**B33**

☐ **The Sveshnikov Positional**
■ **Positional main line 10.Bxf6,13.g3 and 15.Bh3**

1.e4 c5 2.Nf3 Nc6 3.d4 cxd4 4.Nxd4 Nf6 5.Nc3 e5 This is the starting position of the Sveshnikov. Black plays aggressively and wants to fight for the initiative right from the start. This gives him enough time for quick development and a safe position for the king. But by playing e5 black accepts a backward pawn on d6 and a potentially weak square on d5. This is one of the most uncompromising openings in chess. With this opening, you do not need to fight for equality and instead can play for initiative right from the start. Today this is the opening of choice for many leading players in the world. Ex-world champion Vladimir Kramnik plays it with great success. Here I will try to explain not only the forced lines but also the often complex strategy that is behind the ideas. 6.Ndb5 This is white's positional approach. With this move, white wants to force black to play d6 without time to develop the dark-squared bishop and then he can occupy the weak square on d5. Alternatives will be explained in the other chapters. Black has a few nice ideas here that will give him great positions. 6...d6 7.Bg5 This is the second part of white's idea. After taking the knight on f6, the square on d5 will be even weaker. The drawback is in the fact that black will have the two bishops and great activity. 7...a6 Black needs to bring back this knight to a3 and after that seize the initiative and space on the queenside with b5. 8.Na3 b5 9.Nd5 This is one of two main lines or positions in Sveshnikov Sicilian. White now takes

over control over the d5 square. In return, black gets the bishop pair and a lot of activity. 9. Nd5 is a more positional line where white will not double Black's f pawns. Because of this, the position will be much more closed, and there will be plenty of time for improving the positions of pieces and pawns. Mainly white will try to play on the queenside and try to take advantage of the potentially exposed pawns on a6 and b5. Black will have a very solid pawn structure on the kingside and the bishop pair. This will be enough for equality. The positions that arise after this move are very rich and playable for both sides. Once again you can see how simply you can play with the Sveshnikov. The positions you get will be equal but far from a draw ! 9...Be7 10.Bxf6 With the capture on f6 white gets control over d5. 10...Bxf6 11.c4 This is an alternative to c3. White does not want to lose time bringing the knight from a3 into the game and immediately starts to fight on the queenside and attack the exposed black pawns there. 11...b4 Now black can push b4 and a5, and after that reposition his knight and bishop from f6 to g1 - a7 diagonal. 12.Nc2 0-0 There is no need to rush with a5 because white cannot take on b4 for now. This is one of the most positional ideas that white can try against the Sveshnikov. The position will now be closed, and it is important to understand the ideas. Black's idea is to bring the dark-squared bishop onto the best diagonal c1 - h6, play Qc5 via a5 when possible, and get the knight on d4 or even c5 via b8 and d7. If you want to get the rook onto the c file, then you will have to use the a7 square for that idea, because in most lines white will play Bh3 and the c8 square will be not available for it. In these positions black is at least equal. 13.g3 This is white's main idea. To get some space on the kingside with his next move h4 and to get this bad bishop from f1 to a natural square in h3. 13...a5 14.h4 Be6 15.Bh3 Rb8 Black's main idea is to start play on the queenside. Because of that he brings the rook to b8 to support the b4 pawn and allow a4. 16.Qd3 Be7 Here remember that first you want to get the dark-squared bishop back to e7, and do not allow white to take it on f6. This is because the next move you want to play is Qd7 and maybe also Bd8 - b6, as that will be possible. 17.b3 Qd7 18.Bxe6 fxe6 19.Nxe7+ Qxe7 And the position is equal.

**B33**

☐ **The Sveshnikov Positional**
■ **Positional main line 10.Bxf6,13.g3 and 15.Bg2**

1.e4 c5 2.Nf3 Nc6 3.d4 cxd4 4.Nxd4 Nf6 5.Nc3 e5 This is the starting position of the Sveshnikov. Black plays aggressively and wants to fight for the initiative right from the start. This gives him enough time for quick development and a safe position for the king. But by playing e5 black accepts a backward pawn on d6 and a potentially weak square on d5. This is one of the most uncompromising openings in chess. With this opening, you do not need to fight for equality and instead can play for initiative right from the start. Today this is the opening of choice for many leading players in the world. Ex-world champion Vladimir Kramnik plays it with great success.

Here I will try to explain not only the forced lines but also the often complex strategy that is behind the ideas. 6.Ndb5 This is white's positional approach. With this move, white wants to force black to play d6 without time to develop the dark-squared bishop and then he can occupy the weak square on d5. Alternatives will be explained in the other chapters. Black has a few nice ideas here that will give him great positions. 6...d6 7.Bg5 This is the second part of white's idea. After taking the knight on f6, the square on d5 will be even weaker. The drawback is in the fact that black will have the two bishops and great activity. 7...a6 Black needs to bring back this knight to a3 and after that seize the initiative and space on the queenside with b5. 8.Na3 b5 9.Nd5 This is one of two main lines or positions in Sveshnikov Sicilian. White now takes over control over the d5 square. In return, black gets the bishop pair and a lot of activity. 9. Nd5 is a more positional line where white will not double Black's f pawns. Because of this, the position will be much more closed, and there will be plenty of time for improving the positions of pieces and pawns. Mainly white will try to play on the queenside and try to take advantage of the potentially exposed pawns on a6 and b5. Black will have a very solid pawn structure on the kingside and the bishop pair. This will be enough for equality. The positions that arise after this move are very rich and playable for both sides. Once again you can see how simply you can play with the Sveshnikov. The positions you get will be equal but far from a draw ! 9...Be7 10.Bxf6 With the capture on f6 white gets control over d5. 10...Bxf6 11.c4 This is an alternative to c3. White does not want to lose time bringing the knight from a3 into the game and immediately starts to fight on the queenside and attack the exposed black pawns there. 11...b4 Now black can push b4 and a5, and after that reposition his knight and bishop from f6 to g1 - a7 diagonal. 12.Nc2 0-0 There is no need to rush with a5 because white cannot take on b4 for now. This is one of the most positional ideas that white can try against the Sveshnikov. The position will now be closed, and it is important to understand the ideas. Black's idea is to bring the dark-squared bishop onto the best diagonal c1 - h6, play Qc5 via a5 when possible, and get the knight on d4 or even c5 via b8 and d7. If you want to get the rook onto the c file, then you will have to use the a7 square for that idea, because in most lines white will play Bh3 and the c8 square will be not available for it. In these positions black is at least equal. 13.g3 This is white's main idea. To get some space on the kingside with his next move h4 and to get this bad bishop from f1 to a natural square in h3. 13...a5 14.h4 Be6 15.Bg2 This move is not so bad, but the bishop on g2 is even worse than on e2, and this is not what white wants. 15...Bxd5 16.Qxd5 Qb6 17.0-0 Nd4 18.Nxd4 exd4 19.Rfd1 Rab8 20.Qf5 Rfc8 With an equal but nice position for black, who can once again start pushing pawns on the queenside. White does not have any kind of active play, and the black pawn on d4 gives black just a slight edge.

**B33**

## ☐ The Sveshnikov Positional
## ■ Positional main line 10.Bxf6,13.Ncxb4 and 15.Nd5

1.e4 c5 2.Nf3 Nc6 3.d4 cxd4 4.Nxd4 Nf6 5.Nc3 e5 This is the starting position of the Sveshnikov. Black plays aggressively and wants to fight for the initiative right from the start. This gives him enough time for quick development and a safe position for the king. But by playing e5 black accepts a backward pawn on d6 and a potentially weak square on d5. This is one of the most uncompromising openings in chess. With this opening, you do not need to fight for equality and instead can play for initiative right from the start. Today this is the opening of choice for many leading players in the world. Ex-world champion Vladimir Kramnik plays it with great success. Here I will try to explain not only the forced lines but also the often complex strategy that is behind the ideas. 6.Ndb5 This is white's positional approach. With this move, white wants to force black to play d6 without time to develop the dark-squared bishop and then he can occupy the weak square on d5. Alternatives will be explained in the other chapters. Black has a few nice ideas here that will give him great positions. 6...d6 7.Bg5 This is the second part of white's idea. After taking the knight on f6, the square on d5 will be even weaker. The drawback is in the fact that black will have the two bishops and great activity. 7...a6 Black needs to bring back this knight to a3 and after that seize the initiative and space on the queenside with b5. 8.Na3 b5 9.Nd5 This is one of two main lines or positions in Sveshnikov Sicilian. White now takes over control over the d5 square. In return, black gets the bishop pair and a lot of activity. 9. Nd5 is a more positional line where white will not double Black's f pawns. Because of this, the position will be much more closed, and there will be plenty of time for improving the positions of pieces and pawns. Mainly white will try to play on the queenside and try to take advantage of the potentially exposed pawns on a6 and b5. Black will have a very solid pawn structure on the kingside and the bishop pair. This will be enough for equality. The positions that arise after this move are very rich and playable for both sides. Once again you can see how simply you can play with the Sveshnikov. The positions you get will be equal but far from a draw ! 9...Be7 10.Bxf6 With the capture on f6 white gets control over d5. 10...Bxf6 11.c4 This is an alternative to c3. White does not want to lose time bringing the knight from a3 into the game and immediately starts to fight on the queenside and attack the exposed black pawns there. 11...b4 Now black can push b4 and a5, and after that reposition his knight and bishop from f6 to g1 - a7 diagonal. 12.Nc2 0-0 There is no need to rush with a5 because white cannot take on b4 for now. This is one of the most positional ideas that white can try against the Sveshnikov. The position will now be closed, and it is important to understand the ideas. Black's idea is to bring the dark-squared bishop onto the best diagonal c1 - h6, play Qc5 via a5 when possible, and get the knight on d4 or even c5 via b8 and d7. If you want to get the rook onto the c file, then you will have to use the a7 square for that idea, because in most lines white will play Bh3 and the c8 square will be not available for it. In these positions

black is at least equal. 13.Ncxb4 Nxb4 14.Nxb4 Qb6 15.Nd5 Qxb2 16.Be2 Bd8 17.0-0 Be6 And in this equal position black keeps the bishop pair and has the slightly better pawn structure.

**B33**

☐ **Sveshnikov Variation Chelyab**
■ **Chelyabinsk Variation Be6**

1.e4 c5 2.Nf3 Nc6 3.d4 cxd4 4.Nxd4 Nf6 Black puts immediate pressure on White's e4-pawn. 5.Nc3 e5 Black finally puts a pawn in the center. The downside of this move is that it weakens the d6-square significantly and creates a backward pawn on the d-file. Black will have some dynamic compensation however. 6.Ndb5 White eyes the weak d6-square. 6...d6 Black does not want to allow White to occupy the d6-square with his knight. 7.Bg5 White is fighting for the d5-square. Bg5 indirectly pressures that square because the knight on f6 is a key defender of d5. By nullifying the knights control of d5, White will be able to occupy the square himself in the future. 7...a6 Black attacks the knight 8.Na3 Be6 This is Black's much less common alternative. 9.Nc4 White takes advantage of the fact that Black has not played b5, which controls the c4-square. 9...Rc8 10.Bxf6 White increases his control over d5. 10...gxf6 This is the first way that Black can recapture the pawn. 11.Nd5 White immediately grabs the d5-square. 11...Bxd5 12.Qxd5 White still has firm control over d5. Now White has two main options. 12...Nb4 Black plays agressively, hitting the queen and the pawn on c2. 13.Qd2 Everything is defended. 13...d5 A critical move that frees Black's position at the price of a pawn. 14.exd5 Nxc2+ An interesting tactical idea, but White emerges with an advantage. 15.Qxc2 Bb4+ 16.Kd1 White's king appears to be in trouble but the reality is that he is doing fine. The computer evaluates this position as +0.6 for White. 16...Qxd5+ This move looks good but White is in good shape. 17.Kc1 Black avoids any ideas with Nd3+ 17...0-0 18.Kb1 Rfd8 19.a4 I would not recommend playing this position in a blitz game as White because White is defending. However, in a classical game White has much better chances simply due to his extra piece. The computer evaluates the position as +1 for White.

**B33**

☐ **Sveshnikov 9. Bxf6,11. c3 and others**
■ **Sveshnikov 9. Bxf6,11. c3/others #43**

1.e4 c5 2.Nf3 Nc6 3.d4 cxd4 4.Nxd4 Nf6 5.Nc3 e5 6.Ndb5 d6 7.Bg5 a6 8.Na3 b5 9.Bxf6 White has three mainlines in the Sveshnikov: 6. Ndb5 d6 7. Nd5, 6. Ndb5 d6 7. Bg5 a6 8. Na3 b5 9. Nd5 and this one, which is by far the sharpest and most tactical line of the three. This in particular applies to the line 9.Bxf6 gxf6 10.

Nd5 Bg7 11.Bd3 , which is the subject of the subsequent chapter. In this chapter we will examine other lines after 9.Bxf6 , most importantly 9...gxf6 10.Nd5 Bg7 11.c3 , which is the second main sub-branch of the 9. Bxf6 line, besides the 11. Bd3 line. 9...gxf6 This is forced. Black can't capture with the queen , because after 9...Qxf6 ? 10.Nd5 Qd8 White has many lines to give him a huge advantage. The brutal 11.Bxb5 and 11.c4 are terrible for Black. A good comparison to make: look at the very popular mainline 9. Nd5 Be7 10. Bxf6 Bxf6 (covered in 2 chapters of this course) , in which Black has the bishop on f6, while after 9... Qxf6 ? 10. Nd5 Qd8 it is on f8 !So long story short: take with the g-pawn and look forward to playing ...f5 even twice, if possible. 10.Nd5 Bg7 Black has two good moves in this position, the more traditional 10... f5 and the newer move 10... Bg7, the so-called Novosibirsk variation. Both lines have some overlap, because 10. ..Bg7 does only delay ...f5 for the moment. The main difference between the two lines is how the reply 11.Bd3 is handled. In the Novosibirsk you play 11... Ne7 to get rid of the Knight immediately , an approach that is clearly not possible after 10...f5 11.Bd3 , when 11...Ne7 12.Nf6# is a bit of a problem. Instead after 10...f5 11.Bd3 , 11...Be6 is the move , which leads to completely different positions compared to the Novosibirsk. Our repertoire choice is quite easy , as the World Champion has always played 10...Bg7 , as far as I can see. After 10... Bg7 White has two main tries for an advantage. The first one and the sharpest line is 11. Bd3 which we examine in the subsequent chapter. The second approach is to simply play 11.c3 , after which 11...f5 12.exf5 Bxf5 leads to a position that is often reached via 10... f5 11. c3 Bg7 12. exf5 Bxf5. This line leads to interesting play and is considered to be leading to equal chances. It is obviously a critical line for the Sveshnikov, as White can basically force you to enter it. Even going 10... Bg7 or 10... f5 is not relevant, as you have no way to avoid it in both cases. So 11. c3 f5 is clearly the main chunk of this chapter, but we will also look a rare alternatives on move 11. 11.c3 This is White's more strategic choice at this point , compared to 11.Bd3. White intends to improve the Knight as quickly as possible. 11...f5 This is a lot better than 11... Ne7. Playing ...Ne7 is much more pointed after 11. Bd3, because Black in this case immediately threatens to take on d5, forcing the pawn recapture. Therefore after 11. Bd3 Ne7 White has to take on e7, which is not the case here as the Queen is still able to take on d5. An example line would be 11...Ne7 12.Nc2 Nxd5 13.Qxd5 Rb8 14.Ne3 , when Black is more or less busted - you can't even get in ...f5 in the first place. 12.exf5 The simplest and most popular choice for White. 12...Bxf5 13.Nc2 0-0 14.Nce3 Be6 A very natural sequence so far. White has gotten his problem piece back in the centre and now needs to make a decision how to proceed. By far White's most popular move is 15. Bd3 , but there are some offbeat tries worth checking. 15.Bd3 A natural and popular move, angling for piece play against the centre and Kingside, often connected with Qh5. 15...f5 After our natural move 15...f5 we have the final split in this chapter , when White now chooses between 16.O-O , 16.Qh5 and 16.Bc2. The play in similar in these lines , but we need to check some concrete lines. 16.0-0 In some of the sharp lines White does not manage to castle, so this solid move is certainly a

reasonable choice. 16...e4 We usually play ...e4 in these lines in reply to Qh5, so we will choose a similar approach here. Note that 16...f4 fails to 17.Qh5 and 16...Ne7 is refuted by 17.Nxe7+ Qxe7 18.Bxf5 ! , which amounts to a disaster as well. 17.Nf4 The only move, otherwise we'd have ... f4 next. 17...Bf7 18.Bc2 Be5 As played by Magnus Carlsen , so we'll follow the Champion's example. Black has some decent alternatives here , like 18...Qd7 and 18...Qg5. 19.Nfd5 Qg5 I suggest to play this move instead of Carlsen's 19...Kh8. He got into some trouble against V.Topalov in Abidjan 2019. He still won this Blitz game quickly after Topalov misplayed it soon after. The move 19... Qg5 is the recommendation of both the engines and the correspondence players and looks attractive, so we'll go for it. Our threats are now ... f4 and ...Bh5. 20.f4 A case of 'What else ?'. White needed to do something about our mentioned ideas. 20...exf3 21.Qxf3 Bh5 White has 22.Qf2 and 22.Qh3 now. Both lead to extremely tactical positions that are fine for Black , but I am not sure how deep I should cover these complications , given that we are already on move 21 and some lines easily run until move 35 (!) ⊙ This sounds crazy, but if you look at the whole sequence starting from 11. c3 our moves are the only ones or clearly the best ones almost the whole time, so this lines is extremely relevant from a theoretical point of view. I'll show some variations from here, but won't go all the way. You can easily add your own analysis if you feel you need more information. 22.Qf2 f4 23.Nc7 A nice shot ! Now Black can't take on e3 due to 23...fxe3 24.Qxf8+ ! Rxf8 25. Rxf8+ Kxf8 26.Ne6+. 23...Bf7 This is best and not exactly intuitive. 24.Nxa8 fxe3 25.Qf3 e2 The only move, but it works. 26.Rf2 This also ends in a draw after crazy complications. 26...Qh6 27.g4 Qh4 28.Nc7 Bxh2+ 29.Rxh2 e1Q+ 30.Rxe1 Qxe1+ And a perpetual is near again.

**B33**

☐ **Sveshnikov 9. Bxf6,11. c3 and others**
■ **Sveshnikov 9. Bxf6,11. c3/others #13**

1.e4 c5 2.Nf3 Nc6 3.d4 cxd4 4.Nxd4 Nf6 5.Nc3 e5 6.Ndb5 d6 7.Bg5 a6 8.Na3 b5 9.Bxf6 White has three mainlines in the Sveshnikov: 6. Ndb5 d6 7. Nd5, 6. Ndb5 d6 7. Bg5 a6 8. Na3 b5 9. Nd5 and this one, which is by far the sharpest and most tactical line of the three. This in particular applies to the line 9.Bxf6 gxf6 10. Nd5 Bg7 11.Bd3 , which is the subject of the subsequent chapter. In this chapter we will examine other lines after 9.Bxf6 , most importantly 9...gxf6 10.Nd5 Bg7 11.c3 , which is the second main sub-branch of the 9. Bxf6 line, besides the 11. Bd3 line. 9...gxf6 This is forced. Black can't capture with the queen , because after 9...Qxf6 ? 10.Nd5 Qd8 White has many lines to give him a huge advantage. The brutal 11.Bxb5 and 11.c4 are terrible for Black. A good comparison to make: look at the very popular mainline 9. Nd5 Be7 10. Bxf6 Bxf6 (covered in 2 chapters of this course) , in which Black has the bishop on f6, while after 9... Qxf6 ? 10. Nd5 Qd8 it is on f8 !So long story short: take with the g-pawn and look forward to playing ...f5 even twice, if

possible. 10.Nd5 Bg7 Black has two good moves in this position, the more traditional 10... f5 and the newer move 10... Bg7, the so-called Novosibirsk variation. Both lines have some overlap, because 10. ..Bg7 does only delay ...f5 for the moment. The main difference between the two lines is how the reply 11.Bd3 is handled. In the Novosibirsk you play 11... Ne7 to get rid of the Knight immediately , an approach that is clearly not possible after 10...f5 11.Bd3 , when 11...Ne7 12.Nf6# is a bit of a problem. Instead after 10...f5 11.Bd3 , 11...Be6 is the move , which leads to completely different positions compared to the Novosibirsk. Our repertoire choice is quite easy , as the World Champion has always played 10...Bg7 , as far as I can see. After 10... Bg7 White has two main tries for an advantage. The first one and the sharpest line is 11. Bd3 which we examine in the subsequent chapter. The second approach is to simply play 11.c3 , after which 11...f5 12.exf5 Bxf5 leads to a position that is often reached via 10... f5 11. c3 Bg7 12. exf5 Bxf5. This line leads to interesting play and is considered to be leading to equal chances. It is obviously a critical line for the Sveshnikov, as White can basically force you to enter it. Even going 10... Bg7 or 10... f5 is not relevant, as you have no way to avoid it in both cases. So 11. c3 f5 is clearly the main chunk of this chapter, but we will also look a rare alternatives on move 11. 11.Qh5 Ne7 White stopped ...f5, so this is the right move. 12.Ne3 It's better for White to take on e7, heading for a transposition to 11. Bd3 Ne7 eventually. Still this Knight retreat looks logical enough and the best reply is not particularly obvious. 12...d5 Well, this is looks obvious, but there are some important points. 13.exd5 This is the move that might deter you from playing the desired ...d5 break. 13...f5 This move is giving Black a very nice game. 14.0-0-0 f4 15.Ng4 What else ? White's Knight is now in a tight spot, though - it has no natural retreat square. 15...Qd6 16.Bd3 The only move, otherwise ...Bf5-g6 is terrible for White. 16...Bxg4 17.Qxg4 0-0 We will follow up with ...f5 and ...e4, getting a great attack. As seen so often: the Knight on a3 never got back into the game.

**B33**

☐ **Sveshnikov 9. Bxf6,11. Bd3**
■ **Sveshnikov 9. Bxf6,11. Bd3 #42**

1.e4 c5 2.Nf3 Nc6 3.d4 cxd4 4.Nxd4 Nf6 5.Nc3 e5 6.Ndb5 d6 7.Bg5 a6 8.Na3 b5 9.Bxf6 gxf6 10.Nd5 Bg7 11.Bd3 In this chapter we will examine the lines starting with this move. All other variations after 9. Bxf6 are covered in the previous chapter. After 11. Bd3 the game will become very sharp and tactical and Black needs to sacrifice pawns on a regular basis. In the main line of the 11. Bd3 complex we are three pawns down, but have great compensation !Of all the chapters in the whole course this is by far the one that requires move-by-move knowledge and precise calculation over the board. There is very little strategic content or 'plans' to guide you, it's just two sides engaging in a fight with clubs - and you better make sure to bring a huge club, meaning excellent preparation. It is definitely possible to work out some of

the complications over the board, but this will be much more likely to be successful if you once had known them. It sounds odd, but it is true: study time is never wasted, even if you feel you have forgotten everything.The way to do it is to not try to remember as hard as you can, but rather think on your own and hope that you subconsciously piece it together. This works much better than sitting there and wrecking your brain to recall concrete lines.One important point that also needs to be mentioned: Black is the side on the attack after 11. Bd3. If White only has vague knowledge about the complications he is very likely just getting killed quickly. If you screw something up, it might be bad in computer terms... but you still have chances, given the enormous activity that Black usually enjoys. 11...Ne7 The only good move after 11. Bd3. The bishop move prevents ...f5 and we need to get rid of the d5-knight right away. 12.Nxe7 White's choice is limited, because with 11... Ne7 we had threatened to take on d5. As usual it's very desirable for Black to take on d5 when White needs to recapture with a pawn. 12...Qxe7 After 12. .. Qxe7 White has two basic options. He can play c4, attacking the b5-pawn, or play c3, preparing to get the offside knight back into the game. White might play c4 or c3 right away or do it after castling kingside first. Castling is rather natural for both sides, so quite often this will be played quickly after a move of the c-pawn, for example 13.c4 f5 14.O-O O-O is just as common as 13.O-O O-O 14.c4 f5. I will examine 13.O-O O-O as the main line and then split the lines with 14.c4 or 14.c3. If White starts 13. c4, it will very likely transpose to 13. O-O O-O 14. c4, as the deviations are unattractive for White. 13.c3 is a different story. After 13...f5 the sequence 14.O-O O-O is possible and examined via 13. O-O O-O 14. c3 f5, but White often decides to not castle and then we will reach the only important independent line 13.c3 f5 14.Nc2 , when White's king will remain in the centre or castle queenside in some lines. Alright , let's check some moves to make things more concrete. 13.0-0 0-0 It's also possible to play 13...f5 first , there is no drawback to this move order. I went for 13... O-O because this way you have the rule of thumb for move 13 and 14 in this line to play ...f5 against the c-pawn moves and just castle as well if White plays O-O first. 14.c4 f5 The best way to react to 14. c4. As usual taking on c4 is terrible, as it helps the knight far too much. 14...b4 is also a disaster , as after 15. Nc2 a5 16.Ne3 Black does not even manage to play the fundamental ...f5 break. This only leaves Black with sacrificing the b-pawn, which explains why the 14. c4 - or 13. c4 - line is the sharpest one in the main line. Black is giving away the queenside and goes All-In with his counterplay in the centre and kingside. After 14... f5 White's main lines are the queen moves to h5 and f3, but he has also tried other continuations without much success. 15.Qh5 Rb8
We would have liked to take on e4, but 15...fxe4 16.Bxe4 is a double threat on h7 and on the rook. This explains 15... Rb8 - now we are threatening to take on e4 and then play ...f5 a second time ! The move 15... Rb8 has been tested numerous times in over the board play and correspondence chess and it looks like Black is doing fine in the hair-raising complications. I need to mention that 15... Rb8 is not the only move, though. In fact only some days before these lines were written the World Champion went for a different move: he played 15... d5 !? in the Grand Swiss Isle of Man

Tournament against Russian hopeful Alexey Sarana. 15... d5 is a rare move and was probably intended as a surprise, but Sarana had done his homework and blitzed out the following moves. 15...d5 16.cxd5 Qd8 17.exf5 Qxd5 18.Rad1 e4 19.Bxb5 Qxf5 20. Qxf5 Bxf5 21.Bd7 Bxd7 22.Rxd7 Bxb2 23.Nc4. Now, this sequence is in fact clearly best play after 15... d5 and the resulting position I don't want to recommend, even though Magnus played the line. Black is very close to equality, but it's a grovel and not fun at all. Magnus ultimately drew the game after some unpleasant moments. Maybe HE kept his cool, but I would have been concerned ! In any case, I don't want to play for two results just yet if a win is not among them. 16.exf5 A more or less forced decision. Otherwise we take on e4 and play ...f5 next. 16...e4 17.Rae1 We attacked both the bishop on d3 and the pawn on b2, so White needs a tactical solution. 17...Bb7 18.Re3 This move was recommended by GM P.Negi in his GM Repertoire 1. e4 series, which is a very important source for ambitious players on the white side on the open Sicilian. We definitely need a good antidote to this move. 18...bxc4 19.Bxc4 Rbd8 I suggest this move, which is almost a novelty (I found one older correspondence game) and was not covered by Negi at all. If you face someone who has prepared with this book , they will be on their own from here. The traditional way to play this position is 19...d5 , after which White plays 20. Bxd5 Bxd5 21.f6 Qxf6 22.Qxd5 Rxb2 23.Nc4 and Negi concludes that White is easier to play, but Black should hold. It is the kind of position that an engine will probably never lose, but humans have a hard task once the knight comes to f5. Our move 19... Rbd8 intends to play ...d5 without allowing the reply f6 as in the line above. The play is very sharp now, with many possibilities. 20.Rb3 The idea of this move is to attack the bishop on b7, so that in the sequence f6/...Qxf6 the bishop is hanging. 20...d5 21.f6 Bxf6 This is an extremely important move to remember ! The reply 22.Rh3 looks scary , but we are fine nevertheless. Instead 21...Qxf6 is worse , because after 22. Rxb7 dxc4 23.Nxc4 we don't quite get enough play for the pawn. There is a very similar line 20. Rg3 Kh8 21. Rb3, when after 21... d5 22. f6 Qxf6 gives enough compensation - the extra move ...Kh8 is very useful - and 22... Bxf6 ?? 23. Rh3 loses instantly. 22.Rh3 Rfe8 23.Qxh7+ Kf8 I know it looks scary, but the dark-squared bishop covers everything ! After a future queen move to e5 or e6 the king might even go to e7. I have analyzed this position and don't see anything for White. I rather think White needs to be careful here. The knight on a3 is still bad and take a while to improve. 24.Bxa6 A direct tactical shot. 24...Bxa6 25.Qh6+ Bg7 26.Qxa6 So White has won a second pawn, but Black is still fine. 26...Qc5 Interestingly enough the engines suggest several moves for Black that are fine, but I like this best. The queen stops Nc2 and ...d4 is the next idea. You can also take on b2 with 26... Bxb2 , but then Nc2-e3 is coming. This is also fine by computer standards, but I like my recommendation more.

**B33**

☐ **Sveshnikov 9. Bxf6,11. c3 and others**
■ **Sveshnikov 9. Bxf6,11. c3/others #15**

1.e4 c5 2.Nf3 Nc6 3.d4 cxd4 4.Nxd4 Nf6 5.Nc3 e5 6.Ndb5 d6 7.Bg5 a6 8.Na3 b5 9.Bxf6 White has three mainlines in the Sveshnikov: 6. Ndb5 d6 7. Nd5, 6. Ndb5 d6 7. Bg5 a6 8. Na3 b5 9. Nd5 and this one, which is by far the sharpest and most tactical line of the three. This in particular applies to the line 9.Bxf6 gxf6 10. Nd5 Bg7 11.Bd3 , which is the subject of the subsequent chapter. In this chapter we will examine other lines after 9.Bxf6 , most importantly 9...gxf6 10.Nd5 Bg7 11.c3 , which is the second main sub-branch of the 9. Bxf6 line, besides the 11. Bd3 line. 9...gxf6 This is forced. Black can't capture with the queen , because after 9...Qxf6 ? 10.Nd5 Qd8 White has many lines to give him a huge advantage. The brutal 11.Bxb5 and 11.c4 are terrible for Black. A good comparison to make: look at the very popular mainline 9. Nd5 Be7 10. Bxf6 Bxf6 (covered in 2 chapters of this course) , in which Black has the bishop on f6, while after 9... Qxf6 ? 10. Nd5 Qd8 it is on f8 !So long story short: take with the g-pawn and look forward to playing ...f5 even twice, if possible. 10.Nd5 Bg7 Black has two good moves in this position, the more traditional 10... f5 and the newer move 10... Bg7, the so-called Novosibirsk variation. Both lines have some overlap, because 10. ..Bg7 does only delay ...f5 for the moment. The main difference between the two lines is how the reply 11.Bd3 is handled. In the Novosibirsk you play 11... Ne7 to get rid of the Knight immediately , an approach that is clearly not possible after 10...f5 11.Bd3 , when 11...Ne7 12.Nf6# is a bit of a problem. Instead after 10...f5 11.Bd3 , 11...Be6 is the move , which leads to completely different positions compared to the Novosibirsk. Our repertoire choice is quite easy , as the World Champion has always played 10...Bg7 , as far as I can see. After 10... Bg7 White has two main tries for an advantage. The first one and the sharpest line is 11. Bd3 which we examine in the subsequent chapter. The second approach is to simply play 11.c3 , after which 11...f5 12.exf5 Bxf5 leads to a position that is often reached via 10... f5 11. c3 Bg7 12. exf5 Bxf5. This line leads to interesting play and is considered to be leading to equal chances. It is obviously a critical line for the Sveshnikov, as White can basically force you to enter it. Even going 10... Bg7 or 10... f5 is not relevant, as you have no way to avoid it in both cases. So 11. c3 f5 is clearly the main chunk of this chapter, but we will also look a rare alternatives on move 11. 11.Qh5 Ne7 White stopped ...f5, so this is the right move. 12.Nxe7 Qxe7 13.c3 Here 13.Bd3 can be answered by 13...d5 , as examined in the next chapter via the move order 11. Bd3 Ne7 12. Nxe7 Qxe7 13. Qh5 d5. 13...Qb7 This move is perfectly fine for Black , but a little bit unusual for this line. Of course I checked the more normal looking 13...f5 , but after 14.exf5 I was not able to make the complications work. Compared to similar lines after 11. Bd3 we lack a crucial tempo with ...e4. That being said, the Queen move makes a lot of sense. We attack e4 and prepare ...d5 and/ or ...f5. 14.Bd3 f5 The whole 11. Qh5 line is rather rare, so we don't have any game examples. The analysis shows Black is fine

here. 15.exf5 The sharpest line and the one with a critical moment to happen soon. 15...Qxg2 16.0-0-0 Bf6 This is the only move that works for Black ! The reasoning is that the Queen should stay on g2 for the moment to cover the diagonal and prevent Be4, but at the same time Rhg1 was the threat. Of course now ...Qg5+ is on the agenda as well. This is still an interesting position to analyse, but I'll stop here, given that 11. Qh5 is not played often.

**B33**

☐ **Sveshnikov 9. Bxf6,11. c3 and others**
■ **Sveshnikov 9. Bxf6,11. c3/others #39**

1.e4 c5 2.Nf3 Nc6 3.d4 cxd4 4.Nxd4 Nf6 5.Nc3 e5 6.Ndb5 d6 7.Bg5 a6 8.Na3 b5 9.Bxf6 White has three mainlines in the Sveshnikov: 6. Ndb5 d6 7. Nd5, 6. Ndb5 d6 7. Bg5 a6 8. Na3 b5 9. Nd5 and this one, which is by far the sharpest and most tactical line of the three. This in particular applies to the line 9.Bxf6 gxf6 10. Nd5 Bg7 11.Bd3 , which is the subject of the subsequent chapter. In this chapter we will examine other lines after 9.Bxf6 , most importantly 9...gxf6 10.Nd5 Bg7 11.c3 , which is the second main sub-branch of the 9. Bxf6 line, besides the 11. Bd3 line. 9...gxf6 This is forced. Black can't capture with the queen , because after 9...Qxf6 ? 10.Nd5 Qd8 White has many lines to give him a huge advantage. The brutal 11.Bxb5 and 11.c4 are terrible for Black. A good comparison to make: look at the very popular mainline 9. Nd5 Be7 10. Bxf6 Bxf6 (covered in 2 chapters of this course) , in which Black has the bishop on f6, while after 9... Qxf6 ? 10. Nd5 Qd8 it is on f8 !So long story short: take with the g-pawn and look forward to playing ...f5 even twice, if possible. 10.Nd5 Bg7 Black has two good moves in this position, the more traditional 10... f5 and the newer move 10... Bg7, the so-called Novosibirsk variation. Both lines have some overlap, because 10. ..Bg7 does only delay ...f5 for the moment. The main difference between the two lines is how the reply 11.Bd3 is handled. In the Novosibirsk you play 11... Ne7 to get rid of the Knight immediately , an approach that is clearly not possible after 10...f5 11.Bd3 , when 11...Ne7 12.Nf6# is a bit of a problem. Instead after 10...f5 11.Bd3 , 11...Be6 is the move , which leads to completely different positions compared to the Novosibirsk. Our repertoire choice is quite easy , as the World Champion has always played 10...Bg7 , as far as I can see. After 10... Bg7 White has two main tries for an advantage. The first one and the sharpest line is 11. Bd3 which we examine in the subsequent chapter. The second approach is to simply play 11.c3 , after which 11...f5 12.exf5 Bxf5 leads to a position that is often reached via 10... f5 11. c3 Bg7 12. exf5 Bxf5. This line leads to interesting play and is considered to be leading to equal chances. It is obviously a critical line for the Sveshnikov, as White can basically force you to enter it. Even going 10... Bg7 or 10... f5 is not relevant, as you have no way to avoid it in both cases. So 11. c3 f5 is clearly the main chunk of this chapter, but we will also look a rare alternatives on move 11. 11.c3 This is White's more strategic choice at this

point , compared to 11.Bd3. White intends to improve the Knight as quickly as possible. 11...f5 This is a lot better than 11... Ne7. Playing ...Ne7 is much more pointed after 11. Bd3, because Black in this case immediately threatens to take on d5, forcing the pawn recapture. Therefore after 11. Bd3 Ne7 White has to take on e7, which is not the case here as the Queen is still able to take on d5. An example line would be 11...Ne7 12.Nc2 Nxd5 13.Qxd5 Rb8 14.Ne3 , when Black is more or less busted - you can't even get in ...f5 in the first place. 12.exf5 The simplest and most popular choice for White. 12...Bxf5 13.Nc2 0-0 14.Nce3 Be6 A very natural sequence so far. White has gotten his problem piece back in the centre and now needs to make a decision how to proceed. By far White's most popular move is 15. Bd3 , but there are some offbeat tries worth checking. 15.Bd3 A natural and popular move, angling for piece play against the centre and Kingside, often connected with Qh5. 15...f5 After our natural move 15...f5 we have the final split in this chapter , when White now chooses between 16.O-O , 16.Qh5 and 16.Bc2. The play in similar in these lines , but we need to check some concrete lines. 16.0-0 In some of the sharp lines White does not manage to castle, so this solid move is certainly a reasonable choice. 16...e4 We usually play ...e4 in these lines in reply to Qh5, so we will choose a similar approach here. Note that 16...f4 fails to 17.Qh5 and 16...Ne7 is refuted by 17.Nxe7+ Qxe7 18.Bxf5 ! , which amounts to a disaster as well. 17.Nf4 The only move, otherwise we'd have ... f4 next. 17...Bf7 18.Bc2 Be5 As played by Magnus Carlsen , so we'll follow the Champion's example. Black has some decent alternatives here , like 18...Qd7 and 18...Qg5. 19.Nfd5 Qg5 I suggest to play this move instead of Carlsen's 19...Kh8. He got into some trouble against V.Topalov in Abidjan 2019. He still won this Blitz game quickly after Topalov misplayed it soon after. The move 19... Qg5 is the recommendation of both the engines and the correspondence players and looks attractive, so we'll go for it. Our threats are now ... f4 and ...Bh5. 20.f4 A case of 'What else ?'. White needed to do something about our mentioned ideas. 20...exf3 21.Qxf3 Bh5 White has 22.Qf2 and 22.Qh3 now. Both lead to extremely tactical positions that are fine for Black , but I am not sure how deep I should cover these complications , given that we are already on move 21 and some lines easily run until move 35 (!) ⊙ This sounds crazy, but if you look at the whole sequence starting from 11. c3 our moves are the only ones or clearly the best ones almost the whole time, so this lines is extremely relevant from a theoretical point of view. I'll show some variations from here, but won't go all the way. You can easily add your own analysis if you feel you need more information. 22.Qh3 f4 Surprisingly White has half a dozen playable moves here. In such a sharp position this is quite unusual. I'll check three of them. 23.Qd7 Well, you need to check 'Mate in one'-threats ! 23...Ra7 24.Qxc6 fxe3 25.Rxf8+ Kxf8 In this position White needs to find the way to draw ! 26.Qc8+ This is better for Black, but not yet winning. 26...Kg7 27.Qh3 e2 28.Qe3 Qxe3+ 29.Nxe3 b4 White has a tough defensive task, but we need to look any deeper to prove if he can still draw.

**B33**

☐ **Sveshnikov 9. Bxf6,11. Bd3**
■ **Sveshnikov 9. Bxf6,11. Bd3 #39**

1.e4 c5 2.Nf3 Nc6 3.d4 cxd4 4.Nxd4 Nf6 5.Nc3 e5 6.Ndb5 d6 7.Bg5 a6 8.Na3 b5 9.Bxf6 gxf6 10.Nd5 Bg7 11.Bd3 In this chapter we will examine the lines starting with this move. All other variations after 9. Bxf6 are covered in the previous chapter. After 11. Bd3 the game will become very sharp and tactical and Black needs to sacrifice pawns on a regular basis. In the main line of the 11. Bd3 complex we are three pawns down, but have great compensation !Of all the chapters in the whole course this is by far the one that requires move-by-move knowledge and precise calculation over the board. There is very little strategic content or 'plans' to guide you, it's just two sides engaging in a fight with clubs - and you better make sure to bring a huge club, meaning excellent preparation. It is definitely possible to work out some of the complications over the board, but this will be much more likely to be successful if you once had known them. It sounds odd, but it is true: study time is never wasted, even if you feel you have forgotten everything.The way to do it is to not try to remember as hard as you can, but rather think on your own and hope that you subconsciously piece it together. This works much better than sitting there and wrecking your brain to recall concrete lines.One important point that also needs to be mentioned: Black is the side on the attack after 11. Bd3. If White only has vague knowledge about the complications he is very likely just getting killed quickly. If you screw something up, it might be bad in computer terms... but you still have chances, given the enormous activity that Black usually enjoys. 11...Ne7 The only good move after 11. Bd3. The bishop move prevents ...f5 and we need to get rid of the d5-knight right away. 12.Nxe7 White's choice is limited, because with 11... Ne7 we had threatened to take on d5. As usual it's very desirable for Black to take on d5 when White needs to recapture with a pawn. 12...Qxe7 After 12. .. Qxe7 White has two basic options. He can play c4, attacking the b5-pawn, or play c3, preparing to get the offside knight back into the game. White might play c4 or c3 right away or do it after castling kingside first. Castling is rather natural for both sides, so quite often this will be played quickly after a move of the c-pawn, for example 13.c4 f5 14.O-O O-O is just as common as 13.O-O O-O 14.c4 f5. I will examine 13.O-O O-O as the main line and then split the lines with 14.c4 or 14.c3. If White starts 13. c4, it will very likely transpose to 13. O-O O-O 14. c4, as the deviations are unattractive for White. 13.c3 is a different story. After 13...f5 the sequence 14.O-O O-O is possible and examined via 13. O-O O-O 14. c3 f5, but White often decides to not castle and then we will reach the only important independent line 13.c3 f5 14.Nc2 , when White's king will remain in the centre or castle queenside in some lines. Alright , let's check some moves to make things more concrete. 13.0-0 0-0 It's also possible to play 13...f5 first , there is no drawback to this move order. I went for 13... O-O because this way you have the rule of thumb for move 13 and 14 in this line to play ...f5 against the c-pawn moves and just castle as well if White plays O-O first. 14.c4 f5 The best way

to react to 14. c4. As usual taking on c4 is terrible, as it helps the knight far too much. 14...b4 is also a disaster , as after 15. Nc2 a5 16.Ne3 Black does not even manage to play the fundamental ...f5 break. This only leaves Black with sacrificing the b-pawn, which explains why the 14. c4 - or 13. c4 - line is the sharpest one in the main line. Black is giving away the queenside and goes All-In with his counterplay in the centre and kingside. After 14... f5 White's main lines are the queen moves to h5 and f3, but he has also tried other continuations without much success. 15.cxb5 This is not a good idea. White is be able to defend in the coming lines, but it's not a fun task for a human player. 15...d5 Black is forcing the long diagonal open with this standard pawn push. 16.exd5 e4 17.Qe2 The only move to cover b2 and defend the d3-bishop by tactical means. Black now has a plethora of good attacking ideas. I'll show a promising one. 17...Qb4 The less accurate 17...Rb8 is seen in model game #5. 18.Bc4 Qxb2 19.Nc2 axb5 20.Rab1 Qf6 21.Rxb5 f4 With excellent attacking chances for just one pawn.

**B33**

☐ **Sveshnikov 9. Bxf6,11. c3 and others**
■ **Sveshnikov 9. Bxf6,11. c3/others #42**

1.e4 c5 2.Nf3 Nc6 3.d4 cxd4 4.Nxd4 Nf6 5.Nc3 e5 6.Ndb5 d6 7.Bg5 a6 8.Na3 b5 9.Bxf6 White has three mainlines in the Sveshnikov: 6. Ndb5 d6 7. Nd5, 6. Ndb5 d6 7. Bg5 a6 8. Na3 b5 9. Nd5 and this one, which is by far the sharpest and most tactical line of the three. This in particular applies to the line 9.Bxf6 gxf6 10. Nd5 Bg7 11.Bd3 , which is the subject of the subsequent chapter. In this chapter we will examine other lines after 9.Bxf6 , most importantly 9...gxf6 10.Nd5 Bg7 11.c3 , which is the second main sub-branch of the 9. Bxf6 line, besides the 11. Bd3 line. 9...gxf6 This is forced. Black can't capture with the queen , because after 9...Qxf6 ? 10.Nd5 Qd8 White has many lines to give him a huge advantage. The brutal 11.Bxb5 and 11.c4 are terrible for Black. A good comparison to make: look at the very popular mainline 9. Nd5 Be7 10. Bxf6 Bxf6 (covered in 2 chapters of this course) , in which Black has the bishop on f6, while after 9... Qxf6 ? 10. Nd5 Qd8 it is on f8 !So long story short: take with the g-pawn and look forward to playing ...f5 even twice, if possible. 10.Nd5 Bg7 Black has two good moves in this position, the more traditional 10... f5 and the newer move 10... Bg7, the so-called Novosibirsk variation. Both lines have some overlap, because 10. ..Bg7 does only delay ...f5 for the moment. The main difference between the two lines is how the reply 11.Bd3 is handled. In the Novosibirsk you play 11... Ne7 to get rid of the Knight immediately , an approach that is clearly not possible after 10...f5 11.Bd3 , when 11...Ne7 12.Nf6# is a bit of a problem. Instead after 10...f5 11.Bd3 , 11...Be6 is the move , which leads to completely different positions compared to the Novosibirsk. Our repertoire choice is quite easy , as the World Champion has always played 10...Bg7 , as far as I can see. After 10... Bg7 White has two main tries for an advantage. The first one and the

sharpest line is 11. Bd3 which we examine in the subsequent chapter. The second approach is to simply play 11.c3 , after which 11...f5 12.exf5 Bxf5 leads to a position that is often reached via 10... f5 11. c3 Bg7 12. exf5 Bxf5. This line leads to interesting play and is considered to be leading to equal chances. It is obviously a critical line for the Sveshnikov, as White can basically force you to enter it. Even going 10... Bg7 or 10... f5 is not relevant, as you have no way to avoid it in both cases. So 11. c3 f5 is clearly the main chunk of this chapter, but we will also look a rare alternatives on move 11. 11.c3 This is White's more strategic choice at this point , compared to 11.Bd3. White intends to improve the Knight as quickly as possible. 11...f5 This is a lot better than 11... Ne7. Playing ...Ne7 is much more pointed after 11. Bd3, because Black in this case immediately threatens to take on d5, forcing the pawn recapture. Therefore after 11. Bd3 Ne7 White has to take on e7, which is not the case here as the Queen is still able to take on d5. An example line would be 11...Ne7 12.Nc2 Nxd5 13.Qxd5 Rb8 14.Ne3 , when Black is more or less busted - you can't even get in ...f5 in the first place. 12.exf5 The simplest and most popular choice for White. 12...Bxf5 13.Nc2 0-0 14.Nce3 Be6 A very natural sequence so far. White has gotten his problem piece back in the centre and now needs to make a decision how to proceed. By far White's most popular move is 15. Bd3 , but there are some offbeat tries worth checking. 15.Bd3 A natural and popular move, angling for piece play against the centre and Kingside, often connected with Qh5. 15...f5 After our natural move 15...f5 we have the final split in this chapter , when White now chooses between 16.O-O , 16.Qh5 and 16.Bc2. The play in similar in these lines , but we need to check some concrete lines. 16.0-0 In some of the sharp lines White does not manage to castle, so this solid move is certainly a reasonable choice. 16...e4 We usually play ...e4 in these lines in reply to Qh5, so we will choose a similar approach here. Note that 16...f4 fails to 17.Qh5 and 16...Ne7 is refuted by 17.Nxe7+ Qxe7 18.Bxf5 ! , which amounts to a disaster as well. 17.Nf4 The only move, otherwise we'd have ... f4 next. 17...Bf7 18.Bc2 Be5 As played by Magnus Carlsen , so we'll follow the Champion's example. Black has some decent alternatives here , like 18...Qd7 and 18...Qg5. 19.Nfd5 Qg5 I suggest to play this move instead of Carlsen's 19...Kh8. He got into some trouble against V.Topalov in Abidjan 2019. He still won this Blitz game quickly after Topalov misplayed it soon after. The move 19... Qg5 is the recommendation of both the engines and the correspondence players and looks attractive, so we'll go for it. Our threats are now ... f4 and ...Bh5. 20.f4 A case of 'What else ?'. White needed to do something about our mentioned ideas. 20...exf3 21.Qxf3 Bh5 White has 22.Qf2 and 22.Qh3 now. Both lead to extremely tactical positions that are fine for Black , but I am not sure how deep I should cover these complications , given that we are already on move 21 and some lines easily run until move 35 (!) ⊙ This sounds crazy, but if you look at the whole sequence starting from 11. c3 our moves are the only ones or clearly the best ones almost the whole time, so this lines is extremely relevant from a theoretical point of view. I'll show some variations from here, but won't go all the way. You can easily add your own analysis if you feel you need more information. 22.Qf2 f4 23.h4 Qg7

24.Nf5 Rxf5 There is nothing else, but it's fine for Black. We get a very strong attack that White is able to defend against with perfect play. 25.Bxf5 Rf8 26.Be4 f3 Now White only has one sequence to draw. 27.Qd2 h6 We need to play that, as Qg5 was a huge problem. Now ...Qg3 next is unavoidable. I'll put the rest in the text... it runs till the deep endgame. The next moves are 28. Rf2 Qg3 29.Kf1 Qxh4 30.gxf3 Qh1+ 31.Ke2 Qxa1 32.Rf1 Qxa2 33.Qxh6 Qxb2+ 34.Kd3 Rxf3+ 35.Bxf3 Bxf3 36.Rxf3 Qb1+ 37.Ke2 Qc2+ and this endgame is a draw.

If you screw something up, it might be bad in computer terms... but you still have chances, given the enormous activity that Black usually enjoys. 11...Ne7 The only good move after 11. Bd3. The bishop move prevents ...f5 and we need to get rid of the d5-knight right away. 12.Nxe7 White's choice is limited, because with 11... Ne7 we had threatened to take on d5. As usual it's very desirable for Black to take on d5 when White needs to recapture with a pawn. 12...Qxe7 After 12. .. Qxe7 White has two basic options. He can play c4, attacking the b5-pawn, or play c3, preparing to get the offside knight back into the game. White might play c4 or c3 right away or do it after castling kingside first. Castling is rather natural for both sides, so quite often this will be played quickly after a move of the c-pawn, for example 13.c4 f5 14.O-O O-O is just as common as 13.O-O O-O 14.c4 f5. I will examine 13.O-O O-O as the main line and then split the lines with 14.c4 or 14.c3. If White starts 13. c4, it will very likely

transpose to 13. O-O O-O 14. c4, as the deviations are unattractive for White. 13.c3 is a different story. After 13...f5 the sequence 14.O-O O-O is possible and examined via 13. O-O O-O 14. c3 f5, but White often decides to not castle and then we will reach the only important independent line 13.c3 f5 14.Nc2 , when White's king will remain in the centre or castle queenside in some lines. Alright , let's check some moves to make things more concrete. 13.0-0 0-0 It's also possible to play 13...f5 first , there is no drawback to this move order. I went for 13... O-O because this way you have the rule of thumb for move 13 and 14 in this line to play ...f5 against the c-pawn moves and just castle as well if White plays O-O first. 14.c3 A more restrained way to play for White. He prepares Nc2-e3, improving the misplaced knight on a3. 14...f5 15.Nc2 d5 Always an attractive option if it works out tactically. Here it does ! 16.exf5 e4 17.Be2 Rd8 Black needs to cover d5 first. 18.a4 bxa4 As usual it is best to take this pawn. 19.Rxa4 Bxf5 20.Rxa6 We need to check the pawn grab, of course. 20...Rxa6 21.Bxa6 Qg5 Black has enough play for the pawn here. We have multiple ideas in this position, depending on White's choice now. For example if White moves the knight to e3, we are able to advance with ...d4, opening up the d-file and the bishop. There is also ...h5-h4 as a way to reinforce on the kingside. The white extra pawn is not yet dangerous, so it is not necessary to have something very forcing available. I'll show one line to highlight this point. 22.Qc1 Qxc1 23.Rxc1 Rb8 24.Ne3 Be6 25.b4 This was the only way to keep the b-pawn after the queen trade. 25...f5 You may also try to force a draw with 25...Bxc3 26.Rxc3 d4 , but I like this calm approach. We have compensation deep into the endgame, with a king march to e5 on the agenda.

**B33**

☐ **Sveshnikov 9. Bxf6,11. Bd3**
■ **Sveshnikov 9. Bxf6,11. Bd3 #49**

1.e4 c5 2.Nf3 Nc6 3.d4 cxd4 4.Nxd4 Nf6 5.Nc3 e5 6.Ndb5 d6 7.Bg5 a6 8.Na3 b5 9.Bxf6 gxf6 10.Nd5 Bg7 11.Bd3 In this chapter we will examine the lines starting with this move. All other variations after 9. Bxf6 are covered in the previous chapter. After 11. Bd3 the game will become very sharp and tactical and Black needs to sacrifice pawns on a regular basis. In the main line of the 11. Bd3 complex we are three pawns down, but have great compensation !Of all the chapters in the whole course this is by far the one that requires move-by-move knowledge and precise calculation over the board. There is very little strategic content or 'plans' to guide you, it's just two sides engaging in a fight with clubs - and you better make sure to bring a huge club, meaning excellent preparation. It is definitely possible to work out some of the complications over the board, but this will be much more likely to be successful if you once had known them. It sounds odd, but it is true: study time is never wasted, even if you feel you have forgotten everything.The way to do it is to not try to remember as hard as you can, but rather think on your own and hope that you

subconsciously piece it together. This works much better than sitting there and wrecking your brain to recall concrete lines.One important point that also needs to be mentioned: Black is the side on the attack after 11. Bd3. If White only has vague knowledge about the complications he is very likely just getting killed quickly. If you screw something up, it might be bad in computer terms... but you still have chances, given the enormous activity that Black usually enjoys. 11...Ne7 The only good move after 11. Bd3. The bishop move prevents ...f5 and we need to get rid of the d5-knight right away. 12.Nxe7 White's choice is limited, because with 11... Ne7 we had threatened to take on d5. As usual it's very desirable for Black to take on d5 when White needs to recapture with a pawn. 12...Qxe7 After 12. .. Qxe7 White has two basic options. He can play c4, attacking the b5-pawn, or play c3, preparing to get the offside knight back into the game. White might play c4 or c3 right away or do it after castling kingside first. Castling is rather natural for both sides, so quite often this will be played quickly after a move of the c-pawn, for example 13.c4 f5 14.O-O O-O is just as common as 13.O-O O-O 14.c4 f5. I will examine 13.O-O O-O as the main line and then split the lines with 14.c4 or 14.c3. If White starts 13. c4, it will very likely transpose to 13. O-O O-O 14. c4, as the deviations are unattractive for White. 13.c3 is a different story. After 13...f5 the sequence 14.O-O O-O is possible and examined via 13. O-O O-O 14. c3 f5, but White often decides to not castle and then we will reach the only important independent line 13.c3 f5 14.Nc2 , when White's king will remain in the centre or castle queenside in some lines. Alright , let's check some moves to make things more concrete. 13.0-0 0-0 It's also possible to play 13...f5 first , there is no drawback to this move order. I went for 13... O-O because this way you have the rule of thumb for move 13 and 14 in this line to play ...f5 against the c-pawn moves and just castle as well if White plays O-O first. 14.c4 f5 The best way to react to 14. c4. As usual taking on c4 is terrible, as it helps the knight far too much. 14...b4 is also a disaster , as after 15. Nc2 a5 16.Ne3 Black does not even manage to play the fundamental ...f5 break. This only leaves Black with sacrificing the b-pawn, which explains why the 14. c4 - or 13. c4 - line is the sharpest one in the main line. Black is giving away the queenside and goes All-In with his counterplay in the centre and kingside. After 14... f5 White's main lines are the queen moves to h5 and f3, but he has also tried other continuations without much success. 15.Qh5 Rb8
We would have liked to take on e4, but 15...fxe4 16.Bxe4 is a double threat on h7 and on the rook. This explains 15... Rb8 - now we are threatening to take on e4 and then play ...f5 a second time ! The move 15... Rb8 has been tested numerous times in over the board play and correspondence chess and it looks like Black is doing fine in the hair-raising complications. I need to mention that 15... Rb8 is not the only move, though. In fact only some days before these lines were written the World Champion went for a different move: he played 15... d5 !? in the Grand Swiss Isle of Man Tournament against Russian hopeful Alexey Sarana. 15... d5 is a rare move and was probably intended as a surprise, but Sarana had done his homework and blitzed out the following moves. 15...d5 16.cxd5 Qd8 17.exf5 Qxd5 18.Rad1 e4 19.Bxb5 Qxf5 20. Qxf5 Bxf5 21.Bd7 Bxd7 22.Rxd7 Bxb2 23.Nc4. Now, this sequence is in fact

clearly best play after 15... d5 and the resulting position I don't want to recommend, even though Magnus played the line. Black is very close to equality, but it's a grovel and not fun at all. Magnus ultimately drew the game after some unpleasant moments. Maybe HE kept his cool, but I would have been concerned ! In any case, I don't want to play for two results just yet if a win is not among them. 16.exf5 A more or less forced decision. Otherwise we take on e4 and play ...f5 next. 16...e4 17.Rae1 We attacked both the bishop on d3 and the pawn on b2, so White needs a tactical solution. 17...Bb7 18.Kh1 In the GM Repertoire book GM P.Negi recommends 18. Re3 , but he also presents this move as an alternative. He gave a long analysis , ending in equality , but it's a maze of lines. I tried to find a simpler solution and indeed Black is ok even without learning a couple of pages of lines. First we should establish what this king move actually does. The idea is to take on e4 and after ... Bxe4 to play f3, getting the piece back. Without Kh1 Black has ... Qa7+ or ...Bd4+, which refutes this version of the idea. 18...bxc4 19.Bxe4 Bxe4 20.f3 Rxb2 Negi analyses 20...Rfc8 and 20...Qf6 to equality , but these lines are deep and complicated. He does not cover 20... Rxb2, which looks simpler to me. 21.Nxc4 Rb1 The best way to return the piece. 22.Rxb1 Bxb1 23.Rxb1 Re8 The immediate 23... d5 is also fine , but I like to provoke a further weakening due to the bank rank threat. 24.h3 d5 25.f6 Qxf6 26.Qxd5 Qh4 Again Black has enough play for the pawn. It is particularly difficult to find a good route for the white knight, as the dark squares are so weakened.

☐ **Sveshnikov 9. Bxf6,11. c3 and others**
■ **Sveshnikov 9. Bxf6,11. c3/others #32**

1.e4 c5 2.Nf3 Nc6 3.d4 cxd4 4.Nxd4 Nf6 5.Nc3 e5 6.Ndb5 d6 7.Bg5 a6 8.Na3 b5 9.Bxf6 White has three mainlines in the Sveshnikov: 6. Ndb5 d6 7. Nd5, 6. Ndb5 d6 7. Bg5 a6 8. Na3 b5 9. Nd5 and this one, which is by far the sharpest and most tactical line of the three. This in particular applies to the line 9.Bxf6 gxf6 10. Nd5 Bg7 11.Bd3 , which is the subject of the subsequent chapter. In this chapter we will examine other lines after 9.Bxf6 , most importantly 9...gxf6 10.Nd5 Bg7 11.c3 , which is the second main sub-branch of the 9. Bxf6 line, besides the 11. Bd3 line. 9...gxf6 This is forced. Black can't capture with the queen , because after 9...Qxf6 ? 10.Nd5 Qd8 White has many lines to give him a huge advantage. The brutal 11.Bxb5 and 11.c4 are terrible for Black. A good comparison to make: look at the very popular mainline 9. Nd5 Be7 10. Bxf6 Bxf6 (covered in 2 chapters of this course) , in which Black has the bishop on f6, while after 9... Qxf6 ? 10. Nd5 Qd8 it is on f8 !So long story short: take with the g-pawn and look forward to playing ...f5 even twice, if possible. 10.Nd5 Bg7 Black has two good moves in this position, the more traditional 10... f5 and the newer move 10... Bg7, the so-called Novosibirsk variation. Both lines have some overlap, because 10. ..Bg7 does only delay ...f5 for the

moment. The main difference between the two lines is how the reply 11.Bd3 is handled. In the Novosibirsk you play 11... Ne7 to get rid of the Knight immediately , an approach that is clearly not possible after 10...f5 11.Bd3 , when 11...Ne7 12.Nf6# is a bit of a problem. Instead after 10...f5 11.Bd3 , 11...Be6 is the move , which leads to completely different positions compared to the Novosibirsk. Our repertoire choice is quite easy , as the World Champion has always played 10...Bg7 , as far as I can see. After 10... Bg7 White has two main tries for an advantage. The first one and the sharpest line is 11. Bd3 which we examine in the subsequent chapter. The second approach is to simply play 11.c3 , after which 11...f5 12.exf5 Bxf5 leads to a position that is often reached via 10... f5 11. c3 Bg7 12. exf5 Bxf5. This line leads to interesting play and is considered to be leading to equal chances. It is obviously a critical line for the Sveshnikov, as White can basically force you to enter it. Even going 10... Bg7 or 10... f5 is not relevant, as you have no way to avoid it in both cases. So 11. c3 f5 is clearly the main chunk of this chapter, but we will also look a rare alternatives on move 11. 11.c3 This is White's more strategic choice at this point , compared to 11.Bd3. White intends to improve the Knight as quickly as possible. 11...f5 This is a lot better than 11... Ne7. Playing ...Ne7 is much more pointed after 11. Bd3, because Black in this case immediately threatens to take on d5, forcing the pawn recapture. Therefore after 11. Bd3 Ne7 White has to take on e7, which is not the case here as the Queen is still able to take on d5. An example line would be 11...Ne7 12.Nc2 Nxd5 13.Qxd5 Rb8 14.Ne3 , when Black is more or less busted - you can't even get in ...f5 in the first place. 12.exf5 The simplest and most popular choice for White. 12...Bxf5 13.Nc2 0-0 14.Nce3 Be6 A very natural sequence so far. White has gotten his problem piece back in the centre and now needs to make a decision how to proceed. By far White's most popular move is 15. Bd3 , but there are some offbeat tries worth checking. 15.Bd3 A natural and popular move, angling for piece play against the centre and Kingside, often connected with Qh5. 15...f5 After our natural move 15...f5 we have the final split in this chapter , when White now chooses between 16.O-O , 16.Qh5 and 16.Bc2. The play in similar in these lines , but we need to check some concrete lines. 16.Qh5 e4 The f5-pawn was attacked and this gains a tempo, an easy reply. 17.Bc2 Ne7 We are fighting for control over d5 , a common theme. 17...f4 instead looks tempting , but White has 18. Bxe4 ! , when White attacks h7 with decisive effect. 18.Nf4 Bf7 19.Bb3 A bit more ambitious than 19.Qg5 , but still not dangerous for Black. 19...b4 This is rarely played , mostly because 19...d5 20. Qg5 Ng6 is long known to be a complete equaliser for Black. The only issue is that Black can't win after the ensuing simplifications. I suggest 19... b4 as an attempt to keep the game more tense. In fact Black has a couple of moves to do that , for example 19...a5 seems fine as well. 20.0-0 bxc3 21.bxc3 Be5 After 21...Bxc3 22.Rad1 Be5 23.Nh3 is annoying and will force Black to return the pawn quickly. With 21... Be5 we keep the tension and reach an interesting position with equal chances.

**B33**

☐ **Sveshnikov 9. Bxf6,11. Bd3**
■ **Sveshnikov 9. Bxf6,11. Bd3 #29**

1.e4 c5 2.Nf3 Nc6 3.d4 cxd4 4.Nxd4 Nf6 5.Nc3 e5 6.Ndb5 d6 7.Bg5 a6 8.Na3 b5 9.Bxf6 gxf6 10.Nd5 Bg7 11.Bd3 In this chapter we will examine the lines starting with this move. All other variations after 9. Bxf6 are covered in the previous chapter. After 11. Bd3 the game will become very sharp and tactical and Black needs to sacrifice pawns on a regular basis. In the main line of the 11. Bd3 complex we are three pawns down, but have great compensation !Of all the chapters in the whole course this is by far the one that requires move-by-move knowledge and precise calculation over the board. There is very little strategic content or 'plans' to guide you, it's just two sides engaging in a fight with clubs - and you better make sure to bring a huge club, meaning excellent preparation. It is definitely possible to work out some of the complications over the board, but this will be much more likely to be successful if you once had known them. It sounds odd, but it is true: study time is never wasted, even if you feel you have forgotten everything.The way to do it is to not try to remember as hard as you can, but rather think on your own and hope that you subconsciously piece it together. This works much better than sitting there and wrecking your brain to recall concrete lines.One important point that also needs to be mentioned: Black is the side on the attack after 11. Bd3. If White only has vague knowledge about the complications he is very likely just getting killed quickly. If you screw something up, it might be bad in computer terms... but you still have chances, given the enormous activity that Black usually enjoys. 11...Ne7 The only good move after 11. Bd3. The bishop move prevents ...f5 and we need to get rid of the d5-knight right away. 12.Nxe7 White's choice is limited, because with 11... Ne7 we had threatened to take on d5. As usual it's very desirable for Black to take on d5 when White needs to recapture with a pawn. 12...Qxe7 After 12. .. Qxe7 White has two basic options. He can play c4, attacking the b5-pawn, or play c3, preparing to get the offside knight back into the game. White might play c4 or c3 right away or do it after castling kingside first. Castling is rather natural for both sides, so quite often this will be played quickly after a move of the c-pawn, for example 13.c4 f5 14.O-O O-O is just as common as 13.O-O O-O 14.c4 f5. I will examine 13.O-O O-O as the main line and then split the lines with 14.c4 or 14.c3. If White starts 13. c4, it will very likely transpose to 13. O-O O-O 14. c4, as the deviations are unattractive for White. 13.c3 is a different story. After 13...f5 the sequence 14.O-O O-O is possible and examined via 13. O-O O-O 14. c3 f5, but White often decides to not castle and then we will reach the only important independent line 13.c3 f5 14.Nc2 , when White's king will remain in the centre or castle queenside in some lines. Alright , let's check some moves to make things more concrete. 13.0-0 0-0 It's also possible to play 13...f5 first , there is no drawback to this move order. I went for 13... O-O because this way you have the rule of thumb for move 13 and 14 in this line to play ...f5 against the c-pawn moves and just castle as well if White plays O-O first. 14.Qf3 f5 After 13. O-O

O-O we will play ...f5 next, basically no matter what White does. 15.exf5 d5 Very nice ! Black gets a dangerous initiative now. 16.Qxd5 We threatened to play ... e4, so this makes perfect sense. 16...Bb7 17.Qb3 e4 18.Rfe1 Bd4 19.Bf1 This is the only playable move. Black was threatening mostly ...Qh4, attacking d3 and f2 at the same time. 19...e3 20.fxe3 White should maybe return material with 20. Rxe3 , but this can't be the critical test. 20...Be5 I told you that Black needs to sacrifice pawns, right ? Here we are down three pawns, but still have great compensation. The engines confirm that Black is fine and it is White who needs to dodge the bullets. Black has multiple attacking ideas here, most obviously ...Qh4. The only move that does not lose immediately for White is 21. e4. 21.e4 Kh8 Calmly preparing ...Rg8. 22.Kh1 Rg8 23.Rad1 Qh4 24.Qh3 Qxh3 25.gxh3 Bxb2 26.Nb1 Rg5 White is struggling to hold his position together. The f5-pawn is basically doomed and White's king is permanently in danger.

1.e4 c5 2.Nf3 Nc6 3.d4 cxd4 4.Nxd4 Nf6 5.Nc3 e5 6.Ndb5 d6 7.Bg5 a6 8.Na3 b5 9.Bxf6 White has three mainlines in the Sveshnikov: 6. Ndb5 d6 7. Nd5, 6. Ndb5 d6 7. Bg5 a6 8. Na3 b5 9. Nd5 and this one, which is by far the sharpest and most tactical line of the three. This in particular applies to the line 9.Bxf6 gxf6 10. Nd5 Bg7 11.Bd3 , which is the subject of the subsequent chapter. In this chapter we will examine other lines after 9.Bxf6 , most importantly 9...gxf6 10.Nd5 Bg7 11.c3 , which is the second main sub-branch of the 9. Bxf6 line, besides the 11. Bd3 line. 9...gxf6 This is forced. Black can't capture with the queen , because after 9...Qxf6 ? 10.Nd5 Qd8 White has many lines to give him a huge advantage. The brutal 11.Bxb5 and 11.c4 are terrible for Black. A good comparison to make: look at the very popular mainline 9. Nd5 Be7 10. Bxf6 Bxf6 (covered in 2 chapters of this course) , in which Black has the bishop on f6, while after 9... Qxf6 ? 10. Nd5 Qd8 it is on f8 !So long story short: take with the g-pawn and look forward to playing ...f5 even twice, if possible. 10.Nd5 Bg7 Black has two good moves in this position, the more traditional 10... f5 and the newer move 10... Bg7, the so-called Novosibirsk variation. Both lines have some overlap, because 10. ..Bg7 does only delay ...f5 for the moment. The main difference between the two lines is how the reply 11.Bd3 is handled. In the Novosibirsk you play 11... Ne7 to get rid of the Knight immediately , an approach that is clearly not possible after 10...f5 11.Bd3 , when 11...Ne7 12.Nf6# is a bit of a problem. Instead after 10...f5 11.Bd3 , 11...Be6 is the move , which leads to completely different positions compared to the Novosibirsk. Our repertoire choice is quite easy , as the World Champion has always played 10...Bg7 , as far as I can see. After 10... Bg7 White has two main tries for an advantage. The first one and the sharpest line is 11. Bd3 which we examine in the subsequent chapter. The second

approach is to simply play 11.c3 , after which 11...f5 12.exf5 Bxf5 leads to a position that is often reached via 10... f5 11. c3 Bg7 12. exf5 Bxf5. This line leads to interesting play and is considered to be leading to equal chances. It is obviously a critical line for the Sveshnikov, as White can basically force you to enter it. Even going 10... Bg7 or 10... f5 is not relevant, as you have no way to avoid it in both cases. So 11. c3 f5 is clearly the main chunk of this chapter, but we will also look a rare alternatives on move 11. 11.c3 This is White's more strategic choice at this point , compared to 11.Bd3. White intends to improve the Knight as quickly as possible. 11...f5 This is a lot better than 11... Ne7. Playing ...Ne7 is much more pointed after 11. Bd3, because Black in this case immediately threatens to take on d5, forcing the pawn recapture. Therefore after 11. Bd3 Ne7 White has to take on e7, which is not the case here as the Queen is still able to take on d5. An example line would be 11...Ne7 12.Nc2 Nxd5 13.Qxd5 Rb8 14.Ne3 , when Black is more or less busted - you can't even get in ...f5 in the first place. 12.exf5 The simplest and most popular choice for White. 12...Bxf5 13.Nc2 0-0 14.Nce3 Be6 A very natural sequence so far. White has gotten his problem piece back in the centre and now needs to make a decision how to proceed. By far White's most popular move is 15. Bd3 , but there are some offbeat tries worth checking. 15.a4 A commonly seen idea against the Sveshnikov, but it has a flaw in this position. 15...b4 Against a4 in the Sveshnikov you rarely want to allow White to capture on b5, but rather take on a4 or play ...b4. Here the latter is strong. 16.Bc4 Conservative and probably best. 16.cxb4 is playable , but risky. 16...bxc3 17.bxc3 Kh8 Attention ! Don't play 17...f5 ? due to 18.Nb6 ! 18.0-0 Na5 19.Ba2 f5 The Queenside formation is a bit unusual, but otherwise a fairly typical Sveshnikov position. The Knight on a5 is often going to be improved via b7 and c5.

The first one and the sharpest line is 11. Bd3 which we examine in the subsequent chapter. The second approach is to simply play 11.c3 , after which 11...f5 12.exf5 Bxf5 leads to a position that is often reached via 10... f5 11. c3 Bg7 12. exf5 Bxf5. This line leads to interesting play and is considered to be leading to equal chances. It is obviously a critical line for the Sveshnikov, as White can basically force you to enter it. Even going 10... Bg7 or 10... f5 is not relevant, as you have no way to avoid it in both cases. So 11. c3 f5 is clearly the main chunk of this chapter, but we will also look a rare alternatives on move 11. 11.c4 A sharp alternative to the mainlines. Similarly to 11.Bd3 Ne7 12.Nxe7 Qxe7 13.c4 White attacks the Black Queenside Pawns and we have no good alternative to sacrificing the b-pawn. As usual Black gets excellent compensation and quite often manages to win attractive attacking games. The resulting positions are much easier to handle for Black, in particular if you know what

to do. In many cases White does not, because if he had known that after 11. c4 he's be on the defensive the whole time he wouldn't have played into the line in the first place. After perfect play White is still OK after 11. c4, but you will not encounter that against a human opponent. 11...f5 We have to give up the b-pawn. As mentioned several times throughout the course, taking on c4 is always (99. 9% of the time) bad in such a structure. On very few occasions ...b4 is playable , but this is not one of them , as 11...b4 12.Nc2 a5 13.Nce3 is terrible for Black. We are happy to sacrifice the pawn , luring the c-pawn away from the centre. 12.cxb5 Nd4 13.Bd3 The most reasonable move, preparing to play O-O next. 13...fxe4 Here and on the next moves Black has more than one promising way to play and this is the most straightforward one. I also like 13...Be6 14.O-O Bxd5 , which is completely fine. 14.Bxe4 0-0 15.Nc2 Rb8 16.Nxd4 exd4 17.0-0 Rxb5 Black has gotten to material equality again and is fine. The Pawn structure is bad, but all pieces are active and we have the pair of Bishops.

As usual it's very desirable for Black to take on d5 when

White needs to recapture with a pawn. 12...Qxe7 After 12. .. Qxe7 White has two basic options. He can play c4, attacking the b5-pawn, or play c3, preparing to get the offside knight back into the game. White might play c4 or c3 right away or do it after castling kingside first. Castling is rather natural for both sides, so quite often this will be played quickly after a move of the c-pawn, for example 13.c4 f5 14.O-O O-O is just as common as 13.O-O O-O 14.c4 f5. I will examine 13.O-O O-O as the main line and then split the lines with 14.c4 or 14.c3. If White starts 13. c4, it will very likely transpose to 13. O-O O-O 14. c4, as the deviations are unattractive for White. 13.c3 is a different story. After 13...f5 the sequence 14.O-O O-O is possible and examined via 13. O-O O-O 14. c3 f5, but White often decides to not castle and then we will reach the only important independent line 13.c3 f5 14.Nc2 , when White's king will remain in the centre or castle queenside in some lines. Alright , let's check some moves to make things more concrete. 13.c3 Compared to 13.c4 or 14. c4 this is the slower approach. White intends to improve the knight via c2-e3. 13...f5 What else ? You could actually castle first and ...f5 next move, but the rule of thumb to play ...f5 against the c-pawn moves is useful to have. 14.Nc2 The logical follow-up. White may also castle here, but other moves don't convince. 14...0-0 This is not that popular, but I see no reason why. Most of the time White will now castle as well, transposing into the line 13. O-O O-O 14. c3 f5, (which is part of our repertoire anyway - see lines #23-26.) Instead of my recommendation 14... O-O Black most often plays 14...Qb7 , which seems fine as well. I just felt that we save a bit of workload with 14... O-O, as it mostly transposes as mentioned. 15.Ne3 This is a logical move to avoid a transposition to lines starting with 13. O-O O-O. Black seems fine, though. 15...f4 16.Nd5 At first it look like White has achieved his goal and should be fine, but he lacks one or two tempi to be coordinated. 16...Qg5 This is the move that justifies Black's play. 17.g3 Be6 White now needs to be worried about Black taking on d5. As usual a pawn coming to d5 is good news for Black. This position is rather unexplored, but given White's reluctance to castle I guess the following sequence makes sense. 18.h4 Qd8 19.g4 White tries to set up a bind on the light squares, trying to stop ...f5. 19...f5 It still works, in very instructive fashion actually. 20.gxf5 Bxd5 21.exd5 e4 Activity at all costs ! The bishop is coming to life now, giving Black good play. 22.Bxe4 Re8 23.f3 b4 Black has a strong attack on the weak dark squares. With opposite-coloured bishops the side on the attack benefits. The engines manage to defend this for White, but it's not fun. I'll show one line that looks plausible. 24.cxb4 Bxb2 25.Rb1 Bc3+ 26.Kf1 Kh8 We play ...Qf6 and ...Rg8 next, lining up against the white king.

☐ **Sveshnikov 9. Bxf6,11. Bd3**
■ **Sveshnikov 9. Bxf6,11. Bd3 #40**

1.e4 c5 2.Nf3 Nc6 3.d4 cxd4 4.Nxd4 Nf6 5.Nc3 e5 6.Ndb5 d6 7.Bg5 a6 8.Na3 b5 9.Bxf6 gxf6 10.Nd5 Bg7 11.Bd3 In this chapter we will examine the lines starting with this move. All other variations after 9. Bxf6 are covered in the previous chapter. After 11. Bd3 the game will become very sharp and tactical and Black needs to sacrifice pawns on a regular basis. In the main line of the 11. Bd3 complex we are three pawns down, but have great compensation !Of all the chapters in the whole course this is by far the one that requires move-by-move knowledge and precise calculation over the board. There is very little strategic content or 'plans' to guide you, it's just two sides engaging in a fight with clubs - and you better make sure to bring a huge club, meaning excellent preparation. It is definitely possible to work out some of the complications over the board, but this will be much more likely to be successful if you once had known them. It sounds odd, but it is true: study time is never wasted, even if you feel you have forgotten everything.The way to do it is to not try to remember as hard as you can, but rather think on your own and hope that you subconsciously piece it together. This works much better than sitting there and wrecking your brain to recall concrete lines.One important point that also needs to be mentioned: Black is the side on the attack after 11. Bd3. If White only has vague knowledge about the complications he is very likely just getting killed quickly. If you screw something up, it might be bad in computer terms... but you still have chances, given the enormous activity that Black usually enjoys. 11...Ne7 The only good move after 11. Bd3. The bishop move prevents ...f5 and we need to get rid of the d5-knight right away. 12.Nxe7 White's choice is limited, because with 11... Ne7 we had threatened to take on d5. As usual it's very desirable for Black to take on d5 when White needs to recapture with a pawn. 12...Qxe7 After 12. .. Qxe7 White has two basic options. He can play c4, attacking the b5-pawn, or play c3, preparing to get the offside knight back into the game. White might play c4 or c3 right away or do it after castling kingside first. Castling is rather natural for both sides, so quite often this will be played quickly after a move of the c-pawn, for example 13.c4 f5 14.O-O O-O is just as common as 13.O-O O-O 14.c4 f5. I will examine 13.O-O O-O as the main line and then split the lines with 14.c4 or 14.c3. If White starts 13. c4, it will very likely transpose to 13. O-O O-O 14. c4, as the deviations are unattractive for White. 13.c3 is a different story. After 13...f5 the sequence 14.O-O O-O is possible and examined via 13. O-O O-O 14. c3 f5, but White often decides to not castle and then we will reach the only important independent line 13.c3 f5 14.Nc2 , when White's king will remain in the centre or castle queenside in some lines. Alright , let's check some moves to make things more concrete. 13.0-0 0-0 It's also possible to play 13...f5 first , there is no drawback to this move order. I went for 13... O-O because this way you have the rule of thumb for move 13 and 14 in this line to play ...f5 against the c-pawn moves and just castle as well if White plays O-O first. 14.c4 f5 The best way

to react to 14. c4. As usual taking on c4 is terrible, as it helps the knight far too much. 14...b4 is also a disaster , as after 15. Nc2 a5 16.Ne3 Black does not even manage to play the fundamental ...f5 break. This only leaves Black with sacrificing the b-pawn, which explains why the 14. c4 - or 13. c4 - line is the sharpest one in the main line. Black is giving away the queenside and goes All-In with his counterplay in the centre and kingside. After 14... f5 White's main lines are the queen moves to h5 and f3, but he has also tried other continuations without much success. 15.Qe2 d5 Always nice to get this attractive move in. Surprisingly Black most of the time refrains from it and plays 15...Bb7. This is not bad either , admittedly. 16.cxd5 fxe4 17.Bxe4 Qd6 I know that they say you should not blockade a pawn with a queen - but here it is strong ! We stop the d-pawn and prepare ... f5 and ...e4. 18.g4 A principled choice. Otherwise we get the desired pawn roller in motion next. 18...f5 19.gxf5 Bxf5 20.f3 Bxe4 21.fxe4 Rf4 Black has good compensation for the pawn. We have ... Raf8 and ...Qb4 as the next ideas. The move 15. Qe2 is less explored then the more critical queen moves to f3 and h5, but not obviously bad. We still get the type of game going that we intended with the Sveshnikov: dynamic counterplay and unbalanced situations.

If White only has vague knowledge about the complications he is very likely just getting killed quickly. If you screw something up, it might be bad in computer terms... but you still have chances, given the enormous activity that Black usually enjoys. 11...Ne7 The only good move

after 11. Bd3. The bishop move prevents ...f5 and we need to get rid of the d5-knight right away. 12.Nxe7 White's choice is limited, because with 11... Ne7 we had threatened to take on d5. As usual it's very desirable for Black to take on d5 when White needs to recapture with a pawn. 12...Qxe7 After 12. .. Qxe7 White has two basic options. He can play c4, attacking the b5-pawn, or play c3, preparing to get the offside knight back into the game. White might play c4 or c3 right away or do it after castling kingside first. Castling is rather natural for both sides, so quite often this will be played quickly after a move of the c-pawn, for example 13.c4 f5 14.O-O O-O is just as common as 13.O-O O-O 14.c4 f5. I will examine 13.O-O O-O as the main line and then split the lines with 14.c4 or 14.c3. If White starts 13. c4, it will very likely transpose to 13. O-O O-O 14. c4, as the deviations are unattractive for White. 13.c3 is a different story. After 13...f5 the sequence 14.O-O O-O is possible and examined via 13. O-O O-O 14. c3 f5, but White often decides to not castle and then we will reach the only important independent line 13.c3 f5 14.Nc2 , when White's king will remain in the centre or castle queenside in some lines. Alright , let's check some moves to make things more concrete. 13.0-0 0-0 It's also possible to play 13...f5 first , there is no drawback to this move order. I went for 13... O-O because this way you have the rule of thumb for move 13 and 14 in this line to play ...f5 against the c-pawn moves and just castle as well if White plays O-O first. 14.c4 f5 The best way to react to 14. c4. As usual taking on c4 is terrible, as it helps the knight far too much. 14...b4 is also a disaster , as after 15. Nc2 a5 16.Ne3 Black does not even manage to play the fundamental ...f5 break. This only leaves Black with sacrificing the b-pawn, which explains why the 14. c4 - or 13. c4 - line is the sharpest one in the main line. Black is giving away the queenside and goes All-In with his counterplay in the centre and kingside. After 14... f5 White's main lines are the queen moves to h5 and f3, but he has also tried other continuations without much success. 15.Qf3 White's main tries for an advantage are 15.Qh5 and this move. 15...d5 We have seen this idea multiple times , so this should not come as a great surprise. In this particular case we can't play 15...fxe4 16.Qxe4 with a double threat, so ...d5 is played first in order to make ...fxe4 possible. 16.cxd5 fxe4 17.Bxe4 Rb8 We need to play this first. White was threatening d6, which even works after 17...f5 ? 18.d6 !. The rook move is useful not only as prophylaxis, but also introduces active ideas into the position, in particular a rook lift with ...Rb6-h6 or to g6. Now White's most logical way to play is to support the d-pawn with a rook. Both rook moves to d1 have been tested in practice. 18.Rfd1 Qg5 Unfortunately here 18... Rb6 is less convincing, compared to 18. Rad1 Rb6, which is fine. The reason is 18...Rb6 19.Rac1 ! , when 19...f5 ?? fails due to 20.Rxc8 !. This means we need to lose more time with a move like ...Bd7, which is not great. It turns out that 18... Qg5 is fine, but it is a bit annoying that you need two different approaches. 19.d6 Bg4 20.Qg3 Qf4 21.f3 Be6 Black is fine in this position, with full compensation for the pawn. We have ...f5 ready now and ...Rb6 and ...Rd8 will most likely pick up the d-pawn.

If White only has vague knowledge about the complications he is very likely just getting killed quickly. If you screw something up, it might be bad in computer terms... but you still have chances, given the enormous activity that Black usually enjoys. 11...Ne7 The only good move after 11. Bd3. The bishop move prevents ...f5 and we need to get rid of the d5-knight right away. 12.Nxe7 White's choice is limited, because with 11... Ne7 we had threatened to take on d5. As usual it's very desirable for Black to take on d5 when White needs to recapture with a pawn. 12...Qxe7 After 12. .. Qxe7 White has two basic options. He can play c4, attacking the b5-pawn, or play c3, preparing to get the offside knight back into the game. White might play c4 or c3 right away or do it after castling kingside first. Castling is rather natural for both sides, so quite often this will be played quickly after a move of the c-pawn, for example 13.c4 f5 14.O-O O-O is just as common as 13.O-O O-O 14.c4 f5. I will examine 13.O-O O-O as the main line and then split the lines with 14.c4 or 14.c3. If White starts 13. c4, it will very likely transpose to 13. O-O O-O 14. c4, as the deviations are unattractive for White. 13.c3 is a different story. After 13...f5 the sequence 14.O-O O-O is possible and examined via 13. O-O O-O 14. c3 f5, but White often decides to not castle and then we will reach the only important independent line 13.c3 f5 14.Nc2 , when White's king will remain in the centre or castle queenside in some lines. Alright , let's check some moves to make things more concrete. 13.c3 Compared to 13.c4 or 14. c4 this is the slower approach. White intends to improve the knight via c2-e3. 13...f5 What else ? You could actually castle first and ...f5 next move, but the rule of thumb to play ...f5 against the c-pawn moves is useful to have. 14.Nc2 The logical follow-up. White may

also castle here, but other moves don't convince. 14...0-0 This is not that popular, but I see no reason why. Most of the time White will now castle as well, transposing into the line 13. O-O O-O 14. c3 f5, (which is part of our repertoire anyway - see lines #23-26.) Instead of my recommendation 14... O-O Black most often plays 14...Qb7 , which seems fine as well. I just felt that we save a bit of workload with 14... O-O, as it mostly transposes as mentioned. 15.Qh5 This is maybe the most interesting way to avoid a transposition with 15.O-O. It leads to sharp and yet almost unexplored play. 15...f4 I also looked at the more aggressive moves here , like 15...d5. This does not work here , but it is also not necessary to throw the kitchen sink just yet. White's setup is slower and therefore we don't need to rush things. 16.0-0 Be6 Black has no problems in this position. An interesting setup is to play ...Kh8 and ... Rg8, maybe later try to reposition the bishop via f6-d8-b6. Of course White is not going to sit and wait, so this is not easy to accomplish. I'd like to show one more concrete line to show a typical Sveshnikov idea. 17.Nb4 a5 18.Nd5 Bxd5 19.exd5 Now b5 is attacked and White threatens mate on h7. 19...e4 20.Bxb5 f5 And Black has good compensation for the pawn. We'll play ...Kh8, ...Be5 and have a dangerous attack. Of course ...e3 or ...f3 may be good as well.

offside knight back into the game. White might play c4 or c3 right away or do it after castling kingside first. Castling is rather natural for both sides, so quite often this will be played quickly after a move of the c-pawn, for example 13.c4 f5 14.O-O O-O is just as common as 13.O-O O-O 14.c4 f5. I will examine 13.O-O O-O as the main line and then split the lines with 14.c4 or 14.c3. If White starts 13. c4, it will very likely transpose to 13. O-O O-O 14. c4, as the deviations are unattractive for White. 13.c3 is a different story. After 13...f5 the sequence 14.O-O O-O is possible and examined via 13. O-O O-O 14. c3 f5, but White often decides to not castle and then we will reach the only important independent line 13.c3 f5 14.Nc2 , when White's king will remain in the centre or castle queenside in some lines. Alright , let's check some moves to make things more concrete. 13.0-0 0-0 It's also possible to play 13...f5 first , there is no drawback to this move order. I went for 13... O-O because this way you have the rule of thumb for move 13 and 14 in this line to play ...f5 against the c-pawn moves and just castle as well if White plays O-O first. 14.c4 f5 The best way to react to 14. c4. As usual taking on c4 is terrible, as it helps the knight far too much. 14...b4 is also a disaster , as after 15. Nc2 a5 16.Ne3 Black does not even manage to play the fundamental ...f5 break. This only leaves Black with sacrificing the b-pawn, which explains why the 14. c4 - or 13. c4 - line is the sharpest one in the main line. Black is giving away the queenside and goes All-In with his counterplay in the centre and kingside. After 14... f5 White's main lines are the queen moves to h5 and f3, but he has also tried other continuations without much success. 15.Qh5 Rb8
We would have liked to take on e4, but 15...fxe4 16.Bxe4 is a double threat on h7 and on the rook. This explains 15... Rb8 - now we are threatening to take on e4 and then play ...f5 a second time ! The move 15... Rb8 has been tested numerous times in over the board play and correspondence chess and it looks like Black is doing fine in the hair-raising complications. I need to mention that 15... Rb8 is not the only move, though. In fact only some days before these lines were written the World Champion went for a different move: he played 15... d5 !? in the Grand Swiss Isle of Man Tournament against Russian hopeful Alexey Sarana. 15... d5 is a rare move and was probably intended as a surprise, but Sarana had done his homework and blitzed out the following moves. 15...d5 16.cxd5 Qd8 17.exf5 Qxd5 18.Rad1 e4 19.Bxb5 Qxf5 20. Qxf5 Bxf5 21.Bd7 Bxd7 22.Rxd7 Bxb2 23.Nc4. Now, this sequence is in fact clearly best play after 15... d5 and the resulting position I don't want to recommend, even though Magnus played the line. Black is very close to equality, but it's a grovel and not fun at all. Magnus ultimately drew the game after some unpleasant moments. Maybe HE kept his cool, but I would have been concerned ! In any case, I don't want to play for two results just yet if a win is not among them. 16.exf5 A more or less forced decision. Otherwise we take on e4 and play ...f5 next. 16...e4 17.Rae1
We attacked both the bishop on d3 and the pawn on b2, so White needs a tactical solution. 17...Bb7 18.Re3 This move was recommended by GM P.Negi in his GM Repertoire 1. e4 series, which is a very important source for ambitious players on the white side on the open Sicilian. We definitely need a good antidote to this move. 18...bxc4 19.Bxc4 Rbd8 I suggest this move, which is almost a novelty (I found one

older correspondence game) and was not covered by Negi at all. If you face someone who has prepared with this book , they will be on their own from here. The traditional way to play this position is 19...d5 , after which White plays 20. Bxd5 Bxd5 21.f6 Qxf6 22.Qxd5 Rxb2 23.Nc4 and Negi concludes that White is easier to play, but Black should hold. It is the kind of position that an engine will probably never lose, but humans have a hard task once the knight comes to f5. Our move 19... Rbd8 intends to play ...d5 without allowing the reply f6 as in the line above. The play is very sharp now, with many possibilities. 20.Rg3 This threatens Qh6, so we don't have many options. 20...Kh8 Now the most interesting moves are probably Rb3 and Rh3, the moves we already looked at on move 20. The king being on h8 makes a difference in the tactical melee. Of course White may try some other move, but we know what our idea is against slow play: push the d-pawn forward. 21.Rh3 h6 22.Rb3 White provoked ...h6 first, then went to b3 to strengthen the f6 idea. 22...Kh7 Instead 22...d5 is a slightly worse version for Black compared to the same line without ...h6 inserted. The king is weakened quite a bit by ...h6. But we have the remarkably slow 22... Kh7 as an excellent improvement. We are ready for ...d5 now. 23.Rd1 d5 We retain compensation for the pawn after this move, deep in the endgame. 24.f6 Bxf6 25.Bxd5 Bxd5 26.Rxd5 Qe6 27.Rxd8 Rxd8 28.h3 Rd3 We will win a pawn on the queenside ultimately. A very long line, but in these positions with a material deficit for Black you need to prove that it is enough compensation.

**B33**

☐ **Sveshnikov 9. Bxf6,11. c3 and others**
■ **Sveshnikov 9. Bxf6,11. c3/others #44**

1.e4 c5 2.Nf3 Nc6 3.d4 cxd4 4.Nxd4 Nf6 5.Nc3 e5 6.Ndb5 d6 7.Bg5 a6 8.Na3 b5 9.Bxf6 White has three mainlines in the Sveshnikov: 6. Ndb5 d6 7. Nd5, 6. Ndb5 d6 7. Bg5 a6 8. Na3 b5 9. Nd5 and this one, which is by far the sharpest and most tactical line of the three. This in particular applies to the line 9.Bxf6 gxf6 10. Nd5 Bg7 11.Bd3 , which is the subject of the subsequent chapter. In this chapter we will examine other lines after 9.Bxf6 , most importantly 9...gxf6 10.Nd5 Bg7 11.c3 , which is the second main sub-branch of the 9. Bxf6 line, besides the 11. Bd3 line. 9...gxf6 This is forced. Black can't capture with the queen , because after 9...Qxf6 ? 10.Nd5 Qd8 White has many lines to give him a huge advantage. The brutal 11.Bxb5 and 11.c4 are terrible for Black. A good comparison to make: look at the very popular mainline 9. Nd5 Be7 10. Bxf6 Bxf6 (covered in 2 chapters of this course) , in which Black has the bishop on f6, while after 9... Qxf6 ? 10. Nd5 Qd8 it is on f8 !So long story short: take with the g-pawn and look forward to playing ...f5 even twice, if possible. 10.Nd5 Bg7 Black has two good moves in this position, the more traditional 10... f5 and the newer move 10... Bg7, the so-called Novosibirsk variation. Both lines have some overlap, because 10. ..Bg7 does only delay ...f5 for the

moment. The main difference between the two lines is how the reply 11.Bd3 is handled. In the Novosibirsk you play 11... Ne7 to get rid of the Knight immediately , an approach that is clearly not possible after 10...f5 11.Bd3 , when 11...Ne7 12.Nf6# is a bit of a problem. Instead after 10...f5 11.Bd3 , 11...Be6 is the move , which leads to completely different positions compared to the Novosibirsk. Our repertoire choice is quite easy , as the World Champion has always played 10...Bg7 , as far as I can see. After 10... Bg7 White has two main tries for an advantage. The first one and the sharpest line is 11. Bd3 which we examine in the subsequent chapter. The second approach is to simply play 11.c3 , after which 11...f5 12.exf5 Bxf5 leads to a position that is often reached via 10... f5 11. c3 Bg7 12. exf5 Bxf5. This line leads to interesting play and is considered to be leading to equal chances. It is obviously a critical line for the Sveshnikov, as White can basically force you to enter it. Even going 10... Bg7 or 10... f5 is not relevant, as you have no way to avoid it in both cases. So 11. c3 f5 is clearly the main chunk of this chapter, but we will also look a rare alternatives on move 11. 11.c3 This is White's more strategic choice at this point , compared to 11.Bd3. White intends to improve the Knight as quickly as possible. 11...f5 This is a lot better than 11... Ne7. Playing ...Ne7 is much more pointed after 11. Bd3, because Black in this case immediately threatens to take on d5, forcing the pawn recapture. Therefore after 11. Bd3 Ne7 White has to take on e7, which is not the case here as the Queen is still able to take on d5. An example line would be 11...Ne7 12.Nc2 Nxd5 13.Qxd5 Rb8 14.Ne3 , when Black is more or less busted - you can't even get in ...f5 in the first place. 12.exf5 The simplest and most popular choice for White. 12...Bxf5 13.Nc2 0-0 14.Nce3 Be6 A very natural sequence so far. White has gotten his problem piece back in the centre and now needs to make a decision how to proceed. By far White's most popular move is 15. Bd3 , but there are some offbeat tries worth checking. 15.Bd3 A natural and popular move, angling for piece play against the centre and Kingside, often connected with Qh5. 15...f5 After our natural move 15...f5 we have the final split in this chapter , when White now chooses between 16.O-O , 16.Qh5 and 16.Bc2. The play in similar in these lines , but we need to check some concrete lines. 16.0-0 In some of the sharp lines White does not manage to castle, so this solid move is certainly a reasonable choice. 16...e4 We usually play ...e4 in these lines in reply to Qh5, so we will choose a similar approach here. Note that 16...f4 fails to 17.Qh5 and 16...Ne7 is refuted by 17.Nxe7+ Qxe7 18.Bxf5 ! , which amounts to a disaster as well. 17.Nf4 The only move, otherwise we'd have ... f4 next. 17...Bf7 18.Bc2 Be5 As played by Magnus Carlsen , so we'll follow the Champion's example. Black has some decent alternatives here , like 18...Qd7 and 18...Qg5. 19.Nfd5 Qg5 I suggest to play this move instead of Carlsen's 19...Kh8. He got into some trouble against V.Topalov in Abidjan 2019. He still won this Blitz game quickly after Topalov misplayed it soon after. The move 19... Qg5 is the recommendation of both the engines and the correspondence players and looks attractive, so we'll go for it. Our threats are now ... f4 and ...Bh5. 20.f4 A case of 'What else ?'. White needed to do something about our mentioned ideas. 20...exf3 21.Qxf3 Bh5 White has 22.Qf2 and 22.Qh3 now. Both

lead to extremely tactical positions that are fine for Black , but I am not sure how deep I should cover these complications , given that we are already on move 21 and some lines easily run until move 35 (!) ⊙ This sounds crazy, but if you look at the whole sequence starting from 11. c3 our moves are the only ones or clearly the best ones almost the whole time, so this lines is extremely relevant from a theoretical point of view. I'll show some variations from here, but won't go all the way. You can easily add your own analysis if you feel you need more information. 22.Qf2 f4 23.Nc7 A nice shot ! Now Black can't take on e3 due to 23...fxe3 24.Qxf8+ ! Rxf8 25. Rxf8+ Kxf8 26.Ne6+. 23...Bf7 This is best and not exactly intuitive. 24.Nxa8 fxe3 25.Qf3 e2 The only move, but it works. 26.Qxe2 Rxa8 27.Rxf7 Kxf7 28.Qf3+ Kg7 29.Qxc6 Bxh2+ 30.Kxh2 Qh6+ A fireworks line that ends in a perpetual.

**B33**

☐ **Sveshnikov 9. Bxf6,11. c3 and others**
■ **Sveshnikov 9. Bxf6,11. c3/others #21**

1.e4 c5 2.Nf3 Nc6 3.d4 cxd4 4.Nxd4 Nf6 5.Nc3 e5 6.Ndb5 d6 7.Bg5 a6 8.Na3 b5 9.Bxf6 White has three mainlines in the Sveshnikov: 6. Ndb5 d6 7. Nd5, 6. Ndb5 d6 7. Bg5 a6 8. Na3 b5 9. Nd5 and this one, which is by far the sharpest and most tactical line of the three. This in particular applies to the line 9.Bxf6 gxf6 10. Nd5 Bg7 11.Bd3 , which is the subject of the subsequent chapter. In this chapter we will examine other lines after 9.Bxf6 , most importantly 9...gxf6 10.Nd5 Bg7 11.c3 , which is the second main sub-branch of the 9. Bxf6 line, besides the 11. Bd3 line. 9...gxf6 This is forced. Black can't capture with the queen , because after 9...Qxf6 ? 10.Nd5 Qd8 White has many lines to give him a huge advantage. The brutal 11.Bxb5 and 11.c4 are terrible for Black. A good comparison to make: look at the very popular mainline 9. Nd5 Be7 10. Bxf6 Bxf6 (covered in 2 chapters of this course) , in which Black has the bishop on f6, while after 9... Qxf6 ? 10. Nd5 Qd8 it is on f8 !So long story short: take with the g-pawn and look forward to playing ...f5 even twice, if possible. 10.Nd5 Bg7 Black has two good moves in this position, the more traditional 10... f5 and the newer move 10... Bg7, the so-called Novosibirsk variation. Both lines have some overlap, because 10. ..Bg7 does only delay ...f5 for the moment. The main difference between the two lines is how the reply 11.Bd3 is handled. In the Novosibirsk you play 11... Ne7 to get rid of the Knight immediately , an approach that is clearly not possible after 10...f5 11.Bd3 , when 11...Ne7 12.Nf6# is a bit of a problem. Instead after 10...f5 11.Bd3 , 11...Be6 is the move , which leads to completely different positions compared to the Novosibirsk. Our repertoire choice is quite easy , as the World Champion has always played 10...Bg7 , as far as I can see. After 10... Bg7 White has two main tries for an advantage. The first one and the sharpest line is 11. Bd3 which we examine in the subsequent chapter. The second approach is to simply play 11.c3 , after which 11...f5 12.exf5 Bxf5 leads to a position that is often reached via 10... f5 11. c3 Bg7 12. exf5 Bxf5. This line leads to

interesting play and is considered to be leading to equal chances. It is obviously a critical line for the Sveshnikov, as White can basically force you to enter it. Even going 10... Bg7 or 10... f5 is not relevant, as you have no way to avoid it in both cases. So 11. c3 f5 is clearly the main chunk of this chapter, but we will also look a rare alternatives on move 11. 11.c3 This is White's more strategic choice at this point , compared to 11.Bd3. White intends to improve the Knight as quickly as possible. 11...f5 This is a lot better than 11... Ne7. Playing ...Ne7 is much more pointed after 11. Bd3, because Black in this case immediately threatens to take on d5, forcing the pawn recapture. Therefore after 11. Bd3 Ne7 White has to take on e7, which is not the case here as the Queen is still able to take on d5. An example line would be 11...Ne7 12.Nc2 Nxd5 13.Qxd5 Rb8 14.Ne3 , when Black is more or less busted - you can't even get in ...f5 in the first place. 12.exf5 The simplest and most popular choice for White. 12...Bxf5 13.Nc2 0-0 14.Nce3 Be6 A very natural sequence so far. White has gotten his problem piece back in the centre and now needs to make a decision how to proceed. By far White's most popular move is 15. Bd3 , but there are some offbeat tries worth checking. 15.g3 It makes sense to control d5 via g2, but this specific move order has a flaw for White. 15...f5 16.Bg2 This is usually played now and the logical follow-up , but not that great. In fact it is better for White to play 16.Bh3 and prevent ...f4, but this would only be a somewhat inferior version of the lines examined via 11. g3. We play ...a5, ... Rb8 and ...Qd7 and have no problems. The Bishop is misplaced on h3. 16...f4 This is the issue with White's move order. The Knight now has to retreat to a passive position. Surprisingly the f-pawn push is not played that frequently, but it is strong. 17.Nc2 Bf5 The actual point of ...f4. Now Black is even threatening ...f3 !, so White can't play a slow move like 18.O-O. 18.Nxf4 This is met by a forced sequence. 18...exf4 19.Bxc6 Qe7+ 20.Kf1 Forced , as 20. Qe2 loses the Knight on c2. 20...Bh3+ 21.Bg2 Qb7
I wanted to show this attractive move. Black has more than enough for the Pawn and already a substantial advantage.

Our repertoire choice is quite easy , as the World Champion has always played 10...Bg7 , as far as I can see. After 10... Bg7 White has two main tries for an advantage. The first one and the sharpest line is 11. Bd3 which we examine in the subsequent chapter. The second approach is to simply play 11.c3 , after which 11...f5 12.exf5 Bxf5 leads to a position that is often reached via 10... f5 11. c3 Bg7 12. exf5 Bxf5. This line leads to interesting play and is considered to be leading to equal chances. It is obviously a critical line for the Sveshnikov, as White can basically force you to enter it. Even going 10... Bg7 or 10... f5 is not relevant, as you have no way to avoid it in both cases. So 11. c3 f5 is clearly the main chunk of this chapter, but we will also look a rare alternatives on move 11. 11.c3 This is White's more strategic choice at this point , compared to 11.Bd3. White intends to improve the Knight as quickly as possible. 11...f5 This is a lot better than 11... Ne7. Playing ...Ne7 is much more pointed after 11. Bd3, because Black in this case immediately threatens to take on d5, forcing the pawn recapture. Therefore after 11. Bd3 Ne7 White has to take on e7, which is not the case here as the Queen is still able to take on d5. An example line would be 11...Ne7 12.Nc2 Nxd5 13.Qxd5 Rb8 14.Ne3 , when Black is more or less busted - you can't even get in ...f5 in the first place. 12.exf5 The simplest and most popular choice for White. 12...Bxf5 13.Nc2 0-0 14.Nce3 Be6 A very natural sequence so far. White has gotten his problem piece back in the centre and now needs to make a decision how to proceed. By far White's most popular move is 15. Bd3 , but there are some offbeat tries worth checking. 15.Bd3 A natural and popular move, angling for piece play against the centre and Kingside, often connected with Qh5. 15...f5 After our natural move 15...f5 we have the final split in this chapter , when White now chooses between 16.O-O , 16.Qh5 and 16.Bc2. The play in similar in these lines , but we need to check some concrete lines. 16.0-0 In some of the sharp lines White does not manage to castle, so this solid move is certainly a reasonable choice. 16...e4 We usually play ...e4 in these lines in reply to Qh5, so we will choose a similar approach here. Note that 16...f4 fails to 17.Qh5 and 16...Ne7 is refuted by 17.Nxe7+ Qxe7 18.Bxf5 ! , which amounts to a disaster as well. 17.Nf4 The only move, otherwise we'd have ... f4 next. 17...Bf7 18.Bc2 Be5 As played by Magnus Carlsen , so we'll follow the Champion's example. Black has some decent

alternatives here , like 18...Qd7 and 18...Qg5. 19.Nfd5 Qg5 I suggest to play this move instead of Carlsen's 19...Kh8. He got into some trouble against V.Topalov in Abidjan 2019. He still won this Blitz game quickly after Topalov misplayed it soon after. The move 19... Qg5 is the recommendation of both the engines and the correspondence players and looks attractive, so we'll go for it. Our threats are now ... f4 and ...Bh5. 20.f4 A case of 'What else ?'. White needed to do something about our mentioned ideas. 20...exf3 21.Qxf3 Bh5 White has 22.Qf2 and 22.Qh3 now. Both lead to extremely tactical positions that are fine for Black , but I am not sure how deep I should cover these complications , given that we are already on move 21 and some lines easily run until move 35 (!) ⊙ This sounds crazy, but if you look at the whole sequence starting from 11. c3 our moves are the only ones or clearly the best ones almost the whole time, so this lines is extremely relevant from a theoretical point of view. I'll show some variations from here, but won't go all the way. You can easily add your own analysis if you feel you need more information. 22.Qh3 f4 Surprisingly White has half a dozen playable moves here. In such a sharp position this is quite unusual. I'll check three of them. 23.Nf5 Ra7 This is a good idea to remember. The Rook covers h7 and c7 and is ready to go to f7. Here White again has some possible tries. The most logical one is 24. Nh4, in view of our idea to play ...Bg6. 24.Nh4 Kh8 Instead 24...Bg4 is worse due to 25.Nf3 , which gains a tempo compared to 24... Kh8. 25.Nf3 Bxf3 26.Qxf3 Rg7 With equal chances. We have ...a5 and ...b4 ideas next.

**B33**

☐ **Sveshnikov 9. Bxf6,11. Bd3**
■ **Sveshnikov 9. Bxf6,11. Bd3 #8**

1.e4 c5 2.Nf3 Nc6 3.d4 cxd4 4.Nxd4 Nf6 5.Nc3 e5 6.Ndb5 d6 7.Bg5 a6 8.Na3 b5 9.Bxf6 gxf6 10.Nd5 Bg7 11.Bd3 In this chapter we will examine the lines starting with this move. All other variations after 9. Bxf6 are covered in the previous chapter. After 11. Bd3 the game will become very sharp and tactical and Black needs to sacrifice pawns on a regular basis. In the main line of the 11. Bd3 complex we are three pawns down, but have great compensation !Of all the chapters in the whole course this is by far the one that requires move-by-move knowledge and precise calculation over the board. There is very little strategic content or 'plans' to guide you, it's just two sides engaging in a fight with clubs - and you better make sure to bring a huge club, meaning excellent preparation. It is definitely possible to work out some of the complications over the board, but this will be much more likely to be successful if you once had known them. It sounds odd, but it is true: study time is never wasted, even if you feel you have forgotten everything.The way to do it is to not try to remember as hard as you can, but rather think on your own and hope that you subconsciously piece it together. This works much better than sitting there and wrecking your brain to recall concrete lines.One important point that also needs to be

mentioned: Black is the side on the attack after 11. Bd3. If White only has vague knowledge about the complications he is very likely just getting killed quickly. If you screw something up, it might be bad in computer terms... but you still have chances, given the enormous activity that Black usually enjoys. 11...Ne7 The only good move after 11. Bd3. The bishop move prevents ...f5 and we need to get rid of the d5-knight right away. 12.Nxe7 White's choice is limited, because with 11... Ne7 we had threatened to take on d5. As usual it's very desirable for Black to take on d5 when White needs to recapture with a pawn. 12...Qxe7 After 12. .. Qxe7 White has two basic options. He can play c4, attacking the b5-pawn, or play c3, preparing to get the offside knight back into the game. White might play c4 or c3 right away or do it after castling kingside first. Castling is rather natural for both sides, so quite often this will be played quickly after a move of the c-pawn, for example 13.c4 f5 14.O-O O-O is just as common as 13.O-O O-O 14.c4 f5. I will examine 13.O-O O-O as the main line and then split the lines with 14.c4 or 14.c3. If White starts 13. c4, it will very likely transpose to 13. O-O O-O 14. c4, as the deviations are unattractive for White. 13.c3 is a different story. After 13...f5 the sequence 14.O-O O-O is possible and examined via 13. O-O O-O 14. c3 f5, but White often decides to not castle and then we will reach the only important independent line 13.c3 f5 14.Nc2 , when White's king will remain in the centre or castle queenside in some lines. Alright , let's check some moves to make things more concrete. 13.c4 After 13. c4 or 13. O-O O-O 14. c4 the game gets very sharp. After any c4 move by White in the Sveshnikov you need to decide what to do with the b-pawn. Taking on c4 is bad 99.9% of the time, as it helps the knight on a3 far too much. In some cases you can play ...b4, but here it would blunder the pawn due to 13...b4 14.Qa4+. This leads to the third option to just ignore the threat to the pawn and allow White to take on b5. This is why the c4-line is the sharpest one: White will win material and Black throws the kitchen sink to claim compensation. 13...f5 After 13...f5 White should play 14.O-O and after 14...O-O we will transpose to the mainline of this chapter - line #34 and further. Other moves are bad , ranging from dubious to downright losing ! 14.Qf3 d5 This is less effective than after 14. Qh5, but still good for Black. Don't underestimate the psychological effect of such a move. White clearly did not go into this on purpose and now has to dodge bullets. 15.cxd5 The only move to avoid an immediate loss. 15...fxe4 16.Bxe4 f5 General rule in the Sveshnikov: check the most aggressive moves first. This is not a bad rule for chess overall, but this opening is all about maximum activity. 17.Bxf5 Qb4+ 18.Kf1 0-0 19.g4 e4 Black has a devastating attack. One key point is that often at the end just ...Bxb2 picks up material.

☐ **Sveshnikov 9. Bxf6,11. c3 and others**
■ **Sveshnikov 9. Bxf6,11. c3/others #24**

1.e4 c5 2.Nf3 Nc6 3.d4 cxd4 4.Nxd4 Nf6 5.Nc3 e5 6.Ndb5 d6 7.Bg5 a6 8.Na3 b5 9.Bxf6 White has three mainlines in the Sveshnikov: 6. Ndb5 d6 7. Nd5, 6. Ndb5 d6 7. Bg5 a6 8. Na3 b5 9. Nd5 and this one, which is by far the sharpest and most tactical line of the three. This in particular applies to the line 9.Bxf6 gxf6 10. Nd5 Bg7 11.Bd3 , which is the subject of the subsequent chapter. In this chapter we will examine other lines after 9.Bxf6 , most importantly 9...gxf6 10.Nd5 Bg7 11.c3 , which is the second main sub-branch of the 9. Bxf6 line, besides the 11. Bd3 line. 9...gxf6 This is forced. Black can't capture with the queen , because after 9...Qxf6 ? 10.Nd5 Qd8 White has many lines to give him a huge advantage. The brutal 11.Bxb5 and 11.c4 are terrible for Black. A good comparison to make: look at the very popular mainline 9. Nd5 Be7 10. Bxf6 Bxf6 (covered in 2 chapters of this course) , in which Black has the bishop on f6, while after 9... Qxf6 ? 10. Nd5 Qd8 it is on f8 !So long story short: take with the g-pawn and look forward to playing ...f5 even twice, if possible. 10.Nd5 Bg7 Black has two good moves in this position, the more traditional 10... f5 and the newer move 10... Bg7, the so-called Novosibirsk variation. Both lines have some overlap, because 10. ..Bg7 does only delay ...f5 for the moment. The main difference between the two lines is how the reply 11.Bd3 is handled. In the Novosibirsk you play 11... Ne7 to get rid of the Knight immediately , an approach that is clearly not possible after 10...f5 11.Bd3 , when 11...Ne7 12.Nf6# is a bit of a problem. Instead after 10...f5 11.Bd3 , 11...Be6 is the move , which leads to completely different positions compared to the Novosibirsk. Our repertoire choice is quite easy , as the World Champion has always played 10...Bg7 , as far as I can see. After 10... Bg7 White has two main tries for an advantage. The first one and the sharpest line is 11. Bd3 which we examine in the subsequent chapter. The second approach is to simply play 11.c3 , after which 11...f5 12.exf5 Bxf5 leads to a position that is often reached via 10... f5 11. c3 Bg7 12. exf5 Bxf5. This line leads to interesting play and is considered to be leading to equal chances. It is obviously a critical line for the Sveshnikov, as White can basically force you to enter it. Even going 10... Bg7 or 10... f5 is not relevant, as you have no way to avoid it in both cases. So 11. c3 f5 is clearly the main chunk of this chapter, but we will also look a rare alternatives on move 11. 11.c3 This is White's more strategic choice at this point , compared to 11.Bd3. White intends to improve the Knight as quickly as possible. 11...f5 This is a lot better than 11... Ne7. Playing ...Ne7 is much more pointed after 11. Bd3, because Black in this case immediately threatens to take on d5, forcing the pawn recapture. Therefore after 11. Bd3 Ne7 White has to take on e7, which is not the case here as the Queen is still able to take on d5. An example line would be 11...Ne7 12.Nc2 Nxd5 13.Qxd5 Rb8 14.Ne3 , when Black is more or less busted - you can't even get in ...f5 in the first place. 12.exf5 The simplest and most popular choice for White. 12...Bxf5 13.Nc2 0-0 14.Nce3 Be6 A very natural

sequence so far. White has gotten his problem piece back in the centre and now needs to make a decision how to proceed. By far White's most popular move is 15. Bd3 , but there are some offbeat tries worth checking. 15.g4 'No ... f5 for you !' - White stops the-f-pawn, but weakens his position a lot in the process. In particular ... Qh4 can be an annoying move for him to face. First of all we have a good opportunity on the Queenside that we should use. 15...b4 A strong resource that we need to keep in mind. This move is strong here and even more so against 15. a4. The idea is to either get the d4-square after cxb4 or to get the centre into motion after Nxb4, which is already quite bad for White. 16.cxb4 Rb8 The Rook move is a bit better than 16...Nd4 - it's not a huge difference , though. 17.a3 Nd4 Compared to the position without ...Rb8 and a3 we have provoked the weakness on b3. 18.h4 Played to prevent a line like 18.Bg2 Qh4 , which looks very annoying. 18...e4 19.Bg2 f5 Black's attack is already very dangerous. 20.gxf5 Bxd5 21.Nxd5 Rxf5 White's King in under heavy fire and has no safe place to go to. The engines already see a win for Black, which is not a surprise.

☐ **Sveshnikov 9. Bxf6,11. c3 and others**
■ **Sveshnikov 9. Bxf6,11. c3/others #37**

1.e4 c5 2.Nf3 Nc6 3.d4 cxd4 4.Nxd4 Nf6 5.Nc3 e5 6.Ndb5 d6 7.Bg5 a6 8.Na3 b5 9.Bxf6 White has three mainlines in the Sveshnikov: 6. Ndb5 d6 7. Nd5, 6. Ndb5 d6 7. Bg5 a6 8. Na3 b5 9. Nd5 and this one, which is by far the sharpest and most tactical line of the three. This in particular applies to the line 9.Bxf6 gxf6 10. Nd5 Bg7 11.Bd3 , which is the subject of the subsequent chapter. In this chapter we will examine other lines after 9.Bxf6 , most importantly 9...gxf6 10.Nd5 Bg7 11.c3 , which is the second main sub-branch of the 9. Bxf6 line, besides the 11. Bd3 line. 9...gxf6 This is forced. Black can't capture with the queen , because after 9...Qxf6 ? 10.Nd5 Qd8 White has many lines to give him a huge advantage. The brutal 11.Bxb5 and 11.c4 are terrible for Black. A good comparison to make: look at the very popular mainline 9. Nd5 Be7 10. Bxf6 Bxf6 (covered in 2 chapters of this course) , in which Black has the bishop on f6, while after 9... Qxf6 ? 10. Nd5 Qd8 it is on f8 !So long story short: take with the g-pawn and look forward to playing ...f5 even twice, if possible. 10.Nd5 Bg7 Black has two good moves in this position, the more traditional 10... f5 and the newer move 10... Bg7, the so-called Novosibirsk variation. Both lines have some overlap, because 10. ..Bg7 does only delay ...f5 for the moment. The main difference between the two lines is how the reply 11.Bd3 is handled. In the Novosibirsk you play 11... Ne7 to get rid of the Knight immediately , an approach that is clearly not possible after 10...f5 11.Bd3 , when 11...Ne7 12.Nf6# is a bit of a problem. Instead after 10...f5 11.Bd3 , 11...Be6 is the move , which leads to completely different positions compared to the Novosibirsk. Our repertoire choice is quite easy , as the World Champion has always played 10...Bg7 , as far as I can

see. After 10... Bg7 White has two main tries for an advantage. The first one and the sharpest line is 11. Bd3 which we examine in the subsequent chapter. The second approach is to simply play 11.c3 , after which 11...f5 12.exf5 Bxf5 leads to a position that is often reached via 10... f5 11. c3 Bg7 12. exf5 Bxf5. This line leads to interesting play and is considered to be leading to equal chances. It is obviously a critical line for the Sveshnikov, as White can basically force you to enter it. Even going 10... Bg7 or 10... f5 is not relevant, as you have no way to avoid it in both cases. So 11. c3 f5 is clearly the main chunk of this chapter, but we will also look a rare alternatives on move 11. 11.c3 This is White's more strategic choice at this point , compared to 11.Bd3. White intends to improve the Knight as quickly as possible. 11...f5 This is a lot better than 11... Ne7. Playing ...Ne7 is much more pointed after 11. Bd3, because Black in this case immediately threatens to take on d5, forcing the pawn recapture. Therefore after 11. Bd3 Ne7 White has to take on e7, which is not the case here as the Queen is still able to take on d5. An example line would be 11...Ne7 12.Nc2 Nxd5 13.Qxd5 Rb8 14.Ne3 , when Black is more or less busted - you can't even get in ...f5 in the first place. 12.exf5 The simplest and most popular choice for White. 12...Bxf5 13.Nc2 0-0 14.Nce3 Be6 A very natural sequence so far. White has gotten his problem piece back in the centre and now needs to make a decision how to proceed. By far White's most popular move is 15. Bd3 , but there are some offbeat tries worth checking. 15.Bd3 A natural and popular move, angling for piece play against the centre and Kingside, often connected with Qh5. 15...f5 After our natural move 15...f5 we have the final split in this chapter , when White now chooses between 16.O-O , 16.Qh5 and 16.Bc2. The play in similar in these lines , but we need to check some concrete lines. 16.Bc2 Not exactly the most obvious move, compared to 16. Qh5 and 16. O-O, but it makes a lot of sense. it allows Bb3 later, anticipates ...e4 and sets a trap. The move is not dangerous in a purely theoretical sense, because Black has a reliable way to force a draw after 16... f4 , when 17.Qh5 Rf7 18.Bxh7+ Kf8 19.Bf5 Qe8 20.Bxe6 Qxe6 21.Qg4 Qh6 22.Nf5 Qe3 23.Nfe3 has been seen many times. 16...Kh8 Avoiding the drawing line after 16...f4. Another way to probably avoid a draw is 16...Ne7 ?? 17.Nxe7+ Qxe7 18.Bxf5 ! , when Black is busted. This tactical motif is easily missed and has happened many times in classical time control games. 17.Qh5 e4 18.Nf4 The most natural move for White, but Black now has a remarkable reply that leads to a fascinating position. 18...Bf7 19.Qxf5 Bg8 20.Qxe4 d5 Black has sacrificed two Pawns to get this breakthrough in. 21.Qf3 The only move, as the pawn was impossible to take due to ... Re8. 21...Be5 21...Qd6 is also fine for Black. 22.Nf5 Ne7 There are many possibilities in this ultra-sharp position, I'll have a look at the one that looks most human to me. 23.Nh5 This move and 23.Ne2 is met with the same idea. 23...Nxf5 24.Bxf5 d4 Opening up the Bishop on g8 as well and creating a weak Pawn on c3. 25.0-0 dxc3 26.bxc3 Qc7 We have a double attack on c3 and h2 and will get one Pawn back, with a good position. The complications after 16... Kh8 are fun to explore, so you might look a bit yourself. It is rather deep, so it's unclear if you'll ever get it on the board, but analysing middlegames from your openings will never hurt.

☐ **Sveshnikov 9. Bxf6,11. c3 and others**
■ **Sveshnikov 9. Bxf6,11. c3/others #10**

1.e4 c5 2.Nf3 Nc6 3.d4 cxd4 4.Nxd4 Nf6 5.Nc3 e5 6.Ndb5 d6 7.Bg5 a6 8.Na3 b5 9.Bxf6 White has three mainlines in the Sveshnikov: 6. Ndb5 d6 7. Nd5, 6. Ndb5 d6 7. Bg5 a6 8. Na3 b5 9. Nd5 and this one, which is by far the sharpest and most tactical line of the three. This in particular applies to the line 9.Bxf6 gxf6 10. Nd5 Bg7 11.Bd3 , which is the subject of the subsequent chapter. In this chapter we will examine other lines after 9.Bxf6 , most importantly 9...gxf6 10.Nd5 Bg7 11.c3 , which is the second main sub-branch of the 9. Bxf6 line, besides the 11. Bd3 line. 9...gxf6 This is forced. Black can't capture with the queen , because after 9...Qxf6 ? 10.Nd5 Qd8 White has many lines to give him a huge advantage. The brutal 11.Bxb5 and 11.c4 are terrible for Black. A good comparison to make: look at the very popular mainline 9. Nd5 Be7 10. Bxf6 Bxf6 (covered in 2 chapters of this course) , in which Black has the bishop on f6, while after 9... Qxf6 ? 10. Nd5 Qd8 it is on f8 !So long story short: take with the g-pawn and look forward to playing ...f5 even twice, if possible. 10.Nd5 Bg7 Black has two good moves in this position, the more traditional 10... f5 and the newer move 10... Bg7, the so-called Novosibirsk variation. Both lines have some overlap, because 10. ..Bg7 does only delay ...f5 for the moment. The main difference between the two lines is how the reply 11.Bd3 is handled. In the Novosibirsk you play 11... Ne7 to get rid of the Knight immediately , an approach that is clearly not possible after 10...f5 11.Bd3 , when 11...Ne7 12.Nf6# is a bit of a problem. Instead after 10...f5 11.Bd3 , 11...Be6 is the move , which leads to completely different positions compared to the Novosibirsk. Our repertoire choice is quite easy , as the World Champion has always played 10...Bg7 , as far as I can see. After 10... Bg7 White has two main tries for an advantage. The first one and the sharpest line is 11. Bd3 which we examine in the subsequent chapter. The second approach is to simply play 11.c3 , after which 11...f5 12.exf5 Bxf5 leads to a position that is often reached via 10... f5 11. c3 Bg7 12. exf5 Bxf5. This line leads to interesting play and is considered to be leading to equal chances. It is obviously a critical line for the Sveshnikov, as White can basically force you to enter it. Even going 10... Bg7 or 10... f5 is not relevant, as you have no way to avoid it in both cases. So 11. c3 f5 is clearly the main chunk of this chapter, but we will also look a rare alternatives on move 11. 11.c4 A sharp alternative to the mainlines. Similarly to 11.Bd3 Ne7 12.Nxe7 Qxe7 13.c4 White attacks the Black Queenside Pawns and we have no good alternative to sacrificing the b-pawn. As usual Black gets excellent compensation and quite often manages to win attractive attacking games. The resulting positions are much easier to handle for Black, in particular if you know what to do. In many cases White does not, because if he had known that after 11. c4 he's be on the defensive the whole time he wouldn't have played into the line in the first place. After perfect play White is still OK after 11. c4, but you will not encounter that against a human opponent. 11...f5 We have to give up the b-pawn. As mentioned

several times throughout the course, taking on c4 is always (99. 9% of the time) bad in such a structure. On very few occasions ...b4 is playable , but this is not one of them , as 11...b4 12.Nc2 a5 13.Nce3 is terrible for Black. We are happy to sacrifice the pawn , luring the c-pawn away from the centre. 12.cxb5 Nd4 13.Bd3 The most reasonable move, preparing to play O-O next. 13...fxe4 Here and on the next moves Black has more than one promising way to play and this is the most straightforward one. I also like 13...Be6 14.O-O Bxd5 , which is completely fine. 14.Bxe4 0-0 15.Nf6+ This loses immediately. 15...Qxf6 16.Bxa8 Qg6 Black threat of ...Bg4 is extremely strong. Here's a possible line. 17.Bd5 Bg4 18.Qd2 Bh6 19.Qb4 Qd3 And Black is winning.

**B33**

☐ **Sveshnikov 9. Bxf6,11. Bd3**
■ **Sveshnikov 9. Bxf6,11. Bd3 #44**

1.e4 c5 2.Nf3 Nc6 3.d4 cxd4 4.Nxd4 Nf6 5.Nc3 e5 6.Ndb5 d6 7.Bg5 a6 8.Na3 b5 9.Bxf6 gxf6 10.Nd5 Bg7 11.Bd3 In this chapter we will examine the lines starting with this move. All other variations after 9. Bxf6 are covered in the previous chapter. After 11. Bd3 the game will become very sharp and tactical and Black needs to sacrifice pawns on a regular basis. In the main line of the 11. Bd3 complex we are three pawns down, but have great compensation !Of all the chapters in the whole course this is by far the one that requires move-by-move knowledge and precise calculation over the board. There is very little strategic content or 'plans' to guide you, it's just two sides engaging in a fight with clubs - and you better make sure to bring a huge club, meaning excellent preparation. It is definitely possible to work out some of the complications over the board, but this will be much more likely to be successful if you once had known them. It sounds odd, but it is true: study time is never wasted, even if you feel you have forgotten everything.The way to do it is to not try to remember as hard as you can, but rather think on your own and hope that you subconsciously piece it together. This works much better than sitting there and wrecking your brain to recall concrete lines.One important point that also needs to be mentioned: Black is the side on the attack after 11. Bd3. If White only has vague knowledge about the complications he is very likely just getting killed quickly. If you screw something up, it might be bad in computer terms... but you still have chances, given the enormous activity that Black usually enjoys. 11...Ne7 The only good move after 11. Bd3. The bishop move prevents ...f5 and we need to get rid of the d5-knight right away. 12.Nxe7 White's choice is limited, because with 11... Ne7 we had threatened to take on d5. As usual it's very desirable for Black to take on d5 when White needs to recapture with a pawn. 12...Qxe7 After 12. .. Qxe7 White has two basic options. He can play c4, attacking the b5-pawn, or play c3, preparing to get the offside knight back into the game. White might play c4 or c3 right away or do it after castling kingside first. Castling is rather natural for both sides, so quite often this will

be played quickly after a move of the c-pawn, for example 13.c4 f5 14.O-O O-O is just as common as 13.O-O O-O 14.c4 f5. I will examine 13.O-O O-O as the main line and then split the lines with 14.c4 or 14.c3. If White starts 13. c4, it will very likely transpose to 13. O-O O-O 14. c4, as the deviations are unattractive for White. 13.c3 is a different story. After 13...f5 the sequence 14.O-O O-O is possible and examined via 13. O-O O-O 14. c3 f5, but White often decides to not castle and then we will reach the only important independent line 13.c3 f5 14.Nc2 , when White's king will remain in the centre or castle queenside in some lines. Alright , let's check some moves to make things more concrete. 13.0-0 0-0 It's also possible to play 13...f5 first , there is no drawback to this move order. I went for 13... O-O because this way you have the rule of thumb for move 13 and 14 in this line to play ...f5 against the c-pawn moves and just castle as well if White plays O-O first. 14.c4 f5 The best way to react to 14. c4. As usual taking on c4 is terrible, as it helps the knight far too much. 14...b4 is also a disaster , as after 15. Nc2 a5 16.Ne3 Black does not even manage to play the fundamental ...f5 break. This only leaves Black with sacrificing the b-pawn, which explains why the 14. c4 - or 13. c4 - line is the sharpest one in the main line. Black is giving away the queenside and goes All-In with his counterplay in the centre and kingside. After 14... f5 White's main lines are the queen moves to h5 and f3, but he has also tried other continuations without much success. 15.Qh5 Rb8 We would have liked to take on e4, but 15...fxe4 16.Bxe4 is a double threat on h7 and on the rook. This explains 15... Rb8 - now we are threatening to take on e4 and then play ...f5 a second time ! The move 15... Rb8 has been tested numerous times in over the board play and correspondence chess and it looks like Black is doing fine in the hair-raising complications. I need to mention that 15... Rb8 is not the only move, though. In fact only some days before these lines were written the World Champion went for a different move: he played 15... d5 !? in the Grand Swiss Isle of Man Tournament against Russian hopeful Alexey Sarana. 15... d5 is a rare move and was probably intended as a surprise, but Sarana had done his homework and blitzed out the following moves. 15...d5 16.cxd5 Qd8 17.exf5 Qxd5 18.Rad1 e4 19.Bxb5 Qxf5 20. Qxf5 Bxf5 21.Bd7 Bxd7 22.Rxd7 Bxb2 23.Nc4. Now, this sequence is in fact clearly best play after 15... d5 and the resulting position I don't want to recommend, even though Magnus played the line. Black is very close to equality, but it's a grovel and not fun at all. Magnus ultimately drew the game after some unpleasant moments. Maybe HE kept his cool, but I would have been concerned ! In any case, I don't want to play for two results just yet if a win is not among them. 16.exf5 A more or less forced decision. Otherwise we take on e4 and play ...f5 next. 16...e4 17.Rae1 We attacked both the bishop on d3 and the pawn on b2, so White needs a tactical solution. 17...Bb7 18.Re3 This move was recommended by GM P.Negi in his GM Repertoire 1. e4 series, which is a very important source for ambitious players on the white side on the open Sicilian. We definitely need a good antidote to this move. 18...bxc4 19.Bxc4 Rbd8 I suggest this move, which is almost a novelty (I found one older correspondence game) and was not covered by Negi at all. If you face someone who has prepared with this book , they will be on their own from here. The

traditional way to play this position is 19...d5 , after which White plays 20. Bxd5 Bxd5 21.f6 Qxf6 22.Qxd5 Rxb2 23.Nc4 and Negi concludes that White is easier to play, but Black should hold. It is the kind of position that an engine will probably never lose, but humans have a hard task once the knight comes to f5. Our move 19... Rbd8 intends to play ...d5 without allowing the reply f6 as in the line above. The play is very sharp now, with many possibilities. 20.Rg3 This threatens Qh6, so we don't have many options. 20...Kh8 Now the most interesting moves are probably Rb3 and Rh3, the moves we already looked at on move 20. The king being on h8 makes a difference in the tactical melee. Of course White may try some other move, but we know what our idea is against slow play: push the d-pawn forward. 21.Rb3 The idea of this move is to attack the bishop on b7, so that in the sequence f6/...Qxf6 the bishop is hanging. 21...d5 This is fine and easiest to handle. The alternative 21. .. Ba8 !? is also interesting, sacrificing the a6-pawn for tempi with the d-pawn. 22.f6 White needs to do this probably. Against some slow move our d-pawn will become very strong. 22...Qxf6 After 22...Bxf6 ?? 23.Rh3 is curtains. 23.Rxb7 dxc4 24.Nxc4 After this transformation Black is still a pawn down, but we have enough play for it. The white pieces are not well coordinated. 24...Qc6 25.Rb4 f5 We have attacking ideas with ...f4 and ...Bd4. Engines find a defence for White with precise play, but it's not an easy task for a human over the board.

☐ **Sveshnikov 9. Bxf6,11. Bd3**
■ **Sveshnikov 9. Bxf6,11. Bd3 #31**

1.e4 c5 2.Nf3 Nc6 3.d4 cxd4 4.Nxd4 Nf6 5.Nc3 e5 6.Ndb5 d6 7.Bg5 a6 8.Na3 b5 9.Bxf6 gxf6 10.Nd5 Bg7 11.Bd3 In this chapter we will examine the lines starting with this move. All other variations after 9. Bxf6 are covered in the previous chapter. After 11. Bd3 the game will become very sharp and tactical and Black needs to sacrifice pawns on a regular basis. In the main line of the 11. Bd3 complex we are three pawns down, but have great compensation !Of all the chapters in the whole course this is by far the one that requires move-by-move knowledge and precise calculation over the board. There is very little strategic content or 'plans' to guide you, it's just two sides engaging in a fight with clubs - and you better make sure to bring a huge club, meaning excellent preparation. It is definitely possible to work out some of the complications over the board, but this will be much more likely to be successful if you once had known them. It sounds odd, but it is true: study time is never wasted, even if you feel you have forgotten everything.The way to do it is to not try to remember as hard as you can, but rather think on your own and hope that you subconsciously piece it together. This works much better than sitting there and wrecking your brain to recall concrete lines.One important point that also needs to be mentioned: Black is the side on the attack after 11. Bd3. If White only has vague knowledge about the complications he is very likely just getting killed quickly. If you

screw something up, it might be bad in computer terms... but you still have chances, given the enormous activity that Black usually enjoys. 11...Ne7 The only good move after 11. Bd3. The bishop move prevents ...f5 and we need to get rid of the d5-knight right away. 12.Nxe7 White's choice is limited, because with 11... Ne7 we had threatened to take on d5. As usual it's very desirable for Black to take on d5 when White needs to recapture with a pawn. 12...Qxe7 After 12. .. Qxe7 White has two basic options. He can play c4, attacking the b5-pawn, or play c3, preparing to get the offside knight back into the game. White might play c4 or c3 right away or do it after castling kingside first. Castling is rather natural for both sides, so quite often this will be played quickly after a move of the c-pawn, for example 13.c4 f5 14.O-O O-O is just as common as 13.O-O O-O 14.c4 f5. I will examine 13.O-O O-O as the main line and then split the lines with 14.c4 or 14.c3. If White starts 13. c4, it will very likely transpose to 13. O-O O-O 14. c4, as the deviations are unattractive for White. 13.c3 is a different story. After 13...f5 the sequence 14.O-O O-O is possible and examined via 13. O-O O-O 14. c3 f5, but White often decides to not castle and then we will reach the only important independent line 13.c3 f5 14.Nc2 , when White's king will remain in the centre or castle queenside in some lines. Alright , let's check some moves to make things more concrete. 13.0-0 0-0 It's also possible to play 13...f5 first , there is no drawback to this move order. I went for 13... O-O because this way you have the rule of thumb for move 13 and 14 in this line to play ...f5 against the c-pawn moves and just castle as well if White plays O-O first. 14.Qh5 f5 'Always play ...f5 !' 15.exf5 A reasonable way to not transpose after 15.c4 Rb8. Now Black is OK , but not better if White defends accurately. 15...e4 16.Rae1 This normal looking move is a mistake. 16...d5 17.c3 The pawn on b2 was under fire, not only by the bishop, but also by the idea to play ...Qf6. This move unpins on the e-file and attacks the bishop as well. 17...b4 18.cxb4 Qf6 The mentioned ...Qf6 idea. 19.Bc2 Bxf5 This is even better than grabbing b2. Black has a great position for the pawn, aiming to push ...d4-d3 next.

**B33**

☐ **Sveshnikov 9. Bxf6,11. c3 and others**
■ **Sveshnikov 9. Bxf6,11. c3/others #41**

1.e4 c5 2.Nf3 Nc6 3.d4 cxd4 4.Nxd4 Nf6 5.Nc3 e5 6.Ndb5 d6 7.Bg5 a6 8.Na3 b5 9.Bxf6 White has three mainlines in the Sveshnikov: 6. Ndb5 d6 7. Nd5, 6. Ndb5 d6 7. Bg5 a6 8. Na3 b5 9. Nd5 and this one, which is by far the sharpest and most tactical line of the three. This in particular applies to the line 9.Bxf6 gxf6 10. Nd5 Bg7 11.Bd3 , which is the subject of the subsequent chapter. In this chapter we will examine other lines after 9.Bxf6 , most importantly 9...gxf6 10.Nd5 Bg7 11.c3 , which is the second main sub-branch of the 9. Bxf6 line, besides the 11. Bd3 line. 9...gxf6 This is forced. Black can't capture with the queen , because after 9...Qxf6 ? 10.Nd5 Qd8 White has many lines to give him a huge advantage. The brutal 11.Bxb5

and 11.c4 are terrible for Black. A good comparison to make: look at the very popular mainline 9. Nd5 Be7 10. Bxf6 Bxf6 (covered in 2 chapters of this course) , in which Black has the bishop on f6, while after 9... Qxf6 ? 10. Nd5 Qd8 it is on f8 !So long story short: take with the g-pawn and look forward to playing ...f5 even twice, if possible. 10.Nd5 Bg7 Black has two good moves in this position, the more traditional 10... f5 and the newer move 10... Bg7, the so-called Novosibirsk variation. Both lines have some overlap, because 10. ..Bg7 does only delay ...f5 for the moment. The main difference between the two lines is how the reply 11.Bd3 is handled. In the Novosibirsk you play 11... Ne7 to get rid of the Knight immediately , an approach that is clearly not possible after 10...f5 11.Bd3 , when 11...Ne7 12.Nf6# is a bit of a problem. Instead after 10...f5 11.Bd3 , 11...Be6 is the move , which leads to completely different positions compared to the Novosibirsk. Our repertoire choice is quite easy , as the World Champion has always played 10...Bg7 , as far as I can see. After 10... Bg7 White has two main tries for an advantage. The first one and the sharpest line is 11. Bd3 which we examine in the subsequent chapter. The second approach is to simply play 11.c3 , after which 11...f5 12.exf5 Bxf5 leads to a position that is often reached via 10... f5 11. c3 Bg7 12. exf5 Bxf5. This line leads to interesting play and is considered to be leading to equal chances. It is obviously a critical line for the Sveshnikov, as White can basically force you to enter it. Even going 10... Bg7 or 10... f5 is not relevant, as you have no way to avoid it in both cases. So 11. c3 f5 is clearly the main chunk of this chapter, but we will also look a rare alternatives on move 11. 11.c3 This is White's more strategic choice at this point , compared to 11.Bd3. White intends to improve the Knight as quickly as possible. 11...f5 This is a lot better than 11... Ne7. Playing ...Ne7 is much more pointed after 11. Bd3, because Black in this case immediately threatens to take on d5, forcing the pawn recapture. Therefore after 11. Bd3 Ne7 White has to take on e7, which is not the case here as the Queen is still able to take on d5. An example line would be 11...Ne7 12.Nc2 Nxd5 13.Qxd5 Rb8 14.Ne3 , when Black is more or less busted - you can't even get in ...f5 in the first place. 12.exf5 The simplest and most popular choice for White. 12...Bxf5 13.Nc2 0-0 14.Nce3 Be6 A very natural sequence so far. White has gotten his problem piece back in the centre and now needs to make a decision how to proceed. By far White's most popular move is 15. Bd3 , but there are some offbeat tries worth checking. 15.Bd3 A natural and popular move, angling for piece play against the centre and Kingside, often connected with Qh5. 15...f5 After our natural move 15...f5 we have the final split in this chapter , when White now chooses between 16.O-O , 16.Qh5 and 16.Bc2. The play in similar in these lines , but we need to check some concrete lines. 16.0-0 In some of the sharp lines White does not manage to castle, so this solid move is certainly a reasonable choice. 16...e4 We usually play ...e4 in these lines in reply to Qh5, so we will choose a similar approach here. Note that 16...f4 fails to 17.Qh5 and 16...Ne7 is refuted by 17.Nxe7+ Qxe7 18.Bxf5 ! , which amounts to a disaster as well. 17.Nf4 The only move, otherwise we'd have ... f4 next. 17...Bf7 18.Bc2 Be5 As played by Magnus Carlsen , so we'll follow the Champion's example. Black has some decent

alternatives here , like 18...Qd7 and 18...Qg5. 19.Nfd5 Qg5 I suggest to play this move instead of Carlsen's 19...Kh8. He got into some trouble against V.Topalov in Abidjan 2019. He still won this Blitz game quickly after Topalov misplayed it soon after. The move 19... Qg5 is the recommendation of both the engines and the correspondence players and looks attractive, so we'll go for it. Our threats are now ... f4 and ...Bh5. 20.f4 A case of 'What else ?'. White needed to do something about our mentioned ideas. 20...exf3 21.Qxf3 Bh5 White has 22.Qf2 and 22.Qh3 now. Both lead to extremely tactical positions that are fine for Black , but I am not sure how deep I should cover these complications , given that we are already on move 21 and some lines easily run until move 35 (!) ⊙ This sounds crazy, but if you look at the whole sequence starting from 11. c3 our moves are the only ones or clearly the best ones almost the whole time, so this lines is extremely relevant from a theoretical point of view. I'll show some variations from here, but won't go all the way. You can easily add your own analysis if you feel you need more information. 22.Qh3 f4 Surprisingly White has half a dozen playable moves here. In such a sharp position this is quite unusual. I'll check three of them. 23.Nc7 fxe3 24.Nxa8 Rxf1+ 25.Rxf1 e2 26.Re1 Qd2 This is forced after 23. Nc7. It should now end in a draw, the most obvious being the following. 27.Kf2 Qf4+ 28.Kg1 Qd2 And it's a draw.

**B33**

☐ **Sveshnikov 9. Bxf6,11. Bd3**
■ **Sveshnikov 9. Bxf6,11. Bd3 #23**

1.e4 c5 2.Nf3 Nc6 3.d4 cxd4 4.Nxd4 Nf6 5.Nc3 e5 6.Ndb5 d6 7.Bg5 a6 8.Na3 b5 9.Bxf6 gxf6 10.Nd5 Bg7 11.Bd3 In this chapter we will examine the lines starting with this move. All other variations after 9. Bxf6 are covered in the previous chapter. After 11. Bd3 the game will become very sharp and tactical and Black needs to sacrifice pawns on a regular basis. In the main line of the 11. Bd3 complex we are three pawns down, but have great compensation !Of all the chapters in the whole course this is by far the one that requires move-by-move knowledge and precise calculation over the board. There is very little strategic content or 'plans' to guide you, it's just two sides engaging in a fight with clubs - and you better make sure to bring a huge club, meaning excellent preparation. It is definitely possible to work out some of the complications over the board, but this will be much more likely to be successful if you once had known them. It sounds odd, but it is true: study time is never wasted, even if you feel you have forgotten everything.The way to do it is to not try to remember as hard as you can, but rather think on your own and hope that you subconsciously piece it together. This works much better than sitting there and wrecking your brain to recall concrete lines.One important point that also needs to be mentioned: Black is the side on the attack after 11. Bd3. If White only has vague knowledge about the complications he is very likely just getting killed quickly. If you screw something up, it might be bad in computer terms... but you still have chances,

given the enormous activity that Black usually enjoys. 11...Ne7 The only good move after 11. Bd3. The bishop move prevents ...f5 and we need to get rid of the d5-knight right away. 12.Nxe7 White's choice is limited, because with 11... Ne7 we had threatened to take on d5. As usual it's very desirable for Black to take on d5 when White needs to recapture with a pawn. 12...Qxe7 After 12. .. Qxe7 White has two basic options. He can play c4, attacking the b5-pawn, or play c3, preparing to get the offside knight back into the game. White might play c4 or c3 right away or do it after castling kingside first. Castling is rather natural for both sides, so quite often this will be played quickly after a move of the c-pawn, for example 13.c4 f5 14.O-O O-O is just as common as 13.O-O O-O 14.c4 f5. I will examine 13.O-O O-O as the main line and then split the lines with 14.c4 or 14.c3. If White starts 13. c4, it will very likely transpose to 13. O-O O-O 14. c4, as the deviations are unattractive for White. 13.c3 is a different story. After 13...f5 the sequence 14.O-O O-O is possible and examined via 13. O-O O-O 14. c3 f5, but White often decides to not castle and then we will reach the only important independent line 13.c3 f5 14.Nc2 , when White's king will remain in the centre or castle queenside in some lines. Alright , let's check some moves to make things more concrete. 13.0-0 0-0 It's also possible to play 13...f5 first , there is no drawback to this move order. I went for 13... O-O because this way you have the rule of thumb for move 13 and 14 in this line to play ...f5 against the c-pawn moves and just castle as well if White plays O-O first. 14.c3 A more restrained way to play for White. He prepares Nc2-e3, improving the misplaced knight on a3. 14...f5 15.Nc2 d5 Always an attractive option if it works out tactically. Here it does ! 16.exd5 This is rather harmless, as we easily get the d-pawn back. 16...e4 17.Re1 Rd8 18.Bf1 Be6 Black has no problems after regaining the pawn.

**B33**

☐ **Sveshnikov 9. Bxf6,11. Bd3**
■ **Sveshnikov 9. Bxf6,11. Bd3 #47**

1.e4 c5 2.Nf3 Nc6 3.d4 cxd4 4.Nxd4 Nf6 5.Nc3 e5 6.Ndb5 d6 7.Bg5 a6 8.Na3 b5 9.Bxf6 gxf6 10.Nd5 Bg7 11.Bd3 In this chapter we will examine the lines starting with this move. All other variations after 9. Bxf6 are covered in the previous chapter. After 11. Bd3 the game will become very sharp and tactical and Black needs to sacrifice pawns on a regular basis. In the main line of the 11. Bd3 complex we are three pawns down, but have great compensation !Of all the chapters in the whole course this is by far the one that requires move-by-move knowledge and precise calculation over the board. There is very little strategic content or 'plans' to guide you, it's just two sides engaging in a fight with clubs - and you better make sure to bring a huge club, meaning excellent preparation. It sounds odd, but it is true: study time is never wasted, even if you feel you have forgotten everything.The way to do it is to not try to

remember as hard as you can, but rather think on your own and hope that you subconsciously piece it together. This works much better than sitting there and wrecking your brain to recall concrete lines.One important point that also needs to be mentioned: Black is the side on the attack after 11. Bd3. If White only has vague knowledge about the complications he is very likely just getting killed quickly. If you screw something up, it might be bad in computer terms... but you still have chances, given the enormous activity that Black usually enjoys. 11...Ne7 The only good move after 11. Bd3. The bishop move prevents ...f5 and we need to get rid of the d5-knight right away. 12.Nxe7 White's choice is limited, because with 11... Ne7 we had threatened to take on d5. As usual it's very desirable for Black to take on d5 when White needs to recapture with a pawn. 12...Qxe7 After 12. .. Qxe7 White has two basic options. He can play c4, attacking the b5-pawn, or play c3, preparing to get the offside knight back into the game. White might play c4 or c3 right away or do it after castling kingside first. Castling is rather natural for both sides, so quite often this will be played quickly after a move of the c-pawn, for example 13.c4 f5 14.O-O O-O is just as common as 13.O-O O-O 14.c4 f5. I will examine 13.O-O O-O as the main line and then split the lines with 14.c4 or 14.c3. If White starts 13. c4, it will very likely transpose to 13. O-O O-O 14. c4, as the deviations are unattractive for White. 13.c3 is a different story. After 13...f5 the sequence 14.O-O O-O is possible and examined via 13. O-O O-O 14. c3 f5, but White often decides to not castle and then we will reach the only important independent line 13.c3 f5 14.Nc2 , when White's king will remain in the centre or castle queenside in some lines. Alright , let's check some moves to make things more concrete. 13.0-0 0-0 It's also possible to play 13...f5 first , there is no drawback to this move order. I went for 13... O-O because this way you have the rule of thumb for move 13 and 14 in this line to play ...f5 against the c-pawn moves and just castle as well if White plays O-O first. 14.c4 f5 The best way to react to 14. c4. As usual taking on c4 is terrible, as it helps the knight far too much. 14...b4 is also a disaster , as after 15. Nc2 a5 16.Ne3 Black does not even manage to play the fundamental ...f5 break. This only leaves Black with sacrificing the b-pawn, which explains why the 14. c4 - or 13. c4 - line is the sharpest one in the main line. Black is giving away the queenside and goes All-In with his counterplay in the centre and kingside. After 14... f5 White's main lines are the queen moves to h5 and f3, but he has also tried other continuations without much success. 15.Qh5 Rb8
We would have liked to take on e4, but 15...fxe4 16.Bxe4 is a double threat on h7 and on the rook. This explains 15... Rb8 - now we are threatening to take on e4 and then play ...f5 a second time ! The move 15... Rb8 has been tested numerous times in over the board play and correspondence chess and it looks like Black is doing fine in the hair-raising complications. I need to mention that 15... Rb8 is not the only move, though. In fact only some days before these lines were written the World Champion went for a different move: he played 15... d5 !? in the Grand Swiss Isle of Man Tournament against Russian hopeful Alexey Sarana. 15... d5 is a rare move and was probably intended as a surprise, but Sarana had done his homework and blitzed out the following moves. 15...d5 16.cxd5 Qd8 17.exf5 Qxd5 18.Rad1 e4 19.Bxb5 Qxf5

20. Qxf5 Bxf5 21.Bd7 Bxd7 22.Rxd7 Bxb2 23.Nc4. Now, this sequence is in fact clearly best play after 15... d5 and the resulting position I don't want to recommend, even though Magnus played the line. Black is very close to equality, but it's a grovel and not fun at all. Magnus ultimately drew the game after some unpleasant moments. Maybe HE kept his cool, but I would have been concerned ! In any case, I don't want to play for two results just yet if a win is not among them. 16.exf5 A more or less forced decision. Otherwise we take on e4 and play ...f5 next. 16...e4 17.Rae1 We attacked both the bishop on d3 and the pawn on b2, so White needs a tactical solution. 17...Bb7 18.Kh1 In the GM Repertoire book GM P.Negi recommends 18. Re3 , but he also presents this move as an alternative. He gave a long analysis , ending in equality , but it's a maze of lines. I tried to find a simpler solution and indeed Black is ok even without learning a couple of pages of lines. First we should establish what this king move actually does. The idea is to take on e4 and after ... Bxe4 to play f3, getting the piece back. Without Kh1 Black has ... Qa7+ or ...Bd4+, which refutes this version of the idea. 18...bxc4 19.Bxe4 Bxe4 20.f3 Rxb2 Negi analyses 20...Rfc8 and 20...Qf6 to equality , but these lines are deep and complicated. He does not cover 20... Rxb2, which looks simpler to me. 21.Rxe4 Qf6 22.Nxc4 White needs to get the knight into the game urgently. We threatened ...d5, so this is forced. 22...Rxa2 23.Ne3 Again a forced move, in view of our next move. 23...Ra1 Black has equalised, with enough play on the dark squares. After the rook trade we have ...Qc3/...Bd4 ideas.

**B33**

☐ **Sveshnikov 9. Bxf6,11. c3 and others**
■ **Sveshnikov 9. Bxf6,11. c3/others #40**

1.e4 c5 2.Nf3 Nc6 3.d4 cxd4 4.Nxd4 Nf6 5.Nc3 e5 6.Ndb5 d6 7.Bg5 a6 8.Na3 b5 9.Bxf6 White has three mainlines in the Sveshnikov: 6. Ndb5 d6 7. Nd5, 6. Ndb5 d6 7. Bg5 a6 8. Na3 b5 9. Nd5 and this one, which is by far the sharpest and most tactical line of the three. This in particular applies to the line 9.Bxf6 gxf6 10. Nd5 Bg7 11.Bd3 , which is the subject of the subsequent chapter. In this chapter we will examine other lines after 9.Bxf6 , most importantly 9...gxf6 10.Nd5 Bg7 11.c3 , which is the second main sub-branch of the 9. Bxf6 line, besides the 11. Bd3 line. 9...gxf6 This is forced. Black can't capture with the queen , because after 9...Qxf6 ? 10.Nd5 Qd8 White has many lines to give him a huge advantage. The brutal 11.Bxb5 and 11.c4 are terrible for Black. A good comparison to make: look at the very popular mainline 9. Nd5 Be7 10. Bxf6 Bxf6 (covered in 2 chapters of this course) , in which Black has the bishop on f6, while after 9... Qxf6 ? 10. Nd5 Qd8 it is on f8 !So long story short: take with the g-pawn and look forward to playing ...f5 even twice, if possible. 10.Nd5 Bg7 Black has two good moves in this position, the more traditional 10... f5 and the newer move 10... Bg7, the so-called Novosibirsk variation. Both lines have some overlap, because 10. ..Bg7 does only delay ...f5 for the

moment. The main difference between the two lines is how the reply 11.Bd3 is handled. In the Novosibirsk you play 11... Ne7 to get rid of the Knight immediately , an approach that is clearly not possible after 10...f5 11.Bd3 , when 11...Ne7 12.Nf6# is a bit of a problem. Instead after 10...f5 11.Bd3 , 11...Be6 is the move , which leads to completely different positions compared to the Novosibirsk. Our repertoire choice is quite easy , as the World Champion has always played 10...Bg7 , as far as I can see. After 10... Bg7 White has two main tries for an advantage. The first one and the sharpest line is 11. Bd3 which we examine in the subsequent chapter. The second approach is to simply play 11.c3 , after which 11...f5 12.exf5 Bxf5 leads to a position that is often reached via 10... f5 11. c3 Bg7 12. exf5 Bxf5. This line leads to interesting play and is considered to be leading to equal chances. It is obviously a critical line for the Sveshnikov, as White can basically force you to enter it. Even going 10... Bg7 or 10... f5 is not relevant, as you have no way to avoid it in both cases. So 11. c3 f5 is clearly the main chunk of this chapter, but we will also look a rare alternatives on move 11. 11.c3 This is White's more strategic choice at this point , compared to 11.Bd3. White intends to improve the Knight as quickly as possible. 11...f5 This is a lot better than 11... Ne7. Playing ...Ne7 is much more pointed after 11. Bd3, because Black in this case immediately threatens to take on d5, forcing the pawn recapture. Therefore after 11. Bd3 Ne7 White has to take on e7, which is not the case here as the Queen is still able to take on d5. An example line would be 11...Ne7 12.Nc2 Nxd5 13.Qxd5 Rb8 14.Ne3 , when Black is more or less busted - you can't even get in ...f5 in the first place. 12.exf5 The simplest and most popular choice for White. 12...Bxf5 13.Nc2 0-0 14.Nce3 Be6 A very natural sequence so far. White has gotten his problem piece back in the centre and now needs to make a decision how to proceed. By far White's most popular move is 15. Bd3 , but there are some offbeat tries worth checking. 15.Bd3 A natural and popular move, angling for piece play against the centre and Kingside, often connected with Qh5. 15...f5 After our natural move 15...f5 we have the final split in this chapter , when White now chooses between 16.O-O , 16.Qh5 and 16.Bc2. The play in similar in these lines , but we need to check some concrete lines. 16.0-0 In some of the sharp lines White does not manage to castle, so this solid move is certainly a reasonable choice. 16...e4 We usually play ...e4 in these lines in reply to Qh5, so we will choose a similar approach here. Note that 16...f4 fails to 17.Qh5 and 16...Ne7 is refuted by 17.Nxe7+ Qxe7 18.Bxf5 ! , which amounts to a disaster as well. 17.Nf4 The only move, otherwise we'd have ... f4 next. 17...Bf7 18.Bc2 Be5 As played by Magnus Carlsen , so we'll follow the Champion's example. Black has some decent alternatives here , like 18...Qd7 and 18...Qg5. 19.Nfd5 Qg5 I suggest to play this move instead of Carlsen's 19...Kh8. He got into some trouble against V.Topalov in Abidjan 2019. He still won this Blitz game quickly after Topalov misplayed it soon after. The move 19... Qg5 is the recommendation of both the engines and the correspondence players and looks attractive, so we'll go for it. Our threats are now ... f4 and ...Bh5. 20.f4 A case of 'What else ?'. White needed to do something about our mentioned ideas. 20...exf3 21.Qxf3 Bh5 White has 22.Qf2 and 22.Qh3 now. Both

lead to extremely tactical positions that are fine for Black , but I am not sure how deep I should cover these complications , given that we are already on move 21 and some lines easily run until move 35 (!) ⊙ This sounds crazy, but if you look at the whole sequence starting from 11. c3 our moves are the only ones or clearly the best ones almost the whole time, so this lines is extremely relevant from a theoretical point of view. I'll show some variations from here, but won't go all the way. You can easily add your own analysis if you feel you need more information. 22.Qh3 f4 Surprisingly White has half a dozen playable moves here. In such a sharp position this is quite unusual. I'll check three of them. 23.Qd7 Well, you need to check 'Mate in one'-threats ! 23...Ra7 24.Qxc6 fxe3 25.Rxf8+ Kxf8 In this position White needs to find the way to draw ! 26.Qb6 This secures the draw, attacking a7 and e3 at the same time. 26...Bxh2+ I didn't find a way to continue - we need to pull the plug on the game. 27.Kxh2 Qh4+ 28.Kg1 Qf2+ And it's a perpetual check.

☐ **Sveshnikov 9. Bxf6,11. Bd3**
■ **Sveshnikov 9. Bxf6,11. Bd3 #20**

1.e4 c5 2.Nf3 Nc6 3.d4 cxd4 4.Nxd4 Nf6 5.Nc3 e5 6.Ndb5 d6 7.Bg5 a6 8.Na3 b5 9.Bxf6 gxf6 10.Nd5 Bg7 11.Bd3 In this chapter we will examine the lines starting with this move. All other variations after 9. Bxf6 are covered in the previous chapter. After 11. Bd3 the game will become very sharp and tactical and Black needs to sacrifice pawns on a regular basis. In the main line of the 11. Bd3 complex we are three pawns down, but have great compensation !Of all the chapters in the whole course this is by far the one that requires move-by-move knowledge and precise calculation over the board. There is very little strategic content or 'plans' to guide you, it's just two sides engaging in a fight with clubs - and you better make sure to bring a huge club, meaning excellent preparation. It is definitely possible to work out some of the complications over the board, but this will be much more likely to be successful if you once had known them. It sounds odd, but it is true: study time is never wasted, even if you feel you have forgotten everything.The way to do it is to not try to remember as hard as you can, but rather think on your own and hope that you subconsciously piece it together. This works much better than sitting there and wrecking your brain to recall concrete lines.One important point that also needs to be mentioned: Black is the side on the attack after 11. Bd3. If White only has vague knowledge about the complications he is very likely just getting killed quickly. If you screw something up, it might be bad in computer terms... but you still have chances, given the enormous activity that Black usually enjoys. 11...Ne7 The only good move after 11. Bd3. The bishop move prevents ...f5 and we need to get rid of the d5-knight right away. 12.Nxe7 White's choice is limited, because with 11... Ne7 we had threatened to take on d5. As usual it's very desirable for Black to take on d5 when White needs to recapture with a pawn. 12...Qxe7 After 12. .. Qxe7 White has two

basic options. He can play c4, attacking the b5-pawn, or play c3, preparing to get the offside knight back into the game. White might play c4 or c3 right away or do it after castling kingside first. Castling is rather natural for both sides, so quite often this will be played quickly after a move of the c-pawn, for example 13.c4 f5 14.O-O O-O is just as common as 13.O-O O-O 14.c4 f5. I will examine 13.O-O O-O as the main line and then split the lines with 14.c4 or 14.c3. If White starts 13. c4, it will very likely transpose to 13. O-O O-O 14. c4, as the deviations are unattractive for White. 13.c3 is a different story. After 13...f5 the sequence 14.O-O O-O is possible and examined via 13. O-O O-O 14. c3 f5, but White often decides to not castle and then we will reach the only important independent line 13.c3 f5 14.Nc2 , when White's king will remain in the centre or castle queenside in some lines. Alright , let's check some moves to make things more concrete. 13.c3 Compared to 13.c4 or 14. c4 this is the slower approach. White intends to improve the knight via c2-e3. 13...f5 What else ? You could actually castle first and ...f5 next move, but the rule of thumb to play ...f5 against the c-pawn moves is useful to have. 14.Nc2 The logical follow-up. White may also castle here, but other moves don't convince. 14...0-0 This is not that popular, but I see no reason why. Most of the time White will now castle as well, transposing into the line 13. O-O O-O 14. c3 f5, (which is part of our repertoire anyway - see lines #23-26.) Instead of my recommendation 14... O-O Black most often plays 14...Qb7 , which seems fine as well. I just felt that we save a bit of workload with 14... O-O, as it mostly transposes as mentioned. 15.Qh5 This is maybe the most interesting way to avoid a transposition with 15.O-O. It leads to sharp and yet almost unexplored play. 15...f4 I also looked at the more aggressive moves here , like 15...d5. This does not work here , but it is also not necessary to throw the kitchen sink just yet. White's setup is slower and therefore we don't need to rush things. 16.0-0-0 White refused to castle kingside before , so this looks principled. Of course he still could have played 16.O-O , but this is not threatening at all.. 16...Be6 17.g3 This is suggested by the engines. I don't think many human players would play it, but it's interesting to explore. 17...Bxa2 18.gxf4 Qf6 Not the most intuitive move ever, but it is actually difficult to suggest a different one, once you dig a bit deeper. White is ready to start play on the g-file and we need to act quickly. Now ...Qxf4+ is the simple idea. 19.f5 This must be critical, gaining space and taking away the e6-square. 19...Bh6+ We activate the bishop, having a concrete idea in mind. 20.Ne3 b4 This is possible now, as the knight has given up control of b4. A very sharp position is on the board now, that you can easily analyse deeper. This line is rather rare, therefore I am stopping here.

**B33**

☐ **Sveshnikov 9. Bxf6,11. Bd3**
■ **Sveshnikov 9. Bxf6,11. Bd3 #33**

1.e4 c5 2.Nf3 Nc6 3.d4 cxd4 4.Nxd4 Nf6 5.Nc3 e5 6.Ndb5 d6 7.Bg5 a6 8.Na3 b5 9.Bxf6 gxf6 10.Nd5 Bg7 11.Bd3 In this chapter we will examine the lines starting with this move. All other variations after 9. Bxf6 are covered in the previous chapter. After 11. Bd3 the game will become very sharp and tactical and Black needs to sacrifice pawns on a regular basis. In the main line of the 11. Bd3 complex we are three pawns down, but have great compensation !Of all the chapters in the whole course this is by far the one that requires move-by-move knowledge and precise calculation over the board. There is very little strategic content or 'plans' to guide you, it's just two sides engaging in a fight with clubs - and you better make sure to bring a huge club, meaning excellent preparation. It is definitely possible to work out some of the complications over the board, but this will be much more likely to be successful if you once had known them. It sounds odd, but it is true: study time is never wasted, even if you feel you have forgotten everything.The way to do it is to not try to remember as hard as you can, but rather think on your own and hope that you subconsciously piece it together. This works much better than sitting there and wrecking your brain to recall concrete lines.One important point that also needs to be mentioned: Black is the side on the attack after 11. Bd3. If White only has vague knowledge about the complications he is very likely just getting killed quickly. If you screw something up, it might be bad in computer terms... but you still have chances, given the enormous activity that Black usually enjoys. 11...Ne7 The only good move after 11. Bd3. The bishop move prevents ...f5 and we need to get rid of the d5-knight right away. 12.Nxe7 White's choice is limited, because with 11... Ne7 we had threatened to take on d5. As usual it's very desirable for Black to take on d5 when White needs to recapture with a pawn. 12...Qxe7 After 12. .. Qxe7 White has two basic options. He can play c4, attacking the b5-pawn, or play c3, preparing to get the offside knight back into the game. White might play c4 or c3 right away or do it after castling kingside first. Castling is rather natural for both sides, so quite often this will be played quickly after a move of the c-pawn, for example 13.c4 f5 14.O-O O-O is just as common as 13.O-O O-O 14.c4 f5. I will examine 13.O-O O-O as the main line and then split the lines with 14.c4 or 14.c3. If White starts 13. c4, it will very likely transpose to 13. O-O O-O 14. c4, as the deviations are unattractive for White. 13.c3 is a different story. After 13...f5 the sequence 14.O-O O-O is possible and examined via 13. O-O O-O 14. c3 f5, but White often decides to not castle and then we will reach the only important independent line 13.c3 f5 14.Nc2 , when White's king will remain in the centre or castle queenside in some lines. Alright , let's check some moves to make things more concrete. 13.0-0 0-0 It's also possible to play 13...f5 first , there is no drawback to this move order. I went for 13... O-O because this way you have the rule of thumb for move 13 and 14 in this line to play ...f5 against the c-pawn moves and just castle as well if White plays O-O first. 14.Qh5 f5 'Always play ..

f5 !' 15.exf5 A reasonable way to not transpose after 15.c4 Rb8. Now Black is OK , but not better if White defends accurately. 15...e4 16.f6 This is the best move and the only one to avoid trouble. The point is to open the fifth rank. 16...Bxf6 17.Rae1 d5 We need to play the move anyway ! The pawn is hanging, but is still works for Black. 18.Qxd5 Bb7 19.Qf5 Again the only move to keep the balance. 19...Qe5 20.Qxe5 Bxe5 21.Bxe4 Bxe4 22.Rxe4 Bxb2 23.Nb1 Rac8 Black has enough activity to compensate for the pawn. Most likely we will win a pawn on the queenside to level material.

**B33**

☐ **Sveshnikov 9. Nd5 with 11. c3**
■ **Sveshnikov 9. Nd5 with 11. c3**

1.e4 c5 2.Nf3 Nc6 3.d4 cxd4 4.Nxd4 Nf6 5.Nc3 e5 6.Ndb5 d6 7.Bg5 a6 8.Na3 b5 9.Nd5 Be7 10.Bxf6 Bxf6 11.c3 This is the most popular move for White. In the first decades of the Sveshnikov it was basically the only one played, before 11. c4 gained some ground. In this chapter we are analysing 11. c3, while other continuations after 9. Nd5, in particular the 11. c4 line, are discussed in the previous chapter.The move 11. c3 makes a very logical impression. The knight on a3 is clearly a problem piece and needs to be improved. The route via c2 is now possible and often the knight soon connects to the weak d5-square via e3 or, less often, via b4. After the knight is moved away from a3 White gains the option to play a4, attacking the extended black queenside. White's strategy in this line is usually connected with this idea, but there are other options as well. White quite frequently plays the move h4, covering the g5-square and preventing ... Bg5. This may also be the start of play on the kingside, very much depending on the concrete circumstances. Alright, what is black supposed to do ? The good news is that Black has a number of options and Magnus Carlsen has tried most of them. This is also the bad news for an author: you need to pick a line if you want to simply copy what Magnus always does. So what are the options ? First of all , there is one independent and non-transpositional line that Black has available now. He may play 11...Ne7 , and this line was used once by the World Champion in a 2019 Blitz game against Lenier Dominguez. After the usual 12.Nxf6+ gxf6 you get the same pawn structure as after 9. Bxf6, featuring the doubled f-pawns. I think this line is not bad, but it was only employed once by Magnus in a Blitz game. In more important encounters he has used more standard main lines. To understand how the main lines work it makes sense to look at how the theory developed over the course of time. In the early years of the Sveshnikov they started with 11...O-O and after 12.Nc2 played 12...Bg5. The bishop usually goes to g5, watching over the e3-square, freeing the f-pawn and allowing the queen to move without allowing Nxf6+ with doubled pawns. The drawback of 12... Bg5 is 13.a4 , when Black needs to capture with 13...bxa4. it usually a bad idea to play something like 13...Rb8 14.axb5 axb5 , when White controls the a-file and b5 is a useful target

for White. After 13... bxa4 White just plays 14.Rxa4 and is happy to have a setup with Bc4 and often b3 next. This type of position is not terrible for Black, but nowadays Black tries to avoid it in view of better options. One idea is to play an early ...Rb8, so that after White pushes a4 we are able to take and immediately attack b2, making the simple recapture on a4 problematic. There are multiple ways to employ the ... Rb8 idea. You can play it right away with 11...Rb8 , or wait until White has played Nc2, so for example 11...O-O 12.Nc2 Rb8 or 11...Bg5 (as we know a generally useful move) 12.Nc2 Rb8. So essentially Black has three moves that we want to play (...O-O, ... Rb8 and ...Bg5) and he may do so in every imaginable order ! Magnus has played various orders, so we don't see a clear preference on his part. Let's work out what the difference between them is. First of all , let's look at 11...O-O 12.Nc2 Rb8. With 12... Rb8 we have defanged 13. a4, but White has the option to play 13.h4 , which stops our intended next move 13... Bg5. This is the drawback of the early ...O-O move order. So what about 11...Rb8 12.Nc2 Bg5 or 11...Bg5 12.Nc2 Rb8 ? Here the key point to study is 13.a4 bxa4 14.Ncb4 , when both 14...Nxb4 15.cxb4 and 15. Nxb4 lead to long , tactical lines. These lines are fine for Black , but you need to basically learn many variations beyond move 20 on a move-by-move basis. It's tough to work it out over the board and therefore more rote memorization than anything else. If possible I'd like to avoid those lines , unless it is absolutely necessary and the alternatives are unattractive. I looked at 11... O-O 12.Nc2 Rb8 13.h4 in comparison and felt this is much easier to handle , but of course considerably less sharp and tactical. This is largely a matter of personal preference and less a matter of move/ line quality. If you like to be as unpredictable as the World Champion , you may start with the line presented here to get you going and later add the other move orders that Carlsen plays as well. 11...0-0 As explained in the remarks to 11. c3, Black has a range of lines and move orders available. 11...O-O felt like the most practical choice to me. 12.Nc2 What could be more natural after 11. c3 ? White has tried to delay this move, but unsurprisingly this is not dangerous at all. 12...Rb8 As already explained earlier this move is played to discourage White to play a4, due to the pressure down the b-file. If you play 12...Bg5 instead you allow 13.a4 , when you have nothing better than 13...bxa4 14.Rxa4. This line is still played nowadays , but I feel it is an unnecessary concession. After 12...Rb8 the move 13.a4 is still playable , but rather harmless. The only possible issue with 12...Rb8 is the reply 13.h4 , which prevents ...Bg5. The bishop move to g5 is desirable for Black, so we need to have something prepared against the h-pawn push. Instead of 13. h4 White may also play a slower setup with 13.Be2 or 13.Bd3 , but these don't feel very challenging for Black. 13.h4 This move is regarded as the critical one against the move order 11...O-O 12. Nc2 Rb8. White stops ...Bg5 and this is no small feat. If you study the move 13. Be2 and 13. Bd3 you see that ...Bg5 and . ..Ne7 is a common way for Black to continue. Now 13...Ne7 is a huge concession , as 14.Nxf6+ gxf6 changes the pawn structure in White's favour. 13...g6 It looks a bit odd at first to play ...g6 AFTER White has played h4, but we don't need to worry about the h-file here. White has no attacking pieces and the bishop defends the dark squares reliably. With 13... g6

Black intends to play ...Bg7, then proceed with the play for the d5-square with ...Ne7. The main incentive to select it for the repertoire was the game W. So-M.Carlsen, Stavanger 2019 - if in doubt, play what Magnus plays. 14.g3 Bg7 15.h5 Ne7 16.Nce3 Nxd5 17.Nxd5 This position was reached in the mentioned So-Carlsen game. Now Magnus went for 17...Be6 18.Bh3 Bxd5 19.Qxd5 b4 and later drew the game. I have to admit that I don't like this approach for Black. The resulting positions don't offer much activity and the alternative 17... Bb7 looks perfectly fine. It has been tested in many high level correspondence games and Black had no problems. 17...Bb7 Black's basic idea is to play ...Bf6-g5 and ... Rc8-c5 next, fighting for control of d5. We will check some sample continuations from here. 18.Bh3 This way White takes control of c8, preventing ...Rc8 or ...Qc8 later. Black still has enough play on the queenside, though. 18...Bh6 We can occupy this diagonal immediately, as Bh3 blocks the h-file. 19.Qd3 Kg7 20.Rd1 This looks reasonable for White, but Black has a good queenside counterplay idea. 20...b4 21.Nxb4 a5 22.Nc2 22.Nd5 is better and limits the damage. Now Black strikes ! 22...f5 Black is better now, exploiting White's somewhat artificial setup. 23.Bg2 Bxe4 24.Bxe4 fxe4 25.Qxe4 Qf6 Black attacks f2 and b2, giving us a clear advantage.

**B33**

☐ **Sveshnikov 9. Nd5 with 11. c3**

■ **Sveshnikov 9. Nd5 with 11. c3**

1.e4 c5 2.Nf3 Nc6 3.d4 cxd4 4.Nxd4 Nf6 5.Nc3 e5 6.Ndb5 d6 7.Bg5 a6 8.Na3 b5 9.Nd5 Be7 10.Bxf6 Bxf6 11.c3 This is the most popular move for White. In the first decades of the Sveshnikov it was basically the only one played, before 11. c4 gained some ground. In this chapter we are analysing 11. c3, while other continuations after 9. Nd5, in particular the 11. c4 line, are discussed in the previous chapter.The move 11. c3 makes a very logical impression. The knight on a3 is clearly a problem piece and needs to be improved. The route via c2 is now possible and often the knight soon connects to the weak d5-square via e3 or, less often, via b4. After the knight is moved away from a3 White gains the option to play a4, attacking the extended black queenside. White's strategy in this line is usually connected with this idea, but there are other options as well. White quite frequently plays the move h4, covering the g5-square and preventing ... Bg5. This may also be the start of play on the kingside, very much depending on the concrete circumstances. Alright, what is black supposed to do ? The good news is that Black has a number of options and Magnus Carlsen has tried most of them. This is also the bad news for an author: you need to pick a line if you want to simply copy what Magnus always does. So what are the options ? First of all , there is one independent and non-transpositional line that Black has available now. He may play 11...Ne7 , and this line was used once by the World Champion in a 2019 Blitz game against Lenier Dominguez. After the usual 12.Nxf6+ gxf6 you get the same pawn structure as after 9. Bxf6, featuring the

doubled f-pawns. I think this line is not bad, but it was only employed once by Magnus in a Blitz game. In more important encounters he has used more standard main lines. To understand how the main lines work it makes sense to look at how the theory developed over the course of time. In the early years of the Sveshnikov they started with 11...O-O and after 12.Nc2 played 12...Bg5. The bishop usually goes to g5, watching over the e3-square, freeing the f-pawn and allowing the queen to move without allowing Nxf6+ with doubled pawns. The drawback of 12... Bg5 is 13.a4 , when Black needs to capture with 13...bxa4. it usually a bad idea to play something like 13...Rb8 14.axb5 axb5 , when White controls the a-file and b5 is a useful target for White. After 13... bxa4 White just plays 14.Rxa4 and is happy to have a setup with Bc4 and often b3 next. This type of position is not terrible for Black, but nowadays Black tries to avoid it in view of better options. One idea is to play an early ...Rb8, so that after White pushes a4 we are able to take and immediately attack b2, making the simple recapture on a4 problematic. There are multiple ways to employ the ... Rb8 idea. You can play it right away with 11...Rb8 , or wait until White has played Nc2, so for example 11...O-O 12.Nc2 Rb8 or 11...Bg5 (as we know a generally useful move) 12.Nc2 Rb8. So essentially Black has three moves that we want to play (...O-O, ... Rb8 and ...Bg5) and he may do so in every imaginable order ! Magnus has played various orders, so we don't see a clear preference on his part. Let's work out what the difference between them is. First of all , let's look at 11...O-O 12.Nc2 Rb8. With 12... Rb8 we have defanged 13. a4, but White has the option to play 13.h4 , which stops our intended next move 13... Bg5. This is the drawback of the early ...O-O move order. So what about 11...Rb8 12.Nc2 Bg5 or 11...Bg5 12.Nc2 Rb8 ? Here the key point to study is 13.a4 bxa4 14.Ncb4 , when both 14...Nxb4 15.cxb4 and 15. Nxb4 lead to long , tactical lines. These lines are fine for Black , but you need to basically learn many variations beyond move 20 on a move-by-move basis. It's tough to work it out over the board and therefore more rote memorization than anything else. If possible I'd like to avoid those lines , unless it is absolutely necessary and the alternatives are unattractive. I looked at 11... O-O 12.Nc2 Rb8 13.h4 in comparison and felt this is much easier to handle , but of course considerably less sharp and tactical. This is largely a matter of personal preference and less a matter of move/ line quality. If you like to be as unpredictable as the World Champion , you may start with the line presented here to get you going and later add the other move orders that Carlsen plays as well. 11...0-0 As explained in the remarks to 11. c3, Black has a range of lines and move orders available. 11... O-O felt like the most practical choice to me. Carlsen has also played 11...Bg5 earlier in his career , as seen in model game #3. 12.Nc2 What could be more natural after 11. c3 ? White has tried to delay this move, but unsurprisingly this is not dangerous at all. 12...Rb8 As already explained earlier this move is played to discourage White to play a4, due to the pressure down the b-file. If you play 12...Bg5 instead you allow 13.a4 , when you have nothing better than 13...bxa4 14.Rxa4. This line is still played nowadays , but I feel it is an unnecessary concession. After 12...Rb8 the move 13.a4 is still playable , but rather harmless. The only possible issue with 12...Rb8 is the reply 13.h4 , which

prevents ...Bg5. The bishop move to g5 is desirable for Black, so we need to have something prepared against the h-pawn push. Instead of 13. h4 White may also play a slower setup with 13.Be2 or 13.Bd3 , but these don't feel very challenging for Black. 13.Be2 White simply develops the bishop and prepares castling kingside. It is still very frequently played , even though 13.h4 seems more testing these days. Of course 13. Be2 is a classical and sound move, but it does not exert any direct pressure or poses concrete problems. 13.g3 is a rare alternative and is examined in model game #4. 13...Bg5 A standard part of our setup. We clear the way for the f-pawn, are now ready to take a knight on e3 if desirable and give more flexibility for the queen. We also enable ... Ne7 to be played soon. 14.0-0 Kh8 If in doubt, play what Magnus plays ! This is not a bad general approach, but for this repertoire part of the concept, of course. The World Champion has played this twice in 2019 and had no problems at all in both games.That being said, Black has good alternatives to the king move, which does not look extremely obvious. So why did Magnus go for 14... Kh8 ? Well, in this structure there are some moves that are generally useful. Let's have a look: a ...a5 prepares ...b4 and prevents Ncb4, b ...Be6 develops, c ...g6 prepares ...f5, d ...Ne7 to challenge the knight on d5 and e ...Kh8 is useful in any ... f5 scenario, to avoid possible checks on the a2-g8 diagonal and to clear the g-file for ideas like ...Rg8, once ...f5/ exf5/...gxf5 is on the board. So why 14... Kh8 first and not one of the others ? Let's check the alternatives: First of all, 14...a5 can be answered by 15.Na3 ! , which is a bit awkward to meet , as 15...b4 16.Nb5 is annoying and 14...a5 15.Na3 ! Na7 is not ideal either. 14...Be6 is possible and not bad in my mind. One argument against it could be that you are not able to play ...Bb7 anymore, which was Carlsen's reply to Bg4 against Giri. You may also question if ... Be6 is necessary if you like to play ...f5 soon. Next we have 14...g6 , which is not as flexible as 14... Kh8. It also prepares ...f5, but is not as useful in other scenarios. Finally there is 14...Ne7 , which is the most solid move. We will see this idea after 14... Kh8 15. a3 Ne7. It is already playable in move 14 for sure, but less combative compared to 14... Kh8. Once you play ... Ne7 you focus on fighting for d5 and are less likely to mix it up with ...f5. To sum it up, there are alternatives, and I think Carlsen went for 14... Kh8 because it is a flexible move that is not yet explored as much as the other choices. This leads us to an additional point in favour of copying the World Champion at this point. The line we are examining right now was recommended in an important repertoire book for White, written by GM John Shaw: 'Playing 1. e4 - Sicilian Main lines'. Shaw checks most of Black's alternatives on move 14, but not 14... Kh8. This makes this move more attractive for us, as White players might have studied up to this point, but likely don't know the king move if they only relied on this popular book. After 14... Kh8 we will check four options for White, illustrating the main ideas in the process. 15.a3 This move does not look all that dangerous, but it was played by Teimour Radjabov against the World Champion in early 2019. One idea of the move is to enable the move axb4 after a possible Ncb4/... Nxb4 sequence. 15...Ne7 A simple but sound approach by Magnus. Black may also keep the tension with other moves, but the immediate fight for d5 is a straightforward

option. 16.Nxe7 Radjabov played 16.Ncb4 instead , but let's have a brief look at this alternative to discuss some ideas for Black. 16...Qxe7 17.Nb4 Bb7 18.a4 White's direct approach, acknowledging that slow moves don't lead to much. 18...bxa4 Black also has the more conservative move 18...a5 , but this leads to interesting complications that show Black's potential in this position. 19.Rxa4 Bxe4 20.Nxa6 White has a double attack on the bishop and the rook, but Black has an excellent tactical solution. 20...Bxg2 21.Kxg2 Rxb2 Black only has two pawns for the piece, but great compensation. We have ...f5 and ...e4 coming and White's position is not coordinated well. He also has to worry about ...Rd2. Obviously you could analyze this further, but I don't want to go beyond move 25. It often ends in a draw if you do go deeper, but Black has all the fun in the complications.

**B33**

☐ **Sveshnikov Sidelines**
■ **Sveshnikov Sidelines**

1.e4 c5 2.Nf3 Nc6 3.d4 This is the first chapter of this course on the open Sicilian after 1. e4 c5 2. Nf3 Nc6 3. d4. Against the open Sicilian Magnus Carlsen's main choice is the Sveshnikov Variation. After 3...cxd4 4. Nxd4 Nf6 5.Nc3 e5 that starting position of this variation arises. In this chapter we will examine odd lines before this starting position even arises , and more importantly sideline in the Sveshnikov itself. The Sveshnikov has three main lines: the first one arises after 5...e5 6.Ndb5 d6 7. Nd5 , which has become fashionable in the last year. The second one is 5...e5 6. Ndb5 d6 7. Bg5 a6 8.Na3 b5 9.Bxf6 gxf6 , which settles Black with doubled f-pawn early on. The third option is to play 6.Ndb5 d6 7.Bg5 a6 8.Na3 b5 9.Nd5 , after which Black plays 9...Be7 , avoiding the doubled pawns. These three main lines are looked at in the next 5 chapters - 7. Nd5, 9. Bxf6 sidelines, 9. Bxf6 mainline, 9. Nd5 sidelines and 9. Nd5 mainline - while all other lines in the Sveshnikov, and the open Sicilian in general, are examined in this chapter. They are all sidelines for a reason, but still useful to study. In particular on the junior/ amateur level it is not a given that players on the white side go for the critical lines. If you study the sidelines, you will have no problems whatsoever and often Black is getting the better game early on. 3...cxd4 4.Nxd4 Nf6 5.Nc3 e5 This is the starting position of the Sveshnikov. Nowadays this name of the variation is widely accepted , but there have been many other names over the years. It was first used in a top level game by World Champion Emanuel Lasker against Carl Schlechter in 1910 , but Schlechter played the uncritical 6.Nb3 and Lasker obtained a good game easily. It was quite quickly figured out that 6. Ndb5 should be critical, and for a long while the structural weaknesses in Black's position were considered to be too severe. It took almost 50 years to put this line back on the map, when Jorge Pelikan and Herman Pilnik found some new ideas for Black. They mostly investigated 6.Ndb5 d6 7.Bg5 a6 8.Na3 Be6 and 8.Bxf6 gxf6 9.Na3 d5 , lines that still seen today occasionally. So in the late 1960s the move 5... e5 would be

called the start of the Lasker/Pelikan/Pilnik-Variation. Then in the early 1970s Evgeny Sveshnikov and some fellow master players from the Russian city of Chelyabinsk discovered that Black should play 8... b5, rather than 8... Be6. Sveshnikov and mostly Gennadi Timoshenko used their innovation successfully and quite quickly the variation was taken up by some more Russian players, most notably the winners of the World Junior Championships Valeri Chekhov, Sergei Dolmatov and Artur Jussupow, all students of the legendary chess trainer and author Mark Dvoretsky.Since these early days almost all of the World Champions and World Championship challengers have played the Sveshnikov (or Chelyabinsk variation, as it is often called in Russia) regularly or on occasion. We can list Kasparov, Anand (occasionally) , Kramnik, Topalov, Gelfand, Caruana and of course Magnus Carlsen employing the Sveshnikov on the highest level and even during World Championship clashes, as seen in the Carlsen-Caruana Match in London 2018.Now, what is so great about the Sveshnikov Variation ? At the early days of the Sveshnikov Black's weak d5-square and backward d-pawn were thought to be too much to handle - why has this assessment changed ? I think this actually needs to be explained combining some general points and some concrete lines. After 5... e5 White needs to move the knight and concrete lines show that the only challenging move is 6. Ndb5. In this chapter we will examine why 6. Nb3, 6. Nf3 etc. at best lead to equality for White, often less than that.  After 6.Ndb5 d6 is best, after which White has the option to enter the line 7. Nd5, as examined in a dedicated chapter. However, after 7.Nd5 Nxd5 8.exd5 we have to state that Black's structural problems - the d5-square and the d-pawn - are already solved. Only very recently this line has seen some new ideas for White, making it more interesting for White to try. Still Black retains fair chances, usually utilizing the pawn majority on the kingside. The two other main lines of the Sveshnikov start after 6.Ndb5 d6 7.Bg5 a6 8. Na3 b5. Before we look at those concrete lines, I need to mention how important the bad position of the a3-knight is. White has lost quite a bit of time already with this piece and will move it again more often than not, trying to connect it with the d5-square. All these time losses with the knight make the position viable for Black. Just imagine the knight would be on e3 instead of a3 - this would be a terrible position for Black.  Back to the real position: after 8...b5 Black threatens ...b4, which leaves White with the choice between 9.Nd5 , usually followed by 9...Be7 10.Bxf6 Bxf6  or 8...b5 9. Bxf6 gxf6 10.Nd5. The evaluation of the Sveshnikov depends on the theoretical state of the earlier mentioned 7. Nd5 and these two traditional main lines. In both lines Black gains the bishop pair, which is a great asset to have that early in the game.  Now , the line 8... b5 9.Nd5 Be7 10.Bxf6 Bxf6 is White's more strategic choice, trying to exploit the static advantages - control over d5, d-pawn. We will see that Black is able to fight for control over d5, but in many cases does not need to focus on that. Often ignoring the knight and starting play with ...f5 or/and even on the queenside is possible. One point to understand is that it is almost impossible for White to BOTH use the d5-square and build up pressure on the d-file. A knight on d5 plugs the d-file, so White is not just attacking d6 and wins this pawn later. In fact the 'weak' d6-pawn almost never

gets lost in any Sicilian. White also has the line 9. Bxf6 gxf6 forced , because 9... Qxf6 10.Nd5 Qd8 11.c4 is too bad 10. Nd5. In this line the play is more dynamic, because Black will play ...f5 quickly and tries to completely take over the centre. The position opens up, which is excellent for Black's bishop pair. Quite quickly tactics will become an important factor and the knowledge of concrete lines is more essential than in any other line of this repertoire. Before we continue to examine the sidelines, I'd like to mention one very important aspect of the Sveshnikov. Black very frequently will play the move ...f5, starting play in the centre and on the kingside. Black has a central pawn majority since move 3 and ...f5 will even try to remove the e4-pawn to set the central pawn mass in motion.Contrary to Sicilians without ...e5, Black's play is mostly in the centre and on the kingside, while Black's king is perfectly safe. In lines like the Dragon or the Najdorf Black often loses due to mating attacks, which almost never happens in the Sveshnikov, quite the contrary. In some lines we have to abandon the queenside in order to throw the kitchen sink towards White's king, going for Checkmate ! This is an important practical consideration that often allows Black to score points from objectively dubious positions. 6.Nf5 This would be quite strong, if it wasn't for the only good reply. 6...d5 Very important to remember ! If you don't play this, you are in trouble because White's knight is extremely annoying on f5. Compare this with 6. Ndb5 d6 7. Bg5 a6 8. Na3, when this piece is on the edge of the board. 7.exd5 White's only move to keep the game equal. 7...Bxf5 8.dxc6 bxc6 8...Qxd1+ does equalise as well , but 8... bxc6 keeps a bit more tension in the game. I don't think you need to know much more about 6. Nf5, but there is one more concrete line that merits attention. 9.Qf3 Qd7 Please avoid 9...Qc8 10.Ba6 ! 10.Bg5 e4 11.Qe2 White has also tried other queen moves, but this is the only one that might be irritating. We should now ignore the threat to the pawn on e4 and simply continue to develop. 11...Be7 12.Bxf6 This is an extremely risky operation for White. 12...Bxf6 13.Nxe4 0-0 14.Nxf6+ gxf6 Our advantage in development has reached alarming proportions. White needs to stay in the centre with the king now, there is no time to organize castling any more. 15.Qd2 Rfe8+ 16.Kd1 Qc7 17.Bd3 Rad8 And Black has a strong attack against the white king.

**B33**

☐ **Sveshnikov 9. Nd5 with 11. c3**

■ **Sveshnikov 9. Nd5 with 11. c3**

1.e4 c5 2.Nf3 Nc6 3.d4 cxd4 4.Nxd4 Nf6 5.Nc3 e5 6.Ndb5 d6 7.Bg5 a6 8.Na3 b5 9.Nd5 Be7 10.Bxf6 Bxf6 11.c3 This is the most popular move for White. In the first decades of the Sveshnikov it was basically the only one played, before 11. c4 gained some ground. In this chapter we are analysing 11. c3, while other continuations after 9. Nd5, in particular the 11. c4 line, are discussed in the previous chapter.The move 11. c3 makes a very logical impression. The knight on a3 is clearly a problem piece and needs to be improved. The route via c2 is now possible and

often the knight soon connects to the weak d5-square via e3 or, less often, via b4. After the knight is moved away from a3 White gains the option to play a4, attacking the extended black queenside. White's strategy in this line is usually connected with this idea, but there are other options as well. White quite frequently plays the move h4, covering the g5-square and preventing ... Bg5. This may also be the start of play on the kingside, very much depending on the concrete circumstances. Alright, what is black supposed to do ? The good news is that Black has a number of options and Magnus Carlsen has tried most of them. This is also the bad news for an author: you need to pick a line if you want to simply copy what Magnus always does. So what are the options ? First of all , there is one independent and non-transpositional line that Black has available now. He may play 11...Ne7 , and this line was used once by the World Champion in a 2019 Blitz game against Lenier Dominguez. After the usual 12.Nxf6+ gxf6 you get the same pawn structure as after 9. Bxf6, featuring the doubled f-pawns. I think this line is not bad, but it was only employed once by Magnus in a Blitz game. In more important encounters he has used more standard main lines. To understand how the main lines work it makes sense to look at how the theory developed over the course of time. In the early years of the Sveshnikov they started with 11...O-O and after 12.Nc2 played 12...Bg5. The bishop usually goes to g5, watching over the e3-square, freeing the f-pawn and allowing the queen to move without allowing Nxf6+ with doubled pawns. The drawback of 12... Bg5 is 13.a4 , when Black needs to capture with 13...bxa4. it usually a bad idea to play something like 13...Rb8 14.axb5 axb5 , when White controls the a-file and b5 is a useful target for White. After 13... bxa4 White just plays 14.Rxa4 and is happy to have a setup with Bc4 and often b3 next. This type of position is not terrible for Black, but nowadays Black tries to avoid it in view of better options. One idea is to play an early ...Rb8, so that after White pushes a4 we are able to take and immediately attack b2, making the simple recapture on a4 problematic. There are multiple ways to employ the ... Rb8 idea. You can play it right away with 11...Rb8 , or wait until White has played Nc2, so for example 11...O-O 12.Nc2 Rb8 or 11...Bg5 (as we know a generally useful move) 12.Nc2 Rb8. So essentially Black has three moves that we want to play (...O-O, ... Rb8 and ...Bg5) and he may do so in every imaginable order ! Magnus has played various orders, so we don't see a clear preference on his part. Let's work out what the difference between them is. First of all , let's look at 11...O-O 12.Nc2 Rb8. With 12... Rb8 we have defanged 13. a4, but White has the option to play 13.h4 , which stops our intended next move 13... Bg5. This is the drawback of the early ...O-O move order. So what about 11...Rb8 12.Nc2 Bg5 or 11...Bg5 12.Nc2 Rb8 ? Here the key point to study is 13.a4 bxa4 14.Ncb4 , when both 14...Nxb4 15.cxb4 and 15. Nxb4 lead to long , tactical lines. These lines are fine for Black , but you need to basically learn many variations beyond move 20 on a move-by-move basis. It's tough to work it out over the board and therefore more rote memorization than anything else. If possible I'd like to avoid those lines , unless it is absolutely necessary and the alternatives are unattractive. I looked at 11... O-O 12.Nc2 Rb8 13.h4 in comparison and felt this is much easier to handle , but of course considerably less sharp and

tactical. This is largely a matter of personal preference and less a matter of move/ line quality. If you like to be as unpredictable as the World Champion , you may start with the line presented here to get you going and later add the other move orders that Carlsen plays as well. 11...0-0 As explained in the remarks to 11. c3, Black has a range of lines and move orders available. 11...O-O felt like the most practical choice to me. 12.Nc2 What could be more natural after 11. c3 ? White has tried to delay this move, but unsurprisingly this is not dangerous at all. 12...Rb8 As already explained earlier this move is played to discourage White to play a4, due to the pressure down the b-file. If you play 12...Bg5 instead you allow 13.a4 , when you have nothing better than 13...bxa4 14.Rxa4. This line is still played nowadays , but I feel it is an unnecessary concession. After 12...Rb8 the move 13.a4 is still playable , but rather harmless. The only possible issue with 12...Rb8 is the reply 13.h4 , which prevents ...Bg5. The bishop move to g5 is desirable for Black, so we need to have something prepared against the h-pawn push. Instead of 13. h4 White may also play a slower setup with 13.Be2 or 13.Bd3 , but these don't feel very challenging for Black. 13.h4 This move is regarded as the critical one against the move order 11...O-O 12. Nc2 Rb8. White stops ...Bg5 and this is no small feat. If you study the move 13. Be2 and 13. Bd3 you see that ...Bg5 and . ..Ne7 is a common way for Black to continue. Now 13...Ne7 is a huge concession , as 14.Nxf6+ gxf6 changes the pawn structure in White's favour. 13...g6 It looks a bit odd at first to play ...g6 AFTER White has played h4, but we don't need to worry about the h-file here. White has no attacking pieces and the bishop defends the dark squares reliably. With 13... g6 Black intends to play ...Bg7, then proceed with the play for the d5-square with ...Ne7. The main incentive to select it for the repertoire was the game W. So-M.Carlsen, Stavanger 2019 - if in doubt, play what Magnus plays. 14.g3 Bg7 15.h5 Ne7 16.Nce3 Nxd5 17.Nxd5 This position was reached in the mentioned So-Carlsen game. Now Magnus went for 17...Be6 18.Bh3 Bxd5 19.Qxd5 b4 and later drew the game. I have to admit that I don't like this approach for Black. The resulting positions don't offer much activity and the alternative 17... Bb7 looks perfectly fine. It has been tested in many high level correspondence games and Black had no problems. 17...Bb7 Black's basic idea is to play ...Bf6-g5 and ... Rc8-c5 next, fighting for control of d5. We will check some sample continuations from here. 18.Be2 White develops the bishop and prepares a later Kf1-g2. 18...Bf6 19.Qd3 Bg5 It took a while, but we got to g5 after all. Note that while it took longer than usual, in the meantime White has played h4-h5, which does not help much in the battle for central control. 20.Rd1 Rc8 21.hxg6 hxg6 22.Kf1 Rc5 Black has completed the desired setup. Now we are threatening to take on d5, which force a pawn to d5. 23.Ne3 Kg7 It's important to see that d6 is not hanging, because Black is targeting e4 as well. 24.Bf3 Qb6 Black plans to play ...Rd8 and ...b4. Again White can't take on d6. 25.Qxd6 This is wrong, but let's check why. 25...Qxd6 26.Rxd6 Bxe3 27.fxe3 b4 28.cxb4 The second mistake after 25. Qxd6. 28...Rc2 Black is already winning here. The active rook will mop up the whole queenside.

**B33**

☐ **Sveshnikov 9. Nd5 with 11. c3**
■ **Sveshnikov 9. Nd5 with 11. c3**

1.e4 c5 2.Nf3 Nc6 3.d4 cxd4 4.Nxd4 Nf6 5.Nc3 e5 6.Ndb5 d6 7.Bg5 a6 8.Na3 b5 9.Nd5 Be7 10.Bxf6 Bxf6 11.c3 This is the most popular move for White. In the first decades of the Sveshnikov it was basically the only one played, before 11. c4 gained some ground. In this chapter we are analysing 11. c3, while other continuations after 9. Nd5, in particular the 11. c4 line, are discussed in the previous chapter.The move 11. c3 makes a very logical impression. The knight on a3 is clearly a problem piece and needs to be improved. The route via c2 is now possible and often the knight soon connects to the weak d5-square via e3 or, less often, via b4. After the knight is moved away from a3 White gains the option to play a4, attacking the extended black queenside. White's strategy in this line is usually connected with this idea, but there are other options as well. White quite frequently plays the move h4, covering the g5-square and preventing ... Bg5. This may also be the start of play on the kingside, very much depending on the concrete circumstances. Alright, what is black supposed to do ? The bishop usually goes to g5, watching over the e3-square, freeing the f-pawn and allowing the queen to move without allowing Nxf6+ with doubled pawns. The drawback of 12... Bg5 is 13.a4 , when Black needs to capture with 13...bxa4. it usually a bad idea to play something like 13...Rb8 14.axb5 axb5 , when White controls the a-file and b5 is a useful target for White. After 13... bxa4 White just plays 14.Rxa4 and is happy to have a setup with Bc4 and often b3 next. This type of position is not terrible for Black, but nowadays Black tries to avoid it in view of better options. One idea is to play an early ...Rb8, so that after White pushes a4 we are able to take and immediately attack b2, making the simple recapture on a4 problematic. There are multiple ways to employ the ... Rb8 idea. You can play it right away with 11...Rb8 , or wait until White has played Nc2, so for example 11...O-O 12.Nc2 Rb8 or 11...Bg5 (as we know a generally useful move) 12.Nc2 Rb8. So essentially Black has three moves that we want to play (...O-O, ... Rb8 and ...Bg5) and he may do so in every imaginable order ! Magnus has played various orders, so we don't see a clear preference on his part. Let's work out what the difference between them is. First of all , let's look at 11...O-O 12.Nc2 Rb8. With 12... Rb8 we have defanged 13. a4, but White has the option to play 13.h4 , which stops our intended next move 13... Bg5. This is the drawback of the early ...O-O move order. So what about 11...Rb8 12.Nc2 Bg5 or 11...Bg5 12.Nc2 Rb8 ? Here the key point to study is 13.a4 bxa4 14.Ncb4 , when both 14...Nxb4 15.cxb4 and 15. Nxb4 lead to long , tactical lines. These lines are fine for Black , but you need to basically learn many variations beyond move 20 on a move-by-move basis. It's tough to work it out over the board and therefore more rote memorization than anything else. If possible I'd like to avoid those lines , unless it is absolutely necessary and the alternatives are unattractive. I looked at 11... O-O 12.Nc2 Rb8 13.h4 in comparison and felt this is much easier to handle , but of course considerably less sharp and tactical. This is largely a matter of personal preference and less a matter of move/ line quality. If you like to be as unpredictable as the World Champion , you may start with the line presented here to get you going and later add the other move orders that Carlsen plays as well. 11...0-0 As explained in the remarks to 11. c3, Black has a range of lines and move orders available. 11... O-O felt like the most practical choice to me. Carlsen has also played 11...Bg5 earlier in his career , as seen in model game #3. 12.Nc2 What could be more natural after 11. c3 ? White has tried to

delay this move, but unsurprisingly this is not dangerous at all. 12...Rb8 As already explained earlier this move is played to discourage White to play a4, due to the pressure down the b-file. If you play 12...Bg5 instead you allow 13.a4 , when you have nothing better than 13...bxa4 14.Rxa4. This line is still played nowadays , but I feel it is an unnecessary concession. After 12...Rb8 the move 13.a4 is still playable , but rather harmless. The only possible issue with 12...Rb8 is the reply 13.h4 , which prevents ...Bg5. The bishop move to g5 is desirable for Black, so we need to have something prepared against the h-pawn push. Instead of 13. h4 White may also play a slower setup with 13.Be2 or 13.Bd3 , but these don't feel very challenging for Black. 13.Be2 White simply develops the bishop and prepares castling kingside. It is still very frequently played , even though 13.h4 seems more testing these days. Of course 13. Be2 is a classical and sound move, but it does not exert any direct pressure or poses concrete problems. 13.g3 is a rare alternative and is examined in model game #4. 13...Bg5 A standard part of our setup. We clear the way for the f-pawn, are now ready to take a knight on e3 if desirable and give more flexibility for the queen. We also enable ... Ne7 to be played soon. 14.0-0 Kh8 If in doubt, play what Magnus plays ! This is not a bad general approach, but for this repertoire part of the concept, of course. The World Champion has played this twice in 2019 and had no problems at all in both games.That being said, Black has good alternatives to the king move, which does not look extremely obvious. So why did Magnus go for 14... Kh8 ? Well, in this structure there are some moves that are generally useful. Let's have a look: a ...a5 prepares ...b4 and prevents Ncb4, b ...Be6 develops, c ...g6 prepares ...f5, d ...Ne7 to challenge the knight on d5 and e ...Kh8 is useful in any ... f5 scenario, to avoid possible checks on the a2-g8 diagonal and to clear the g-file for ideas like ...Rg8, once ...f5/ exf5/...gxf5 is on the board. So why 14... Kh8 first and not one of the others ? Let's check the alternatives: First of all, 14...a5 can be answered by 15.Na3 ! , which is a bit awkward to meet , as 15...b4 16.Nb5 is annoying and 14...a5 15.Na3 ! Na7 is not ideal either. 14...Be6 is possible and not bad in my mind. One argument against it could be that you are not able to play ...Bb7 anymore, which was Carlsen's reply to Bg4 against Giri. You may also question if ... Be6 is necessary if you like to play ...f5 soon. Next we have 14...g6 , which is not as flexible as 14... Kh8. It also prepares ...f5, but is not as useful in other scenarios. Finally there is 14...Ne7 , which is the most solid move. We will see this idea after 14... Kh8 15. a3 Ne7. It is already playable in move 14 for sure, but less combative compared to 14... Kh8. Once you play ... Ne7 you focus on fighting for d5 and are less likely to mix it up with ...f5. To sum it up, there are alternatives, and I think Carlsen went for 14... Kh8 because it is a flexible move that is not yet explored as much as the other choices. This leads us to an additional point in favour of copying the World Champion at this point. The line we are examining right now was recommended in an important repertoire book for White, written by GM John Shaw: 'Playing 1. e4 - Sicilian Main lines'. Shaw checks most of Black's alternatives on move 14, but not 14... Kh8. This makes this move more attractive for us, as White players might have studied up to this point, but likely don't know the king move if they

only relied on this popular book. After 14... Kh8 we will check four options for White, illustrating the main ideas in the process. 15.a3 This move does not look all that dangerous, but it was played by Teimour Radjabov against the World Champion in early 2019. One idea of the move is to enable the move axb4 after a possible Ncb4/... Nxb4 sequence. 15...Ne7 A simple but sound approach by Magnus. Black may also keep the tension with other moves, but the immediate fight for d5 is a straightforward option. 16.Nxe7 Radjabov played 16.Ncb4 instead , but let's have a brief look at this alternative to discuss some ideas for Black. 16...Qxe7 17.Nb4 Bb7 18.Qd3 White covers the pawn, but is hit with a quick counterplay. 18...f5 19.exf5 e4 20.Qd4 Rxf5 Black's active pieces give us good play. The rook and bishop are doing a great job in controlling the d5-square. An ideal scenario to come is ...d5, ...Rbf8 and later ...Be7-c5.

**B33**

☐ **Sveshnikov 9. Nd5 with 11. c3**
■ **Sveshnikov 9. Nd5 with 11. c3**

1.e4 c5 2.Nf3 Nc6 3.d4 cxd4 4.Nxd4 Nf6 5.Nc3 e5 6.Ndb5 d6 7.Bg5 a6 8.Na3 b5 9.Nd5 Be7 10.Bxf6 Bxf6 11.c3 This is the most popular move for White. In the first decades of the Sveshnikov it was basically the only one played, before 11. c4 gained some ground. In this chapter we are analysing 11. c3, while other continuations after 9. Nd5, in particular the 11. c4 line, are discussed in the previous chapter.The move 11. c3 makes a very logical impression. The knight on a3 is clearly a problem piece and needs to be improved. The route via c2 is now possible and often the knight soon connects to the weak d5-square via e3 or, less often, via b4. After the knight is moved away from a3 White gains the option to play a4, attacking the extended black queenside. White's strategy in this line is usually connected with this idea, but there are other options as well. White quite frequently plays the move h4, covering the g5-square and preventing ... Bg5. This may also be the start of play on the kingside, very much depending on the concrete circumstances. Alright, what is black supposed to do ? The good news is that Black has a number of options and Magnus Carlsen has tried most of them. This is also the bad news for an author: you need to pick a line if you want to simply copy what Magnus always does. So what are the options ? First of all , there is one independent and non-transpositional line that Black has available now. He may play 11...Ne7 , and this line was used once by the World Champion in a 2019 Blitz game against Lenier Dominguez. After the usual 12.Nxf6+ gxf6 you get the same pawn structure as after 9. Bxf6, featuring the doubled f-pawns. I think this line is not bad, but it was only employed once by Magnus in a Blitz game. In more important encounters he has used more standard main lines. To understand how the main lines work it makes sense to look at how the theory developed over the course of time. In the early years of the Sveshnikov they started with 11...O-O and after 12.Nc2 played 12...Bg5. The bishop usually goes to

g5, watching over the e3-square, freeing the f-pawn and allowing the queen to move without allowing Nxf6+ with doubled pawns. The drawback of 12... Bg5 is 13.a4 , when Black needs to capture with 13...bxa4. it usually a bad idea to play something like 13...Rb8 14.axb5 axb5 , when White controls the a-file and b5 is a useful target for White. After 13... bxa4 White just plays 14.Rxa4 and is happy to have a setup with Bc4 and often b3 next. This type of position is not terrible for Black, but nowadays Black tries to avoid it in view of better options. One idea is to play an early ...Rb8, so that after White pushes a4 we are able to take and immediately attack b2, making the simple recapture on a4 problematic. There are multiple ways to employ the ... Rb8 idea. You can play it right away with 11...Rb8 , or wait until White has played Nc2, so for example 11...O-O 12.Nc2 Rb8 or 11...Bg5 (as we know a generally useful move) 12.Nc2 Rb8. So essentially Black has three moves that we want to play (...O-O, ... Rb8 and ...Bg5) and he may do so in every imaginable order ! Magnus has played various orders, so we don't see a clear preference on his part. Let's work out what the difference between them is. First of all , let's look at 11...O-O 12.Nc2 Rb8. With 12... Rb8 we have defanged 13. a4, but White has the option to play 13.h4 , which stops our intended next move 13... Bg5. This is the drawback of the early ...O-O move order. So what about 11...Rb8 12.Nc2 Bg5 or 11...Bg5 12.Nc2 Rb8 ? Here the key point to study is 13.a4 bxa4 14.Ncb4 , when both 14...Nxb4 15.cxb4 and 15. Nxb4 lead to long , tactical lines. These lines are fine for Black , but you need to basically learn many variations beyond move 20 on a move-by-move basis. It's tough to work it out over the board and therefore more rote memorization than anything else. If possible I'd like to avoid those lines , unless it is absolutely necessary and the alternatives are unattractive. I looked at 11... O-O 12.Nc2 Rb8 13.h4 in comparison and felt this is much easier to handle , but of course considerably less sharp and tactical. This is largely a matter of personal preference and less a matter of move/ line quality. If you like to be as unpredictable as the World Champion , you may start with the line presented here to get you going and later add the other move orders that Carlsen plays as well. 11...0-0 As explained in the remarks to 11. c3, Black has a range of lines and move orders available. 11... O-O felt like the most practical choice to me. Carlsen has also played 11...Bg5 earlier in his career , as seen in model game #3. 12.Bd3 The idea of this move is to transfer the bishop to b3, covering the d5-square. 12...Bg5 13.0-0 Ne7 As usual we try to challenge White's control over d5. He is far away from an ideal piece setup to maintain a piece on this square. 14.Nxe7+ Qxe7 15.Bc2 Rb8 Not the only move here, but a good one. We cover b5 to prepare ...a5, which comes in handy soon. 16.Bb3 Kh8 White's piece are on the queenside,. so preparing ...f5 makes a lot of sense. 17.Nc2 a5
This setup is a common idea in the slow Sveshnikov positions arising in the 9. Nd5 line. White is not able to transfer his knight to d5, as b4 is covered and e3 is not a safe transfer square either. Depending on the circumstances we always have the option to just capture the knight if appropriate. Note that the rook is useful on b8, covering the pawn on b5 and making a4 more difficult to play for White.

**B33**

☐ **Sveshnikov 9. Nd5 with 11. c3**
■ **Sveshnikov 9. Nd5 with 11. c3**

1.e4 c5 2.Nf3 Nc6 3.d4 cxd4 4.Nxd4 Nf6 5.Nc3 e5 6.Ndb5 d6 7.Bg5 a6 8.Na3 b5 9.Nd5 Be7 10.Bxf6 Bxf6 11.c3 This is the most popular move for White. In the first decades of the Sveshnikov it was basically the only one played, before 11. c4 gained some ground. In this chapter we are analysing 11. c3, while other continuations after 9. Nd5, in particular the 11. c4 line, are discussed in the previous chapter.The move 11. c3 makes a very logical impression. The knight on a3 is clearly a problem piece and needs to be improved. The route via c2 is now possible and often the knight soon connects to the weak d5-square via e3 or, less often, via b4. The bishop usually goes to g5, watching over the e3-square, freeing the f-pawn and allowing the queen to move without allowing Nxf6+ with doubled pawns. The drawback of 12... Bg5 is 13.a4 , when Black needs to capture with 13...bxa4. it usually a bad idea to play something like 13...Rb8 14.axb5 axb5 , when White controls the a-file and b5 is a useful target for White. After 13... bxa4 White just plays 14.Rxa4 and is happy to have a setup with Bc4 and often b3 next. This type of position is not terrible for Black, but nowadays Black tries to avoid it in view of better options. One idea is to play an early ...Rb8, so that after White pushes a4 we are able to take and immediately attack b2, making the simple recapture on a4 problematic. There are multiple ways to employ the ... Rb8 idea. You can play it right away with 11...Rb8 , or wait until White has played Nc2, so for example 11...O-O 12.Nc2 Rb8 or 11...Bg5 (as we know a generally useful move) 12.Nc2 Rb8. So essentially Black has three moves that we want to play (...O-O, ... Rb8 and ...Bg5) and he may do so in every imaginable order ! Magnus has played various orders, so we don't see a clear preference on his part. Let's work out what

the difference between them is. First of all , let's look at 11...O-O 12.Nc2 Rb8. With 12... Rb8 we have defanged 13. a4, but White has the option to play 13.h4 , which stops our intended next move 13... Bg5. This is the drawback of the early ...O-O move order. So what about 11...Rb8 12.Nc2 Bg5 or 11...Bg5 12.Nc2 Rb8 ? Here the key point to study is 13.a4 bxa4 14.Ncb4 , when both 14...Nxb4 15.cxb4 and 15. Nxb4 lead to long , tactical lines. These lines are fine for Black , but you need to basically learn many variations beyond move 20 on a move-by-move basis. It's tough to work it out over the board and therefore more rote memorization than anything else. If possible I'd like to avoid those lines , unless it is absolutely necessary and the alternatives are unattractive. I looked at 11... O-O 12.Nc2 Rb8 13.h4 in comparison and felt this is much easier to handle , but of course considerably less sharp and tactical. This is largely a matter of personal preference and less a matter of move/ line quality. If you like to be as unpredictable as the World Champion , you may start with the line presented here to get you going and later add the other move orders that Carlsen plays as well. 11...0-0 As explained in the remarks to 11. c3, Black has a range of lines and move orders available. 11... O-O felt like the most practical choice to me. Carlsen has also played 11...Bg5 earlier in his career , as seen in model game #3. 12.Nc2 What could be more natural after 11. c3 ? White has tried to delay this move, but unsurprisingly this is not dangerous at all. 12...Rb8 As already explained earlier this move is played to discourage White to play a4, due to the pressure down the b-file. If you play 12...Bg5 instead you allow 13.a4 , when you have nothing better than 13...bxa4 14.Rxa4. This line is still played nowadays , but I feel it is an unnecessary concession. After 12...Rb8 the move 13.a4 is still playable , but rather harmless. The only possible issue with 12...Rb8 is the reply 13.h4 , which prevents ...Bg5. The bishop move to g5 is desirable for Black, so we need to have something prepared against the h-pawn push. Instead of 13. h4 White may also play a slower setup with 13.Be2 or 13.Bd3 , but these don't feel very challenging for Black. 13.Bd3 A natural development move. White might have a later Bc2-b3 in mind, connecting the bishop to the d5-square. Black is not worried much about slow ideas like that. 13...Bg5 The usual move we basically always play unless White stops us with 13. h4 or 13. a4. Here White might answer it with 14.h4 , but we'll see it is not an issue. If you want to avoid this for some reason you might also start with 13...Be6 and only after 14.O-O go 14....Bg5. I recommend 13... Bg5 for consistency reasons - 'always play ...Bg5 unless they stop us'. 14.h4 This leads to an unconventional and sharp position that gives Black equal chances. If you like to avoid this scenario you can play 13... Be6 first as mentioned. 14...Bh6 We can't take it due to Qh5. 15.g4 The consistent follow up. White can't castle short with the exposed h4-pawn anyway. 15...Bf4 Instead 15...f6 is not bad either, but this move is more dynamic. We hope that White takes our bishop, giving us the excellent e5-square for the knight. 16.Qf3 Be6 17.Nxf4 White should avoid this move as Black gets a strong initiative. 17...exf4 18.Qxf4 Ne5 19.Be2 b4 A very strong improvement on existing games. After the weaker 19...Bxg4 20.Ne3 White is still ok. The move 19... b4 ! makes sure that the b-file opens to great effect. 20.cxb4 Bxg4 21.Ne3 Bxe2 22.Kxe2 Rxb4 Black has a

devastating attack. A killer idea is to play ...f5 ! next, using the pins on the white queen.

**B33**

☐ **Sveshnikov 9. Nd5 with 11. c3**
■ **Sveshnikov 9. Nd5 with 11. c3**

1.e4 c5 2.Nf3 Nc6 3.d4 cxd4 4.Nxd4 Nf6 5.Nc3 e5 6.Ndb5 d6 7.Bg5 a6 8.Na3 b5 9.Nd5 Be7 10.Bxf6 Bxf6 11.c3 This is the most popular move for White. In the first decades of the Sveshnikov it was basically the only one played, before 11. c4 gained some ground. In this chapter we are analysing 11. c3, while other continuations after 9. There are multiple ways to employ the ... Rb8 idea. You can play it right away with 11...Rb8 , or wait until White has played Nc2, so

for example 11...O-O 12.Nc2 Rb8 or 11...Bg5 (as we know a generally useful move) 12.Nc2 Rb8. So essentially Black has three moves that we want to play (...O-O, ... Rb8 and ...Bg5) and he may do so in every imaginable order ! Magnus has played various orders, so we don't see a clear preference on his part. Let's work out what the difference between them is. First of all , let's look at 11...O-O 12.Nc2 Rb8. With 12... Rb8 we have defanged 13. a4, but White has the option to play 13.h4 , which stops our intended next move 13... Bg5. This is the drawback of the early ...O-O move order. So what about 11...Rb8 12.Nc2 Bg5 or 11...Bg5 12.Nc2 Rb8 ? Here the key point to study is 13.a4 bxa4 14.Ncb4 , when both 14...Nxb4 15.cxb4 and 15. Nxb4 lead to long , tactical lines. These lines are fine for Black , but you need to basically learn many variations beyond move 20 on a move-by-move basis. It's tough to work it out over the board and therefore more rote memorization than anything else. If possible I'd like to avoid those lines , unless it is absolutely necessary and the alternatives are unattractive. I looked at 11... O-O 12.Nc2 Rb8 13.h4 in comparison and felt this is much easier to handle , but of course considerably less sharp and tactical. This is largely a matter of personal preference and less a matter of move/ line quality. If you like to be as unpredictable as the World Champion , you may start with the line presented here to get you going and later add the other move orders that Carlsen plays as well. 11...0-0 As explained in the remarks to 11. c3, Black has a range of lines and move orders available. 11... O-O felt like the most practical choice to me. Carlsen has also played 11...Bg5 earlier in his career , as seen in model game #3. 12.Nc2 What could be more natural after 11. c3 ? White has tried to delay this move, but unsurprisingly this is not dangerous at all. 12...Rb8 As already explained earlier this move is played to discourage White to play a4, due to the pressure down the b-file. If you play 12...Bg5 instead you allow 13.a4 , when you have nothing better than 13...bxa4 14.Rxa4. This line is still played nowadays , but I feel it is an unnecessary concession. After 12...Rb8 the move 13.a4 is still playable , but rather harmless. The only possible issue with 12...Rb8 is the reply 13.h4 , which prevents ...Bg5. The bishop move to g5 is desirable for Black, so we need to have something prepared against the h-pawn push. Instead of 13. h4 White may also play a slower setup with 13.Be2 or 13.Bd3 , but these don't feel very challenging for Black. 13.Be2 White simply develops the bishop and prepares castling kingside. It is still very frequently played , even though 13.h4 seems more testing these days. Of course 13. Be2 is a classical and sound move, but it does not exert any direct pressure or poses concrete problems. 13.g3 is a rare alternative and is examined in model game #4. 13...Bg5 A standard part of our setup. We clear the way for the f-pawn, are now ready to take a knight on e3 if desirable and give more flexibility for the queen. We also enable ... Ne7 to be played soon. 14.0-0 Kh8 If in doubt, play what Magnus plays ! This is not a bad general approach, but for this repertoire part of the concept, of course. The World Champion has played this twice in 2019 and had no problems at all in both games.That being said, Black has good alternatives to the king move, which does not look extremely obvious. So why did Magnus go for 14... Kh8 ? Well, in this structure there are some moves that are generally useful. Let's

have a look: a ...a5 prepares ...b4 and prevents Ncb4, b ...Be6 develops, c ...g6 prepares ...f5, d ...Ne7 to challenge the knight on d5 and e ...Kh8 is useful in any ... f5 scenario, to avoid possible checks on the a2-g8 diagonal and to clear the g-file for ideas like ...Rg8, once ...f5/ exf5/...gxf5 is on the board. So why 14... Kh8 first and not one of the others ? Let's check the alternatives: First of all, 14...a5 can be answered by 15.Na3 ! , which is a bit awkward to meet , as 15...b4 16.Nb5 is annoying and 14...a5 15.Na3 ! Na7 is not ideal either. 14...Be6 is possible and not bad in my mind. One argument against it could be that you are not able to play ...Bb7 anymore, which was Carlsen's reply to Bg4 against Giri. You may also question if ... Be6 is necessary if you like to play ...f5 soon. Next we have 14...g6 , which is not as flexible as 14... Kh8. It also prepares ...f5, but is not as useful in other scenarios. Finally there is 14...Ne7 , which is the most solid move. We will see this idea after 14... Kh8 15. a3 Ne7. It is already playable in move 14 for sure, but less combative compared to 14... Kh8. Once you play ... Ne7 you focus on fighting for d5 and are less likely to mix it up with ...f5. To sum it up, there are alternatives, and I think Carlsen went for 14... Kh8 because it is a flexible move that is not yet explored as much as the other choices. This leads us to an additional point in favour of copying the World Champion at this point. The line we are examining right now was recommended in an important repertoire book for White, written by GM John Shaw: 'Playing 1. e4 - Sicilian Main lines'. Shaw checks most of Black's alternatives on move 14, but not 14... Kh8. This makes this move more attractive for us, as White players might have studied up to this point, but likely don't know the king move if they only relied on this popular book. After 14... Kh8 we will check four options for White, illustrating the main ideas in the process. 15.Bg4 This move was played by Anish Giri, two days after Carlsen had played the 14... Kh8 line for the first time against Radjabov. Did Giri manage to pose some problems ? Let's have a look. 15...Bb7 This is the best move. We don't want to trade the light-squared bishops unless we benefit due to a favourable change of the pawn structure. In many positions the reply ...Be6 against against Bg4 is a good choice, anticipating the sequence Bxe6/...fxe6, after which Black covers the d5-square with a pawn. In our specific position 15...Be6 is not great , because after 16.Bxe6 fxe6 17. Ndb4 Nxb4 18.Nxb4 White has the better chances. It is favourable for him to have a pair of knights traded , because he lacks good posts for knights and is happy to only have one of them. It is useful to compare this situation with lines after 1. e4 c5 2. Nf3 Nc6 3. d4 cxd4 4. Nxd4 Nf6 5. Nc3 e5 6. Ndb5 d6 7. Bg5 a6 8. Na3 b5 9. Nd5 Be7 10. Bxf6 Bxf6 and now 11. c4 b4 12. Nc2 O-O 13. Be2 a5 14. O-O Bg5 15. Bg4, when 15... Be6 is fine for Black. After 16. Bxe6 fxe6 17. Nde3 White has two knights that step on each other's toes. Alright, let's return to the best move, 15... Bb7. Giri now played 16.Ncb4 , which did not pose many problems. This position is still fresh, so we can't rely on game samples. In addition to 16. Ncb4 I will also explore two other moves to illustrate the play. 16.Qd3 White covers e4 in anticipation of ...Ne7 and connects rooks. 16...Ne7 It's also possible to keep the tension, but ...Ne7 serves Black well in general, fighting for control over the crucial d5-square. 17.Nxe7 Qxe7 18.Nb4 White is able to play this

move because e4 is covered, a benefit of the earlier 16. Qd3. 18...Qc7 I suggest to play this queen move, intending to play ...Qc4 in response to Nd5. This is an interesting option to keep the game more complicated. In fact Black may also play a move like 18... g6 and simple take the knight in case of Nd5. After 19.Nd5 Bxd5 20. Qxd5 Black has 20...b4 to open up the queenside for counterplay. Such a position is about equal , but obviously not very exciting. 19.Rfd1 The immediate 19.Nd5 Qc4 leads to the same type of position. 19...a5 20.Nd5 Qc4 This position is about equal, but a bit more complex than going for the Nd5/...Bxd5 structure. It's good to have a rock solid and a more fighting option.

☐ **Sveshnikov 9. Bxf6,11. Bd3**
■ **Sveshnikov 9. Bxf6,11. Bd3 #54**

1.e4 c5 2.Nf3 Nc6 3.d4 cxd4 4.Nxd4 Nf6 5.Nc3 e5 6.Ndb5 d6 7.Bg5 a6 8.Na3 b5 9.Bxf6 gxf6 10.Nd5 Bg7 11.Bd3 In this chapter we will examine the lines starting with this move. All other variations after 9. Bxf6 are covered in the previous chapter. After 11. Bd3 the game will become very sharp and tactical and Black needs to sacrifice pawns on a regular basis. In the main line of the 11. Bd3 complex we are three pawns down, but have great compensation !Of all the chapters in the whole course this is by far the one that requires move-by-move knowledge and precise calculation over the board. There is very little strategic content or 'plans' to guide you, it's just two sides engaging in a fight with clubs - and you better make sure to bring a huge club, meaning excellent preparation. It is definitely possible to work out some of the complications over the board, but this will be much more likely to be successful if you once had known them. It sounds odd, but it is true: study time is never wasted, even if you feel you have forgotten everything.The way to do it is to not try to remember as hard as you can, but rather think on your own and hope that you subconsciously piece it together. This works much better than sitting there and wrecking your brain to recall concrete lines.One important point that also needs to be mentioned: Black is the side on the attack after 11. Bd3. If White only has vague knowledge about the complications he is very likely just getting killed quickly. If you screw something up, it might be bad in computer terms... but you still have chances, given the enormous activity that Black usually enjoys. 11...Ne7 The only good move after 11. Bd3. The bishop move prevents ...f5 and we need to get rid of the d5-knight right away. 12.Nxe7 White's choice is limited, because with 11... Ne7 we had threatened to take on d5. As usual it's very desirable for Black to take on d5 when White needs to recapture with a pawn. 12...Qxe7 After 12. .. Qxe7 White has two basic options. He can play c4, attacking the b5-pawn, or play c3, preparing to get the offside knight back into the game. White might play c4 or c3 right away or do it after castling kingside first. Castling is rather natural for both sides, so quite often this will

be played quickly after a move of the c-pawn, for example 13.c4 f5 14.O-O O-O is just as common as 13.O-O O-O 14.c4 f5. I will examine 13.O-O O-O as the main line and then split the lines with 14.c4 or 14.c3. If White starts 13. c4, it will very likely transpose to 13. O-O O-O 14. c4, as the deviations are unattractive for White. 13.c3 is a different story. After 13...f5 the sequence 14.O-O O-O is possible and examined via 13. O-O O-O 14. c3 f5, but White often decides to not castle and then we will reach the only important independent line 13.c3 f5 14.Nc2 , when White's king will remain in the centre or castle queenside in some lines. Alright , let's check some moves to make things more concrete. 13.0-0 0-0 It's also possible to play 13...f5 first , there is no drawback to this move order. I went for 13... O-O because this way you have the rule of thumb for move 13 and 14 in this line to play ...f5 against the c-pawn moves and just castle as well if White plays O-O first. 14.c4 f5 The best way to react to 14. c4. As usual taking on c4 is terrible, as it helps the knight far too much. 14...b4 is also a disaster , as after 15. Nc2 a5 16.Ne3 Black does not even manage to play the fundamental ...f5 break. This only leaves Black with sacrificing the b-pawn, which explains why the 14. c4 - or 13. c4 - line is the sharpest one in the main line. Black is giving away the queenside and goes All-In with his counterplay in the centre and kingside. After 14... f5 White's main lines are the queen moves to h5 and f3, but he has also tried other continuations without much success. 15.Qh5 Rb8 We would have liked to take on e4, but 15...fxe4 16.Bxe4 is a double threat on h7 and on the rook. This explains 15... Rb8 - now we are threatening to take on e4 and then play ...f5 a second time ! The move 15... Rb8 has been tested numerous times in over the board play and correspondence chess and it looks like Black is doing fine in the hair-raising complications. I need to mention that 15... Rb8 is not the only move, though. In fact only some days before these lines were written the World Champion went for a different move: he played 15... d5 !? in the Grand Swiss Isle of Man Tournament against Russian hopeful Alexey Sarana. 15... d5 is a rare move and was probably intended as a surprise, but Sarana had done his homework and blitzed out the following moves. 15...d5 16.cxd5 Qd8 17.exf5 Qxd5 18.Rad1 e4 19.Bxb5 Qxf5 20. Qxf5 Bxf5 21.Bd7 Bxd7 22.Rxd7 Bxb2 23.Nc4. Now, this sequence is in fact clearly best play after 15... d5 and the resulting position I don't want to recommend, even though Magnus played the line. Black is very close to equality, but it's a grovel and not fun at all. Magnus ultimately drew the game after some unpleasant moments. Maybe HE kept his cool, but I would have been concerned ! In any case, I don't want to play for two results just yet if a win is not among them. 16.exf5 A more or less forced decision. Otherwise we take on e4 and play ...f5 next. 16...e4 17.Rae1 We attacked both the bishop on d3 and the pawn on b2, so White needs a tactical solution. 17...Bb7 18.Qg4 Rfe8 We need to cover e4. 19.cxb5 Kh8 We can't play without this king move. Our bishop was pinned and ...Rg8 is an important option to gain. 20.bxa6 Ba8 This is a good moment to take stock. This position is particularly important because of two reasons: 1. It is reached by forced or close to forced moves after 15... Rb8 and 2. White now actually has a choice of moves. One a general note: Black is three pawns down, but on all other accounts things are great ! The pieces

are active and there are many weak pawns that we might win back soon, like b2 and a6. Remarkably the engine evaluation is 'equal' and in correspondence chess White has not won a single game out of the 43 games in my database ! This is amazing and an almost sure sign that purely from an analytical point of view Black is fine. This is not so important in a practical game, of course, but assuring to know. As mentioned White has more than one move now, let's look at some sample lines. 21.a7 Qxa7 22.Bxe4 Qe7 This pinning move is sufficient for equality. 23.f3 Rxb2 24.Nc4 Rxa2 We have gotten two pawns back and White's position remains unstable. I decided to stop here, but feel free to continue yourself if you feel this is relevant for you.

**B33**

☐ **Sveshnikov 9. Bxf6,11. c3 and others**
■ **Sveshnikov 9. Bxf6,11. c3/others #6**

1.e4 c5 2.Nf3 Nc6 3.d4 cxd4 4.Nxd4 Nf6 5.Nc3 e5 6.Ndb5 d6 7.Bg5 a6 8.Na3 b5 9.Bxf6 White has three mainlines in the Sveshnikov: 6. Ndb5 d6 7. Nd5, 6. Ndb5 d6 7. Bg5 a6 8. Na3 b5 9. Nd5 and this one, which is by far the sharpest and most tactical line of the three. This in particular applies to the line 9.Bxf6 gxf6 10. Nd5 Bg7 11.Bd3 , which is the subject of the subsequent chapter. In this chapter we will examine other lines after 9.Bxf6 , most importantly 9...gxf6 10.Nd5 Bg7 11.c3 , which is the second main sub-branch of the 9. Bxf6 line, besides the 11. Bd3 line. 9...gxf6 This is forced. Black can't capture with the queen , because after 9...Qxf6 ? 10.Nd5 Qd8 White has many lines to give him a huge advantage. The brutal 11.Bxb5 and 11.c4 are terrible for Black. A good comparison to make: look at the very popular mainline 9. Nd5 Be7 10. Bxf6 Bxf6 (covered in 2 chapters of this course) , in which Black has the bishop on f6, while after 9... Qxf6 ? 10. Nd5 Qd8 it is on f8 !So long story short: take with the g-pawn and look forward to playing ...f5 even twice, if possible. 10.Nd5 Bg7 Black has two good moves in this position, the more traditional 10... f5 and the newer move 10... Bg7, the so-called Novosibirsk variation. Both lines have some overlap, because 10. ..Bg7 does only delay ...f5 for the moment. The main difference between the two lines is how the reply 11.Bd3 is handled. In the Novosibirsk you play 11... Ne7 to get rid of the Knight immediately , an approach that is clearly not possible after 10...f5 11.Bd3 , when 11...Ne7 12.Nf6# is a bit of a problem. Instead after 10...f5 11.Bd3 , 11...Be6 is the move , which leads to completely different positions compared to the Novosibirsk. Our repertoire choice is quite easy , as the World Champion has always played 10...Bg7 , as far as I can see. After 10... Bg7 White has two main tries for an advantage. The first one and the sharpest line is 11. Bd3 which we examine in the subsequent chapter. The second approach is to simply play 11.c3 , after which 11...f5 12.exf5 Bxf5 leads to a position that is often reached via 10... f5 11. c3 Bg7 12. exf5 Bxf5. This line leads to interesting play and is considered to be leading to equal chances. It is obviously a critical line for the Sveshnikov, as White can basically force you to enter it. Even

going 10... Bg7 or 10... f5 is not relevant, as you have no way to avoid it in both cases. So 11. c3 f5 is clearly the main chunk of this chapter, but we will also look a rare alternatives on move 11. 11.g3 White goes for one of the better sidelines. Black will get a fine position, but White usually does not get in trouble early on. 11...f5 Instead 11...Ne7 is not bad either, but 11... f5 is sharper and sets a small trap later. Playing ...Ne7 is much more pointed after 11. Bd3, because Black in this case immediately threatens to take on d5, forcing the pawn recapture. Therefore after 11. Bd3 Ne7 White has to take on e7, which is not the case here as the Queen is still able to take on d5. 12.exf5 Bxf5 13.Bg2 Be6 You may also castle instead, but this is the little trap that I mentioned. 14.c3 The wise choice instead of grabbing the exchange with 14.Nf6+. Instead 14.O-O is also reasonable , of course. 14...0-0 15.Nc2 a5 Black's setup includes .. .f5, ...a5 and ...Rb8, with the order of those moves being somewhat flexible. I like starting with ...a5 and ...Rb8, as this makes absolutely sure that nothing bad happens on the long diagonal. 16.0-0 Rb8 Black has cleared the long diagonal and is ready to play ...b4 at the right moment. 17.Qh5 f5 This move needs to be carefully considered against a fianchettoed Bishop on g2 if the Knight on c6 is unprotected , as Nf4 might be a good reply. Here 18.Nf4 is not working at all. 18.Nf4 Bf7 19.Qh3 exf4 20.Bxc6 d5 This is the problem for White ! The Bishop is trapped on c6 and the only line to save it is good for Black as well. 21.a4 bxa4 22.Bxa4 fxg3 23.hxg3 Rb6 The Rook lift to h6 gives Black a devastating attack, given that the a4-Bishop is out of play and can't help in the defence.

As usual it's very desirable for Black to take on d5 when White needs to recapture with a pawn. 12...Qxe7 After 12. .. Qxe7 White has two basic options. He can play c4, attacking the b5-pawn, or play c3, preparing to get the offside knight back into the game. White might play c4 or c3 right away or do it after castling kingside first. Castling is rather natural for both sides, so quite often this will be played quickly after a move of the c-pawn, for example 13.c4 f5 14.O-O O-O is just as common as 13.O-O O-O 14.c4 f5. I will examine 13.O-O O-O as the main line and then split the lines with 14.c4 or 14.c3. If White starts 13. c4, it will very likely transpose to 13. O-O O-O 14. c4, as the deviations are unattractive for White. 13.c3 is a different story. After 13...f5 the sequence 14.O-O O-O is possible and examined via 13. O-O O-O 14. c3 f5, but White often decides to not castle and then we will reach the only important independent line 13.c3 f5 14.Nc2 , when White's king will remain in the centre or castle queenside in some lines. Alright , let's check some moves to make things more concrete. 13.0-0 0-0 It's also possible to play 13...f5 first , there is no drawback to this move order. I went for 13... O-O because this way you have the rule of thumb for move 13 and 14 in this line to play ...f5 against the c-pawn moves and just castle as well if White plays O-O first. 14.c4 f5 The best way to react to 14. c4. As usual taking on c4 is terrible, as it helps the knight far too much. 14...b4 is also a disaster , as after 15. Nc2 a5 16.Ne3 Black does not even manage to play the fundamental ...f5 break. This only leaves Black with sacrificing the b-pawn, which explains why the 14. c4 - or 13. c4 - line is the sharpest one in the main line. Black is giving away the queenside and goes All-In with his counterplay in the centre and kingside. After 14... f5 White's main lines are the queen moves to h5 and f3, but he has also tried other continuations without much success. 15.Qf3 White's main tries for an advantage are 15.Qh5 and this move. 15...d5 We have seen this idea multiple times , so this should not come as a great surprise. In this particular case we can't play 15...fxe4 16.Qxe4 with a double threat, so ...d5 is played first in order to make ...fxe4 possible. 16.cxd5 fxe4 17.Bxe4 Rb8 We need to play this first. White was threatening d6, which even works after 17...f5 ? 18.d6 !. The rook move is useful not only as prophylaxis, but also introduces active ideas into the position, in particular a rook lift with ...Rb6-h6 or to g6. Now White's most logical way to play is to support the d-pawn with a rook. Both rook moves to d1 have been tested in practice. 18.Rad1 Rb6 Again we can't play ...f5 due to the d-pawn push. Now we threaten to play ...f5 again. 19.Qd3 By far the main move and for sure a critical one. White reinforces d6 and attacks h7 at the same time. Black's resources in these positions are remarkable, as Black's reply is rather shocking. 19...Qd7 Amazingly

Black can sacrifice h7 with a check. 20.Bxh7+ Kh8 What is this madness all about ? Black is now threatening ...f5, trapping the bishop ! White needs to be precise now to address this idea correctly. 21.d6 Rd8 Black is picking up the d-pawn and retains enough compensation. The knight on a3 is still not in the game and this is the main reason why all the complications work for Black. I'll show a line to demonstrate Black's chances. 22.Qe3 Rxd6 23.Rxd6 Qxd6 24.Bb1 f5 25.Qh3+ Qh6 26.Bxf5 Qxh3 27.Bxh3 Bxh3 28.gxh3 Rd2 I apologize for showing a line up to move 28, but you need to prove that such a dramatic line works at all. Here Black gets b2 back and is fine.

**B33**

☐ **Sveshnikov 9. Bxf6,11. Bd3**
■ **Sveshnikov 9. Bxf6,11. Bd3 #48**

1.e4 c5 2.Nf3 Nc6 3.d4 cxd4 4.Nxd4 Nf6 5.Nc3 e5 6.Ndb5 d6 7.Bg5 a6 8.Na3 b5 9.Bxf6 gxf6 10.Nd5 Bg7 11.Bd3 In this chapter we will examine the lines starting with this move. All other variations after 9. Bxf6 are covered in the previous chapter. After 11. Bd3 the game will become very sharp and tactical and Black needs to sacrifice pawns on a regular basis. In the main line of the 11. Bd3 complex we are three pawns down, but have great compensation !Of all the chapters in the whole course this is by far the one that requires move-by-move knowledge and precise calculation over the board. There is very little strategic content or 'plans' to guide you, it's just two sides engaging in a fight with clubs - and you better make sure to bring a huge club, meaning excellent preparation. It is definitely possible to work out some of the complications over the board, but this will be much more likely to be successful if you once had known them. It sounds odd, but it is true: study time is never wasted, even if you feel you have forgotten everything.The way to do it is to not try to remember as hard as you can, but rather think on your own and hope that you subconsciously piece it together. This works much better than sitting there and wrecking your brain to recall concrete lines.One important point that also needs to be mentioned: Black is the side on the attack after 11. Bd3. If White only has vague knowledge about the complications he is very likely just getting killed quickly. If you screw something up, it might be bad in computer terms... but you still have chances, given the enormous activity that Black usually enjoys. 11...Ne7 The only good move after 11. Bd3. The bishop move prevents ...f5 and we need to get rid of the d5-knight right away. 12.Nxe7 White's choice is limited, because with 11... Ne7 we had threatened to take on d5. As usual it's very desirable for Black to take on d5 when White needs to recapture with a pawn. 12...Qxe7 After 12. .. Qxe7 White has two basic options. He can play c4, attacking the b5-pawn, or play c3, preparing to get the offside knight back into the game. White might play c4 or c3 right away or do it after castling kingside first. Castling is rather natural for both sides, so quite often this will be played quickly after a move of the c-pawn, for example 13.c4 f5 14.O-O O-O is

just as common as 13.O-O O-O 14.c4 f5. I will examine 13.O-O O-O as the main line and then split the lines with 14.c4 or 14.c3. If White starts 13. c4, it will very likely transpose to 13. O-O O-O 14. c4, as the deviations are unattractive for White. 13.c3 is a different story. After 13...f5 the sequence 14.O-O O-O is possible and examined via 13. O-O O-O 14. c3 f5, but White often decides to not castle and then we will reach the only important independent line 13.c3 f5 14.Nc2 , when White's king will remain in the centre or castle queenside in some lines. Alright , let's check some moves to make things more concrete. 13.0-0 0-0 It's also possible to play 13...f5 first , there is no drawback to this move order. I went for 13... O-O because this way you have the rule of thumb for move 13 and 14 in this line to play ...f5 against the c-pawn moves and just castle as well if White plays O-O first. 14.c4 f5 The best way to react to 14. c4. As usual taking on c4 is terrible, as it helps the knight far too much. 14...b4 is also a disaster , as after 15. Nc2 a5 16.Ne3 Black does not even manage to play the fundamental ...f5 break. This only leaves Black with sacrificing the b-pawn, which explains why the 14. c4 - or 13. c4 - line is the sharpest one in the main line. Black is giving away the queenside and goes All-In with his counterplay in the centre and kingside. After 14... f5 White's main lines are the queen moves to h5 and f3, but he has also tried other continuations without much success. 15.Qh5 Rb8
We would have liked to take on e4, but 15...fxe4 16.Bxe4 is a double threat on h7 and on the rook. This explains 15... Rb8 - now we are threatening to take on e4 and then play ...f5 a second time ! The move 15... Rb8 has been tested numerous times in over the board play and correspondence chess and it looks like Black is doing fine in the hair-raising complications. I need to mention that 15... Rb8 is not the only move, though. In fact only some days before these lines were written the World Champion went for a different move: he played 15... d5 !? in the Grand Swiss Isle of Man Tournament against Russian hopeful Alexey Sarana. 15... d5 is a rare move and was probably intended as a surprise, but Sarana had done his homework and blitzed out the following moves. 15...d5 16.cxd5 Qd8 17.exf5 Qxd5 18.Rad1 e4 19.Bxb5 Qxf5 20. Qxf5 Bxf5 21.Bd7 Bxd7 22.Rxd7 Bxb2 23.Nc4. Now, this sequence is in fact clearly best play after 15... d5 and the resulting position I don't want to recommend, even though Magnus played the line. Black is very close to equality, but it's a grovel and not fun at all. Magnus ultimately drew the game after some unpleasant moments. Maybe HE kept his cool, but I would have been concerned ! In any case, I don't want to play for two results just yet if a win is not among them. 16.exf5 A more or less forced decision. Otherwise we take on e4 and play ...f5 next. 16...e4 17.Rae1
We attacked both the bishop on d3 and the pawn on b2, so White needs a tactical solution. 17...Bb7 18.Kh1 In the GM Repertoire book GM P.Negi recommends 18. Re3 , but he also presents this move as an alternative. He gave a long analysis , ending in equality , but it's a maze of lines. I tried to find a simpler solution and indeed Black is ok even without learning a couple of pages of lines. First we should establish what this king move actually does. The idea is to take on e4 and after ... Bxe4 to play f3, getting the piece back. Without Kh1 Black has ... Qa7+ or ...Bd4+, which refutes this version of the idea. 18...bxc4 19.Bxe4 Bxe4 20.f3 Rxb2

Negi analyses 20...Rfc8 and 20...Qf6 to equality , but these lines are deep and complicated. He does not cover 20... Rxb2, which looks simpler to me. 21.Nxc4 Rb1 The best way to return the piece. 22.fxe4 Rxe1 23.Rxe1 d5 This trick is the equaliser for Black. There are some moves for White here, but Black always has enough for the pawn. I am showing a sample line. 24.f6 Qxf6 25.exd5 Qd4 26.Ne3 Re8 White has no way forward from here.

**B33**

☐ **Sveshnikov 9. Bxf6,11. c3 and others**
■ **Sveshnikov 9. Bxf6,11. c3/others #4**

1.e4 c5 2.Nf3 Nc6 3.d4 cxd4 4.Nxd4 Nf6 5.Nc3 e5 6.Ndb5 d6 7.Bg5 a6 8.Na3 b5 9.Bxf6 White has three mainlines in the Sveshnikov: 6. Ndb5 d6 7. Nd5, 6. Ndb5 d6 7. Bg5 a6 8. Na3 b5 9. Nd5 and this one, which is by far the sharpest and most tactical line of the three. This in particular applies to the line 9.Bxf6 gxf6 10. Nd5 Bg7 11.Bd3 , which is the subject of the subsequent chapter. In this chapter we will examine other lines after 9.Bxf6 , most importantly 9...gxf6 10.Nd5 Bg7 11.c3 , which is the second main sub-branch of the 9. Bxf6 line, besides the 11. Bd3 line. 9...gxf6 This is forced. Black can't capture with the queen , because after 9...Qxf6 ? 10.Nd5 Qd8 White has many lines to give him a huge advantage. The brutal 11.Bxb5 and 11.c4 are terrible for Black. A good comparison to make: look at the very popular mainline 9. Nd5 Be7 10. Bxf6 Bxf6 (covered in 2 chapters of this course) , in which Black has the bishop on f6, while after 9... Qxf6 ? 10. Nd5 Qd8 it is on f8 !So long story short: take with the g-pawn and look forward to playing ...f5 even twice, if possible. 10.Nd5 Bg7 Black has two good moves in this position, the more traditional 10... f5 and the newer move 10... Bg7, the so-called Novosibirsk variation. Both lines have some overlap, because 10. ..Bg7 does only delay ...f5 for the moment. The main difference between the two lines is how the reply 11.Bd3 is handled. In the Novosibirsk you play 11... Ne7 to get rid of the Knight immediately , an approach that is clearly not possible after 10...f5 11.Bd3 , when 11...Ne7 12.Nf6# is a bit of a problem. Instead after 10...f5 11.Bd3 , 11...Be6 is the move , which leads to completely different positions compared to the Novosibirsk. Our repertoire choice is quite easy , as the World Champion has always played 10...Bg7 , as far as I can see. After 10... Bg7 White has two main tries for an advantage. The first one and the sharpest line is 11. Bd3 which we examine in the subsequent chapter. The second approach is to simply play 11.c3 , after which 11...f5 12.exf5 Bxf5 leads to a position that is often reached via 10... f5 11. c3 Bg7 12. exf5 Bxf5. This line leads to interesting play and is considered to be leading to equal chances. It is obviously a critical line for the Sveshnikov, as White can basically force you to enter it. Even going 10... Bg7 or 10... f5 is not relevant, as you have no way to avoid it in both cases. So 11. c3 f5 is clearly the main chunk of this chapter, but we will also look a rare alternatives on move 11. 11.g3 White goes for one of the better sidelines. Black

will get a fine position, but White usually does not get in trouble early on. 11...f5 Instead 11...Ne7 is not bad either, but 11... f5 is sharper and sets a small trap later. Playing ...Ne7 is much more pointed after 11. Bd3, because Black in this case immediately threatens to take on d5, forcing the pawn recapture. Therefore after 11. Bd3 Ne7 White has to take on e7, which is not the case here as the Queen is still able to take on d5. 12.exf5 Bxf5 13.Bg2 Be6 You may also castle instead, but this is the little trap that I mentioned. 14.Nf6+ This is the greedy and bad move ! 14...Bxf6 15.Bxc6+ Ke7 16.Bxa8 Qxa8 Black has a great position for the exchange and already a substantial advantage. 17.0-0 h5 Even stronger than 17...Bh3. Note that ... b4 at the right moment sends the Knight back to b1, completely killing White's coordination.

If White only has vague knowledge about the complications he is very likely just getting killed quickly. If you screw something up, it might be bad in computer terms... but you still have chances, given the enormous activity that Black usually enjoys. 11...Ne7 The only good move after 11. Bd3. The bishop move prevents ...f5 and we need to get rid of the d5-knight right away. 12.Nxe7 White's choice is limited, because with 11... Ne7 we had threatened to take on d5. As usual it's very desirable for Black to take on d5 when White needs to recapture with a pawn. 12...Qxe7 After 12. .. Qxe7 White has two basic options. He can play c4, attacking the b5-pawn, or play c3, preparing to get the offside knight back into the game. White might play c4 or c3 right away or do it after

castling kingside first. Castling is rather natural for both sides, so quite often this will be played quickly after a move of the c-pawn, for example 13.c4 f5 14.O-O O-O is just as common as 13.O-O O-O 14.c4 f5. I will examine 13.O-O O-O as the main line and then split the lines with 14.c4 or 14.c3. If White starts 13. c4, it will very likely transpose to 13. O-O O-O 14. c4, as the deviations are unattractive for White. 13.c3 is a different story. After 13...f5 the sequence 14.O-O O-O is possible and examined via 13. O-O O-O 14. c3 f5, but White often decides to not castle and then we will reach the only important independent line 13.c3 f5 14.Nc2 , when White's king will remain in the centre or castle queenside in some lines. Alright , let's check some moves to make things more concrete. 13.0-0 0-0 It's also possible to play 13...f5 first , there is no drawback to this move order. I went for 13... O-O because this way you have the rule of thumb for move 13 and 14 in this line to play ...f5 against the c-pawn moves and just castle as well if White plays O-O first. 14.c4 f5 The best way to react to 14. c4. As usual taking on c4 is terrible, as it helps the knight far too much. 14...b4 is also a disaster , as after 15. Nc2 a5 16.Ne3 Black does not even manage to play the fundamental ...f5 break. This only leaves Black with sacrificing the b-pawn, which explains why the 14. c4 - or 13. c4 - line is the sharpest one in the main line. Black is giving away the queenside and goes All-In with his counterplay in the centre and kingside. After 14... f5 White's main lines are the queen moves to h5 and f3, but he has also tried other continuations without much success. 15.Qh5 Rb8
We would have liked to take on e4, but 15...fxe4 16.Bxe4 is a double threat on h7 and on the rook. This explains 15... Rb8 - now we are threatening to take on e4 and then play ...f5 a second time ! The move 15... Rb8 has been tested numerous times in over the board play and correspondence chess and it looks like Black is doing fine in the hair-raising complications. I need to mention that 15... Rb8 is not the only move, though. In fact only some days before these lines were written the World Champion went for a different move: he played 15... d5 !? in the Grand Swiss Isle of Man Tournament against Russian hopeful Alexey Sarana. 15... d5 is a rare move and was probably intended as a surprise, but Sarana had done his homework and blitzed out the following moves. 15...d5 16.cxd5 Qd8 17.exf5 Qxd5 18.Rad1 e4 19.Bxb5 Qxf5 20. Qxf5 Bxf5 21.Bd7 Bxd7 22.Rxd7 Bxb2 23.Nc4. Now, this sequence is in fact clearly best play after 15... d5 and the resulting position I don't want to recommend, even though Magnus played the line. Black is very close to equality, but it's a grovel and not fun at all. Magnus ultimately drew the game after some unpleasant moments. Maybe HE kept his cool, but I would have been concerned ! In any case, I don't want to play for two results just yet if a win is not among them. 16.exf5 A more or less forced decision. Otherwise we take on e4 and play ...f5 next. 16...e4 17.Rae1
We attacked both the bishop on d3 and the pawn on b2, so White needs a tactical solution. 17...Bb7 18.Qg4 Rfe8 We need to cover e4. 19.cxb5 Kh8 We can't play without this king move. Our bishop was pinned and ...Rg8 is an important option to gain. 20.bxa6 Ba8 This is a good moment to take stock. This position is particularly important because of two reasons: 1. It is reached by forced or close to forced moves after 15... Rb8 and 2. White now actually has a choice of moves. One a general note:

Black is three pawns down, but on all other accounts things are great ! The pieces are active and there are many weak pawns that we might win back soon, like b2 and a6. Remarkably the engine evaluation is 'equal' and in correspondence chess White has not won a single game out of the 43 games in my database ! This is amazing and an almost sure sign that purely from an analytical point of view Black is fine. This is not so important in a practical game, of course, but assuring to know. As mentioned White has more than one move now, let's look at some sample lines. 21.Nb5 This is the move that I would probably play if I just had to play this over the board without any prior knowledge. The knight gets activated and a4 will lend support to it. 21...d5 22.a4 Be5 23.Bb1 Rb6 Black has a strong attack, with ...Rg8 and the rook lift to h6 to come. You can also pick up a6, which makes sense. The far advanced a-pawn is a possible distraction during the attack and should be removed. This position is evaluated 0.00 by engines, which is what you expect somehow. Still it is clear that it is as far away from drawish as you can possibly imagine. White needs to defend very accurately against our attack, which is tough to do for a human. In a practical game I'll take Black any day !

Qxf5 Bxf5 21.Bd7 Bxd7 22.Rxd7 Bxb2 23.Nc4. Now, this sequence is in fact clearly best play after 15... d5 and the resulting position I don't want to recommend, even though Magnus played the line. Black is very close to equality, but it's a grovel and not fun at all. Magnus ultimately drew the game after some unpleasant moments. Maybe HE kept his cool, but I would have been concerned ! In any case, I don't want to play for two results just yet if a win is not among them. 16.exf5 A more or less forced decision. Otherwise we take on e4 and play ...f5 next. 16...e4 17.Rae1
We attacked both the bishop on d3 and the pawn on b2, so White needs a tactical

solution. 17...Bb7 18.f3 This move was played in the early days of this line. Nowadays it has been worked out how to refute it. 18...d5 19.fxe4 dxc4 20.Bb1 Bd4+ 21.Kh1 f6 Black is already winning by engine standards. This is a harsh assessment, but it's clear that White is in trouble. He has a hard time covering b2 !

☐ **Sveshnikov 9. Bxf6,11. Bd3**
■ **Sveshnikov 9. Bxf6,11. Bd3 #52**

1.e4 c5 2.Nf3 Nc6 3.d4 cxd4 4.Nxd4 Nf6 5.Nc3 e5 6.Ndb5 d6 7.Bg5 a6 8.Na3 b5 9.Bxf6 gxf6 10.Nd5 Bg7 11.Bd3 In this chapter we will examine the lines starting with this move. All other variations after 9. Bxf6 are covered in the previous chapter. After 11. Bd3 the game will become very sharp and tactical and Black needs to sacrifice pawns on a regular basis. In the main line of the 11. Bd3 complex we are three pawns down, but have great compensation !Of all the chapters in the whole course this is by far the one that requires move-by-move knowledge and precise calculation over the board. There is very little strategic content or 'plans' to guide you, it's just two sides engaging in a fight with clubs - and you better make sure to bring a huge club, meaning excellent preparation. It is definitely possible to work out some of the complications over the board, but this will be much more likely to be successful if you once had known them. It sounds odd, but it is true: study time is never wasted, even if you feel you have forgotten everything.The way to do it is to not try to remember as hard as you can, but rather think on your own and hope that you subconsciously piece it together. This works much better than sitting there and wrecking your brain to recall concrete lines.One important point that also needs to be mentioned: Black is the side on the attack after 11. Bd3. If White only has vague knowledge about the complications he is very likely just getting killed quickly. If you screw something up, it might be bad in computer terms... but you still have chances, given the enormous activity that Black usually enjoys. 11...Ne7 The only good move after 11. Bd3. The bishop move prevents ...f5 and we need to get rid of the d5-knight right away. 12.Nxe7 White's choice is limited, because with 11... Ne7 we had threatened to take on d5. As usual it's very desirable for Black to take on d5 when White needs to recapture with a pawn. 12...Qxe7 After 12. .. Qxe7 White has two basic options. He can play c4, attacking the b5-pawn, or play c3, preparing to get the offside knight back into the game. White might play c4 or c3 right away or do it after castling kingside first. Castling is rather natural for both sides, so quite often this will be played quickly after a move of the c-pawn, for example 13.c4 f5 14.O-O O-O is just as common as 13.O-O O-O 14.c4 f5. I will examine 13.O-O O-O as the main line and then split the lines with 14.c4 or 14.c3. If White starts 13. c4, it will very likely transpose to 13. O-O O-O 14. c4, as the deviations are unattractive for White. 13.c3 is a different story. After 13...f5 the sequence 14.O-O O-O is possible and examined via 13. O-O O-O 14. c3 f5, but White often decides to not castle and then we will

reach the only important independent line 13.c3 f5 14.Nc2 , when White's king will remain in the centre or castle queenside in some lines. Alright , let's check some moves to make things more concrete. 13.0-0 0-0 It's also possible to play 13...f5 first , there is no drawback to this move order. I went for 13... O-O because this way you have the rule of thumb for move 13 and 14 in this line to play ...f5 against the c-pawn moves and just castle as well if White plays O-O first. 14.c4 f5 The best way to react to 14. c4. As usual taking on c4 is terrible, as it helps the knight far too much. 14...b4 is also a disaster , as after 15. Nc2 a5 16.Ne3 Black does not even manage to play the fundamental ...f5 break. This only leaves Black with sacrificing the b-pawn, which explains why the 14. c4 - or 13. c4 - line is the sharpest one in the main line. Black is giving away the queenside and goes All-In with his counterplay in the centre and kingside. After 14... f5 White's main lines are the queen moves to h5 and f3, but he has also tried other continuations without much success. 15.Qh5 Rb8 We would have liked to take on e4, but 15...fxe4 16.Bxe4 is a double threat on h7 and on the rook. This explains 15... Rb8 - now we are threatening to take on e4 and then play ...f5 a second time ! The move 15... Rb8 has been tested numerous times in over the board play and correspondence chess and it looks like Black is doing fine in the hair-raising complications. I need to mention that 15... Rb8 is not the only move, though. In fact only some days before these lines were written the World Champion went for a different move: he played 15... d5 !? in the Grand Swiss Isle of Man Tournament against Russian hopeful Alexey Sarana. 15... d5 is a rare move and was probably intended as a surprise, but Sarana had done his homework and blitzed out the following moves. 15...d5 16.cxd5 Qd8 17.exf5 Qxd5 18.Rad1 e4 19.Bxb5 Qxf5 20. Qxf5 Bxf5 21.Bd7 Bxd7 22.Rxd7 Bxb2 23.Nc4. Now, this sequence is in fact clearly best play after 15... d5 and the resulting position I don't want to recommend, even though Magnus played the line. Black is very close to equality, but it's a grovel and not fun at all. Magnus ultimately drew the game after some unpleasant moments. Maybe HE kept his cool, but I would have been concerned ! In any case, I don't want to play for two results just yet if a win is not among them. 16.exf5 A more or less forced decision. Otherwise we take on e4 and play ...f5 next. 16...e4 17.Rae1 We attacked both the bishop on d3 and the pawn on b2, so White needs a tactical solution. 17...Bb7 18.Qg4 Rfe8 We need to cover e4. 19.cxb5 Kh8 We can't play without this king move. Our bishop was pinned and ...Rg8 is an important option to gain. 20.f3 This does not work for White. 20...Bxb2 21.Nc4 Bd4+ 22.Kh1 d5 The knight has no good square to go to and ...Rg8 is looming. White is in deep trouble.

This works much better than sitting there and wrecking your brain to recall concrete lines.One important point that also needs to be mentioned: Black is the side on the attack after 11. Bd3. If White only has vague knowledge about the complications he is very likely just getting killed quickly. If you screw something up, it might be bad in computer terms... but you still have chances, given the enormous activity that Black usually enjoys. 11...Ne7 The only good move after 11. Bd3. The bishop move prevents ...f5 and we need to get rid of the d5-knight right away. 12.Nxe7 White's choice is limited, because with 11... Ne7 we had threatened to take on d5. As usual it's very desirable for Black to take on d5 when White needs to recapture with a pawn. 12...Qxe7 After 12. .. Qxe7 White has two basic options. He can play c4, attacking the b5-pawn, or play c3, preparing to get the offside knight back into the game. White might play c4 or c3 right away or do it after castling kingside first. Castling is rather natural for both sides, so quite often this will be played quickly after a move of the c-pawn, for example 13.c4 f5 14.O-O O-O is just as common as 13.O-O O-O 14.c4 f5. I will examine 13.O-O O-O as the main line and then split the lines with 14.c4 or 14.c3. If White starts 13. c4, it will very likely transpose to 13. O-O O-O 14. c4, as the deviations are unattractive for White. 13.c3 is a different story. After 13...f5 the sequence 14.O-O O-O is possible and examined via 13. O-O O-O 14. c3 f5, but White often decides to not castle and then we will reach the only important independent line 13.c3 f5 14.Nc2 , when White's king will remain in the centre or castle queenside in some lines. Alright , let's check some moves to make things more concrete. 13.0-0 0-0 It's also possible to play 13...f5 first , there is no drawback to this move order. I went for 13... O-O because this way you have the rule of thumb for move 13 and 14 in this line to play ...f5 against the c-pawn moves and just castle as well if White plays O-O first. 14.c4 f5 The best way

to react to 14. c4. As usual taking on c4 is terrible, as it helps the knight far too much. 14...b4 is also a disaster , as after 15. Nc2 a5 16.Ne3 Black does not even manage to play the fundamental ...f5 break. This only leaves Black with sacrificing the b-pawn, which explains why the 14. c4 - or 13. c4 - line is the sharpest one in the main line. Black is giving away the queenside and goes All-In with his counterplay in the centre and kingside. After 14... f5 White's main lines are the queen moves to h5 and f3, but he has also tried other continuations without much success. 15.Qf3 White's main tries for an advantage are 15.Qh5 and this move. 15...d5 We have seen this idea multiple times , so this should not come as a great surprise. In this particular case we can't play 15...fxe4 16.Qxe4 with a double threat, so ...d5 is played first in order to make ...fxe4 possible. 16.cxd5 fxe4 17.Bxe4 Rb8 We need to play this first. White was threatening d6, which even works after 17...f5 ? 18.d6 !. The rook move is useful not only as prophylaxis, but also introduces active ideas into the position, in particular a rook lift with ...Rb6-h6 or to g6. Now White's most logical way to play is to support the d-pawn with a rook. Both rook moves to d1 have been tested in practice. 18.Rad1 Rb6 Again we can't play . ..f5 due to the d-pawn push. Now we threaten to play ... f5 again. 19.Qd3 By far the main move and for sure a critical one. White reinforces d6 and attacks h7 at the same time. Black's resources in these positions are remarkable, as Black's reply is rather shocking. 19...Qd7 Amazingly Black can sacrifice h7 with a check. 20.Bxh7+ Kh8 What is this madness all about ? Black is now threatening ...f5, trapping the bishop ! White needs to be precise now to address this idea correctly. 21.Qe3 Rh6 The rook is defending and attacking at the same time. 22.Bc2 Qd6 This is the final move you need to remember. Black avoids 22...f5 23.d6 ! and is now able to push ...e4 and/or ...f5. I'll show the rest of a game in which a 2600 GM lost in three more moves. 23.g3 Bh3 24.Rfe1 f5 25.f4 The losing mistake. It was tough to defend this position anyway, but now it's all over. 25...exf4 26.Qe7 Qb6+ And White resigned in P.Smirnov-T.Radjabov , Tripoli 2004. After 27.Kh1 Qf2 the mate is unavoidable.

**B33**

☐ **Sveshnikov 9. Nd5 with 11. c3**
■ **Sveshnikov 9. Nd5 with 11. c3**

1.e4 c5 2.Nf3 Nc6 3.d4 cxd4 4.Nxd4 Nf6 5.Nc3 e5 6.Ndb5 d6 7.Bg5 a6 8.Na3 b5 9.Nd5 Be7 10.Bxf6 Bxf6 11.c3 This is the most popular move for White. In the first decades of the Sveshnikov it was basically the only one played, before 11. c4 gained some ground. In this chapter we are analysing 11. c3, while other continuations after 9. Nd5, in particular the 11. c4 line, are discussed in the previous chapter.The move 11. c3 makes a very logical impression. The knight on a3 is clearly a problem piece and needs to be improved. The route via c2 is now possible and often the knight soon connects to the weak d5-square via e3 or, less often, via b4. After the knight is moved away from a3 White gains the option to play a4, attacking

the extended black queenside. White's strategy in this line is usually connected with this idea, but there are other options as well. White quite frequently plays the move h4, covering the g5-square and preventing ... Bg5. This may also be the start of play on the kingside, very much depending on the concrete circumstances. Alright, what is black supposed to do ? The good news is that Black has a number of options and Magnus Carlsen has tried most of them. This is also the bad news for an author: you need to pick a line if you want to simply copy what Magnus always does. So what are the options ? First of all , there is one independent and non-transpositional line that Black has available now. He may play 11...Ne7 , and this line was used once by the World Champion in a 2019 Blitz game against Lenier Dominguez. After the usual 12.Nxf6+ gxf6 you get the same pawn structure as after 9. Bxf6, featuring the doubled f-pawns. I think this line is not bad, but it was only employed once by Magnus in a Blitz game. In more important encounters he has used more standard main lines. To understand how the main lines work it makes sense to look at how the theory developed over the course of time. In the early years of the Sveshnikov they started with 11...O-O and after 12.Nc2 played 12...Bg5. The bishop usually goes to g5, watching over the e3-square, freeing the f-pawn and allowing the queen to move without allowing Nxf6+ with doubled pawns. The drawback of 12... Bg5 is 13.a4 , when Black needs to capture with 13...bxa4. it usually a bad idea to play something like 13...Rb8 14.axb5 axb5 , when White controls the a-file and b5 is a useful target for White. After 13... bxa4 White just plays 14.Rxa4 and is happy to have a setup with Bc4 and often b3 next. This type of position is not terrible for Black, but nowadays Black tries to avoid it in view of better options. One idea is to play an early ...Rb8, so that after White pushes a4 we are able to take and immediately attack b2, making the simple recapture on a4 problematic. There are multiple ways to employ the ... Rb8 idea. You can play it right away with 11...Rb8 , or wait until White has played Nc2, so for example 11...O-O 12.Nc2 Rb8 or 11...Bg5 (as we know a generally useful move) 12.Nc2 Rb8. So essentially Black has three moves that we want to play (...O-O, ... Rb8 and ...Bg5) and he may do so in every imaginable order ! Magnus has played various orders, so we don't see a clear preference on his part. Let's work out what the difference between them is. First of all , let's look at 11...O-O 12.Nc2 Rb8. With 12... Rb8 we have defanged 13. a4, but White has the option to play 13.h4 , which stops our intended next move 13... Bg5. This is the drawback of the early ...O-O move order. So what about 11...Rb8 12.Nc2 Bg5 or 11...Bg5 12.Nc2 Rb8 ? Here the key point to study is 13.a4 bxa4 14.Ncb4 , when both 14...Nxb4 15.cxb4 and 15. Nxb4 lead to long , tactical lines. These lines are fine for Black , but you need to basically learn many variations beyond move 20 on a move-by-move basis. It's tough to work it out over the board and therefore more rote memorization than anything else. If possible I'd like to avoid those lines , unless it is absolutely necessary and the alternatives are unattractive. I looked at 11... O-O 12.Nc2 Rb8 13.h4 in comparison and felt this is much easier to handle , but of course considerably less sharp and tactical. This is largely a matter of personal preference and less a matter of move/ line quality. If you like to be as unpredictable as the World Champion , you may start

with the line presented here to get you going and later add the other move orders that Carlsen plays as well. 11...0-0 As explained in the remarks to 11. c3, Black has a range of lines and move orders available. 11...O-O felt like the most practical choice to me. 12.Nc2 What could be more natural after 11. c3 ? White has tried to delay this move, but unsurprisingly this is not dangerous at all. 12...Rb8 As already explained earlier this move is played to discourage White to play a4, due to the pressure down the b-file. If you play 12...Bg5 instead you allow 13.a4 , when you have nothing better than 13...bxa4 14.Rxa4. This line is still played nowadays , but I feel it is an unnecessary concession. After 12...Rb8 the move 13.a4 is still playable , but rather harmless. The only possible issue with 12...Rb8 is the reply 13.h4 , which prevents ...Bg5. The bishop move to g5 is desirable for Black, so we need to have something prepared against the h-pawn push. Instead of 13. h4 White may also play a slower setup with 13.Be2 or 13.Bd3 , but these don't feel very challenging for Black. 13.Bd3 A natural development move. White might have a later Bc2-b3 in mind, connecting the bishop to the d5-square. Black is not worried much about slow ideas like that. 13...Bg5 The usual move we basically always play unless White stops us with 13. h4 or 13. a4. Here White might answer it with 14.h4 , but we'll see it is not an issue. If you want to avoid this for some reason you might also start with 13...Be6 and only after 14.O-O go 14....Bg5. I recommend 13... Bg5 for consistency reasons - 'always play ...Bg5 unless they stop us'. 14.h4 This leads to an unconventional and sharp position that gives Black equal chances. If you like to avoid this scenario you can play 13... Be6 first as mentioned. 14...Bh6 We can't take it due to Qh5. 15.g4 The consistent follow up. White can't castle short with the exposed h4-pawn anyway. 15...Bf4 Instead 15...f6 is not bad either, but this move is more dynamic. We hope that White takes our bishop, giving us the excellent e5-square for the knight. 16.Qf3 Be6 17.Nxf4 White should avoid this move as Black gets a strong initiative. 17...exf4 18.Qxf4 Ne5 19.Be2 b4 A very strong improvement on existing games. After the weaker 19...Bxg4 20.Ne3 White is still ok. The move 19... b4 ! makes sure that the b-file opens to great effect. 20.Nxb4 a5 21.Nd3 Nxd3+ 22.Bxd3 Rxb2 Black is in great shape here. White has no attack and his king does not find a safe place any more.

**B33**

☐ **Sveshnikov 9. Nd5 with 11. c3**

■ **Sveshnikov 9. Nd5 with 11. c3**

1.e4 c5 2.Nf3 Nc6 3.d4 cxd4 4.Nxd4 Nf6 5.Nc3 e5 6.Ndb5 d6 7.Bg5 a6 8.Na3 b5 9.Nd5 Be7 10.Bxf6 Bxf6 11.c3 This is the most popular move for White. In the first decades of the Sveshnikov it was basically the only one played, before 11. c4 gained some ground. In this chapter we are analysing 11. c3, while other continuations after 9. The bishop usually goes to g5, watching over the e3-square, freeing the f-pawn and allowing the queen to move without allowing Nxf6+ with doubled pawns. The drawback of 12... Bg5 is 13.a4 , when Black needs to capture with 13...bxa4. it usually a bad idea to play something like 13...Rb8 14.axb5 axb5 , when White controls the a-file and b5 is a useful target for White. After 13... bxa4 White just plays 14.Rxa4 and is happy to have a setup with Bc4 and often b3 next. This type of position is not terrible for Black, but nowadays Black tries to avoid it in view of better options. One idea is to play an early ...Rb8, so that after White pushes a4 we are able to take and immediately attack b2, making the simple recapture on a4 problematic. There are multiple ways to employ the ... Rb8 idea. You can play it right away with 11...Rb8 , or wait until White has played Nc2, so for example 11...O-O 12.Nc2 Rb8 or 11...Bg5 (as we know a generally useful move) 12.Nc2 Rb8. So essentially Black has three moves that we want to play (...O-O, ... Rb8 and ...Bg5) and he may do so in every imaginable order ! Magnus has played various orders, so we don't see a clear preference on his part. Let's work out what the difference between them is. First of all , let's look at 11...O-O 12.Nc2 Rb8. With 12... Rb8 we have defanged 13. a4, but White has the option to play 13.h4 , which stops our intended next move 13... Bg5. This is the drawback of the early ...O-O move order. So what about 11...Rb8 12.Nc2 Bg5 or 11...Bg5 12.Nc2 Rb8 ? Here the key point to study is 13.a4 bxa4 14.Ncb4 , when both 14...Nxb4 15.cxb4 and 15. Nxb4 lead to long , tactical lines. These lines are fine for Black , but you need to basically learn many variations beyond move 20 on a move-by-move basis. It's tough to work it out over the board and therefore more rote memorization than anything else. If possible I'd like to avoid those lines , unless it is absolutely necessary and the alternatives are unattractive. I looked at 11... O-O 12.Nc2 Rb8 13.h4 in comparison

and felt this is much easier to handle , but of course considerably less sharp and tactical. This is largely a matter of personal preference and less a matter of move/ line quality. If you like to be as unpredictable as the World Champion , you may start with the line presented here to get you going and later add the other move orders that Carlsen plays as well. 11...0-0 As explained in the remarks to 11. c3, Black has a range of lines and move orders available. 11...O-O felt like the most practical choice to me. 12.Nc2 What could be more natural after 11. c3 ? White has tried to delay this move, but unsurprisingly this is not dangerous at all. 12...Rb8 As already explained earlier this move is played to discourage White to play a4, due to the pressure down the b-file. If you play 12...Bg5 instead you allow 13.a4 , when you have nothing better than 13...bxa4 14.Rxa4. This line is still played nowadays , but I feel it is an unnecessary concession. After 12...Rb8 the move 13.a4 is still playable , but rather harmless. The only possible issue with 12...Rb8 is the reply 13.h4 , which prevents ...Bg5. The bishop move to g5 is desirable for Black, so we need to have something prepared against the h-pawn push. Instead of 13. h4 White may also play a slower setup with 13.Be2 or 13.Bd3 , but these don't feel very challenging for Black. 13.a4 bxa4 Always take on a4 ! It sounds a bit like a Ben Finegold quote, but it is nevertheless good advice. 14.Ncb4 Black is fine after this move, but it is a least an interesting try. 14...Nxb4 15.cxb4 Here it is a good moment to briefly consider the difference between our move order with 11... O-O 12. Nc2 Rb8 compared to 11... Bg5 12. Nc2 Rb8. In our move order we are able to play 15... Bb7 after both captures and equalize easily (or even more) . If you play the second move order the king is still on e8, which means a4 is hanging with check, making ...Bb7 impossible. As discussed earlier the second move order is perfectly fine, but it takes much more learning effort to defuse the a4 idea. 15...Bb7 16.Rxa4 Qc8 This is the only difficult move to remember, but it is important to do so. Black is able to even fight for more than equality now. Black's idea is to take on d5 and force White to recapture with the e-pawn, as Qxd5 allows a check on c1 ! 17.Nxf6+ gxf6 18.Bd3 This position was reached in M.Vachier Lagrave-M.Carlsen, London 2015. 18...d5 This is even better than Carlsen's more cautious 18...Bc6. 19.exd5 Rd8 Black intends to take on d5 with the rook, with ...Qd7 to follow. The black kingside looks weak, but White has no way to exploit it. 20.0-0 Rxd5 Black is better here. Black's pieces are more active and even ...Rd4-g4 is a possible way to continue.

**B33**

■ **Sveshnikov 9. Nd5 with 11. c3**

1.e4 c5 2.Nf3 Nc6 3.d4 cxd4 4.Nxd4 Nf6 5.Nc3 e5 6.Ndb5 d6 7.Bg5 a6 8.Na3 b5 9.Nd5 Be7 10.Bxf6 Bxf6 11.c3 This is the most popular move for White. In the first decades of the Sveshnikov it was basically the only one played, before 11. c4 gained some ground. In this chapter we are analysing 11. c3, while other

continuations after 9. Nd5, in particular the 11. c4 line, are discussed in the previous chapter.The move 11. c3 makes a very logical impression. The knight on a3 is clearly a problem piece and needs to be improved. The route via c2 is now possible and often the knight soon connects to the weak d5-square via e3 or, less often, via b4. After the knight is moved away from a3 White gains the option to play a4, attacking the extended black queenside. White's strategy in this line is usually connected with this idea, but there are other options as well. White quite frequently plays the move h4, covering the g5-square and preventing ... Bg5. This may also be the start of play on the kingside, very much depending on the concrete circumstances. Alright, what is black supposed to do ? The good news is that Black has a number of options and Magnus Carlsen has tried most of them. This is also the bad news for an author: you need to pick a line if you want to simply copy what Magnus always does. So what are the options ? First of all , there is one independent and non-transpositional line that Black has available now. He may play 11...Ne7 , and this line was used once by the World Champion in a 2019 Blitz game against Lenier Dominguez. After the usual 12.Nxf6+ gxf6 you get the same pawn structure as after 9. Bxf6, featuring the doubled f-pawns. I think this line is not bad, but it was only employed once by Magnus in a Blitz game. In more important encounters he has used more standard main lines. To understand how the main lines work it makes sense to look at how the theory developed over the course of time. In the early years of the Sveshnikov they started with 11...O-O and after 12.Nc2 played 12...Bg5. The bishop usually goes to g5, watching over the e3-square, freeing the f-pawn and allowing the queen to move without allowing Nxf6+ with doubled pawns. The drawback of 12... Bg5 is 13.a4 , when Black needs to capture with 13...bxa4. it usually a bad idea to play something like 13...Rb8 14.axb5 axb5 , when White controls the a-file and b5 is a useful target for White. After 13... bxa4 White just plays 14.Rxa4 and is happy to have a setup with Bc4 and often b3 next. This type of position is not terrible for Black, but nowadays Black tries to avoid it in view of better options. One idea is to play an early ...Rb8, so that after White pushes a4 we are able to take and immediately attack b2, making the simple recapture on a4 problematic. There are multiple ways to employ the ... Rb8 idea. You can play it right away with 11...Rb8 , or wait until White has played Nc2, so for example 11...O-O 12.Nc2 Rb8 or 11...Bg5 (as we know a generally useful move) 12.Nc2 Rb8. So essentially Black has three moves that we want to play (...O-O, ... Rb8 and ...Bg5) and he may do so in every imaginable order ! Magnus has played various orders, so we don't see a clear preference on his part. Let's work out what the difference between them is. First of all , let's look at 11...O-O 12.Nc2 Rb8. With 12... Rb8 we have defanged 13. a4, but White has the option to play 13.h4 , which stops our intended next move 13... Bg5. This is the drawback of the early ...O-O move order. So what about 11...Rb8 12.Nc2 Bg5 or 11...Bg5 12.Nc2 Rb8 ? Here the key point to study is 13.a4 bxa4 14.Ncb4 , when both 14...Nxb4 15.cxb4 and 15. Nxb4 lead to long , tactical lines. These lines are fine for Black , but you need to basically learn many variations beyond move 20 on a move-by-move basis. It's tough to work it out over the board and therefore more rote memorization than anything else.

If possible I'd like to avoid those lines , unless it is absolutely necessary and the alternatives are unattractive. I looked at 11... O-O 12.Nc2 Rb8 13.h4 in comparison and felt this is much easier to handle , but of course considerably less sharp and tactical. This is largely a matter of personal preference and less a matter of move/ line quality. If you like to be as unpredictable as the World Champion , you may start with the line presented here to get you going and later add the other move orders that Carlsen plays as well. 11...0-0 As explained in the remarks to 11. c3, Black has a range of lines and move orders available. 11...O-O felt like the most practical choice to me. 12.Nc2 What could be more natural after 11. c3 ? White has tried to delay this move, but unsurprisingly this is not dangerous at all. 12...Rb8 As already explained earlier this move is played to discourage White to play a4, due to the pressure down the b-file. If you play 12...Bg5 instead you allow 13.a4 , when you have nothing better than 13...bxa4 14.Rxa4. This line is still played nowadays , but I feel it is an unnecessary concession. After 12...Rb8 the move 13.a4 is still playable , but rather harmless. The only possible issue with 12...Rb8 is the reply 13.h4 , which prevents ...Bg5. The bishop move to g5 is desirable for Black, so we need to have something prepared against the h-pawn push. Instead of 13. h4 White may also play a slower setup with 13.Be2 or 13.Bd3 , but these don't feel very challenging for Black. 13.Bd3 A natural development move. White might have a later Bc2-b3 in mind, connecting the bishop to the d5-square. Black is not worried much about slow ideas like that. 13...Bg5 The usual move we basically always play unless White stops us with 13. h4 or 13. a4. Here White might answer it with 14.h4 , but we'll see it is not an issue. If you want to avoid this for some reason you might also start with 13...Be6 and only after 14.O-O go 14....Bg5. I recommend 13... Bg5 for consistency reasons - 'always play ...Bg5 unless they stop us'. 14.h4 This leads to an unconventional and sharp position that gives Black equal chances. If you like to avoid this scenario you can play 13... Be6 first as mentioned. 14...Bh6 We can't take it due to Qh5. 15.g4 The consistent follow up. White can't castle short with the exposed h4-pawn anyway. 15...Bf4 Instead 15...f6 is not bad either, but this move is more dynamic. We hope that White takes our bishop, giving us the excellent e5-square for the knight. 16.Qf3 Be6 17.g5 Qd7 White's attack is a bit stuck now. We are ready to play ... b4 soon and are certainly fine if White plays something slow now. 18.h5 This 'throw-the-kitchen-sink'-move must be critical. 18...Bxd5 It might be possible to take the pawn on g5, but this move is easier to handle and gives us good play. 19.exd5 Na5 We keep the kingside closed and still have queenside play. Black is fine in this sharp position.

**B33**

☐ **Sveshnikov 9. Nd5 with 11. c3**
■ **Sveshnikov 9. Nd5 with 11. c3**

1.e4 c5 2.Nf3 Nc6 3.d4 cxd4 4.Nxd4 Nf6 5.Nc3 e5 6.Ndb5 d6 7.Bg5 a6 8.Na3 b5 9.Nd5 Be7 10.Bxf6 Bxf6 11.c3 This is the most popular move for White. In the first decades of the Sveshnikov it was basically the only one played, before 11. c4 gained some ground. In this chapter we are analysing 11. c3, while other continuations after 9. You can play it right away with 11...Rb8 , or wait until White has played Nc2, so for example 11...O-O 12.Nc2 Rb8 or 11...Bg5 (as we know a generally useful move) 12.Nc2 Rb8. So essentially Black has three moves that we want to play (...O-O, ... Rb8 and ...Bg5) and he may do so in every imaginable order ! Magnus has played various orders, so we don't see a clear preference on his part. Let's work out what

the difference between them is. First of all , let's look at 11...O-O 12.Nc2 Rb8. With 12... Rb8 we have defanged 13. a4, but White has the option to play 13.h4 , which stops our intended next move 13... Bg5. This is the drawback of the early ...O-O move order. So what about 11...Rb8 12.Nc2 Bg5 or 11...Bg5 12.Nc2 Rb8 ? Here the key point to study is 13.a4 bxa4 14.Ncb4 , when both 14...Nxb4 15.cxb4 and 15. Nxb4 lead to long , tactical lines. These lines are fine for Black , but you need to basically learn many variations beyond move 20 on a move-by-move basis. It's tough to work it out over the board and therefore more rote memorization than anything else. If possible I'd like to avoid those lines , unless it is absolutely necessary and the alternatives are unattractive. I looked at 11... O-O 12.Nc2 Rb8 13.h4 in comparison and felt this is much easier to handle , but of course considerably less sharp and tactical. This is largely a matter of personal preference and less a matter of move/ line quality. If you like to be as unpredictable as the World Champion , you may start with the line presented here to get you going and later add the other move orders that Carlsen plays as well. 11...0-0 As explained in the remarks to 11. c3, Black has a range of lines and move orders available. 11...O-O felt like the most practical choice to me. 12.Nc2 What could be more natural after 11. c3 ? White has tried to delay this move, but unsurprisingly this is not dangerous at all. 12...Rb8 As already explained earlier this move is played to discourage White to play a4, due to the pressure down the b-file. If you play 12...Bg5 instead you allow 13.a4 , when you have nothing better than 13...bxa4 14.Rxa4. This line is still played nowadays , but I feel it is an unnecessary concession. After 12...Rb8 the move 13.a4 is still playable , but rather harmless. The only possible issue with 12...Rb8 is the reply 13.h4 , which prevents ...Bg5. The bishop move to g5 is desirable for Black, so we need to have something prepared against the h-pawn push. Instead of 13. h4 White may also play a slower setup with 13.Be2 or 13.Bd3 , but these don't feel very challenging for Black. 13.Be2 White simply develops the bishop and prepares castling kingside. It is still very frequently played , even though 13.h4 seems more testing these days. Of course 13. Be2 is a classical and sound move, but it does not exert any direct pressure or poses concrete problems. 13.g3 is a rare alternative and is examined in model game #4. 13...Bg5 A standard part of our setup. We clear the way for the f-pawn, are now ready to take a knight on e3 if desirable and give more flexibility for the queen. We also enable ... Ne7 to be played soon. 14.0-0 Kh8 If in doubt, play what Magnus plays ! This is not a bad general approach, but for this repertoire part of the concept, of course. The World Champion has played this twice in 2019 and had no problems at all in both games.That being said, Black has good alternatives to the king move, which does not look extremely obvious. So why did Magnus go for 14... Kh8 ? Well, in this structure there are some moves that are generally useful. Let's have a look: a ...a5 prepares ...b4 and prevents Ncb4, b ...Be6 develops, c ...g6 prepares ...f5, d ...Ne7 to challenge the knight on d5 and e ...Kh8 is useful in any ... f5 scenario, to avoid possible checks on the a2-g8 diagonal and to clear the g-file for ideas like ...Rg8, once ...f5/ exf5/...gxf5 is on the board. So why 14... Kh8 first and not one of the others ? Let's check the alternatives: First of all, 14...a5 can be

answered by 15.Na3 ! , which is a bit awkward to meet , as 15...b4 16.Nb5 is annoying and 14...a5 15.Na3 ! Na7 is not ideal either. 14...Be6 is possible and not bad in my mind. One argument against it could be that you are not able to play ...Bb7 anymore, which was Carlsen's reply to Bg4 against Giri. You may also question if ... Be6 is necessary if you like to play ...f5 soon. Next we have 14...g6 , which is not as flexible as 14... Kh8. It also prepares ...f5, but is not as useful in other scenarios. Finally there is 14...Ne7 , which is the most solid move. We will see this idea after 14... Kh8 15. a3 Ne7. It is already playable in move 14 for sure, but less combative compared to 14... Kh8. Once you play ... Ne7 you focus on fighting for d5 and are less likely to mix it up with ...f5. To sum it up, there are alternatives, and I think Carlsen went for 14... Kh8 because it is a flexible move that is not yet explored as much as the other choices. This leads us to an additional point in favour of copying the World Champion at this point. The line we are examining right now was recommended in an important repertoire book for White, written by GM John Shaw: 'Playing 1. e4 - Sicilian Main lines'. Shaw checks most of Black's alternatives on move 14, but not 14... Kh8. This makes this move more attractive for us, as White players might have studied up to this point, but likely don't know the king move if they only relied on this popular book. After 14... Kh8 we will check four options for White, illustrating the main ideas in the process. 15.Bg4 This move was played by Anish Giri, two days after Carlsen had played the 14... Kh8 line for the first time against Radjabov. Did Giri manage to pose some problems ? Let's have a look. 15...Bb7 This is the best move. We don't want to trade the light-squared bishops unless we benefit due to a favourable change of the pawn structure. In many positions the reply ...Be6 against against Bg4 is a good choice, anticipating the sequence Bxe6/...fxe6, after which Black covers the d5-square with a pawn. In our specific position 15...Be6 is not great , because after 16.Bxe6 fxe6 17. Ndb4 Nxb4 18.Nxb4 White has the better chances. It is favourable for him to have a pair of knights traded , because he lacks good posts for knights and is happy to only have one of them. It is useful to compare this situation with lines after 1.e4 c5 2.Nf3 Nc6 3.d4 cxd4 4.Nxd4 Nf6 5.Nc3 e5 6.Ndb5 d6 7.Bg5 a6 8.Na3 b5 9.Nd5 Be7 10.Bxf6 Bxf6 11.c4 b4 12.Nc2 O-O 13. Be2 a5 14.O-O Bg5 15. Bg4 , when 15...Be6 is fine for Black. After 16.Bxe6 fxe6 17. Nde3 White has two knights that step on each other's toes. Alright, let's return to the best move, 15... Bb7. Giri now played 16.Ncb4 , which did not pose many problems. This position is still fresh, so we can't rely on game samples. In addition to 16. Ncb4 I will also explore two other moves to illustrate the play. 16.Ncb4 Nxb4
Not a decision to be taken lightly , as White is able to take with the pawn and open a crucial file. It turns out that Black is fine , but he also had the option to just play 16... g6 for example. Let's see how the Giri-Carlsen game continued. 17.cxb4 g6 18.a4 White decides it is time to act quickly in view of the coming ...f5 counterplay. Black is perfectly fine anyway, but after 19. a4 White actually is the one that needs to be careful. 18...bxa4 19.Rxa4 Bc6 This move ensures Black a good game. 20.Be2 Giri opts for an exchange sacrifice. His idea is to get the a-pawn and generate play on the light squares , but it does not work out well. A similar sacrificial idea was

possible with 20.Rxa6 , which would have been a better version. 20...Bxa4 21.Qxa4 a5 This is the engine improvement on Magnus' 21...f5 , which was good enough for an advantage as well - but 21... a5 is a lot stronger ! 22.bxa5 Rxb2 23.Bc4 Qc8 Black is lot better here. The a-pawn still looks dangerous, but we are able to stop it. ...Qc5 and ... Ra8 is the basic idea.

☐ **Sveshnikov 9. Nd5 with 11. c3**

■ **Sveshnikov 9. Nd5 with 11. c3**

1.e4 c5 2.Nf3 Nc6 3.d4 cxd4 4.Nxd4 Nf6 5.Nc3 e5 6.Ndb5 d6 7.Bg5 a6 8.Na3 b5 9.Nd5 Be7 10.Bxf6 Bxf6 11.c3 This is the most popular move for White. In the first decades of the Sveshnikov it was basically the only one played, before 11. c4 gained some ground. In this chapter we are analysing 11. c3, while other continuations after 9. Nd5, in particular the 11. c4 line, are discussed in the previous chapter.The move 11. c3 makes a very logical impression. The knight on a3 is clearly a problem piece and needs to be improved. The route via c2 is now possible and often the knight soon connects to the weak d5-square via e3 or, less often, via b4. After the knight is moved away from a3 White gains the option to play a4, attacking the extended black queenside. White's strategy in this line is usually connected with this idea, but there are other options as well. White quite frequently plays the move h4, covering the g5-square and preventing ... Bg5. This may also be the start of play on the kingside, very much depending on the concrete circumstances. Alright, what is black supposed to do ? The good news is that Black has a number of options and Magnus Carlsen has tried most of them. This is also the bad news for an author: you need to pick a line if you want to simply copy what Magnus always does. So what are the options ? First of all , there is one independent and non-transpositional line that Black has available now. He may play 11...Ne7 , and this line was used once by the World Champion in a 2019 Blitz game against Lenier Dominguez. After the usual 12.Nxf6+ gxf6 you get the same pawn structure as after 9. Bxf6, featuring the doubled f-pawns. I think this line is not bad, but it was only employed once by Magnus in a Blitz game. In more important encounters he has used more standard main lines. To understand how the main lines work it makes sense to look at how the theory developed over the course of time. In the early years of the Sveshnikov they started with 11...O-O and after 12.Nc2 played 12...Bg5. The bishop usually goes to g5, watching over the e3-square, freeing the f-pawn and allowing the queen to move without allowing Nxf6+ with doubled pawns. The drawback of 12... Bg5 is 13.a4 , when Black needs to capture with 13...bxa4. it usually a bad idea to play something like 13...Rb8 14.axb5 axb5 , when White controls the a-file and b5 is a useful target for White. After 13... bxa4 White just plays 14.Rxa4 and is happy to have a setup with Bc4 and often b3 next. This type of position is not terrible for Black, but nowadays Black tries to avoid it in view of better options. One idea is to play an early ...Rb8, so

that after White pushes a4 we are able to take and immediately attack b2, making the simple recapture on a4 problematic. There are multiple ways to employ the ... Rb8 idea. You can play it right away with 11...Rb8 , or wait until White has played Nc2, so for example 11...O-O 12.Nc2 Rb8 or 11...Bg5 (as we know a generally useful move) 12.Nc2 Rb8. So essentially Black has three moves that we want to play (...O-O, ... Rb8 and ...Bg5) and he may do so in every imaginable order ! Magnus has played various orders, so we don't see a clear preference on his part. Let's work out what the difference between them is. First of all , let's look at 11...O-O 12.Nc2 Rb8. With 12... Rb8 we have defanged 13. a4, but White has the option to play 13.h4 , which stops our intended next move 13... Bg5. This is the drawback of the early ...O-O move order. So what about 11...Rb8 12.Nc2 Bg5 or 11...Bg5 12.Nc2 Rb8 ? Here the key point to study is 13.a4 bxa4 14.Ncb4 , when both 14...Nxb4 15.cxb4 and 15. Nxb4 lead to long , tactical lines. These lines are fine for Black , but you need to basically learn many variations beyond move 20 on a move-by-move basis. It's tough to work it out over the board and therefore more rote memorization than anything else. If possible I'd like to avoid those lines , unless it is absolutely necessary and the alternatives are unattractive. I looked at 11... O-O 12.Nc2 Rb8 13.h4 in comparison and felt this is much easier to handle , but of course considerably less sharp and tactical. This is largely a matter of personal preference and less a matter of move/ line quality. If you like to be as unpredictable as the World Champion , you may start with the line presented here to get you going and later add the other move orders that Carlsen plays as well. 11...0-0 As explained in the remarks to 11. c3, Black has a range of lines and move orders available. 11...O-O felt like the most practical choice to me. 12.Nc2 What could be more natural after 11. c3 ? White has tried to delay this move, but unsurprisingly this is not dangerous at all. 12...Rb8 As already explained earlier this move is played to discourage White to play a4, due to the pressure down the b-file. If you play 12...Bg5 instead you allow 13.a4 , when you have nothing better than 13...bxa4 14.Rxa4. This line is still played nowadays , but I feel it is an unnecessary concession. After 12...Rb8 the move 13.a4 is still playable , but rather harmless. The only possible issue with 12...Rb8 is the reply 13.h4 , which prevents ...Bg5. The bishop move to g5 is desirable for Black, so we need to have something prepared against the h-pawn push. Instead of 13. h4 White may also play a slower setup with 13.Be2 or 13.Bd3 , but these don't feel very challenging for Black. 13.Bd3 A natural development move. White might have a later Bc2-b3 in mind, connecting the bishop to the d5-square. Black is not worried much about slow ideas like that. 13...Bg5 The usual move we basically always play unless White stops us with 13. h4 or 13. a4. Here White might answer it with 14.h4 , but we'll see it is not an issue. If you want to avoid this for some reason you might also start with 13...Be6 and only after 14.O-O go 14....Bg5. I recommend 13... Bg5 for consistency reasons - 'always play ...Bg5 unless they stop us'. 14.0-0 Be6 In the line 13. Be2 Bg5 14. O-O we have chosen to play 14... Kh8, copying Magnus Carlsen's approach. The World Champion never faced the Bd3-setup, so we don't know what he would play. Here 14...Kh8 looks less pointed, as you can't play ...f5 that easily against the bishop on

d3 and playing for control of d5 with a move like 14...Ne7 or 14...Be6 looks more urgent. With the bishop on d3 White has lesser influence on d5, compared to a a bishop on e2. Still Black has many playable options here, this being a rather slow type of game. I went for 14... Be6, which is played most often and easily scores 60% for Black. 15.Nce3 White supports the knight on d5. He always needs to worry about Black taking on d5, forcing a pawn to d5. This scenario is usually quite favourable for Black who easily gets f5 in later in such a structure. 15...Ne7 This is a bit more interesting than 15...Bxe3 16.Nxe3 Ne7 , which already looks like a safe bet for equality. 16.Bc2 Nxd5 17.Nxd5 a5 Black's idea is to just ignore the knight on d5 and go for kingside play. 18.a3 Qd7 19.Bb3 Kh8 We have ...g6 and ...f5 next, starting the standard play on the kingside. This position is a good example why Black is not suffering from both a weak backward pawn on d6 AND a hole on d5. White is simply unable to use BOTH at the same time. White may put a knight on d5, but this means there is no pressure on the d-file. In the meantime it is unclear what the knight on d5 is actually attacking, while we know what to do on the kingside. This is why many Sveshnikov positions are actually easier to play for Black - you have the clearer ideas to pursue.

**B33**

☐ **Sveshnikov 9. Nd5 with 11. c3**
■ **Sveshnikov 9. Nd5 with 11. c3**

1.e4 c5 2.Nf3 Nc6 3.d4 cxd4 4.Nxd4 Nf6 5.Nc3 e5 6.Ndb5 d6 7.Bg5 a6 8.Na3 b5 9.Nd5 Be7 10.Bxf6 Bxf6 11.c3 This is the most popular move for White. In the first decades of the Sveshnikov it was basically the only one played, before 11. c4 gained some ground. In this chapter we are analysing 11. c3, while other continuations after 9. Nd5, in particular the 11. c4 line, are discussed in the previous chapter.The move 11. c3 makes a very logical impression. The knight on a3 is clearly a problem piece and needs to be improved. The route via c2 is now possible and often the knight soon connects to the weak d5-square via e3 or, less often, via b4. After the knight is moved away from a3 White gains the option to play a4, attacking the extended black queenside. White's strategy in this line is usually connected with this idea, but there are other options as well. White quite frequently plays the move h4, covering the g5-square and preventing ... Bg5. This may also be the start of play on the kingside, very much depending on the concrete circumstances. Alright, what is black supposed to do ? The good news is that Black has a number of options and Magnus Carlsen has tried most of them. This is also the bad news for an author: you need to pick a line if you want to simply copy what Magnus always does. So what are the options ? First of all , there is one independent and non-transpositional line that Black has available now. He may play 11...Ne7 , and this line was used once by the World Champion in a 2019 Blitz game against Lenier Dominguez. After the usual 12.Nxf6+ gxf6 you get the same pawn structure as after 9. Bxf6, featuring the

doubled f-pawns. I think this line is not bad, but it was only employed once by Magnus in a Blitz game. In more important encounters he has used more standard main lines. To understand how the main lines work it makes sense to look at how the theory developed over the course of time. In the early years of the Sveshnikov they started with 11...O-O and after 12.Nc2 played 12...Bg5. The bishop usually goes to g5, watching over the e3-square, freeing the f-pawn and allowing the queen to move without allowing Nxf6+ with doubled pawns. The drawback of 12... Bg5 is 13.a4 , when Black needs to capture with 13...bxa4. it usually a bad idea to play something like 13...Rb8 14.axb5 axb5 , when White controls the a-file and b5 is a useful target for White. After 13... bxa4 White just plays 14.Rxa4 and is happy to have a setup with Bc4 and often b3 next. This type of position is not terrible for Black, but nowadays Black tries to avoid it in view of better options. One idea is to play an early ...Rb8, so that after White pushes a4 we are able to take and immediately attack b2, making the simple recapture on a4 problematic. There are multiple ways to employ the ... Rb8 idea. You can play it right away with 11...Rb8 , or wait until White has played Nc2, so for example 11...O-O 12.Nc2 Rb8 or 11...Bg5 (as we know a generally useful move) 12.Nc2 Rb8. So essentially Black has three moves that we want to play (...O-O, ... Rb8 and ...Bg5) and he may do so in every imaginable order ! Magnus has played various orders, so we don't see a clear preference on his part. Let's work out what the difference between them is. First of all , let's look at 11...O-O 12.Nc2 Rb8. With 12... Rb8 we have defanged 13. a4, but White has the option to play 13.h4 , which stops our intended next move 13... Bg5. This is the drawback of the early ...O-O move order. So what about 11...Rb8 12.Nc2 Bg5 or 11...Bg5 12.Nc2 Rb8 ? Here the key point to study is 13.a4 bxa4 14.Ncb4 , when both 14...Nxb4 15.cxb4 and 15. Nxb4 lead to long , tactical lines. These lines are fine for Black , but you need to basically learn many variations beyond move 20 on a move-by-move basis. It's tough to work it out over the board and therefore more rote memorization than anything else. If possible I'd like to avoid those lines , unless it is absolutely necessary and the alternatives are unattractive. I looked at 11... O-O 12.Nc2 Rb8 13.h4 in comparison and felt this is much easier to handle , but of course considerably less sharp and tactical. This is largely a matter of personal preference and less a matter of move/ line quality. If you like to be as unpredictable as the World Champion , you may start with the line presented here to get you going and later add the other move orders that Carlsen plays as well. 11...0-0 As explained in the remarks to 11. c3, Black has a range of lines and move orders available. 11... O-O felt like the most practical choice to me. Carlsen has also played 11...Bg5 earlier in his career , as seen in model game #3. 12.Nc2 What could be more natural after 11. c3 ? White has tried to delay this move, but unsurprisingly this is not dangerous at all. 12...Rb8 As already explained earlier this move is played to discourage White to play a4, due to the pressure down the b-file. If you play 12...Bg5 instead you allow 13.a4 , when you have nothing better than 13...bxa4 14.Rxa4. This line is still played nowadays , but I feel it is an unnecessary concession. After 12...Rb8 the move 13.a4 is still playable , but rather harmless. The only possible issue with 12...Rb8 is the reply 13.h4 , which

prevents ...Bg5. The bishop move to g5 is desirable for Black, so we need to have something prepared against the h-pawn push. Instead of 13. h4 White may also play a slower setup with 13.Be2 or 13.Bd3 , but these don't feel very challenging for Black. 13.Be2 White simply develops the bishop and prepares castling kingside. It is still very frequently played , even though 13.h4 seems more testing these days. Of course 13. Be2 is a classical and sound move, but it does not exert any direct pressure or poses concrete problems. 13.g3 is a rare alternative and is examined in model game #4. 13...Bg5 A standard part of our setup. We clear the way for the f-pawn, are now ready to take a knight on e3 if desirable and give more flexibility for the queen. We also enable ... Ne7 to be played soon. 14.0-0 Kh8 If in doubt, play what Magnus plays ! This is not a bad general approach, but for this repertoire part of the concept, of course. The World Champion has played this twice in 2019 and had no problems at all in both games.That being said, Black has good alternatives to the king move, which does not look extremely obvious. So why did Magnus go for 14... Kh8 ? Well, in this structure there are some moves that are generally useful. Let's have a look: a ...a5 prepares ...b4 and prevents Ncb4, b ...Be6 develops, c ...g6 prepares ...f5, d ...Ne7 to challenge the knight on d5 and e ...Kh8 is useful in any ... f5 scenario, to avoid possible checks on the a2-g8 diagonal and to clear the g-file for ideas like ...Rg8, once ...f5/ exf5/...gxf5 is on the board. So why 14... Kh8 first and not one of the others ? Let's check the alternatives: First of all, 14...a5 can be answered by 15.Na3 ! , which is a bit awkward to meet , as 15...b4 16.Nb5 is annoying and 14...a5 15.Na3 ! Na7 is not ideal either. 14...Be6 is possible and not bad in my mind. One argument against it could be that you are not able to play ...Bb7 anymore, which was Carlsen's reply to Bg4 against Giri. You may also question if ... Be6 is necessary if you like to play ...f5 soon. Next we have 14...g6 , which is not as flexible as 14... Kh8. It also prepares ...f5, but is not as useful in other scenarios. Finally there is 14...Ne7 , which is the most solid move. We will see this idea after 14... Kh8 15. a3 Ne7. It is already playable in move 14 for sure, but less combative compared to 14... Kh8. Once you play ... Ne7 you focus on fighting for d5 and are less likely to mix it up with ...f5. To sum it up, there are alternatives, and I think Carlsen went for 14... Kh8 because it is a flexible move that is not yet explored as much as the other choices. This leads us to an additional point in favour of copying the World Champion at this point. The line we are examining right now was recommended in an important repertoire book for White, written by GM John Shaw: 'Playing 1. e4 - Sicilian Main lines'. Shaw checks most of Black's alternatives on move 14, but not 14... Kh8. This makes this move more attractive for us, as White players might have studied up to this point, but likely don't know the king move if they only relied on this popular book. After 14... Kh8 we will check four options for White, illustrating the main ideas in the process. 15.Bg4 This move was played by Anish Giri, two days after Carlsen had played the 14... Kh8 line for the first time against Radjabov. Did Giri manage to pose some problems ? Let's have a look. 15...Bb7 This is the best move. We don't want to trade the light-squared bishops unless we benefit due to a favourable change of the pawn structure. In many positions the reply

...Be6 against against Bg4 is a good choice, anticipating the sequence Bxe6/...fxe6, after which Black covers the d5-square with a pawn. In our specific position 15...Be6 is not great , because after 16.Bxe6 fxe6 17. Ndb4 Nxb4 18.Nxb4 White has the better chances. It is favourable for him to have a pair of knights traded , because he lacks good posts for knights and is happy to only have one of them. It is useful to compare this situation with lines after 1.e4 c5 2.Nf3 Nc6 3.d4 cxd4 4.Nxd4 Nf6 5.Nc3 e5 6.Ndb5 d6 7.Bg5 a6 8.Na3 b5 9.Nd5 Be7 10.Bxf6 Bxf6 11.c4 b4 12.Nc2 O-O 13. Be2 a5 14.O-O Bg5 15. Bg4 , when 15...Be6 is fine for Black. After 16.Bxe6 fxe6 17. Nde3 White has two knights that step on each other's toes. Alright, let's return to the best move, 15... Bb7. Giri now played 16.Ncb4 , which did not pose many problems. This position is still fresh, so we can't rely on game samples. In addition to 16. Ncb4 I will also explore two other moves to illustrate the play. 16.Ncb4 Nxb4
Not a decision to be taken lightly , as White is able to take with the pawn and open a crucial file. It turns out that Black is fine , but he also had the option to just play 16... g6 for example. Let's see how the Giri-Carlsen game continued. 17.cxb4 g6 18.a4 White decides it is time to act quickly in view of the coming ...f5 counterplay. Black is perfectly fine anyway, but after 19. a4 White actually is the one that needs to be careful. 18...bxa4 19.Rxa4 Bc6 This move ensures Black a good game. 20.Ra5 Bxd5 21.Qxd5 Rxb4 22.Rxa6 Rd4 23.Qc6 d5 White still has to be careful here to hold, there is no need to analyse further.

**B33**

☐ **Sveshnikov 9. Bxf6,11. Bd3**
■ **Sveshnikov 9. Bxf6,11. Bd3 #51**

1.e4 c5 2.Nf3 Nc6 3.d4 cxd4 4.Nxd4 Nf6 5.Nc3 e5 6.Ndb5 d6 7.Bg5 a6 8.Na3 b5 9.Bxf6 gxf6 10.Nd5 Bg7 11.Bd3 In this chapter we will examine the lines starting with this move. All other variations after 9. Bxf6 are covered in the previous chapter. After 11. Bd3 the game will become very sharp and tactical and Black needs to sacrifice pawns on a regular basis. In the main line of the 11. Bd3 complex we are three pawns down, but have great compensation !Of all the chapters in the whole course this is by far the one that requires move-by-move knowledge and precise calculation over the board. There is very little strategic content or 'plans' to guide you, it's just two sides engaging in a fight with clubs - and you better make sure to bring a huge club, meaning excellent preparation. It is definitely possible to work out some of the complications over the board, but this will be much more likely to be successful if you once had known them. It sounds odd, but it is true: study time is never wasted, even if you feel you have forgotten everything.The way to do it is to not try to remember as hard as you can, but rather think on your own and hope that you subconsciously piece it together. This works much better than sitting there and wrecking your brain to recall concrete lines.One important point that also needs to be mentioned: Black is the side on the attack after 11. Bd3. If White only has vague

knowledge about the complications he is very likely just getting killed quickly. If you screw something up, it might be bad in computer terms... but you still have chances, given the enormous activity that Black usually enjoys. 11...Ne7 The only good move after 11. Bd3. The bishop move prevents ...f5 and we need to get rid of the d5-knight right away. 12.Nxe7 White's choice is limited, because with 11... Ne7 we had threatened to take on d5. As usual it's very desirable for Black to take on d5 when White needs to recapture with a pawn. 12...Qxe7 After 12. .. Qxe7 White has two basic options. He can play c4, attacking the b5-pawn, or play c3, preparing to get the offside knight back into the game. White might play c4 or c3 right away or do it after castling kingside first. Castling is rather natural for both sides, so quite often this will be played quickly after a move of the c-pawn, for example 13.c4 f5 14.O-O O-O is just as common as 13.O-O O-O 14.c4 f5. I will examine 13.O-O O-O as the main line and then split the lines with 14.c4 or 14.c3. If White starts 13. c4, it will very likely transpose to 13. O-O O-O 14. c4, as the deviations are unattractive for White. 13.c3 is a different story. After 13...f5 the sequence 14.O-O O-O is possible and examined via 13. O-O O-O 14. c3 f5, but White often decides to not castle and then we will reach the only important independent line 13.c3 f5 14.Nc2 , when White's king will remain in the centre or castle queenside in some lines. Alright , let's check some moves to make things more concrete. 13.0-0 0-0 It's also possible to play 13...f5 first , there is no drawback to this move order. I went for 13... O-O because this way you have the rule of thumb for move 13 and 14 in this line to play ...f5 against the c-pawn moves and just castle as well if White plays O-O first. 14.c4 f5 The best way to react to 14. c4. As usual taking on c4 is terrible, as it helps the knight far too much. 14...b4 is also a disaster , as after 15. Nc2 a5 16.Ne3 Black does not even manage to play the fundamental ...f5 break. This only leaves Black with sacrificing the b-pawn, which explains why the 14. c4 - or 13. c4 - line is the sharpest one in the main line. Black is giving away the queenside and goes All-In with his counterplay in the centre and kingside. After 14... f5 White's main lines are the queen moves to h5 and f3, but he has also tried other continuations without much success. 15.Qh5 Rb8
We would have liked to take on e4, but 15...fxe4 16.Bxe4 is a double threat on h7 and on the rook. This explains 15... Rb8 - now we are threatening to take on e4 and then play ...f5 a second time ! The move 15... Rb8 has been tested numerous times in over the board play and correspondence chess and it looks like Black is doing fine in the hair-raising complications. I need to mention that 15... Rb8 is not the only move, though. In fact only some days before these lines were written the World Champion went for a different move: he played 15... d5 !? in the Grand Swiss Isle of Man Tournament against Russian hopeful Alexey Sarana. 15... d5 is a rare move and was probably intended as a surprise, but Sarana had done his homework and blitzed out the following moves. 15...d5 16.cxd5 Qd8 17.exf5 Qxd5 18.Rad1 e4 19.Bxb5 Qxf5 20. Qxf5 Bxf5 21.Bd7 Bxd7 22.Rxd7 Bxb2 23.Nc4. Now, this sequence is in fact clearly best play after 15... d5 and the resulting position I don't want to recommend, even though Magnus played the line. Black is very close to equality, but it's a grovel and not fun at all. Magnus ultimately drew the game after some unpleasant moments.

Maybe HE kept his cool, but I would have been concerned ! In any case, I don't want to play for two results just yet if a win is not among them. 16.exf5 A more or less forced decision. Otherwise we take on e4 and play ...f5 next. 16...e4 17.Rae1 We attacked both the bishop on d3 and the pawn on b2, so White needs a tactical solution. 17...Bb7 18.Qg4 Rfe8 We need to cover e4. 19.f3 A very rare move, but logical enough to check. 19...h5 19...Kh8 also looks fine , but this is a fun line. 20.Qxh5 Bd4+ 21.Kh1 exf3 The point of 19... h5. We are threatening ... fxg2#! 22.gxf3 Qxe1 23.f6 This is the only move that saves White ! 23...Qxf1+ 24.Bxf1 Bxf6 25.Qg4+ Bg7 26.cxb5 Re3 27.Kg1 axb5 The engines find equality for White, but this is not fun for a human to defend.

**B33**

☐ **Sveshnikov 9. Nd5 with 11. c3**
■ **Sveshnikov 9. Nd5 with 11. c3**

1.e4 c5 2.Nf3 Nc6 3.d4 cxd4 4.Nxd4 Nf6 5.Nc3 e5 6.Ndb5 d6 7.Bg5 a6 8.Na3 b5 9.Nd5 Be7 10.Bxf6 Bxf6 11.c3 This is the most popular move for White. In the first decades of the Sveshnikov it was basically the only one played, before 11. c4 gained some ground. In this chapter we are analysing 11. c3, while other continuations after 9. Nd5, in particular the 11. c4 line, are discussed in the previous chapter.The move 11. c3 makes a very logical impression. The knight on a3 is clearly a problem piece and needs to be improved. The route via c2 is now possible and often the knight soon connects to the weak d5-square via e3 or, less often, via b4. After the knight is moved away from a3 White gains the option to play a4, attacking the extended black queenside. White's strategy in this line is usually connected with this idea, but there are other options as well. White quite frequently plays the move h4, covering the g5-square and preventing ... Bg5. This may also be the start of play on the kingside, very much depending on the concrete circumstances. Alright, what is black supposed to do ? The good news is that Black has a number of options and Magnus Carlsen has tried most of them. This is also the bad news for an author: you need to pick a line if you want to simply copy what Magnus always does. So what are the options ? First of all , there is one independent and non-transpositional line that Black has available now. He may play 11...Ne7 , and this line was used once by the World Champion in a 2019 Blitz game against Lenier Dominguez. After the usual 12.Nxf6+ gxf6 you get the same pawn structure as after 9. Bxf6, featuring the doubled f-pawns. I think this line is not bad, but it was only employed once by Magnus in a Blitz game. In more important encounters he has used more standard main lines. To understand how the main lines work it makes sense to look at how the theory developed over the course of time. In the early years of the Sveshnikov they started with 11...O-O and after 12.Nc2 played 12...Bg5. The bishop usually goes to g5, watching over the e3-square, freeing the f-pawn and allowing the queen to move without allowing Nxf6+ with doubled pawns. The drawback of 12... Bg5 is 13.a4 ,

when Black needs to capture with 13...bxa4. it usually a bad idea to play something like 13...Rb8 14.axb5 axb5 , when White controls the a-file and b5 is a useful target for White. After 13... bxa4 White just plays 14.Rxa4 and is happy to have a setup with Bc4 and often b3 next. This type of position is not terrible for Black, but nowadays Black tries to avoid it in view of better options. One idea is to play an early ...Rb8, so that after White pushes a4 we are able to take and immediately attack b2, making the simple recapture on a4 problematic. There are multiple ways to employ the ... Rb8 idea. You can play it right away with 11...Rb8 , or wait until White has played Nc2, so for example 11...O-O 12.Nc2 Rb8 or 11...Bg5 (as we know a generally useful move) 12.Nc2 Rb8. So essentially Black has three moves that we want to play (...O-O, ... Rb8 and ...Bg5) and he may do so in every imaginable order ! Magnus has played various orders, so we don't see a clear preference on his part. Let's work out what the difference between them is. First of all , let's look at 11...O-O 12.Nc2 Rb8. With 12... Rb8 we have defanged 13. a4, but White has the option to play 13.h4 , which stops our intended next move 13... Bg5. This is the drawback of the early ...O-O move order. So what about 11...Rb8 12.Nc2 Bg5 or 11...Bg5 12.Nc2 Rb8 ? Here the key point to study is 13.a4 bxa4 14.Ncb4 , when both 14...Nxb4 15.cxb4 and 15. Nxb4 lead to long , tactical lines. These lines are fine for Black , but you need to basically learn many variations beyond move 20 on a move-by-move basis. It's tough to work it out over the board and therefore more rote memorization than anything else. If possible I'd like to avoid those lines , unless it is absolutely necessary and the alternatives are unattractive. I looked at 11... O-O 12.Nc2 Rb8 13.h4 in comparison and felt this is much easier to handle , but of course considerably less sharp and tactical. This is largely a matter of personal preference and less a matter of move/ line quality. If you like to be as unpredictable as the World Champion , you may start with the line presented here to get you going and later add the other move orders that Carlsen plays as well. 11...0-0 As explained in the remarks to 11. c3, Black has a range of lines and move orders available. 11... O-O felt like the most practical choice to me. Carlsen has also played 11...Bg5 earlier in his career , as seen in model game #3. 12.Nc2 What could be more natural after 11. c3 ? White has tried to delay this move, but unsurprisingly this is not dangerous at all. 12...Rb8 As already explained earlier this move is played to discourage White to play a4, due to the pressure down the b-file. If you play 12...Bg5 instead you allow 13.a4 , when you have nothing better than 13...bxa4 14.Rxa4. This line is still played nowadays , but I feel it is an unnecessary concession. After 12...Rb8 the move 13.a4 is still playable , but rather harmless. The only possible issue with 12...Rb8 is the reply 13.h4 , which prevents ...Bg5. The bishop move to g5 is desirable for Black, so we need to have something prepared against the h-pawn push. Instead of 13. h4 White may also play a slower setup with 13.Be2 or 13.Bd3 , but these don't feel very challenging for Black. 13.Be2 White simply develops the bishop and prepares castling kingside. It is still very frequently played , even though 13.h4 seems more testing these days. Of course 13. Be2 is a classical and sound move, but it does not exert any direct pressure or poses concrete problems. 13.g3 is a rare alternative and is examined in

model game #4. 13...Bg5 A standard part of our setup. We clear the way for the f-pawn, are now ready to take a knight on e3 if desirable and give more flexibility for the queen. We also enable ... Ne7 to be played soon. 14.0-0 Kh8 If in doubt, play what Magnus plays ! This is not a bad general approach, but for this repertoire part of the concept, of course. The World Champion has played this twice in 2019 and had no problems at all in both games.That being said, Black has good alternatives to the king move, which does not look extremely obvious. So why did Magnus go for 14... Kh8 ? Well, in this structure there are some moves that are generally useful. Let's have a look: a ...a5 prepares ...b4 and prevents Ncb4, b ...Be6 develops, c ...g6 prepares ...f5, d ...Ne7 to challenge the knight on d5 and e ...Kh8 is useful in any ... f5 scenario, to avoid possible checks on the a2-g8 diagonal and to clear the g-file for ideas like ...Rg8, once ...f5/ exf5/...gxf5 is on the board. So why 14... Kh8 first and not one of the others ? Let's check the alternatives: First of all, 14...a5 can be answered by 15.Na3 ! , which is a bit awkward to meet , as 15...b4 16.Nb5 is annoying and 14...a5 15.Na3 ! Na7 is not ideal either. 14...Be6 is possible and not bad in my mind. One argument against it could be that you are not able to play ...Bb7 anymore, which was Carlsen's reply to Bg4 against Giri. You may also question if ... Be6 is necessary if you like to play ...f5 soon. Next we have 14...g6 , which is not as flexible as 14... Kh8. It also prepares ...f5, but is not as useful in other scenarios. Finally there is 14...Ne7 , which is the most solid move. We will see this idea after 14... Kh8 15. a3 Ne7. It is already playable in move 14 for sure, but less combative compared to 14... Kh8. Once you play ... Ne7 you focus on fighting for d5 and are less likely to mix it up with ...f5. To sum it up, there are alternatives, and I think Carlsen went for 14... Kh8 because it is a flexible move that is not yet explored as much as the other choices. This leads us to an additional point in favour of copying the World Champion at this point. The line we are examining right now was recommended in an important repertoire book for White, written by GM John Shaw: 'Playing 1. e4 - Sicilian Main lines'. Shaw checks most of Black's alternatives on move 14, but not 14... Kh8. This makes this move more attractive for us, as White players might have studied up to this point, but likely don't know the king move if they only relied on this popular book. After 14... Kh8 we will check four options for White, illustrating the main ideas in the process. 15.Qd3 White goes for a quick play on the d-file, but we are ready for counterplay. 15...f5 This looks particularly strong at this moment , given that 16.exf5 Bxf5 looks unattractive for White. 16.Bf3 g6 17.Rfd1 a5 Now what ? We see a typical dilemma of the Sveshnikov pawn structure. It is just not possible to have a knight on d5 and apply pressure against d6 at the same time ! You can only do one at a time, but each on its own is something that Black can handle well. 18.Nde3 Bxe3 Black also has the interesting 18...f4 , but I wanted to show a strategic idea with this move. 19.Nxe3 f4 20.Nd5 Be6 Now White has a great looking knight on d5, but it actually has no square to go to ! In this position White needs to get something going on the queenside quickly, otherwise Black's play on the kingside will be tough to handle.

**B33**

☐ **Sveshnikov 9. Nd5 with 11. c3**
■ **Sveshnikov 9. Nd5 with 11. c3**

1.e4 c5 2.Nf3 Nc6 3.d4 cxd4 4.Nxd4 Nf6 5.Nc3 e5 6.Ndb5 d6 7.Bg5 a6 8.Na3 b5 9.Nd5 Be7 10.Bxf6 Bxf6 11.c3 This is the most popular move for White. In the first decades of the Sveshnikov it was basically the only one played, before 11. c4 gained some ground. In this chapter we are analysing 11. c3, while other continuations after 9. Nd5, in particular the 11. c4 line, are discussed in the previous chapter.The move 11. c3 makes a very logical impression. The knight on a3 is clearly a problem piece and needs to be improved. The route via c2 is now possible and often the knight soon connects to the weak d5-square via e3 or, less often, via b4. After the knight is moved away from a3 White gains the option to play a4, attacking the extended black queenside. White's strategy in this line is usually connected with this idea, but there are other options as well. White quite frequently plays the move h4, covering the g5-square and preventing ... Bg5. This may also be the start of play on the kingside, very much depending on the concrete circumstances. Alright, what is black supposed to do ? The good news is that Black has a number of options and Magnus Carlsen has tried most of them. This is also the bad news for an author: you need to pick a line if you want to simply copy what Magnus always does. So what are the options ? First of all , there is one independent and non-transpositional line that Black has available now. In the early years of the Sveshnikov they started with 11...O-O and after 12.Nc2 played 12...Bg5. The bishop usually goes to g5, watching over the e3-square, freeing the f-pawn and allowing the queen to move without allowing Nxf6+ with doubled pawns. The drawback of 12... Bg5 is 13.a4 , when Black needs to capture with 13...bxa4. it usually a bad idea to play something like 13...Rb8 14.axb5 axb5 , when White controls the a-file and b5 is a useful target for White. After 13... bxa4 White just plays 14.Rxa4 and is happy to have a setup with Bc4 and often b3 next. This type of position is not terrible for Black, but nowadays Black tries to avoid it in view of better options. One idea is to play an early ...Rb8, so that after White pushes a4 we are able to take and immediately attack b2, making the simple recapture on a4 problematic. There are multiple ways to employ the ... Rb8 idea. You can play it right away with 11...Rb8 , or wait until White has played Nc2, so for example 11...O-O 12.Nc2 Rb8 or 11...Bg5 (as we know a generally useful move) 12.Nc2 Rb8. So essentially Black has three moves that we want to play (...O-O, ... Rb8 and ...Bg5) and he may do so in every imaginable order ! Magnus has played various orders, so we don't see a clear preference on his part. Let's work out what

the difference between them is. First of all , let's look at 11...O-O 12.Nc2 Rb8. With 12... Rb8 we have defanged 13. a4, but White has the option to play 13.h4 , which stops our intended next move 13... Bg5. This is the drawback of the early ...O-O move order. So what about 11...Rb8 12.Nc2 Bg5 or 11...Bg5 12.Nc2 Rb8 ? Here the key point to study is 13.a4 bxa4 14.Ncb4 , when both 14...Nxb4 15.cxb4 and 15. Nxb4 lead to long , tactical lines. These lines are fine for Black , but you need to basically learn many variations beyond move 20 on a move-by-move basis. It's tough to work it out over the board and therefore more rote memorization than anything else. If possible I'd like to avoid those lines , unless it is absolutely necessary and the alternatives are unattractive. I looked at 11... O-O 12.Nc2 Rb8 13.h4 in comparison and felt this is much easier to handle , but of course considerably less sharp and tactical. This is largely a matter of personal preference and less a matter of move/ line quality. If you like to be as unpredictable as the World Champion , you may start with the line presented here to get you going and later add the other move orders that Carlsen plays as well. 11...0-0 As explained in the remarks to 11. c3, Black has a range of lines and move orders available. 11... O-O felt like the most practical choice to me. Carlsen has also played 11...Bg5 earlier in his career , as seen in model game #3. 12.Nc2 What could be more natural after 11. c3 ? White has tried to delay this move, but unsurprisingly this is not dangerous at all. 12...Rb8 As already explained earlier this move is played to discourage White to play a4, due to the pressure down the b-file. If you play 12...Bg5 instead you allow 13.a4 , when you have nothing better than 13...bxa4 14.Rxa4. This line is still played nowadays , but I feel it is an unnecessary concession. After 12...Rb8 the move 13.a4 is still playable , but rather harmless. The only possible issue with 12...Rb8 is the reply 13.h4 , which prevents ...Bg5. The bishop move to g5 is desirable for Black, so we need to have something prepared against the h-pawn push. Instead of 13. h4 White may also play a slower setup with 13.Be2 or 13.Bd3 , but these don't feel very challenging for Black. 13.Be2 White simply develops the bishop and prepares castling kingside. It is still very frequently played , even though 13.h4 seems more testing these days. Of course 13. Be2 is a classical and sound move, but it does not exert any direct pressure or poses concrete problems. 13.g3 is a rare alternative and is examined in model game #4. 13...Bg5 A standard part of our setup. We clear the way for the f-pawn, are now ready to take a knight on e3 if desirable and give more flexibility for the queen. We also enable ... Ne7 to be played soon. 14.0-0 Kh8 If in doubt, play what Magnus plays ! This is not a bad general approach, but for this repertoire part of the concept, of course. The World Champion has played this twice in 2019 and had no problems at all in both games.That being said, Black has good alternatives to the king move, which does not look extremely obvious. So why did Magnus go for 14... Kh8 ? Well, in this structure there are some moves that are generally useful. Let's have a look: a ...a5 prepares ...b4 and prevents Ncb4, b ...Be6 develops, c ...g6 prepares ...f5, d ...Ne7 to challenge the knight on d5 and e ...Kh8 is useful in any ... f5 scenario, to avoid possible checks on the a2-g8 diagonal and to clear the g-file for ideas like ...Rg8, once ...f5/ exf5/...gxf5 is on the board. So why 14... Kh8 first and

not one of the others ? Let's check the alternatives: First of all, 14...a5 can be answered by 15.Na3 ! , which is a bit awkward to meet , as 15...b4 16.Nb5 is annoying and 14...a5 15.Na3 ! Na7 is not ideal either. 14...Be6 is possible and not bad in my mind. One argument against it could be that you are not able to play ...Bb7 anymore, which was Carlsen's reply to Bg4 against Giri. You may also question if ... Be6 is necessary if you like to play ...f5 soon. Next we have 14...g6 , which is not as flexible as 14... Kh8. It also prepares ...f5, but is not as useful in other scenarios. Finally there is 14...Ne7 , which is the most solid move. We will see this idea after 14... Kh8 15. a3 Ne7. It is already playable in move 14 for sure, but less combative compared to 14... Kh8. Once you play ... Ne7 you focus on fighting for d5 and are less likely to mix it up with ...f5. To sum it up, there are alternatives, and I think Carlsen went for 14... Kh8 because it is a flexible move that is not yet explored as much as the other choices. This leads us to an additional point in favour of copying the World Champion at this point. The line we are examining right now was recommended in an important repertoire book for White, written by GM John Shaw: 'Playing 1. e4 - Sicilian Main lines'. Shaw checks most of Black's alternatives on move 14, but not 14... Kh8. This makes this move more attractive for us, as White players might have studied up to this point, but likely don't know the king move if they only relied on this popular book. After 14... Kh8 we will check four options for White, illustrating the main ideas in the process. 15.Bg4 This move was played by Anish Giri, two days after Carlsen had played the 14... Kh8 line for the first time against Radjabov. Did Giri manage to pose some problems ? Let's have a look. 15...Bb7 This is the best move. We don't want to trade the light-squared bishops unless we benefit due to a favourable change of the pawn structure. In many positions the reply ...Be6 against against Bg4 is a good choice, anticipating the sequence Bxe6/...fxe6, after which Black covers the d5-square with a pawn. In our specific position 15...Be6 is not great , because after 16.Bxe6 fxe6 17. Ndb4 Nxb4 18.Nxb4 White has the better chances. It is favourable for him to have a pair of knights traded , because he lacks good posts for knights and is happy to only have one of them. It is useful to compare this situation with lines after 1.e4 c5 2.Nf3 Nc6 3.d4 cxd4 4.Nxd4 Nf6 5.Nc3 e5 6.Ndb5 d6 7.Bg5 a6 8.Na3 b5 9.Nd5 Be7 10.Bxf6 Bxf6 11.c4 b4 12.Nc2 O-O 13. Be2 a5 14.O-O Bg5 15. Bg4 , when 15...Be6 is fine for Black. After 16.Bxe6 fxe6 17. Nde3 White has two knights that step on each other's toes. Alright, let's return to the best move, 15... Bb7. Giri now played 16.Ncb4 , which did not pose many problems. This position is still fresh, so we can't rely on game samples. In addition to 16. Ncb4 I will also explore two other moves to illustrate the play. 16.a4 The a4 pawn lever should always be checked. Black is well equipped here to deal with it. 16...bxa4 17.Rxa4 Ne7 18.Nxe7 Qxe7 Black has counterplay against b2 and e4, giving us equal chances in a still interesting position. 19.Nb4 This is more interesting than a slow move like 19.Be2 , as it prevents 19... Bc6. 19...Bxe4 20.Bf3 Bxf3 21.Qxf3 e4 22.Qe2 Rbe8 23.Rxa6 f5 And we have a model position for the Sveshnikov. White has made progress on the queenside, but we have attacking chances based on f5-f4

and then ...f3 or ...e3, depending on the concrete tactical details. Engines call it equal, but it's not a boring position at all !

**10...h6!?** This has been used successfully in recent years by GMs Salgado Lopez and Narciso Dublan, so it should be considered the main line.
[ 10...Nd4 11.Nd5 Bxd5 12.exd5 White has a powerful attack. ]
[ 10...Nb4 11.Nd5± is promising for White.) *( 11.Bxf6 Qxf6 12.Ne3 )*
As suggested by John Shaw. This move has only occurred in a few games, but it is more flexible than the usual 11...Nbxd5 12.exd5 , when the pawn structure has been clarified and Black can organize his defences accordingly. Instead we will delay the exchange on g6 until a more favourable moment. Bf5 13.Bd3 Bxd3 14.Qxd3 Be7 15.Be3 ]
**11.Bxf6 Qxf6 12.Nd5! Qg6N** This prevents any instant attacking ideas, but White keeps a strong initiative anyway.

[ 12...Bxd5 ( 13.exd5! Ne7 14.c3! ]
[ 12...Qd8 13.c3! ]

**13.f3 Bxd5**

[ I also considered 13...Be7 N, ignoring Black's kingside problems and discouraging White from castling on the queenside. Unfortunately for Black, the kingside attack works well enough with the king still sitting on e1: 14.Nxe7 ]

**14.Qxd5 Be7**

[ 14...Nb4 15.Qd2 d5 16.Nxe5 Qf6 17.f4± An extra exchange is always good, and the king is not in too much danger. Bd6 18.0-0-0 the open h-file is a worry for Black) ]

**15.c3** With the prospect of g2-g3 or c3-c4 next, White can develop his initiative in different areas of the board, while Black has no obvious counterplay. Conclusion 3... g6 is playable, but it does not have a great reputation, especially with the white knight on d2, as c2-c3 conveniently supports White's centre. In the event that Black avoids ...dxe4, the attacking plan with h4-h5 is especially attractive. The main part of the chapter was devoted to sidelines after 3...dxe4 4.Nxe4. The first of them, 4... h6!?, has some surprise value, but if White reacts smartly with 5.Nf3 Bf5 6. Nc5! he is guaranteed a pleasant game. A much more important move is 4...Nf6, when 5.Nxf6+ gives Black a choice between two strategically contrasting options. 5...gxf6 is a popular choice among players who wish to unbalance the game. I favour simple development with 6.Nf3, and after the usual 6...Bg4 7. Be2, White often does well with the effective plan of swapping light-squared bishops with a timely Nh4. In the final part of the chapter we discussed the solid 5...exf6. Here White has an effective plan of 6.c3! followed by Bd3 and later Qc2, setting up a battery against h7 and forcing Black to make some kind of concession on the kingside. The critical reply is ... g6, which leads to lively play after White advances his h-pawn. I like White's chances here, although it will take a bit of effort to understand the subtleties such as when to exchange on g6, and recognizing the different kinds of tactical opportunities that may be available. **15...0-0? 16.g3!** looks awful for Black. **16...Qh5**

[ 16...Kh8 is met by 17.Bh3! Qh5 (after 18.Bg4! with promising play for White, for instance: Qg6!? The critical reply, but it enables White to win some material. 19.0-0 ]

**17.Bg2 Kh8**

[ 17...b5 18.axb5 axb5 19.Ne3 gives White a promising initiative. Bg5 is playable, but after 20.Ng4 White will swap his knight for one of the bishops - quite enough to declare a comfortable edge for him. ]

**18.0-0 f5 19.f4**

**B33**

☐ **Chapter**
■ **N,N**

**1.e4 c5 2.Nf3 Nc6 3.d4 cxd4 4.Nxd4 Nf6 5.Nc3 e5 6.Ndb5 d6 7.Bg5 a6 8.Na3 b5 9.Bxf6 gxf6 10.Nd5 f5 11.Bd3 Be6 12.c3 Bg7 13.Nxb5 axb5 14.Bxb5 Bd7 15.exf5 0-0 16.0-0 e4 17.a4 Re8 18.Qg4 Kh8 19.Rad1 Rc8 20.Rfe1 Re5 21.Ne3 Qf6 22.Qh3!?N**

[ 22.Qe2 Bxf5 23.Nxf5 Qxf5 24.Rxd6 Nb8 is the main theoretical line, but this has already been tested in a lot of games, and analysed in depth by Kotronias. The problem for White is that Black is able to generate a lot of activity. There are the direct moves such as ... Bf8-c5, but also against the typical g2-g3, Black has the strong plan of ... Bf6 and ... h5-h4. Of course this position could be analysed further, but it seems best to avoid it altogether. Since ... Bxf5 is no longer possible (as we will see below) Black is required to play the rather artificial ... Rc5, which is a good sign for us. ]

**22...Rc5** This is an interesting position to explore further. Particularly I find the idea of g2-g4 fascinating, and it leads to a complex middlegame.

[ 22...Bxf5 23.Nxf5 Qxf5 24.Qxf5 Rxf5 25.Rxd6± and White is getting too many pawns for the piece. ]

**23.g4!?**

[ Another option is: 23.b4 Rxc3 24.Qh5 Qe5 25.Kh1 Frankly, I can't figure out what's going on here, but it doesn't seem easy to break through. On the other hand, the computer then suggests moves such as ... Qf6, which looks rather unimpressive. ]

[ 23.Rd2!? This also deserves attention, and is a safe plan. The idea is that after ... Ne5, Bxd7 and Red1, the d6-pawn is in trouble, and the computer's ... Rd8, ... Bc8 defensive plan looks so awkward.

**A)** 23...Ne5 24.Bxd7 Nxd7 25.Red1 Bf8 Now there are two lines that both show instructive ideas: 26.Rd4 *( 26.b4! Rxc3* This allows White to show his idea (26... R5c6 is tougher). *27.Nd5 Rxh3 28.Nxf6 Nxf6 29.gxh3 d5 30.b5± )* 26...Re8 ( *( 26...Rb8 27.R1d2* doesn't change much and there is also the option of 27. Rb4!?) *)* 27.Qg4 Qe5 28.Qh4⩲ Black is stuck. Nf6 29.g4±;

**B)** 23...Rd8 24.Red1 Bc8 25.Bxc6 *( 25.Qg4 Ne7! )* 25...Rxc6 26.Qg4⩲ ]

**23...Rg8**

[ 23...Ne5 24.Bxd7 Nxd7 25.Nd5 ( *( 25.Qg2 Qh4! 26.Qxe4 Ne5 27.Qg2* ) *)* 25...Qd8 26.Rxe4 Nf6 27.Nxf6 Bxf6 We saw a similar structure in the 14... Rc8 line, but here White has a pawn more. Also, while ...d5-d4 ideas might exist, it's not so easy to implement them yet. ]

**24.Qg3 Ne5**

[ 24...Bf8 would be too slow. 25.Kf1! with the idea of h2-h4 and g4-g5 looks unpleasant for Black. ]

**25.Bxd7 Nxd7 26.Qxd6 Qxd6 27.Rxd6 Ne5 28.Kf1** Again, I'm not sure if Black

can hold this or not, but it's certainly one-sided due to all White's pawns. Conclusion In this chapter we focused on plans where Black castles quickly. The first point Black should note at move 16 is that he must prevent White establishing a bind with Qg4-e4. 16... Ra7!? has some clever ideas. It covers the d7-knight, and avoids possible forks on b6, but White's queenside advance generally creates a lot of pressure, though of course the positions remains complicated. The main line by far is 16...e4, which has the twin achievements of preventing the white queen from reaching her dream blockading square on e4, and also allowing black knight jumps to e5. In the critical position I recommend both 19. Qf4!?N and 19. Rad1 and in the latter line, after 19... Rc8, I can suggest both 20. Kh1!?N and 20. Rfe1. The multiple suggestions are no coincidence: the Sveshnikov remains a sound opening and I have not found a direct route to a clear advantage against the best defences, but I have offered many fresh ideas that will challenge Black. And even if Black is fully familiar with all the new lines I suggest, the resulting positions still appear more difficult to play for Black.

**B33**

☐ **Chapter**
■ **N,N**

**1.e4 c5 2.Nf3 Nc6 3.d4 cxd4 4.Nxd4 Nf6 5.Nc3 e5 6.Ndb5 d6 7.Bg5 a6 8.Na3 Be7 9.Nc4 Be6?! 10.Bxf6 Bxf6**

[ 10...gxf6? 11.Ne3 is positional suicide for Black. This strange pawn sacrifice has been played in a bunch of old-ish correspondence games. The only explanation I can think of is that the computers of ten to fifteen years ago were not strong enough to evaluate the ensuing positions accurately. ]

**11.Nxd6+ Kf8 12.Nc4 Qd4**

[ 12...Bg5 13.Nd5 b5 14.Nce3 g6 15.Bd3 leaves White a solid pawn up. ]

**13.Ne3** White has an extra pawn and will soon plonk a knight on the excellent d5-square. **13...Qxd1+**

[ 13...Bh4 14.Ncd5 maintains control. ]

[ 13...Rd8 14.Bd3 Nb4 15.0-0 Nxd3 16.cxd3 Bg5 ( *( 16...Qxd3 17.Qf3±* ) ) 17.Qf3 h5 18.Ncd5 Rh6 19.Nf5 Bxf5 20.Qxf5**±** Enkalo - Kazurov, email 2012. ]

**14.Rxd1 Bg5 15.Ncd5 Rd8 16.Be2 g6 17.h4 Bxe3 18.fxe3 h5 19.0-0 Kg7 20.c4** Even though Black managed to hold this position in Canamas Soler - Llompart Flexas, corr. 2012, it's obvious that he is just a pawn down without any real compensation.

**B33**

☐ **Chapter**
■ **N,N**

**1.e4 c5 2.Nf3 Nc6 3.d4 cxd4 4.Nxd4 Nf6 5.Nc3 e5 6.Ndb5 d6** The standard approach, and the supposed downside to White's last move. **7.Bg5** White plans an eventual Nh4 to exchange the light-squared bishops. On h4 the knight is perfectly in play, at least as a defender - it blocks Black's h-pawn and defends the potential target on g2. **7...a6** Another popular move order has been: **8.Na3 Be7 9.Nc4 Bg4 10.Be2**

[ 10.f3 is possible, but it gives Black options such as ... Bh3, although I still prefer White.) Be6 I am not sure if there is a good reason not to play ...e6 immediately, but I guess it doesn't really change anything. White continues with the same plan, and the two move orders may just transpose. 11.Bxf6 Bxf6 12.Nxd6+ Kf8 13.Nc4 Nd4 14.Ne3 Bh4+ 15.g3 Bg5 16.Ned5!N 13.d5 has been played with considerable success, but I don't see any reason not to plonk my queen on the ideal h5-square. It absolutely prevents any counterplay on the kingside, where Black has to constantly worry about his pawns. Rc8 ]

**10...Bxe2!?** Provoking h2-h3, which is certainly a commitment, and leaves White's kingside less solid than the ideal g2-g3. **11.Qxe2!?N Ng8**

[ 11...Nd4 12.Qd3 0-0 13.Bxf6 White had an excellent position in Koziak - Maslak, Palma de Mallorca 2009. Bxf6 14.Nd5 ]

**12.Bd2**

[ 12.Be3 has the idea to play more actively against Nh4, but White can switch to another simple and effective plan. b5!? ( 13.Nd2 Nf6! 14.0-0 0-0 15.Rfd1 Qc7 ]

**12...Nf6**

[ 12...b5 13.Ne3 transposes to the 7... Qc7 line above. ]

**13.0-0! 0-0 14.Ne3 Rc8 15.Ned5** White will follow up with dxc5, with a pleasant position. **15...Nd7**

[ 15...Nd4 gave White an excellent position in Adams - Short, Sheffield (rapid-2) 2011. Black can improve with 14. .. Kb8!?N, although White is possibly still better. Now 16.Qd3 Ne6 transposes to the 7... Qc7 line, but Nigel tried something different. *( 16...Nxd5 17.Nxd5 )* 17.Rad1 ]

**16.Qg4!** is not so clear. **16...Kh8?** runs into

[ Preventing ... Bd6, and threatening f2-f3. 16...Nd4 17.Be3! is Black's nasty idea. Nxc2 18.Nxe7+ Qxe7 19.Nd5 Qd8 20.Bh6 g6 21.Qxd7?! ]

**17.Be3±** . **17...b5** is met by **18.Rfd1** when White has a much quicker attack on the queenside than Black's play on the kingside.

## ☐ 3c. Positional − Good Knigh
## ■ Judit Polgar vs. Miguel Illes,Leon 1996

1.e4 c5 2.Nf3 Nc6 3.d4 cxd4 4.Nxd4 Nf6 5.Nc3 e5 6.Ndb5 d6 7.Bg5 a6 8.Na3 b5 9.Nd5 Be7 At the beginning of this chapter we have looked at similar setups with a weak d5-square. Now we are going to expand on this knowledge by adding a new concept to it − the scenario we call 'good knight versus bad bishop'. This situation usually requires an outpost, that makes our knight a very potent one, and a rather poorly placed bishop, usually stuck behind pawns of the same colour. In the above theoretical position, we already see the rough 'draft' of our plan taking shape as the knight on d5 looks menacing. How should we continue from here? 10.Bxf6 This capture is the key! White gives up the bishop for a knight (and thus breaks a principle) in order to work towards the desired good knight/bad bishop scenario. The first step is to eliminate the pieces that can attack d5 and thus the capture is perfectly logical! 10...Bxf6 11.c3 0-0 12.Nc2 Rb8 Black is aiming to put his bishops on g5 and e6, the former to disallow Nce3, the latter to challenge d5 directly. How did I manage to throw the spanner in the works to upset this plan? 13.h4 This move is primarily designed to take away the g5-square from the bishop, but it also has a secondary concept behind it, which we shall soon see. Of course, this positional nuance, as so often, rests on an awesome tactical foundation, which makes the pawn immune. 13...Bxh4?? 14.Qh5 and Black is lost. 13...g6 Black secures the g7-square for his bishop so that a potential f7-f5 break may become a possibility at one point. It was my turn to reveal the second, positional point behind h4. What was it? 14.g3 This move allows me to play for Bf1-h3, aiming to challenge Black's light-squared bishop, yet another piece that is a potential challenger of my d5-knight. 14...Be6 15.Bh3 Bg7 16.h5 a5 17.Nce3 Qg5 Black's last move does not carry any immediate threats but the queen might look intimidating. The move definitely has a downside, though, as it allows me to carry out my strategic plan and trade the light-squared bishops under optimal circumstances.

How exactly? 18.Nc7 This maneuver forces the exchange of the light-squared bishops, without me having to take on e6, 18.Bxe6? fxe6 , which is almost always inferior as the e6-pawn provides a perfect cover for the d5-square. 18...Bxh3 19.Rxh3 And thus I have achieved a really huge positional plus: both of my knights can cover d5 but Black only has 1 piece remaining that can challenge it! 19...Rfd8 20.Kf1 b4 21.Ncd5 Rdc8 22.Qa4 bxc3 23.bxc3 Qd8 24.Kg2 Ne7 25.hxg6 hxg6 26.Rhh1 Nxd5 27.Nxd5 Rc5 After a lengthy strategic battle I have achieved the much-desired good knight/ bad bishop minor piece setup, so now it is time we turn our attention to the heavy pieces! How? 28.Rab1 The most obvious move indeed, I am introducing the only undeveloped piece into the game. The goal is to obtain control of the b-file, followed by the invasion of the remaining heavy pieces. 28...Rxb1 29.Rxb1 Qa8 30.c4 Bf8 31.Qd7 Qc8 Black is hoping to survive a clearly inferior endgame after the queen trade but White has a bigger fish to fry. What move did I play here in the spirit of 'infiltration with the heavy pieces'? 32.Qa7 This sideways maneuver decides the battle as now both Rb7 and Rb8 are deadly threats. 32...Rxd5 32...Rxc4 33.Rb8 Qe6 34.Qa8+- and the bishop is doomed. 33.cxd5 Black decided to prolong his misery by giving up an exchange just to eliminate the dominant knight, but the game is essentially over. 33...Qc2 34.Re1 Qxa2 35.Re3 Qa4 36.Rf3 Qe8 37.Qxa5 Qd7 38.Qa8 Kg7 39.Qc6 Qe7 40.Qc8 Qa7 41.Rb3

**B33**

□ **19) 2...Nc6 - Sveshnikov**
■ **Sveshnikov Ne7**

1.e4 c5 2.Nf3 Nc6 3.d4 cxd4 4.Nxd4 Nf6 5.Nc3 e5 The Sveshnikov variation. Since many new ideas were found in the 70ies and the 80ies, it gained a reputation as one of the best Sicilians for Black. It was a pet line of many top-class players, including two World champions: Magnus Carlsen and Vladimir Kramnik, who played it quite often before the unfortunate discovery of the Berlin defense. 6.Ndb5 d6 7.Nd5 This move was never considered critical, but the World Championship match Caruana - Carlsen from 2018 has completely changed the course of the current theory. The main problem for White is that after 7.Bg5 Black was successfully equalizing in most of the lines, so White players were somehow forced to create something new. The move 7.Nd5 gives up fight for the d5 square, which is a success for Black and leads to the pawn structures that are typical for the Najdorf. The positive side for White with the move Nd5 is that the knight from b5 doesn't have to retreat to the a3 square and quite often goes back to c3 after the pawn goes to c4. Also, Black has to decide where to place his knight. 7...Nxd5 8.exd5 Ne7 The modern way of playing this position. It has brought many victories to the current World Champion. It seems as if Black is on the verge of losing a pawn in this line, but somehow always manages to find some compensation for it. 9.c4 Ng6 If Black could castle he would have a great position. 10.Qa4 Creating a deadly

threats. 10...Bd7 Only move. 11.Qb4 White is annoying Black and constantly attacking some pawns. Here Black has choice between two approximately similar options: Bf5 and Qb8. 11...Qb8 Defending pawn, and keeping the option of playing f7-f5. 12.Be3 White players are automatically including h4 and h5, and only then playing Be3, but I have realized that this only helps Black to create some counter chances. If Black doesn't do anything, White wants to play c5 on the next move. 12...a6 Black can hardly play without this move, 12...Be7 allows 13.c5 , so he has to include a6 first. 13.Nc3 Be7 13...f5 isn't something White should be afraid of. The move f4 is not really a threat since it gives away the e4 square, and White can continue expanding on the queenside. 14.a4 and White has easier play. 14.Na4 Going for Nb6. It is important that in many lines the pawn on h4 isn't hanging. That is the differencecompared to 13. h4. 14...Qc7 Giving the rook air to breathe. 15.Qb6 In general, the endgame should be favourable for White with the pawn majority on the queenside. 15...Qb8 Or 15...Qc8 is responded in the same manner. 16.Qb3 As we have seen in the Bf5 line, White queen is better played on b3 than on b4 since it participates in the defence over the third rank. In some lines playing c5 also becomes option, especially when Black pushes f5. 16...Qc7 17.Nb6 White will take the bishop on d7 and obtain the bishop pair advantage.

**B33**

## ☐ 3g) Sicilian Kalashnikov and ■ Sicilian Sveshnikov Variatio

1.e4 c5 This move marks the Sicilian Defense. Black does not put a pawn directly in the center but controls it instead with a flank pawn. 2.Nf3 YouCplay in the same fashion as in the Open Games after îîStartFENîîrnbqkbnr/ pppppppp/8/8/4P3/8/ PPPP1PPP/RNBQKBNR b KQkq e3 0 1îîEndFENîî 1...e5 2.Nf3 You develop the knight and control the center. Wait to put your other pawn in the center with îîStartFENîîrnbqkbnr/pppppppp/8/8/4P3/8/PPPP1PPP/RNBQKBNR b KQkq e3 0 1îîEndFENîî 1...c5 2.d4 because after 2...cxd4 3.Qxd4 Black can develop with tempo and attack your queen with 3...Nc6 . 2...Nc6 Black develops the knight and remains flexible with his pawns for now. The most popular move at the beginner and Club player level, and the second most popular move at the top level. 3.d4 The Open Sicilian. Many White players are scared to play Open Silician because they think it's a heavy theoretical battleground. Black has many setups, and we must learn how to play against all of them. This course will teach you that it's possible to do well in the open Sicilian without learning a massive amount of theory. We will use a robust development setup that works versus almost all Sicilians. 3...cxd4 4.Nxd4 You capture with the knight as usual. 4...Nf6 5.Nc3 e5 This is the Sveshnikov Sicilian, named after the Soviet grandmaster Evgeny Sveshnikov. The ideas are similar to the Kalashnikov variation. Black quickly attacks White's central knight, but his pawn formation gets slightly weakened. After 5...e6 , we can continue with 6. Be2

followed by Be3 and the same after 5...d6 6.Be2  6.Ndb5 White jumps in with his knight, just like against the Kalashnikov Sicilian.  6...d6 Black prevents the b5-knight from jumping in.  7.Bg5 White develops his bishop and pins the f6-knight. Your knights can become very threatening on b5 and d5. Black has to be careful now and can't just continue development. Next move, you will capture the knight.  7...a6 A precise move! Black kicks back your knight before they continue development. 8.Na3 You retreat the knight!  8...b5 Threatening a fork with ...b4 so you should move the knight.  9.Nd5 Reaching Knight Domination and attacking the pinned knight on f6. 9...Be7 BlaCk develops and threatens to win a piece with îîStartFENîîr1bqk2r/4bppp/p1np1n2/1p1Np1B1/ 4P3/N7/PPP2PPP/R2QKB1R b KQkq - 2 10îîEndFENîî 10...Nxd5 when they open up the attack against our bishop and after 11.Bxe7 , their knight can escape back to safety with 11...Ndxe7 .  10.Bxf6 You eliminate the knight and keep our knight on a powerful outpost. After 10...Bxf6 , you don't want to trade with 11.Nxf6 Qxf6! Your knight is powerful on the outpost, and you want to keep it there.  10...Bxf6  11.c3 You get ready to bring your knight back into the game with Nc2 and can play a4 next to undermine Black's pawns on the queenside and get your bishop to c4. Don't play 11.Be2 , it's the Knight Domination Setup, and your bishop belongs on c4. You want to get ready to support your dominating knight with your friends.  11...Ne7 Black directly challenges your knight on the outpost.  12.Nxf6+ You grab the chance to destroy Black's pawn structure. Black will try to claim that opening up the g-file also has some benefits, which is true.  12...gxf6  13.Nc2 You bring the knight back to the game.  13...Bb7 Black pressure the e4-pawn.  14.Bd3 You develop and support the pawn.  14...d5 Black opens the center.  14...f5 is not dangerous! 15.exf5 Bxg2 16.Rg1 activates your rook along the g-file.  15.exd5 You accept the trade. 15.Qe2 is also a sound alternative. In general, you only want to be defending in chess if you have to. Defending ties your pieces down and doesn't give them the freedom to fight somewhere else.  15...Qxd5 After 15...Nxd5 16.Be4 pins the knight.  16.Ne3 You get the knight to e3 with tempo and defend the g2-pawn. 16...Qe6  17.a4 BlaCk is unable to capture your pawn. 17...bxa4 18.Qxa4+ Qd7 19.Qxd7+ Kxd7 20.Bc4 gives you a fantastic endgame. You attack the f7-pawn and can play Ke2, and double the rooks on the a-file, and target the a6-pawn. îîStartFENîîr3k2r/1b2np1p/p3qp2/1p2p3/P7/2PBN3/1P3PPP/R2QK2R b KQkq a3 0 17îîEndFENîî 17...Rd8 is the critical reply when 18.Qe2 unpins the bishop. Black should play 18...e4 to chase your bishop to a worse square but it also blocks Black's bishop. 19.Bc2 b4 is the best defense for Black when after 20. Rd1 , you aim to trade rooks to weaken Black's king. A sample variation is 20.. .f5 21.Rxd8+ to weaken Black's king Kxd8 22.Qd1+ Kc7 23.Qd4 forks the rook and b4-pawn 23...Rd8 24.Qxb4 , this looks riskier for Black since you should be able to give a perpetual check once Black's attack gets strong.

**B33**

## ☐ 3g) Sicilian Kalashnikov and
## ■ Sicilian Sveshnikov Variatio

1.e4 c5 This move marks the Sicilian Defense. Black does not put a pawn directly in the center but controls it instead with a flank pawn. 2.Nf3 YouCplay in the same fashion as in the Open Games after îîStartFENîîrnbqkbnr/ pppppppp/8/8/4P3/8/ PPPP1PPP/RNBQKBNR b KQkq e3 0 1îîEndFENîî 1...e5 2.Nf3 You develop the knight and control the center. Wait to put your other pawn in the center with îîStartFENîîrnbqkbnr/pppppppp/8/8/4P3/8/PPPP1PPP/RNBQKBNR b KQkq e3 0 1îîEndFENîî 1...c5 2.d4 because after 2...cxd4 3.Qxd4 Black can develop with tempo and attack your queen with 3...Nc6 . 2...Nc6 Black develops the knight and remains flexible with his pawns for now. The most popular move at the beginner and Club player level, and the second most popular move at the top level. 3.d4 The Open Sicilian. Many White players are scared to play Open Silician because they think it's a heavy theoretical battleground. Black has many setups, and we must learn how to play against all of them. This course will teach you that it's possible to do well in the open Sicilian without learning a massive amount of theory. We will use a robust development setup that works versus almost all Sicilians. 3...cxd4 4.Nxd4 You capture with the knight as usual. 4...Nf6 5.Nc3 e5 This is the Sveshnikov Sicilian, named after the Soviet grandmaster Evgeny Sveshnikov. The ideas are similar to the Kalashnikov variation. Black quickly attacks White's central knight, but his pawn formation gets slightly weakened. After 5...e6 , we can continue with 6. Be2 followed by Be3 and the same after 5...d6 6.Be2 6.Ndb5 White jumps in with his knight, just like against the Kalashnikov Sicilian. 6...d6 Black prevents the b5-knight from jumping in. 7.Bg5 White develops his bishop and pins the f6-knight. Your knights can become very threatening on b5 and d5. Black has to be careful now and can't just continue development. Next move, you will capture the knight. 7...a6 A precise move! Black kicks back your knight before they continue development. 8.Na3 You retreat the knight! 8...b5 Threatening a fork with ...b4 so you should move the knight. 9.Nd5 Reaching Knight Domination and attacking the pinned knight on f6. 9...Be7 BlaCk develops and threatens to win a piece with îîStartFENîîr1bqk2r/4bppp/ p1np1n2/1p1Np1B1/ 4P3/N7/PPP2PPP/R2QKB1R b KQkq - 2 10îîEndFENîî 10... Nxd5 when they open up the attack against our bishop and after 11.Bxe7 , their knight can escape back to safety with 11...Ndxe7 . 10.Bxf6 You eliminate the knight and keep our knight on a powerful outpost. After 10...Bxf6 , you don't want to trade with 11.Nxf6 Qxf6! Your knight is powerful on the outpost, and you want to keep it there. 10...Bxf6 11.c3 You get ready to bring your knight back into the game with Nc2 and can play a4 next to undermine Black's pawns on the queenside and get your bishop to c4. Don't play 11.Be2 , it's the Knight Domination Setup, and your bishop belongs on c4. You want to get ready to support your dominating knight with your friends. 11...0-0 12.Nc2 Bg5 13.a4 The same plan! 13...bxa4 14.Rxa4 a5 Black secures the pawn. 15.Bc4 You develop the bishop and support the knight on

the outpost. 15...Rb8 Black attacks your b2-pawn. 16.b3 You also safeguard the pawn. 16...Kh8 Black's only good option in the position is to play ... f5 either in one go or with first g6 and f5. Therefore, the king has to sidestep to safety first. 17.Nce3 You bring your knight over to support your dominating knight and to slow down Black's ...f5 idea. 17.O-O would be a solid alternative. 17...g6 After 17...Ne7, you can trade with 18.Nxe7 Qxe7 and reinforce the Knight Domination with 19.Nd5 18.0-0 18.h4 is a big theoretical debate where White sacrifices material with to open up the h-file 18...Bxh4 19.g3 Bg5 20.f4 exf4 21.gxf4 Bh4+ 22.Kf1 g5! The position looks more pleasant for White, but Black should be able to hold the balance. Both sides need to remember lots of theory there. I like to keep it simple and avoid going for these complications. 18...f5 19.Qd3 Did you notice that all the pieces in your position are defended? This is the trademark of a healthy position. You don't want to trade with 19.exf5 gxf5 when Black gets more control over the center. You would be happy to see îîStartFENîî1rbq1r1k/7p/ 2np2p1/p2Nppb1/R1B1P3/1PPQN3/5PPP/ 5RK1 b - - 1 19îîEndFENîî 19...f4 20.Nc2 f3 21.g3 when the on f3 is more a weakness than a strength. After 21...Qd7? 22. Rfa1 Qh3 23.Ne1 , you defend against the mate, and Black cannot continue the attack. You can chase the knight away with Bb5 and start marching your b-pawn forward. Black's best strategy is to stay patient with îîStartFENîî1rbq1r1k/7p/ 2np2p1/p2Nppb1/R1B1P3/1PPQN3/5PPP/5RK1 b - - 1 19îîEndFENîî 19...Be6 when you can play 20.Rd1 going to the semi-open d-file. Since all your pieces are protected, you are not rushing to change the position. You can aim for Ra2 to prepare to defend the f2-pawn and swing over to the d-file.

**B33**

☐ **19) 2...Nc6 - Sveshnikov**
■ **Sveshnikov Nb8**

1.e4 c5 2.Nf3 Nc6 3.d4 cxd4 4.Nxd4 Nf6 5.Nc3 e5 The Sveshnikov variation. Since many new ideas were found in the 70ies and the 80ies, it gained a reputation as one of the best Sicilians for Black. It was a pet line of many top-class players, including two World champions: Magnus Carlsen and Vladimir Kramnik, who played it quite often before the unfortunate discovery of the Berlin defense. 6.Ndb5 d6 7.Nd5 This move was never considered critical, but the World Championship match Caruana - Carlsen from 2018 has completely changed the course of the current theory. The main problem for White is that after 7.Bg5 Black was successfully equalizing in most of the lines, so White players were somehow forced to create something new. The move 7.Nd5 gives up fight for the d5 square, which is a success for Black and leads to the pawn structures that are typical for the Najdorf. The positive side for White with the move Nd5 is that the knight from b5 doesn't have to retreat to the a3 square and quite often goes back to c3 after the pawn goes to c4. Also, Black has to decide where to place his knight. 7...Nxd5 8.exd5 Black here has a choice between Nb8 and Ne7. The first one had a better reputation, but the World

Champion revived the whole Ne7 line. 8...Nb8 9.a4 White has two ways to solve the problem of the b5-knight, he can play 9.c4 and return the knight to c3, or play in a modern way 9.a4 and return the knight to a3 where it can reach his ideal square in this pawn structure, the c4 square. 9...Be7 Black develops his kingside first, and is not in a hurry to play a6. 10.Be2 White also develops, before pushing on the queenside with a5. 10...0-0 11.Bd2 TheCmost common move is 11.O-O but after 11...Nd7 12.Bd2 a6 13.Na3 a5 practice has shown that Black has good chances there. With this move order îîStartBracketîîBd2 before castlingîîEndBracketîî White fights against the mentioned plan îîStartBracketîîa6 followed by a5îîEndBracketîî and doesn't spoil his position. The bishop goes to d2, to guard the pawn on a5, or to attack the black pawn depending on our opponent's reaction. 11...Nd7 Black is flexible about pushing f5, instead he develops pieces. 12.a5 Time to gain space on the queenside. Also shows the point of Bd2. 12...a6 If Black waited a bit more and played 12...Nf6 instead, White's reaction would be 13.Be3! and suddenly a6 can't be played because of Bb6. This is possible because the black knight is behind the f-pawn and not in front. 13.Na3 Nf6 Black keeps avoiding playing f5. His plan is to develop the bishop to f5, and quickly connect the rooks. 14.Bb4 We have to defend the d5 pawn. The bishop is doing a nice job on the b4 square. 14...Bf5 Developing, quite logical move. 15.Nc4 White must play this move. 15...Be4 Double attack. 16.Ne3 Double defense. 16...b5 Black must stop White from pushing the pawns on the queenside, otherwise he might get crushed without any resistance. 17.c4 bxc4 18.Bxc4 White seems slightly better, due to Black's weaknesses on the queenside.

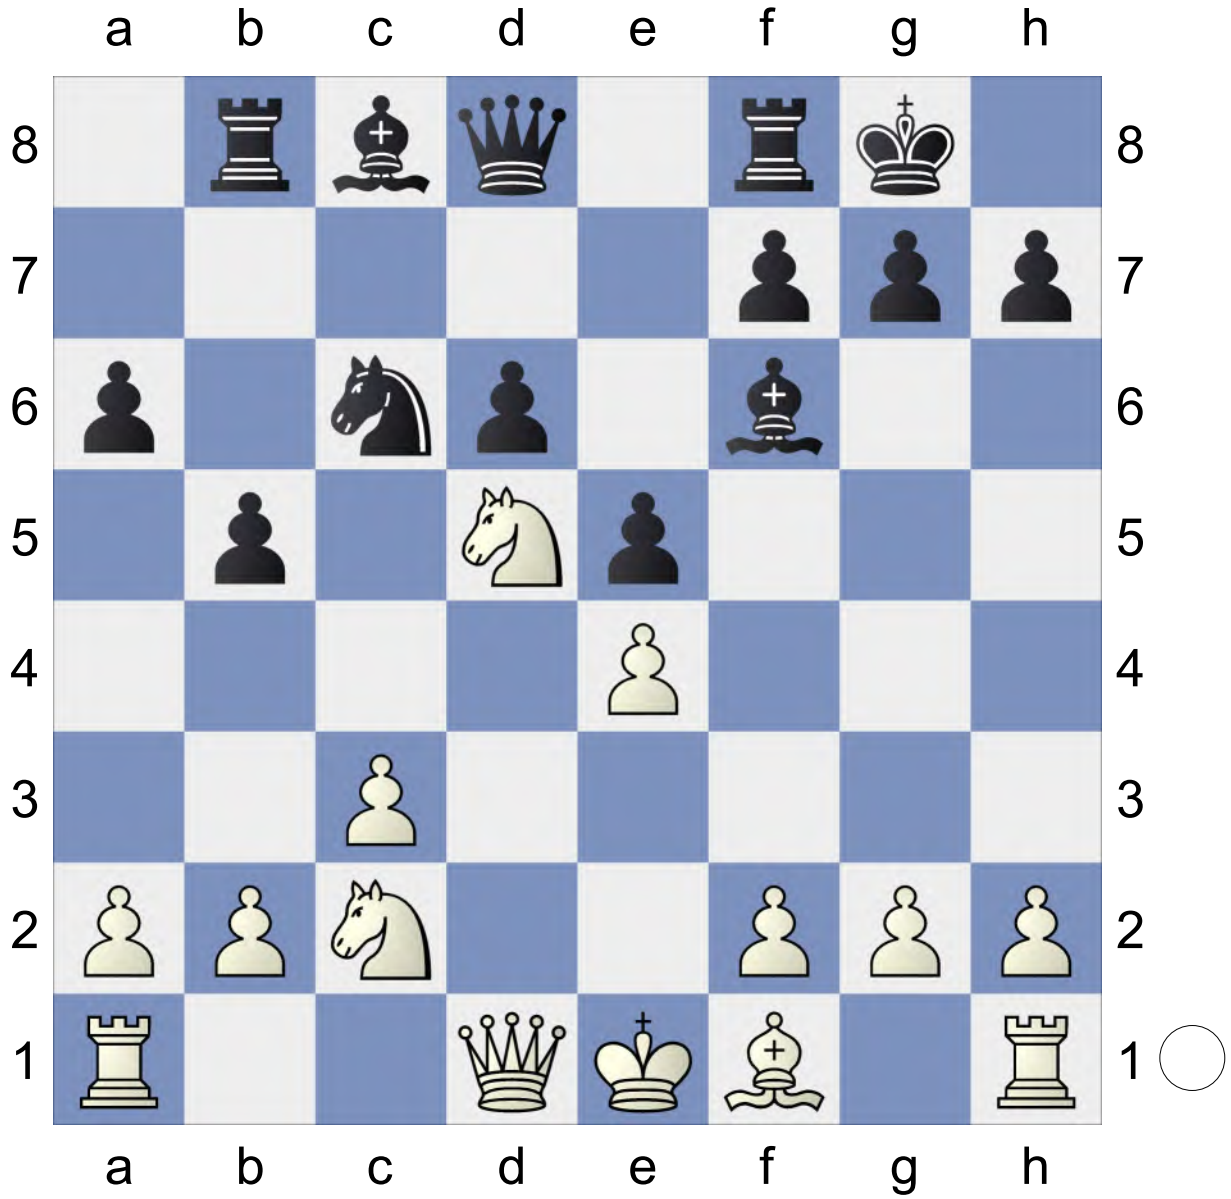
*[Larry Christiansen]*

As 11... Bb7 gradually faded from tournament play, new setups have been employed, most notably **1.e4 c5 2.Nf3 Nc6 3.d4 cxd4 4.Nxd4 Nf6 5.Nc3 e5 6.Ndb5 d6 7.Bg5 a6 8.Na3 b5 9.Nd5 Be7 10.Bxf6 Bxf6 11.c3 0-0** This move often transposes to 11...Bg5 but it has some independent lines. One interesting recent game from the 2004-5 US Championship was Kamsky-Benjamin which continued **12.Nc2 Rb8** Diagram

(Diagram)

which is popular nowadays because it aims to prevent a2-a4. The downside is that it invites the annoying **13.h4!** (again an idea from Kasparov), which prevents ...Bg5 and is very flexible. **13...Ne7!?** A very sharp move that seems to invite the breakup of Black's king position. But it has some nice advantages. Black's centre is ready to advance, and the Black rook on b8 is well placed to support quick play with ... b4 if



the two sides becoming locked in mutual king-hunting. There is no question, however, that the Yakovich line 13... Be7 looks like a very reliable continuation. Anyway, 13... Ne7!? was the continuation of Kamsky-Benjamin, which continued

[Black's sturdiest continuation is 13...Be7! (Yakovich) when I think White's most effective continuation is 14.Nce3 more flexible than *( 14.Bd3 Be6 15.Nce3 Qd7* with the plan of Bd8 and Ne7 *)* 14...Be6 15.a4! I think it is important to open up another front and keep Black busy on both sides of the board and now bxa4 *(*I must admit though that the continuation *15...Qd7 16.axb5 axb5* is a very hard rock to break. Black plans simply ... Bd8 and ... Ne7, coupled with the positional idea of ... Bb6. Perhaps *17.b4!? Bd8 18.Be2 Ne7 19.h5* offers White the slightest of safe advantages (h5 enables 0-0 without fearing ...Bxh4) *)* 16.Qxa4 Bd7 17.Qa3! eying the d6 weakness while guarding b2, looks very promising. ]

□ **19) 2...Nc6 - Sveshnikov**
■ **Sveshnikov Nb8**

1.e4 c5 2.Nf3 Nc6 3.d4 cxd4 4.Nxd4 Nf6 5.Nc3 e5 The Sveshnikov variation. Since many new ideas were found in the 70ies and the 80ies, it gained a reputation as one of the best Sicilians for Black. It was a pet line of many top-class players, including two World champions: Magnus Carlsen and Vladimir Kramnik, who played it quite often before the unfortunate discovery of the Berlin defense. 6.Ndb5 d6 7.Nd5 This move was never considered critical, but the World Championship match Caruana - Carlsen from 2018 has completely changed the course of the current theory. The main problem for White is that after 7.Bg5 Black was successfully equalizing in most of the lines, so White players were somehow forced to create something new. The move 7.Nd5 gives up fight for the d5 square, which is a success for Black and leads to the pawn structures that are typical for the Najdorf. The positive side for White with the move Nd5 is that the knight from b5 doesn't have to retreat to the a3 square and quite often goes back to c3 after the pawn goes to c4. Also, Black has to decide where to place his knight. 7...Nxd5 8.exd5 Black here has a choice between Nb8 and Ne7. The first one had a better reputation, but the World Champion revived the whole Ne7 line. 8...Nb8 9.a4 White has two ways to solve the problem of the b5-knight, he can play 9.c4 and return the knight to c3, or play in a modern way 9.a4 and return the knight to a3 where it can reach his ideal square in this pawn structure, the c4 square. 9...Be7 Black develops his kingside first, and is not in a hurry to play a6. 10.Be2 White also develops, before pushing on the queenside with a5. 10...0-0 11.Bd2 We have to check what happens if Black plays in the same manner as in the main line. 11...a6 12.Na3 a5 13.Bb5 Playing a5 stops White from playing it, but gives up an important square on b5. Instead of the knight, White places the bishop on b5 while the knight will go to c4. 13...Nd7 Black can also start with 13...f5 and after 14.Nc4 play Nd7. 14.Nc4 f5 15.Qe2 Surprise, White is castling queenside. 15...Nf6 Black attacks the pawn on d5. 16.0-0-0 Bd7 16...Nxd5? loses to 17.Bxa5 when White wins an exchange. 17.Bxd7 Nxd7 This is too slow for Black. 18.f4 Typical resource, undermining Black's pawns. 18...e4 19.Be3 White has a nice positional edge. He can place his queen or knight on b5 later to stop any kind of counterplay from Black and then slowly prepare g4 to open up black king and undermine the e4-pawn.

■ **N,N**
*[GM Renato Quintiliano]*

**1.e4 c5 2.Nf3 Nc6 3.d4 cxd4 4.Nxd4 Nf6 5.Nc3 e5 6.Nxc6 bxc6**
The exchange on c6 clearly favours Black: the d5-square is not weak anymore, d7-d5 is an idea to seize further space in the centre and the open b-file can be very useful sometimes. **7.Bc4** The most logical, developing the bishop on an active diagonal and fighting against the advance of the d-pawn.
[ 7.Bg5?! only brings problems for White: Rb8 8.Rb1 h6 9.Bxf6 *(*If *9.Bh4?* Black has the strong reply *Qa5!* when White already faces material losses, for instance: *10.Bxf6 Rxb2!-+ )* 9...Qxf6 10.Bc4 Bc5 11.0-0 0-0∓ when Black has a pleasant position already, with the bishop pair and a promising majority in the centre. ]
[ 7.Bd3 is also harmless. Black has more than one way to get a good position now: Be7 *(*The more active *7...Bc5* is also possible. *8.0-0 0-0* Now *9.Bg5* seems a principled way of developing the bishop, but the pin is not dangerous. The following variation is very natural: *h6 10.Bh4 Rb8 11.Kh1 Be7 12.Rb1 d6 13.Qe2 Be6 14.b3 Nd7 15.Bg3 Nc5 16.Bc4 Qa5 17.Bxe6 Nxe6*= and Black is fine. *)* 8.0-0 0-0 9.f4 The only active idea for White, but Black stays solid anyway. d6 10.Kh1 *( 10.fxe5* can be met by *Ng4!* when Black achieves a strong post for the knight on e5, since *11.exd6?? Bxd6-+* is obviously hopeless for White. *)* 10...exf4 11.Bxf4 Be6 Black's next idea is the typical maneuver Nd7, with a strong regrouping. White can avoid this plan by means of 12.e5 but after dxe5 13.Bxe5 Nd7 14.Bd4 g6= Black's position seems totally fine. ]
[Other continuations also don't pose problems for Black, for example: 7.Qf3 Be7 8.Bc4 0-0 9.0-0 d6 10.h3 h6 11.Be3 Be6 12.Bb3 d5∓ ]
[Or 7.a3 Bc5 8.Bc4 0-0 9.0-0 Bd4 10.Qf3 d6 11.h3 Be6 12.Bxe6 fxe6∓ in both cases, Black has a comfortable game. ]
**7...Bb4** Putting pressure in the centre.
[ 7...Bc5 and ]
[ 7...Be7 are also playable. ]
**8.0-0**
[ 8.Bg5?! seems imprecise as after h6 White has to part with the bishop pair. 9.Bxf6 *( 9.Bh4?* is bad in view of *g5 10.Bg3 Nxe4 11.Bxe5 Qe7!* when even after the best continuation *12.Qd4 f6 13.Qxe4 Qxe5 14.Qxe5+ fxe5∓* Black keeps a big advantage. *)* 9...Qxf6 10.0-0 0-0 and Black has a pleasant game, with the bishop pair and nice chances in the centre. ]
[Another interesting line is 8.Qf3 0-0 9.Bg5 h6 10.Bxf6 Qxf6 11.Qxf6 gxf6 12.0-0-0 Now Black has a nice idea: f5! with strong play in the centre, for example: 13.f3 *( 13.exf5? d5 14.Bd3 e4∓ )* 13...Kg7 14.exf5 d5 15.Bd3 h5 16.g4 hxg4 17.fxg4 e4 18.Be2 Rh8 19.h4 Be7 20.h5 Kh6∓ Despite being a

pawn down, it's Black who has a clear advantage here. ]

**8...0-0**

[ In case of 8...Bxc3 9.bxc3 Nxe4 10.Ba3!?⩲ White gets decent compensation for the pawn. ]

**9.Bg5**

[ In case of 9.Qd3 Black has the active reaction d5 10.exd5 Bxc3 11.Qxc3 cxd5 with a comfortable position, for example: 12.Bd3 *( 12.Rd1?* is a serious mistake: *Bg4! 13.f3 Rc8-+* and Black is already winning. *)* 12...Re8 13.Re1 d4 14.Qc5 e4 15.Bb5 Bd7 16.Bxd7 Qxd7∓ when Black already has an easier game. ]

**9...h6 10.Bh4**

[ 10.Bxf6 Qxf6 is simply pleasant for Black, as we've seen in similar positions. ]

**10...g5!?** I like this move, neutralizing the pin and putting the dark-squared bishop out of play for a while. **11.Bg3 Qe7**

[ Black can also force some imbalance with 11...Bxc3!? The position after 12.bxc3 Qe7 13.Qd3 d6 14.Rad1 Rd8 15.f3= seems dynamically balanced. ]

**12.Qd3**

[ Another possible continuation is 12.Qe2 d6 13.Rad1 Rd8 14.f3 Rb8 15.Bf2 Nh5↑ with some initiative for Black. ]

**12...Rd8 13.Rad1 d6 14.f3 Bb7** The position is objectively balanced, but I like Black's chances. For example: **15.Bb3** Good prophylaxis.

[ In case of 15.a3 Bc5+ 16.Kh1 *( 16.Bf2? d5! 17.exd5 cxd5 18.Bb3 a5!∓* is already difficult for White. *)* 16...d5↑ Black's position seems promising. ]

**15...a5!** Creating the direct threat of Ba6 and a5-a4 sometimes.

[ 15...d5? now is bad due to 16.exd5 cxd5 17.Qf5! Bd6 18.Kh1± and White keeps some pressure in the centre. ]

**16.Na4 d5 17.exd5 cxd5 18.Qf5 Re8 19.a3 Bd6 20.Nc3 Rad8 21.Kh1 Bb8!∓** Black keeps the centre under control and has a comfortable game. In the next moves we can play something like Kg7 and Qe6, consolidating our advantage in the centre.

*[GM Alexander Khalifman]*

**1.e4 c5 2.Nf3 Nc6 3.d4 cxd4 4.Nxd4 Nf6 5.Nc3 e5 6.Ndb5 d6 7.Nd5**

Perhaps it should be called the new main variant, although I prefer the name "Kholmov's variation". So, after 7.Nd5 Black has no choice: he has to take the knight, and naturally, White takes the pawn. This pawn structure has become very important in the 21st century in various variations of the Sicilian Defense. White refuses to use the d5-square with his pieces, and by means of an exchange, he moves the pawn there and strives for a pawn offensive on the queenside **7...Nxd5 8.exd5**

Black has to make an important choice: where to retreat with his knight, to b8 or to e7.

In general terms, the knight's retreat to e7 is more aggressive, but, on the other hand, Black is required to be more precise because further on, with minimal inaccuracy, one can easily not get out of the opening. The move to b8 is more accurate and more classic, and it's harder not to get out of the opening here, but on the other hand, it's a little more difficult to get active counterplay. One way or another, this choice is primarily a matter of taste. **8...Nb8** If we take the knight to b8, then later it most often comes to d7. There is a possibility to activate it further or by pushing the f&e pawns, providing the knight with an excellent e5 square. Also, depending on the situation, it can go to f6 or c5. It is important that with d7 he slows down White's advance by controlling the important c5-square, but at the same time blocks the way for the light-squared bishop. **9.c4** This is the old main line but it's pretty unproblematic for black at the moment.

**16...Qf6⇄** Black intends to play Qh6 & Be3 forcing dark-squared bishops exchange. It's not so easy to prevent this as the idea e5-e4 is in the air too.

**B33**

□ **6.Nf5**

■ **N,N**

*[GM Renato Quintiliano]*

**1.e4 c5 2.Nf3 Nc6 3.d4 cxd4 4.Nxd4 Nf6 5.Nc3 e5 6.Nf5** This active jump is more or less refuted by **6...d5!**

[ Of course, 6...d6? 7.Bg5± is simply bad for Black. ]

**7.exd5 Bxf5 8.dxc6 bxc6!**

[ More precise than 8...Qxd1+ 9.Nxd1 bxc6 as now White has 10.Ne3 Be6 11.Nc4 with a harmonious development. ]

**9.Qf3**

[ 9.Bd3 was tried in a few games, but after e4!? Black can even play for some advantage. *(* The endgame after *9...Bxd3 10.Qxd3 Qxd3 11.cxd3 Rb8=* is also harmless for Black. *)* 10.Bc4 *(* In case of *10.Qe2 Bb4 11.0-0 Qe7 12.Bc4 0-0 13.Bf4 Rad8* I like Black's position. A nice point is that *14.Rad1?* is bad in view of *Bg4! 15.f3 Bh5* when White is already in trouble, for instance: *16.Rxd8 Rxd8 17.Nxe4? Nxe4 18.Qxe4 Bc5+! 19.Kh1 Rd4-+* and Black wins a piece. *)* 10...Bd6 The e4-pawn takes space in the centre and allows Black to develop a strong initiative on the kingside. The following game is a nice example of how to

develop this plan: 11.h3 0-0 12.Be3 Qe7 13.Qe2 Be5! *( 13...Rad8? 14.0-0-0!* was White's idea. *)* 14.0-0 Rfe8 15.Rfd1 h6 16.Bb3 Rac8 17.Na4 Bb8!-+ and White's position is already hopeless. ]

[ In case of 9.Qxd8+ Rxd8 White has problems with the c2-pawn. 10.Be3 is more or less forced, but after Bxc2 11.Bxa7 Ra8 12.Be3 Rb8 13.b3 Nd5↑ the initiative is with Black. ]

[ 9.Ba6!? is also comfortable for Black after Bb4 *( 9...Qb6 10.Qe2* is White's idea, with a normal development. *)* 10.0-0 *( 10.Bb7? Qxd1+ 11.Kxd1 Rd8+ 12.Bd2 Bxc3 13.bxc3 Ke7 14.Bxc6? Rd6-+ )* 10...0-0 11.Qf3 Bxc2 12.Qxc6 Qb6 Black is completely fine here. ]

**9...Qd7** This position was seen in a few recent games, but practice has shown that Black is ok with correct play. **10.Bg5**

[ 10.Bc4 is another logical option. Be7 *( 10...Bxc2 11.Qe2* is the point. *)* 11.0-0 0-0

**A)** Another game went 12.Bg5 Bxc2 13.Rac1?! *( 13.Qe2* was perhaps better, though after *Bg6 14.Qxe5 Bd6 15.Qe2 Rfe8*↑ Black has an easier game. *)* 13...Bg6 14.Bxf6 Bxf6 15.Rfd1 Qb7∓ and White hadn't enough compensation for the pawn.;

**B)** 12.Rd1 Qc8 13.Qe2 Defending against both Bxc2 and Bg4. *( 13.Ba6 Qe6* should lead to a repetition, since *14.Bb7? e4!∓* leaves White in trouble. *)* 13...Qc7 Black has no problems completing the development here. 14.h3 Bb4 15.Na4 Rfe8 16.a3 Bf8 17.Nc3 Fernandez,D (2500)-Jackson,J (2314) London Classic op 2017 (4) ½-½ Black has a good position and can continue in many ways here. I like e4 18.Be3 *( 18.Bg5 Bd6!? 19.Bxf6?! gxf6∓* is good only for Black, as ideas like Bg6-f5-f4 look very promising. *)* 18...Bd6 19.Rd2 Bh2+ 20.Kh1 Be5= with a balanced game. ]

**10...e4!** This advance is a nice attempt to disturb White's coordination. **11.Qd1**

[ 11.Qe2 is the most played, but after Be7 White needs to solve the development of the light-squared bishop. 12.Rd1 *( 12.Bxf6? Bxf6 13.Nxe4 0-0!∓* is very bad for White. *)* 12...Qe6 13.Qc4 Rb8 14.Qxe6 fxe6! Now Black can take the initiative. 15.b3 Nd5 16.Bxe7 Kxe7 17.Na4 Akopian, V (2615)-Yakovich,Y (2510) Rostov on Don op 1993 ½-½ Black would have kept better chances here with Rhd8 for example: 18.Be2 Nb4! 19.Rxd8 Rxd8 20.Bd1 Nxa2∓ ]

**11...Bd6!** A less exploited but very strong idea. Instead of being worried about doubled pawns on the f-file, Black looks for active development.

[ 11...Qe6 was played by Carlsen and is also enough to get a good game. 12.Qd4 Rd8 13.Qa4 Bc5 14.Bc4 Qe5 15.Qxc6+ Bd7 16.Bxf6 Bxf2+! 17.Kf1! *(*But not *17.Kxf2?? Qf4+-+ )* 17...gxf6 18.Qxe4 Bd4 19.Re1 Kf8!∓ Vachier Lagrave,M (2784) -Carlsen, M (2862) Chess.com Speed blitz 2020 (3.22) 1-0 Black has more than enough compensation for the pawn here, despite the final result. ]

**12.Qd4**

[ 12.Bxf6 gxf6∓ immediately is similar. ]

[ In case of passive play Black is more than fine. For example: 12.Bc4 Qe7 13.0-0

0-0 14.Qd2 Rad8 15.Qe3 Rfe8 16.Be2 *( 16.Rad1?* loses on the spot in view of *Bxh2+! 17.Kxh2 Ng4+ 18.Kg1 Rxd1-+ )* 16...h6 17.Bh4 g5!? 18.Bg3 Bc5-+ and Black has a crushing attack already. ]

[ 12.Be2 Rb8∓ is also better for Black. ]

**12...Qe7 13.Bxf6** Muzychuk,A (2533)-Ushenina,A (2452) EU-ch (Women) 11th 2010 (11) ½-½

[ The best option for White probably was 13.0-0-0 Be5 14.Bxf6 Bxf6 15.Qd6 but after 0-0 16.Qxe7 Bxe7∓ the endgame seems more pleasant for Black due to the bishop pair. ]

In the game Muzychuk exchanged queens, but **13...gxf6!** is a nice improvement. Considering the open position and White's worse development, keeping queens on the board seems very good for Black. **14.Rd1**

[ 14.Be2? is too slow. After Rb8-+ White already lacks a decent way of defending the b2-pawn. 15.0-0-0? Bf4+ 16.Kb1 Rb4 17.Bc4 Be5-+ and White already faces material losses. ]

[ 14.0-0-0 Bf4+ 15.Kb1 Rb8 16.Bc4 0-0∓ also seems bad for White. ]

A natural variation now is **14...Be5 15.Qc4 0-0 16.Be2 Rab8 17.Qxc6 Rxb2 18.Nd5 Qe6!∓** when Black definitely has a better game with active piece play.

**B33**

☐ **4: 9 Nd5 Main Line: 11...0-0**

■ **N,N**

*[John Cox]*

**1.e4 c5 2.Nf3 Nc6 3.d4 cxd4 4.Nxd4 Nf6 5.Nc3 e5 6.Ndb5 d6 7.Bg5 a6 8.Na3 b5 9.Nd5 Be7 10.Bxf6 Bxf6 11.c3 0-0 12.Nc2 Bg5** A popular choice.

[ An important alternative is 12...Rb8 ; see the second half of this chapter. ]

**13.a4** Since Black hasn't set out to prevent it, this is far and away White's most natural and commonest move. --- NOTE: It helps White to remove the b5-pawn by forcing ...bxa4 since it means that Black cannot choose his moment for ...b4, either leaving a backward c-pawn on the open file or eroding White's control of d4, to say nothing of exposing the a-pawn on the open file.

[ White has three alternatives, none of which inspires much confidence: 13.g3 just doesn't devote itself to the critical issues of d5 and the queenside pawns enough, and was very thematically dealt with in Xie Jun-A.Galliamova, 6th matchgame, Kazan 1999: Ne7 14.Ncb4 Be6 15.Bg2 a5 16.Nxe7+ Qxe7 17.Nd5 Qb7 18.0-0 . Black's sequence up to here is worth noting carefully; with the bishop on g2 White just doesn't have the firepower to keep control of d5 properly and Black could now have played the thematic Bxd5 *(* not that there was anything wrong with *18...b4 19.c4 Rfc8* as in the game *)* 19.Qxd5 Qxd5 20.exd5 . --- TIP: This opposite-coloured bishop and double rook ending is almost always better for Black with or without queens; he can take the bishop to b6 and play ...f5,

while White's bishop has very few active prospects. ]
[ After 13.g3 Ne7 , Nigel Short recently tried the grotesque 14.h4 Bh6 15.Bh3?! against former Avignon Pope Veselin Topalov at Wijk aan Zee 2005. Topalov could perfectly well have played Be6 - exchanging on e6 and giving Black back control of d5 is not something White is keen to do; *(* but played even more simply: *15...Bxh3 16.Rxh3 a5 17.Kf1 Rc8 18.Nce3 Bxe3 19.Nxe3 Qd7* , and Black was better. --- NOTE: Topalov's combination of ...a5 and ... Bg5 cut off the knight on c2 from d5; as a result White was even unable to prevent the ...d5-break. *)*]
[ I said 'grotesque', but Judit Polgar recently tried the same idea in a slightly different order against Topalov in their Bilbao blindfold match, with 13.h4 Bh6 14.g3 . I don't know why Topalov didn't play the thematic Ne7 now; *(* in fact he preferred *14...Rb8 15.Bh3 Bxh3 16.Rxh3 a5 17.Nce3* . *)*]
[ 13.Be2 seems natural but can be dealt with in the same sort of way: Be6 14.0-0 Ne7 15.Ncb4 a5 16.Nxe7+ Qxe7 17.Nd5 Qb7 18.Qd3 Bxd5 19.Qxd5 Qxd5 20.exd5 and again Black is better, E. Dervishi-M.Krasenkow, European Championship, Ohrid 2001 (Black won the endgame in a very typical fashion well worth playing through). ]
[ 13.h4 , on the other hand, errs rather on the side of vigorousness. White, obviously isn't going to follow up by quietly castling; his principal idea is Bh6 14.g4 *(* although *14.g3* is possible; see above *)* 14...Bf4 is usual. Then *(* although *14...f6* is clearly possible *)* 15.Qf3 is usually what White plays, hoping just to win a pawn. Black can either just develop (with say 15...Re8 or 15...Bb7) and gambit the pawn, or sensibly develop with Be6 (intending to follow up with ...Bxd5, while 16 Nxf4 can be met with 16...Qf6 and so doesn't win a pawn), when 16.Rd1 Bxd5 17.Rxd5 Qa5 is quite annoying (e.g. 18.a3 *( 18.Rxd6 Rac8* makes things worse *)* 18...Bc1 ), so White can't keep the d-file open. ]

**13...bxa4**

[ WARNING: 13...Rb8 14.axb5 axb5 is a very bad idea; b5 is weak and, almost worse, the c2-knight can rest undisturbed on b4 and thus White easily maintains d5. --- Even if Black should then manage to swap off the two knights for his own knight and bishop, White would be able to play b4 with a huge advantage in the opposite-coloured bishop position, since b5 is impossible to defend and even trading it for c3 is likely to leave White much better with his passed b-pawn and control of d5. ]

**14.Rxa4**

[ 14.Nce3 is a rare move aiming to take on a4 with the queen. In the very recent game L. D.Nisipeanu-L.Van Wely, European Club Cup, Fuegen 2006, White associated it with the extravagant idea to castle queenside after Bxe3 15.Nxe3 Rb8 16.Qxa4 Ne7

**A)** This has the computers reeling in disbelief, but if White wants to play for a win it's really the only way since 17.Rd1 Rxb2 18.Nc4 *( 18.Bxa6* and a draw offer is better *)* 18...Rb8 19.Nxd6 allows Bg4 20.f3 Be6 with the better prospects for Black (Nisipeanu).;

**B)** 17.0-0-0 . Time will tell how Nisipeanu's idea should best be met, but Rogozenko's suggestion to wait with 17...Qc7 to see where White's king's bishop is going (18 Bc4 is met by 18.. .Bb7 and 18 Bd3 with 18...Be6) is pretty sensible. It's hard to imagine that Black can be worse here. ]

**14...a5**

[ 14...Bb7 is rather like the 11...Bb7 of Chapter Three, but if Black wanted to play ... Bb7, he didn't need to bother putting the other bishop on g5. The move was once associated with a specific idea to prevent White castling: 15.Bc4 Na5 16.Ba2 Bc6 17.Ra3 Bb5 , but in order to achieve this Black has had to put all his minor pieces in stupid positions and abandon the fight for d5, and it turns out that White is much better after 18.h4 Bh6 19.Nce3 Bxe3 20.Nxe3 Rc8 21.Nf5 . ]

[ Meanwhile 14...Rb8 aims to swap the weak a-pawn for the potentially dangerous b-pawn, but the price is too high and after 15.h4 Bh6 16.Bxa6 Rxb2 17.Bxc8 Qxc8 18.Rc4 White is much better - he has sidelined the bishop, managed to exchange light-squared bishops, and can look forward to exchanging knights and dominating d5. ]

**15.Bc4**

[ 15.Bb5 hopes either for an exchange of bishops after Bd7 *(* or for *15...Bb7 16.0-0 Ne7 17.Bc4* , when White can maintain at least a slight edge. *)*]

[ Instead of committing the c8-bishop Black should challenge the knight at once with 15.Bb5 Ne7 16.Nxe7+ *( 16.Nce3* is met as usual by *Bxe3;* while *16.Ncb4* , as we saw in the notes to Smeets-Carlsen, allows *Bd7 17.Nxe7+ Bxe7! 18.Nc6 Qe8 )* 16...Qxe7 this was the point of 16 Nxe7+; *(* now *16...Bxe7* can be met by *17.Ne3 )* 17.Nb4 , and now Black can either play the obscure Bh3!? *(* or the approved equalizer *17...Bg4* , with the point that *18.Qa1 Qb7! 19.Bc6 Qb6 20.Bxa8 Qb5!* forces a draw - *21.f3 axb4 22.fxg4 Qd3* and perpetual. *)*]

**15...Rb8** This is a very natural and by far the commonest move - it seems so obvious that the rook needs to be here, and no other piece's destination is quite so clear.

[ But Black does have a good and (as yet) much less theoretical alternative in 15...Bd7 , which is an old idea of Sveshnikov's recently revived by Radjabov (two folk worth taking a lot of notice of in this opening). Black has a few ideas: he might want to keep b8 free for the queen to allow ...Bd8-b6; or he might want, by harassing the rook, to put himself in a good position to drive the bishop away from contact with d5 and perhaps even win the fight for that square. --- Following 15... Bd7 16.0-0 *(* Black's immediate point is that *16.Ra2* is well met by *a4* driving the bishop back when, for example, *17.0-0 Na5 18.Bd3 Nb3* sees Black continue with ...Nc5 and ...Be6 with a good position;*; 16.b3 Ne7* is also fine, since in view of the fact Black's rook usually comes to c8 in this line it isn't likely to be right for White to weaken c3 like this *)* 16...Ne7 *( 16...Nb4* is critical but didn't do so well after *17.Ra3 Rc8 18.cxb4 axb4 19.Ra6 Rxc4 20.Rxd6* , when White was better in A.Volokitin-T.Radjabov, Biel 2006 *)* 17.Ra3 *( 17.Ra2 Rc8 18.Nxe7+ Qxe7 19.Bd5 Rc5* had got White nowhere in V.Anand-T.Radjabov, 1st rapidplay matchgame, Mainz 2006 - White is hampered by the possibility of ...Rxc4 and ...

Be6 *)* 17...Rc8 18.Nxe7+ Qxe7 19.Qd3 Rc5 20.Rd1 Rb8 21.b4 White had an advantage in J.Smeets-A.Khairullin, Essent 2006, and it's here that Black may need to improve in this line. ]

**16.b3** The position before this move has been the main starting point for the variation with 12...Bg5 for 25 years or more. White has tried many other moves, but the text is beginning to establish itself as the favourite.

[Alternatively: 16.Qa1 aims to bring a rook to the queenside. Black should proceed as usual with Kh8 17.0-0 and now g6 *(*or *17...f5 18.exf5 Bxf5 19.Nce3 Bg6 )* 18.b4 axb4 19.cxb4 Ne7 (once the a-pawn has gone Black can happily embark on this typical manoeuvre), followed by arranging ...f5 should give Black good play. ]

[ 16.b4 aims to save time on the queen move, but Bd7 *(*the object of this is to avoid *16...axb4 17.Ncxb4 Nxb4 18.Rxb4 Rxb4 19.cxb4* ; although Black ought to be OK here too he does better to keep White's slightly awkwardly placed rook on the board *)* 17.Ra2 axb4 18.cxb4 *( 18.Ncxb4 Nxb4* just helps Black *)* 18...Ne7 is fine for Black too. ]

[ 16.Ra2 is seen in Game 17. ]

**16...Kh8** TIP: Black has really only two, slightly different, plans here: one is to play ... f5 with minimal preparation, the other is ...g6 and then ...f5. In either case the text move is essential, so it makes sense to play it at once and preserve the choice between the two a move longer.

[If Black is afraid of 16...Kh8 17 Nce3 then he can, as Leko did recently, commit himself with 16...g6 . Then White's idea from Game 19 is less effective after 17 Nce3 Kg7, but on the other hand Black is committed after 17.0-0 Kh8 to the ...g6 and ...f5 plan, which may not be what he wanted to do. ]

**17.Qe2** After 16...Kh8, 17 0-0 is the subject of Game 18 and 17 Nce3 that of Game 19. White has many alternatives here too, notably 17 Qe2. **17...--**

[The first idea of this is that 17...g6 can be met with 18.h4 Bxh4 19.g3 Bg5 20.f4 in the style of Game 19, ]

[so usually Black plays 17...f5 and now the second idea is revealed after 18.h4 Bh6 19.exf5 Bxf5 20.g4 , when Black is reputedly forced into the undesirable exchange 20. .Bxc2 21 Qxc2, although it isn't immediately obvious that Bd7 21.g5 Nd4 is bad for Black. ]

[However, instead 17...f5 18.h4 Bf6 19.exf5 Bxf5 20.Nce3 Bd7 is normal, when Black is fine: White can't keep ...e4 and ...Ne5 prevented (even after 21.Qc2 e4 ) and hold on to d5, especially with h4 vulnerable if he castles. ]

**B33**

## ☐ 3g) Sicilian Kalashnikov and
## ■ Sicilian Sveshnikov Variatio

1.e4  c5 This move marks the Sicilian Defense. Black does not put a pawn directly in the center but controls it instead with a flank pawn.  2.Nf3 YouCplay in the same fashion as in the Open Games after îîStartFENîîrnbqkbnr/ pppppppp/8/8/4P3/8/ PPPP1PPP/RNBQKBNR b KQkq e3 0 1îîEndFENîî 1...e5 2.Nf3 You develop the knight and control the center. Wait to put your other pawn in the center with îîStartFENîîrnbqkbnr/pppppppp/8/8/4P3/8/PPPP1PPP/RNBQKBNR b KQkq e3 0 1îîEndFENîî 1...c5 2.d4 because after 2...cxd4 3.Qxd4 Black can develop with tempo and attack your queen with 3...Nc6 .  2...Nc6 Black develops the knight and remains flexible with his pawns for now. The most popular move at the beginner and Club player level, and the second most popular move at the top level.  3.d4 The Open Sicilian. Many White players are scared to play Open Silician because they think it's a heavy theoretical battleground. Black has many setups, and we must learn how to play against all of them. This course will teach you that it's possible to do well in the open Sicilian without learning a massive amount of theory. We will use a robust development setup that works versus almost all Sicilians.  3...cxd4  4.Nxd4 You capture with the knight as usual.  4...Nf6  5.Nc3  e5 This is the Sveshnikov Sicilian, named after the Soviet grandmaster Evgeny Sveshnikov. The ideas are similar to the Kalashnikov variation. Black quickly attacks White's central knight, but his pawn formation gets slightly weakened. After 5...e6 , we can continue with 6. Be2 followed by Be3 and the same after 5...d6 6.Be2  6.Ndb5 White jumps in with his knight, just like against the Kalashnikov Sicilian.  6...d6 Black prevents the b5-knight from jumping in.  7.Bg5 White develops his bishop and pins the f6-knight. Your knights can become very threatening on b5 and d5. Black has to be careful now and can't just continue development. Next move, you will capture the knight.  7...a6 A precise move! Black kicks back your knight before they continue development. 8.Na3 You retreat the knight!  8...b5 Threatening a fork with ...b4 so you should move the knight.  9.Nd5 Reaching Knight Domination and attacking the pinned knight on f6. 9...Be7 BlaCk develops and threatens to win a piece with îîStartFENîîr1bqk2r/4bppp/ p1np1n2/1p1Np1B1/ 4P3/N7/PPP2PPP/R2QKB1R b KQkq - 2 10îîEndFENîî 10... Nxd5 when they open up the attack against our bishop and after 11.Bxe7 , their knight can escape back to safety with 11...Ndxe7 .  10.Bxf6 You eliminate the knight and keep our knight on a powerful outpost. After 10...Bxf6 , you don't want to trade with 11.Nxf6 Qxf6! Your knight is powerful on the outpost, and you want to keep it there.  10...Bxf6  11.c3 You get ready to bring your knight back into the game with Nc2 and can play a4 next to undermine Black's pawns on the queenside and get your bishop to c4. Don't play 11.Be2 , it's the Knight Domination Setup, and your bishop belongs on c4. You want to get ready to support your dominating knight with your friends.  11...Bg5  12.Nc2  Rb8 BlaCk can also go for this setup to delay castling. This can also be reached by the îîStartFENîîr1bqk2r/5ppp/p1np1b2/1p1Np3/4P3/

N1P5/PP3PPP/R2QKB1R b KQkq - 0 11îîEndFENîî 11...Rb8 12.Nc2 Bg5 move order. 13.a4 Your plans don't change. 13...bxa4 Black is threatening ...Rxb2 so you should prevent that. 14.Rxa4 You recapture with the rook and stay consistent. 14. Ncb4 also makes it possible to save the b2-pawn. 14...Rxb2 Black captures the pawn. 15.Bxa6 You win the pawn back and propose a trade of light-squared bishops. 15...0-0 The most played move for club players. You happily trade the bishops since it strengthens your Knight Domination. 16.Bxc8 Qxc8 17.0-0 Ne7 Black counters your Knight Domination. 18.Nxe7+ You trade the knights. 18...Bxe7 19.Ne3 Your other knight is quick to reclaim the Knight Domination. 19...Qxc3? is not possible since 20.Nd5! gets the Knight Domination with a fork on the queen and bishop.

**B33**

□ **6.Nf3**
■ **N,N**
*[GM Renato Quintiliano]*

**1.e4 c5 2.Nf3 Nc6 3.d4 cxd4 4.Nxd4 Nf6 5.Nc3 e5 6.Nf3** This retreat was played by some strong players, but it allows Black to get a good game very easily by simple active play. **6...Bb4 7.Bc4** The best option according to the engine. Also, I remember that a long time ago someone tried to convince me this line was a worth option for White, though honestly I didn't buy it.

[ 7.Bd3 is more passive. 0-0 8.0-0 *( 8.Bd2* avoids doubling pawns on the c-file. On the other hand, Black takes advantage of the lead in development to achieve a serious advantage with *d5 9.exd5 Nxd5 10.Nxd5 Qxd5 11.Bxb4 Nxb4* when even further simplifications don't solve White's problems, for instance: *12.a3 Nxd3+ 13.Qxd3 Qc6 14.Qe2 Bg4∓ )* Black has a typical positional operation now: 8...Bxc3! 9.bxc3 h6! avoiding Bg5. Black's next plan is simple: we want to develop pressure against the doubled pawns on the c-file, in style of Nimzo positions. A logical variation could be 10.h3 d6 11.Be3 Be6 12.Nd2 Rc8 13.c4 b6∓ Black has a pleasant position and can increase the pressure by means of typical maneuvers like Na5, Nd7-c5 etc. ]

[ 7.Bg5 leads to a similar path after h6 8.Bxf6 Bxc3+! 9.bxc3 Qxf6 when the exchange of one more pair of pieces has only helped Black. 10.Bc4 d6 11.Qd3 *(*Black is also better after *11.0-0 Bg4 12.Be2 0-0 13.Nd2 Be6 14.Nc4 Rfd8 15.Ne3 Rac8∓ )* 11...0-0 12.0-0 b6 13.Rfd1 Na5! 14.Bd5 *(*Or *14.Bb3 Rd8∓ )* 14...Bb7 15.Bb3 Rfd8∓ Black has an obvious advantage. ]

[ 7.Bd2? is a blunder. White simply loses a pawn in a long forced line: Bxc3 8.Bxc3 Nxe4 9.Nxe5 *( 9.Bxe5? Nxe5 10.Nxe5 Qa5+-+* is the tactical point. *)* 9...Nxc3 10.Nxc6 Nxd1 11.Nxd8 Nxb2 12.Nxb7 Bxb7 13.Rb1 Bxg2! 14.Bxg2 Rb8∓ ]

**7...0-0 8.0-0**

[ 8.Bg5 doesn't improves White's chances. h6 9.Bh4 Bxc3+ 10.bxc3 d6 11.0-0 Qe7 12.Qd3 Rd8 13.Rad1 Be6∓ The pin is simply harmless and Black keeps developing the pressure on the c-file without problems. ]

**8...Bxc3 9.bxc3 d6**

[ In case of 9...Nxe4 White can play 10.Ba3 d6 11.Re1 Ng5 12.Bd5= when Black probably will return the pawn. ]

**10.Ba3** The most active.

[ 10.Qd3 is also natural, but in this case Black achieves a good development by means of Re8 11.Rd1 Be6 12.Bg5 Rc8 White is able to keep the balance here with 13.Bb5 h6 14.Bxf6 Qxf6 15.Qxd6 despite even here, after a6 16.Be2 *( 16.Bxc6? Rxc6 17.Qxe5 Qxe5 18.Nxe5 Rxc3∓* is already better for Black. *)* 16...Red8 17.Qa3 Rc7 18.Rxd8+ Qxd8= Black is fine. White's pawn advantage has no value in practice, and the pressure on the c-file is still annoying. ]

**10...Na5!** Black manages to solve all the opening problems thanks to this move.

**11.Bb3**

[ But not 11.Bd3? Qc7∓ and Black consolidates a big advantage. ]

**11...Nxe4 12.Re1 Bf5** Black is about to consolidate his position, but White manages to equalize with correct play: **13.Qd5!**

[ 13.Qd3 is a bit tricky in view of Re8! when White needs to be more precise to avoid problems. 14.Bd5 *( 14.Rxe4? Nxb3 15.axb3 d5*-+ is the trap. *)* 14...Nf6! 15.Qxf5 Nxd5 16.Rad1 Qf6 17.Qxf6 Nxf6 18.Bxd6 e4 19.Nd4 Nc4= White should be ok with correct play here, but I prefer Black's chances a little bit. ]

**13...Nxc3 14.Qxd6** Many exchanges take place now and result in an equal ending:

**14...Re8 15.Rxe5 Qxd6 16.Bxd6 Nxb3 17.cxb3 Rxe5 18.Bxe5 Rc8=**

**B33**

□ **6.Nde2**

■ **N,N**

*[GM Renato Quintiliano]*

**1.e4 c5 2.Nf3 Nc6 3.d4 cxd4 4.Nxd4 Nf6 5.Nc3 e5 6.Nde2!?** This looks like the only viable alternative to 6.Ndb5 can pose practical problems for Black. It can be found in games of strong players like GM's Ponkratov and Andreikin and was played by Topalov recently in Norway Chess. **6...Bc5!** There is no threat of a check on d6, so Black has time to develop the bishop on an active diagonal first.

[ 6...d6 7.g3! transposes to the Classic Sicilian. ]

[ 6...Bb4 is not so unpleasant for White now as after either 6.Nf3 or 6.Nb3. White has an interesting way to deal with the pin: 7.a3 Ba5 8.Bg5!? *( 8.b4 Bb6 9.Qd6!?* is also possible. *)* 8...h6 9.Bh4 g5 10.Bg3 Nxe4 11.b4 Nxc3 12.Nxc3 Bb6 13.Nd5⩲ ;Andreikin,D (2726)-Zhigalko,S (2572) Clash of the Titans blitz 2020 (2) 1-0 and White has nice compensation. ]

**7.Ng3**

[ 7.Be3?! is the second option of the engine and was played in some games. However, it seems hard to believe that such a move can bring any advantage for White. Bxe3 8.fxe3 d6 9.Ng3 *( 9.Qd2 Be6 10.0-0-0 Qa5∓* also looks good for Black. *)* 9...Be6 10.Bb5 *( 10.Qd2* can be met by *h5! 11.0-0-0 g6!* when Black already has the initiative. For instance: *12.Bb5 Rc8 13.Qxd6 Qxd6 14.Rxd6 Ke7 15.Rd2 h4 16.Nge2 Na5∓* despite the pawn advantage, White is clearly under pressure here. *)* 10...Qb6 11.Qd3 0-0-0 12.0-0 Cubas,J (2455)-Supi,L (2424) Sao Paulo Hebraica 18th 2015 (7) 0-1 d5 was already possible here. After 13.Bxc6 *( 13.Rxf6? dxe4-+ )* 13...Qxc6 14.exd5 Nxd5 15.Nf5 Rhe8 Black has a better game. 16.Nxg7? is obviously bad in view of Rg8-+ ]

**7...0-0**

[ After 7...Qb6 8.Qd2 White has no problems continuing developing with Bc4 and 0-0, and Black has to count with Na4 sometimes. ]

[ 7...d6 was played in Topalov's game. Now he went for the interesting idea 8.Na4!? Bb4+ 9.c3 Ba5 10.b4 Bc7 with a very original position. After the natural moves 11.Be2 0-0 12.0-0 a6 Topalov,V (2730)-Wang,H (2744) Norway Chess 10th 2022 (7) ½-½ the position is balanced. In the game Topalov even managed to get a small advantage at some point, but Black was able to neutralize it with correct defensive play. ]

**8.Be2** The most played, but White has two other natural ways of developing this bishop.

[ 8.Bc4 seems more active, on the other hand White can face some issues with the exposed g4-square. d6 9.0-0 a6 I like this move, avoiding the Na4-idea seen in Topalov-Wag Hao. *( 9...Ng4* looks aggressive but only leads to a forced draw after *10.h3 Qh4 11.Qf3 Nd4 12.Qd3 Be6! 13.hxg4 Bxc4 14.Qxc4 Nf3+ 15.gxf3 Qxg3+ 16.Kh1 Qh3+= )* 10.Bg5 *( 10.Nd5 Nxd5 11.Bxd5 Ne7 12.Bb3 Be6=* is fine for Black. *)* 10...h6 11.Bxf6 Qxf6 12.Nd5 Qd8 13.c3 Ponkratov,P (2641)-Obolenskikh,D (2547) Cheliabinsk Variation Blitz 2022 (4) 1-0 *(* Another game went *13.Qh5* Ivanov,O (2458)-Studer,N (2580) EU-ch Online 2300+ Final 2020 (5) 0-1 A nice improvement for Black now would be *b5 14.Bb3 a5 15.a3* and only now *Qg5!* as after *16.Qxg5 hxg5 17.Nf5* Black has the option of *Ra7!? 18.Rfd1 Rd8* with a nice position. *)* Here I suggest 13...g6!? keeping the Ng3 away of f5. Sometimes, Black can also consider developing his play on the kingside by either h6-h5 or f7-f5. A possible variation could be 14.b4 Ba7 15.a4 Kg7 16.Kh1 Be6 17.Qd3 Rc8 18.Rad1 Ne7 with a similar position as in the game, but now it's harder to suggest a constructive plan for White. For example: 19.a5 Qd7 20.Ne3 Bxc4 21.Nxc4 Qe6! 22.Ne3 *( 22.Nxd6? Rcd8 23.c4 Bb8! 24.c5 Nc8!∓* is better for Black. *)* 22...Bxe3 23.Qxe3 d5= and Black is ok. ]

[ 8.Bd3 is more solid. Now Black can choose between the solid continuation h6 *(* Or *8...Bb4!? 9.0-0 Bxc3 10.bxc3 d6=* with an unbalanced game and chances for both sides. *)* 9.0-0 a6 After preventing Bg5 and vacating a7 for the bishop, we can play d6 and continue developing our pieces. Black's position is solid, and White is lacking active ideas. For example: 10.Nd5 *(* The attacking plan *10.Nh5*

*Nxh5 11.Qxh5 d6 12.Kh1* is not dangerous for Black, as after *Be6 13.f4 exf4 14.Bxf4* Black has the nice maneuver *Bd4!* which keeps the kingside safe. For example: *15.Rf3 Ne5 16.Rg3 Bf2!∓* and actually White is the side in danger here.*; 10.Be3!? Bxe3 11.fxe3 d6 12.Nd5* Otherwise Black would play prophylactic moves like g6-Be6-Kg7, avoiding any idea on the kingside. Now we have transposed to 10.Nd5. *)* 10...d6 11.Be3 *( 11.c4* reinforces the Nd5, but now Black also has an outpost on d4. *)* 11...Nxd5 12.exd5 *( 12.Bxc5* can be met by *Nc3!? 13.bxc3 dxc5* with a balanced game after *14.Bc4 Qc7 15.Bd5 Bd7= )* 12...Bxe3 13.fxe3 *(*But not *13.dxc6? Ba7 14.cxb7 Bxb7∓* when Black has two powerful bishops and a promising majority in the centre. *)* 13...Ne7 14.c4 f5 We have a typical structure where both sides can play for the initiative. A logical development could be 15.Rc1 *( 15.Qh5?* is bad due to *Qb6!∓ )* 15...b6 16.b4 a5 17.a3 g6 18.c5 axb4 19.axb4 bxc5 20.bxc5 Kg7= with an equal game. ]

**8...Bb4!?** Black has many ways to get a playable position, but I like this principled idea, creating the threats of d5 and Bxc3.

[ 8...h6 9.0-0 a6 followed by d7-d6 is also possible, with the same approach as after 8.Bd3. ]

**9.Bc4** Besides wasting one more tempo, this doesn't prevents the freeing advance.

[ After 9.0-0!? Bxc3 10.bxc3 d5 Black has a nice development and has avoided any problem in the opening. White's bishops are not particularly dangerous, and the doubled pawns on the c-file make it very difficult to play for any advantage. For example:

**A)** In case of 11.exd5 Nxd5 12.Bc4 Be6! *( 12...Nxc3 13.Qe1⩱* gives some compensation for White. *)* 13.Qf3 Ne3! 14.Bxe3 Bxc4 15.Rfd1 Qc7∓ I think Black has better practical chances.;

**B)** 11.Bf3 Be6 12.Bg5 *( 12.Rb1 dxe4 13.Nxe4 Nxe4 14.Bxe4 Qc7∓* also seems easier for Black. *)* 12...dxe4 13.Nxe4 Qxd1 14.Rfxd1 Nxe4 15.Bxe4 Rac8∓ and Black keep some practical chances in the endgame. ]

[ In case of 9.Bd2 Bxc3 10.Bxc3 d5 I also like Black's position. After something like 11.Bd3 *( 11.exd5?! Nxd5 12.Bd2 Be6 13.0-0 Qc7∓* is more pleasant for Black. *)* 11...Bg4 12.f3 dxe4 13.Nxe4 Bf5 14.Nxf6+ Qxf6 15.Bxf5 Qxf5= Black is completely fine. ]

**9...d5! 10.exd5**

[ 10.Bxd5? is worse in view of Nxd5 11.exd5 Ne7∓ and Black regains the pawn with a nice position. ]

**10...Na5 11.Bd3 Bxc3+ 12.bxc3 Qxd5** and Black has a good game. **13.0-0 Bg4 14.Qe1 Rfe8 15.f3 Be6 16.Bg5 Nd7** Black has a solid position and simple ideas like Rac8-Nc4 to put pressure on the enemy camp, forcing White to look for active play to avoid being worse. Still, after something like **17.Rd1 Qc5+ 18.Be3 Qc7 19.f4** Black can avoid any problem. There are many moves here, but I like the simplifying path **19...Bg4 20.Rb1 exf4 21.Rxf4 Qxf4! 22.Bxf4 Rxe1+ 23.Rxe1 Be6=**

**B33**

☐ **The Sveshnikov - 6th move alt**
■ **The Sicilian Sveshnikov 6.Nf3**
*[MH]*

B33: Sicilian: Pelikan and Sveshnikov Variations **1.e4 c5 2.Nf3 Nc6** This is the only move that leads to the Sveshnikov Sicilian. It is important to understand that since white can play 3. Bb5, a move that cant be played if black had played e6. This is not a disaster, but you need to know that this move order gives white this opportunity. In one of the following chapters, I will show you how to play against that. Also, 3. c3 is the Alapin variation where I will also cover the line using this move order Nc6. In the Sicilian you need to be prepared for all possible scenarios and move orders. **3.d4 cxd4 4.Nxd4 Nf6 5.Nc3 e5** This is the starting position of the Sveshnikov. The Sveshnikov is a unique opening where black plays aggressively and wants to fight for the initiative right from the start. This gives him enough time for quick development and a safe position for the king. But, by playing e5 black accepts a backward pawn on d6 and potentially a weak square on d5. This is one of the most uncompromising openings in chess. With this opening, you do not need to fight for equality, with this opening you can play for initiative right from the start ! Today this is the opening choice for many leading players in the world. Ex-world champion Vladimir Kramnik plays it with great success. Here I will try to explain not only the forced lines but also the very complex strategy that is behind it. Let start first with the unusual 6th moves by white. **6.Nf3** This is one of four main alternatives to 5. Ndb5. This move does not give white any kind of advantage. Here and in other moves black has a strong reply, Bb4. With 5. Nf3 white is not doing anything to control the squares d4 and d5, and allows black to play for the advantage. **6...Bb4** A strong reply. Now black pins this knight on c3 and fights for the d5 square. In some lines, Black can double White's c pawns which could become very weak. Also after taking on c3, the d5 square will be in black's control, and the possible breakthrough d5 is strong. **7.Bc4** The only move that gives white chances to fight for equality. And if white needs to fight for equality in 7 moves then something is wrong with his idea. With 7. Bc4 white fights for control over the vital d5 square. **7...0-0 8.0-0** After this move white needs to be careful. The alternative 8. Qd3 or something similar, will not be enough even for equality. Because if white loses control over the d5 square, black will play d5 himself and get the initiative. **8...Bxc3** Now black doubles white's pawns on the c file and takes the central e4 pawn. **9.bxc3** The position is equal. **9...Nxe4 10.Ba3** A strong pair of Bishops. **10...d6** Black wants to play . ..Bg4!

[ 10...Nxc3 11.Qd3 d5 12.Qxc3± ]

**11.Re1 Ng5**

[ Much worse is 11...Nxc3 12.Qxd6 Re8 *( 12...Qxd6 13.Bxd6 Rd8 14.Bc7± )* 13.Qxd8 *( 13.Nxe5 Nxe5 14.Qxd8 Rxd8± )* 13...Rxd8 14.Nxe5 Nxe5 15.Rxe5± ]

**12.Nxg5**

[ 12.Bxd6? perishes. Nxf3+ 13.gxf3 Qg5+ 14.Kh1 Rd8-+ ]

**12...Qxg5 13.Bxd6 Rd8N**
[ 13...Bg4 14.Qc1 Qxc1 15.Raxc1 Rfe8 16.Bd5 Be6 17.Bxc6 bxc6 18.a3 f6 19.f3 Red8 20.Red1 Bc4 21.Kf2 Kf7 22.Bc5 a6 23.Rb1 Ke6 24.Ke1 Rd5 25.Rxd5 Kxd5 26.Be3 Bb5 27.Rb4 g5 28.c4+ G.Mukhin-A.Minasian Leningrad (Game 2) 1990 0-1 ]
**14.Qf3 Qf6**
[ Weaker is 14...Rxd6 15.Qxf7+ Kh8 16.Qg8# ]
**15.Qxf6 gxf6 16.Rad1 Be6** After a few forced moves, white will get the pawn back. White also develops all of his pieces and retains the bishop pair, but not for long. Now after 16.. .Be6 black forces white to take the bishop because the pawn on a2 is hanging and after that, he will not have the bishop's pair anymore, but double c pawns forever. **17.Bxe6 fxe6** Although the position is about equal, the bad pawns on the c file give black better chances in the endgame. An uneventful encounter.
Weighted Error Value: White=0.00 (flawless) /Black=0.05 (flawless) . OK: White=6 Black=3 Best: White=1 Black=1

**B33**

□ **11.c3 Bb7**
■ **N,N**
*[Larry Christiansen]*

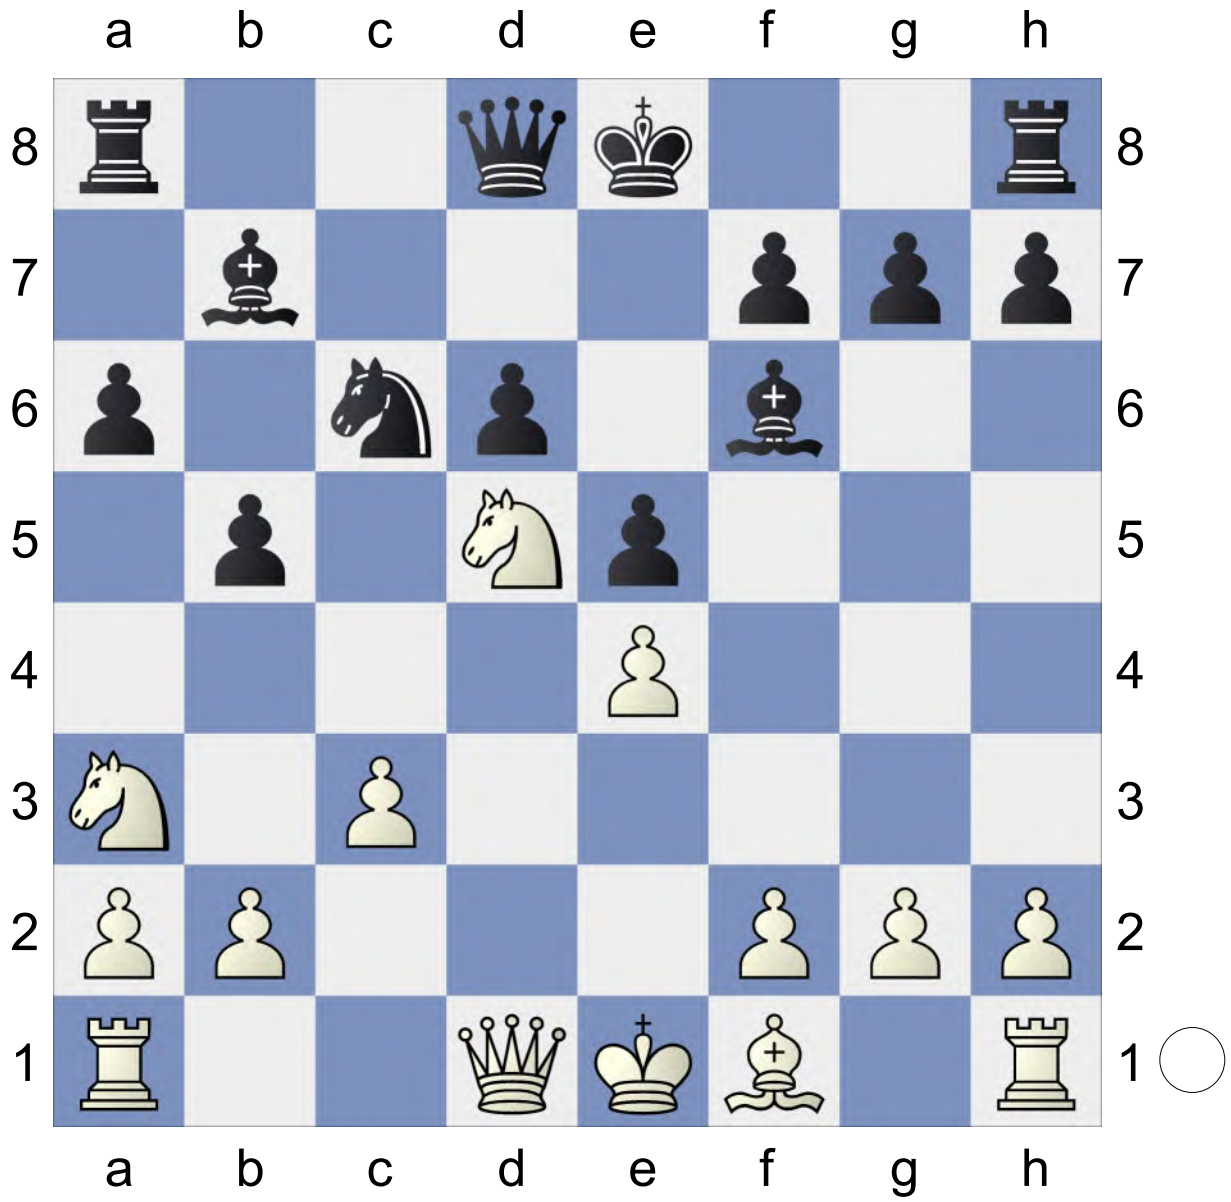
Now let's move on to Black's second major alternative, namely 11... Bb7 **1.e4 c5 2.Nf3 Nc6 3.d4 cxd4 4.Nxd4 Nf6 5.Nc3 e5 6.Ndb5 d6 7.Bg5 a6 8.Na3 b5 9.Nd5 Be7 10.Bxf6 Bxf6 11.c3 Bb7** Diagram

(Diagram)

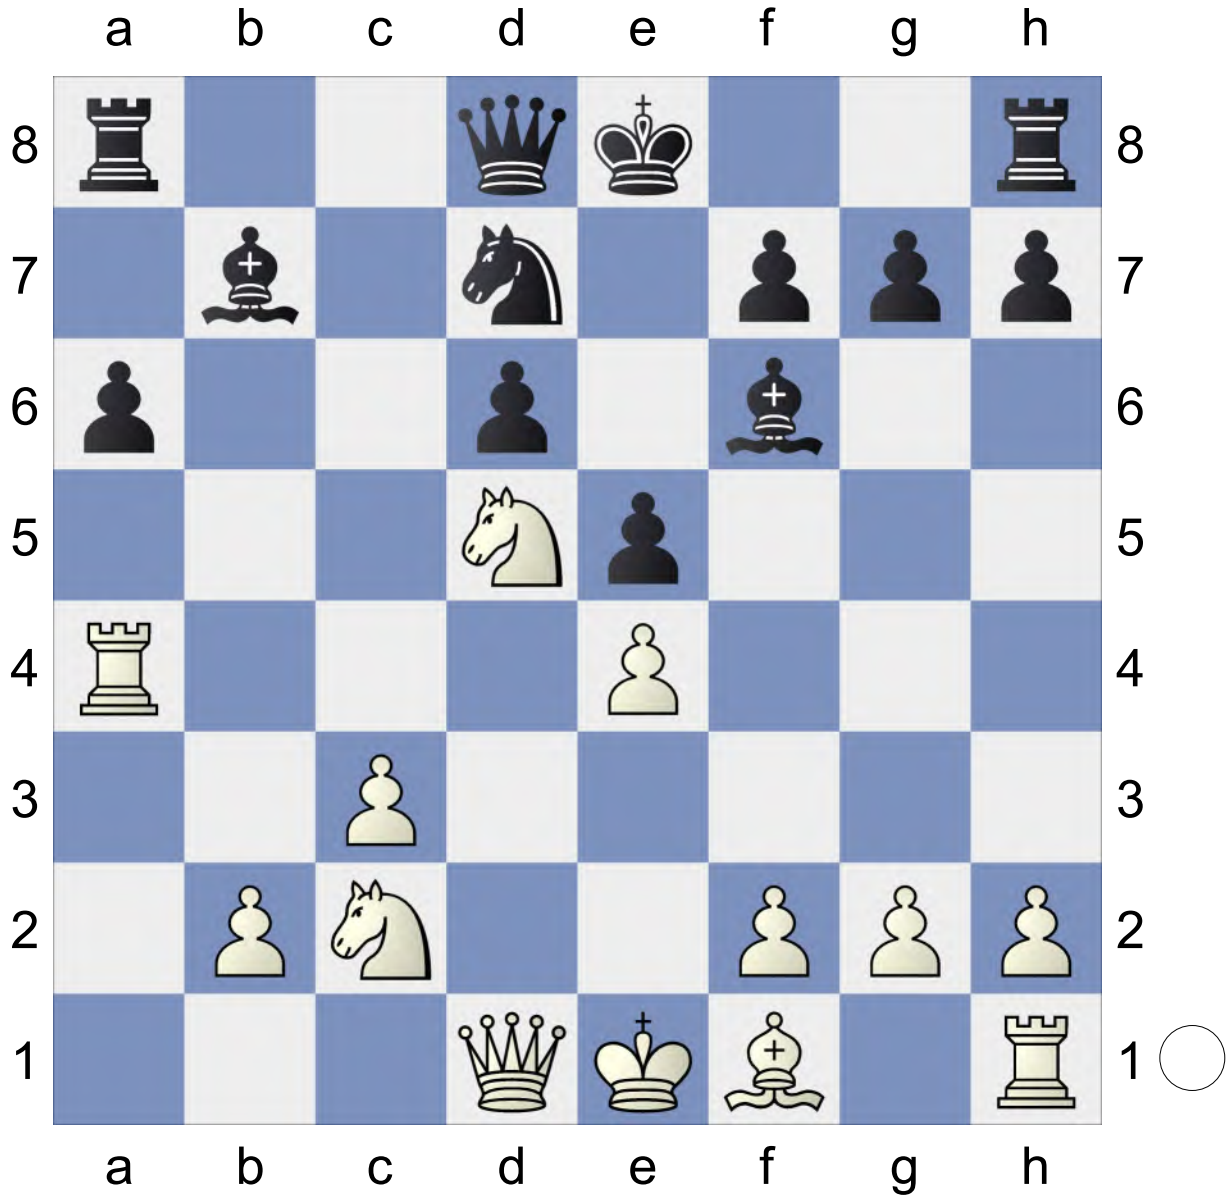
This flexible move is still played at high levels (Luke McShane continues to play it) but White seems to get a small but enduring advantage after **12.Nc2 Nb8**
This knight seeks a greener pasture on d7 where it can jump to c5 or b6. **13.a4!**
White must create a weakness and activate his Ra1 **13...bxa4 14.Rxa4 Nd7**
Diagram

(Diagram)

and now both Kasparov's **15.Rb4** promise White a small edge. As most everyone knows, the retiree won a beautiful game against Shirov at Horgen 1994 with
[ and 15.Bc4 with the point of Nc5 16.Ra1 Nxe4?! 17.Qf3 Nc5 18.b4 e4 19.Nxf6+ gxf6 20.Qf5! d5 21.Ne3 dxc4 22.bxc5 and Black's position is a wreck ]
**15...Nc5?**
[ So players turned to the more solid response 15...Rb8 16.Bc4 0-0 but here also



a b c d e f g h
8 7 6 5 4 3 2 1



White looks to enjoy a small but enduring plus after 17.Qe2! (attacking a6). It is very difficult for Black to churn up counterplay and he must reckon with potential exchange sacs on b7, for instance Nc5 18.0-0 Bg5 19.Rd1 Kh8 aiming for kingside play with ...f7-f5 20.Rxb7! Nxb7 *( 20...Rxb7 21.b4 Ne6 22.Bxa6* gives White more than enough comp for the exchange *)* 21.Ncb4 Na5 22.Bxa6 f5 23.exf5 Rxf5 24.Bd3 and again White has total control of the position plus a pawn in return for the exchange sacrifice. ]

**16.Rxb7 Nxb7 17.b4!**

**B33**

☐ **11...Ne7**
■ **14...dxe4 and 14...Be6**

**1.e4 c5 2.Nf3 Nc6 3.d4 cxd4 4.Nxd4 Nf6 5.Nc3 e5 6.Ndb5 d6 7.Bg5 a6 8.Na3 b5 9.Nd5 Be7 10.Bxf6 Bxf6 11.c3 Ne7 12.Nxf6+ gxf6 13.Bd3 d5 14.Qe2** And here we are again. **14...dxe4** Provoking the bishop to e4 where it will gain a tempo on the rook then lose it back to ...f6-f5.

[ 14...Be6 This move is rare but it was tried by Krasenkow a few years ago, so is certainly worth a look. 15.Nc2 Qb6 16.Ne3 Now the rook belongs on d8, but whether or not the black king should jump over it to c8 is a debate.

**A)** 16...0-0-0 17.a4 This must be the right move. dxe4 18.Bxe4 f5 19.axb5! Qxb5 *( 19...fxe4 20.Rxa6* and White will follow up with 0-0 and Rfa1, which will be too much for the defence to bear *)* 20.Bf3!? Planning to sac the bishop *(*a tiny but safe edge was achievable via *20.Qxb5 axb5 21.Bd3± )* 20...e4 21.Rxa6 Qc5 22.Bxe4 fxe4 23.0-0↑ Over the board I would expect a White win, but Black eventually held a draw in Dogan - Troia, email 2011.;

**B)** 16...Rd8 My guess is that the king is safer on e8 than c8. 17.0-0**±** I prefer White for the usual structural reasons, which also mean we have the safer king. Rg8 18.Qh5!?N Crude and annoying. After the text move one possible line is: *(*Blomqvist - Krasenkow, Cappelle-la-Grande 2016, instead continued: *18.Rfd1 dxe4 19.Bxe4 f5 20.Rxd8+ Qxd8 21.Rd1 Qc8* and Black was over the worst, and drew soon enough. *)* 18...Rg7 19.Qh6 Kf8 20.exd5 Nxd5 21.Be4!? Nxe3 22.fxe3 Rd2 23.Rxf6**±** White has won a safe pawn, as Rxb2? 24.Raf1 is a clean winner due to the many pins and the following trick: Kg8 25.Bxh7+! Rxh7 26.Rg6+ fxg6 27.Rf8# ]

**15.Bxe4** The next couple of moves are natural and obvious. **15...Rb8 16.0-0 f5 17.Rad1** It makes sense to nudge the queen before deciding where the bishop belongs. **17...Qc7** But now it's decision time for the bishop. **18.Bb1**

[Another idea is: 18.Bd5 I like White's chances even though it's not totally clear. 0-0 19.c4!?N b4 *( 19...Nxd5 20.cxd5 Rb6 21.Rc1 Qd6 22.Rfd1* and White has something to play for. *)* 20.Nc2 b3 21.axb3 Rxb3 22.Ne3 f4 23.Ng4 Bxg4 24.Qxg4+ Kh8 25.Qh5 f6 26.c5!**±** White has an advantage. The c-pawn is strong and the black king is weak. The b2-pawn and the a6-pawn are both irrelevant.

**A)** 26...Rxb2? does not work. 27.Be6! Qc6 28.Rd6 Qe8 *( 28...Qxc5? 29.Rd7* and White wins because of Be6-f5 coming. *)* 29.Qh3**±** Black has an extra pawn, the one on a6, which is entirely useless; meanwhile White's c-pawn is looming, and Black's king is insecure.;

**B)** 26...Nxd5 27.Rxd5 Qf7 *( 27...Rxb2 28.Rfd1 Rb7 29.g3± )* 28.Qd1! Rxb2 29.c6 Qc7 30.Qc1 Rb6 31.Qc5 Rg8 32.Rc1**±** Black is in a lot of bother. ]

**18...0-0 19.Nc2!?N** The rooks might double on the d-file or get to the two central files. We don't know yet, but we do know that we have to bring the knight back to the game!

[ 19.Rfe1 Ng6 20.Nc2 Be6 21.Nb4 Rb6! and Black held without problems in the high-level correspondence games Sochor - Bubir, email 2013, and Poehr - Hedlund, email 2014. ]

**19...Rb6**

[ Also after 19...Kh8 20.Ne3 f4 21.Nd5 Nxd5 22.Rxd5 f6 23.Rfd1 Black has not succeeded in fully equalizing. ]

**20.Rfe1 e4**

[ Or 20...Ng6 21.g3 is similar. ]

**21.g3 Ng6 22.Ne3!**

[ Instead 22.Nb4 Bb7 23.Nd5 Bxd5 24.Rxd5 Ne5 should lead to a draw by force. 25.Red1 Nf3+ 26.Kg2 Rh6 27.h3 Rg6 28.Qe3 h5 29.h4 Nxh4+ 30.Kf1 Nf3 31.Rxf5 Qc4+ 32.Bd3 Rd8 33.Bxc4 Rxd1+ 34.Kg2 Rg1+ 35.Kh3 Rh1+ is one example of how this could happen. ]

**22...Be6 23.Qh5 Ne5 24.Kh1!** The correct move order.

[ 24.Nxf5?! Bxf5 25.Qxf5 Nf3+ 26.Kh1 does not work as well, as Rh6! puts White under pressure. ]

**24...Nf3 25.Nxf5 Bxf5 26.Rxe4 Bxe4 27.Bxe4 f5 28.Bd5+ Kh8 29.Qxf3⩲**

With a powerful bishop and two healthy extra pawns versus a rook, White has promising play.

**B33**

□ **11.c3 Ne7**

■ **N,N**

*[Larry Christiansen]*

**1.e4 c5 2.Nf3 Nc6 3.d4 cxd4 4.Nxd4 Nf6 5.Nc3 e5 6.Ndb5 d6 7.Bg5 a6 8.Na3 b5 9.Nd5** Instead of 9...Qa5+, most Sveshnikovers play **9...Be7** setting up **10.Bxf6 Bxf6 11.c3** Diagram

(Diagram)

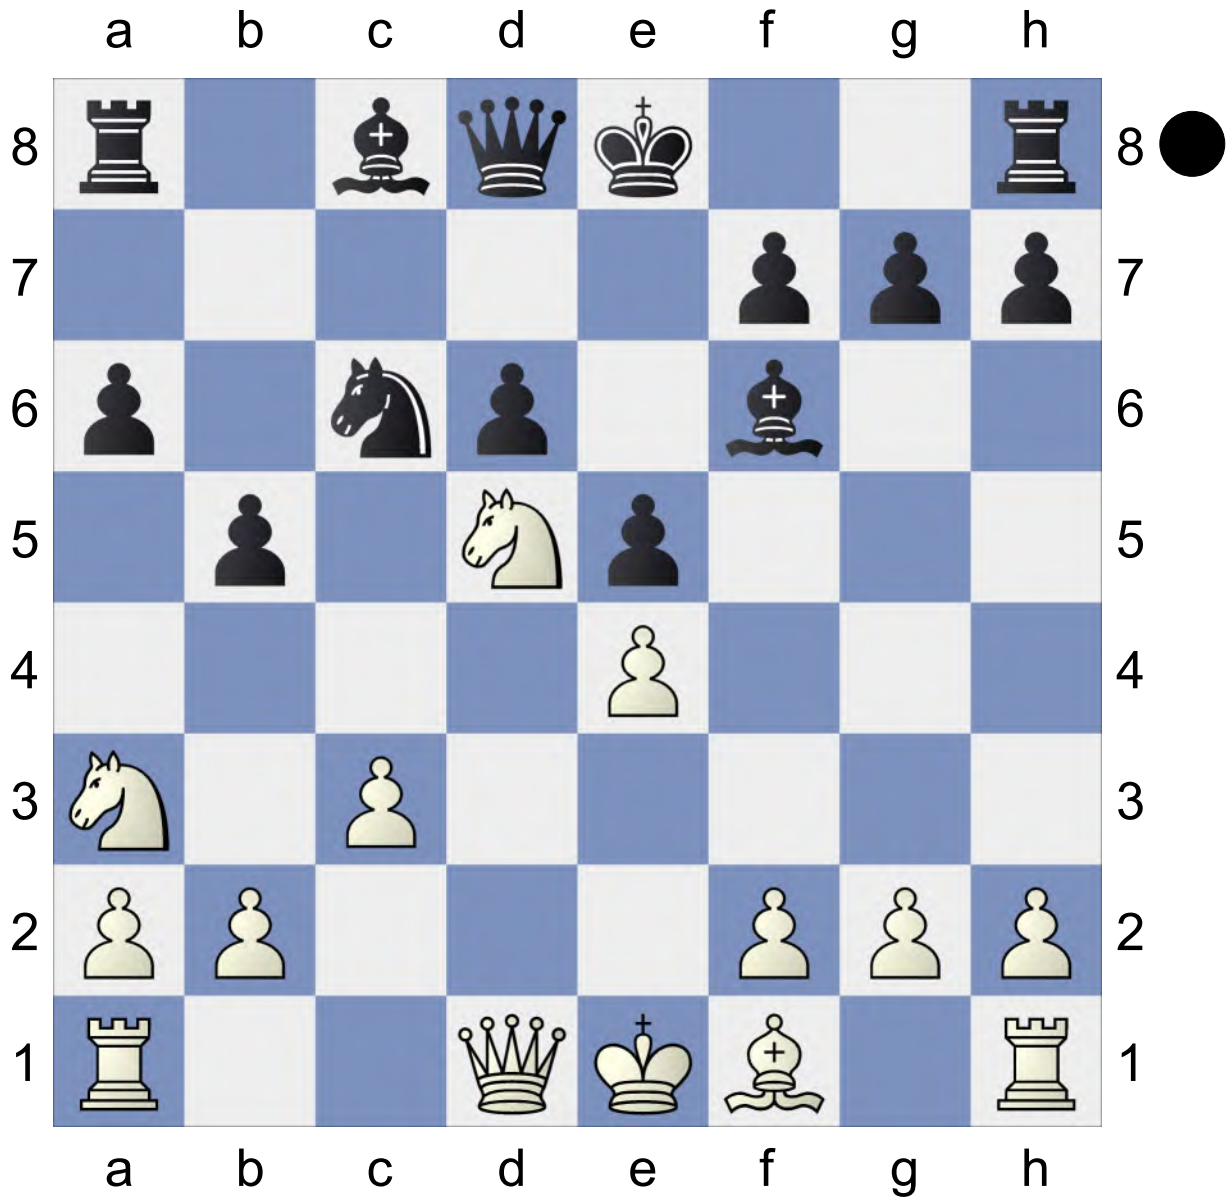
White occupies d5 and looks forward to bringing his bad knight into the game with Nc2. He had other ideas like a2-a4 to weaken Black. Black is interested in creating kingside play with an eventual ...f7-f5, working around that powerful knight on d5. Black has four main ideas after 11.c3 **11...Ne7** Diagram

[ 11...Bb7 ]

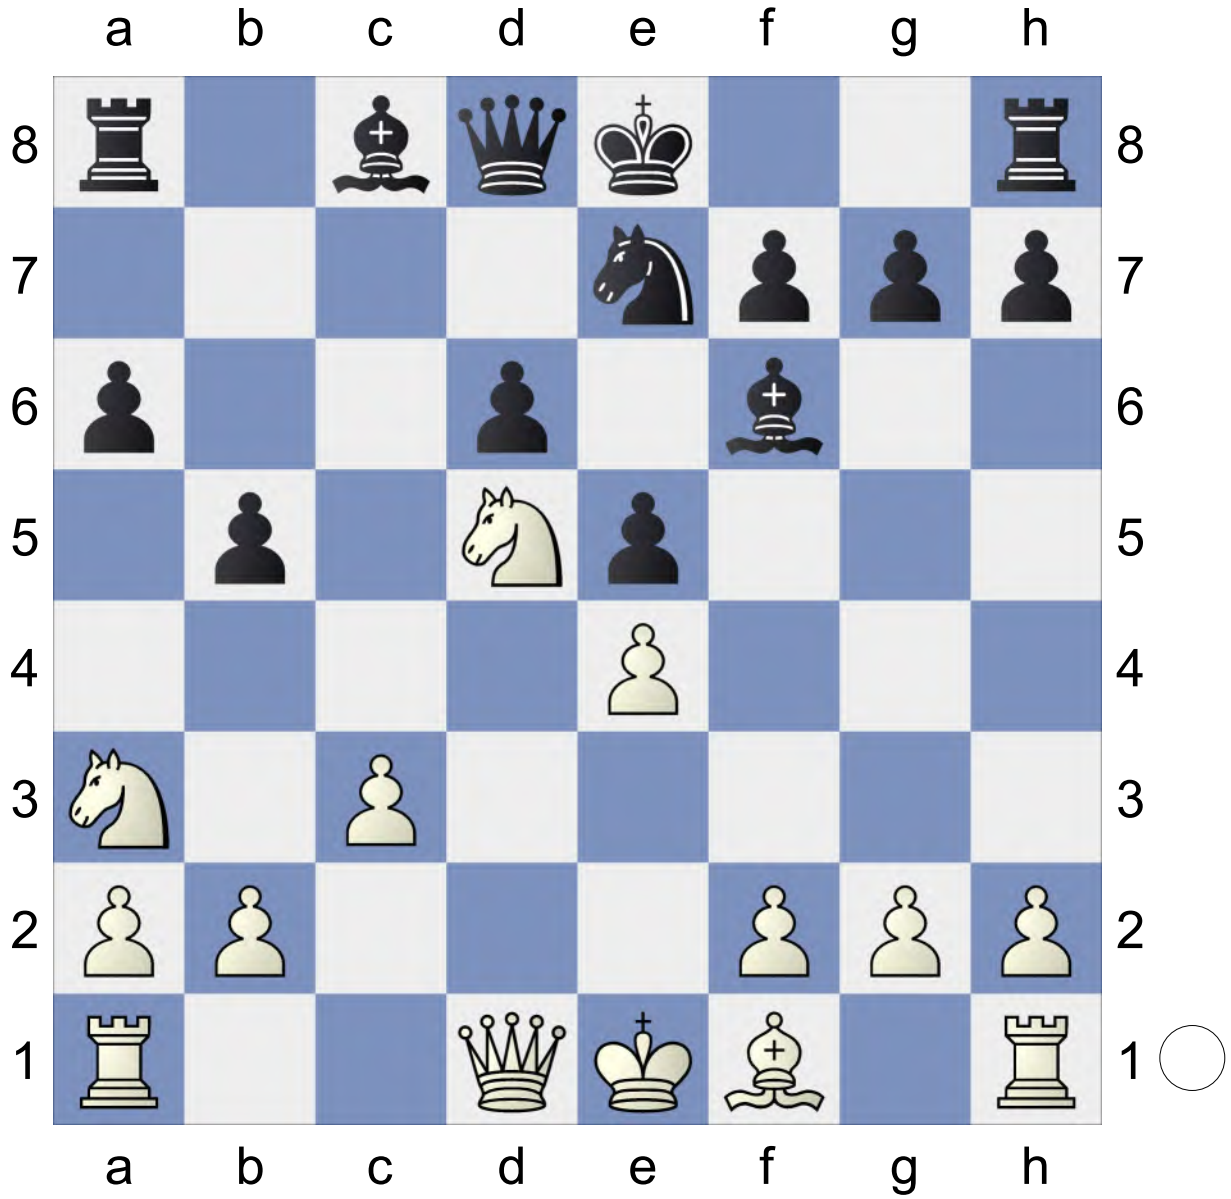
[ 11...Bg5 ]

[ 11...0-0 ]

(Diagram)



a b c d e f g h
8 7 6 5 4 3 2 1



The idea behind 11...Ne7 is simple enough - he plays to trade off the powerful outposted knight. White's only promising continuation now is **12.Nxf6+ gxf6** and here he must choose between 13. Nc2, 13. Bd3 and the solid 13. g3. **13.g3** The Russian GM Korneev has had great success with 13. g3 - White's aim with that move is to support e4 while eliminating counterplay on the g-file. 13. Nc2 is favoured by the Icelandic GM Steffansson, while 13. Bd3 is favoured by the likes of Nick de Firmian, Jonathan Rowson and Sergei Tiviakov. Rummaging through the various databases I would tend to favour 13. Bd3 or 13. g3 myself. The play is relatively controlled compared with many wild lines of the Sveshnikov. Here are some recent offerings with comments by me:

[ 13.Bd3 Bb7 14.Qe2 *( 14.0-0* Castling kingside is not recommended - Black quickly begins an attack with *f5 15.exf5 Rg8 16.g3 d5 17.Nc2 e4 18.Be2 Nxf5* with good play *)* 14...Qb6 15.Nc2 d5 16.Nb4!? *( 16.0-0-0 0-0-0 17.Rhe1*

looks a bit better for White *)* 16...0-0-0!? *( 16...Rd8* is safer *17.a4!?* is a little better for White *)* 17.a4 f5! 18.axb5 fxe4 *( 18...dxe4!? 19.bxa6 Ba8* is also interesting *)* 19.bxa6 Ba8 20.Bb5 Rhg8 21.g3 Nf5?! *( 21...f5!? 22.a7 Rg6!* looks worth checking *)* 22.a7 Bc6 becomes a threat now, along with Ra6 Rd6 *( 22...Rg6 )*

**A)** 23.Qh5! is stronger, e.g. Nd4 *(*or *23...Qxb5 24.Qxf5+ Kd8 25.Qxe5* and Black is busted *)* 24.Qxf7 Qxb5 25.Qxg8+ Rd8 26.Qg4+ Kb7 27.cxd4 Qxb4+ 28.Kf1 exd4 29.Qg7+ and wins,;

**B)** 23.Ra6 Qc5 24.Qh5! Nd4 25.Qxf7 Qxb5 26.Qxg8+ Rd8 27.Qg4+ Kc7

**B1)** More definitive was 28.Rf6! Nf3+ 29.Kd1 Qa4+ *( 29...d4 30.Na6+ Kb7 31.Qg7+ Rd7 32.Qxd7+* wins *)* 30.Nc2 Qa2 31.Rf7+ Kd6 32.Kc1 d4 33.Qg7! Kc5 34.Rf6 and Black has no defence to the many threats;

**B2)** 28.cxd4? Qxb4+ 29.Kf1 Qc4+

**B2a)** Also strong was 30.Qe2! exd4 31.Re6 *( 31.Qxc4+ dxc4 32.Ke2* should win as well - Black's pawns are not as strong as they look *)* 31...Qb4 White threatened Rxe4! 32.Kg2 and White should win easily thanks to Black's exposed king;

**B2b)** 30.Kg2! Qxa6

**B2b1)** 31.Qg7+ Rd7 *( 31...Kb6 32.Qf6+* wins at once *)*;

**B2b2)** 31.Rc1+ Bc6! 32.b4? *( 32.Qg7+ Kb6 33.Rc3!* is strong *)* 32...Kb7 33.b5?! and Black lost on time. Tiviakov-Sulava, St. Vincent 2004. ]

[ 13.Nc2 ]

**13...Bb7 14.Bg2 f5 15.Qe2**

[ 15.Qd3!? is worth a try ]

**15...Qb6 16.0-0-0** The most forceful continuation. **16...0-0-0**

[ 16...Rc8 17.Kb1 ]

**17.f4!** I like this active move attacking the centre and breaking the pin on the e4 pawn

[ 17.Nc2 h5!

**A)** 18.f4! Qc6 19.Qf1! with the idea of *( 19.Nb4* is also a little better for White *)* 19...fxe4 20.fxe5 dxe5 21.Qxf7 looks promising for White;

**B)** 18.h4?! Kb8 19.Rd2 f4! 20.gxf4 Ng6! Black secures the f4 square for his knight, promising excellent play for the pawn sacrificed. 21.f5 Nf4 22.Qf1 Nxg2 23.Qxg2 Rhg8 24.Qf3 Rg4! 25.Re1 a5! White is kept busy on all sides of the board 26.Qh1 Rdg8 27.b3? *( 27.f3! Rg1 28.Qh2* is playable *)* 27...Bxe4 28.Qf1 Qc5 29.Kb2 Rc8 30.Re3 Bb7 31.Qd1 d5 32.Red3 Rxh4 33.a3 f6 34.b4 Qc7 35.bxa5 Rc4 36.Nb4 Rxc3 37.a6 Ba8 38.a7+? *( 38.Nxd5 Bxd5 39.Rxd5 Qa5 40.Kb1* held out some hope, however slight *)* 38...Kxa7 39.Nxd5 Bxd5 40.Rxd5 Qa5 41.Qa1 Qa4 White resigned Kutuzevic-Babula, Pula 2001 ]

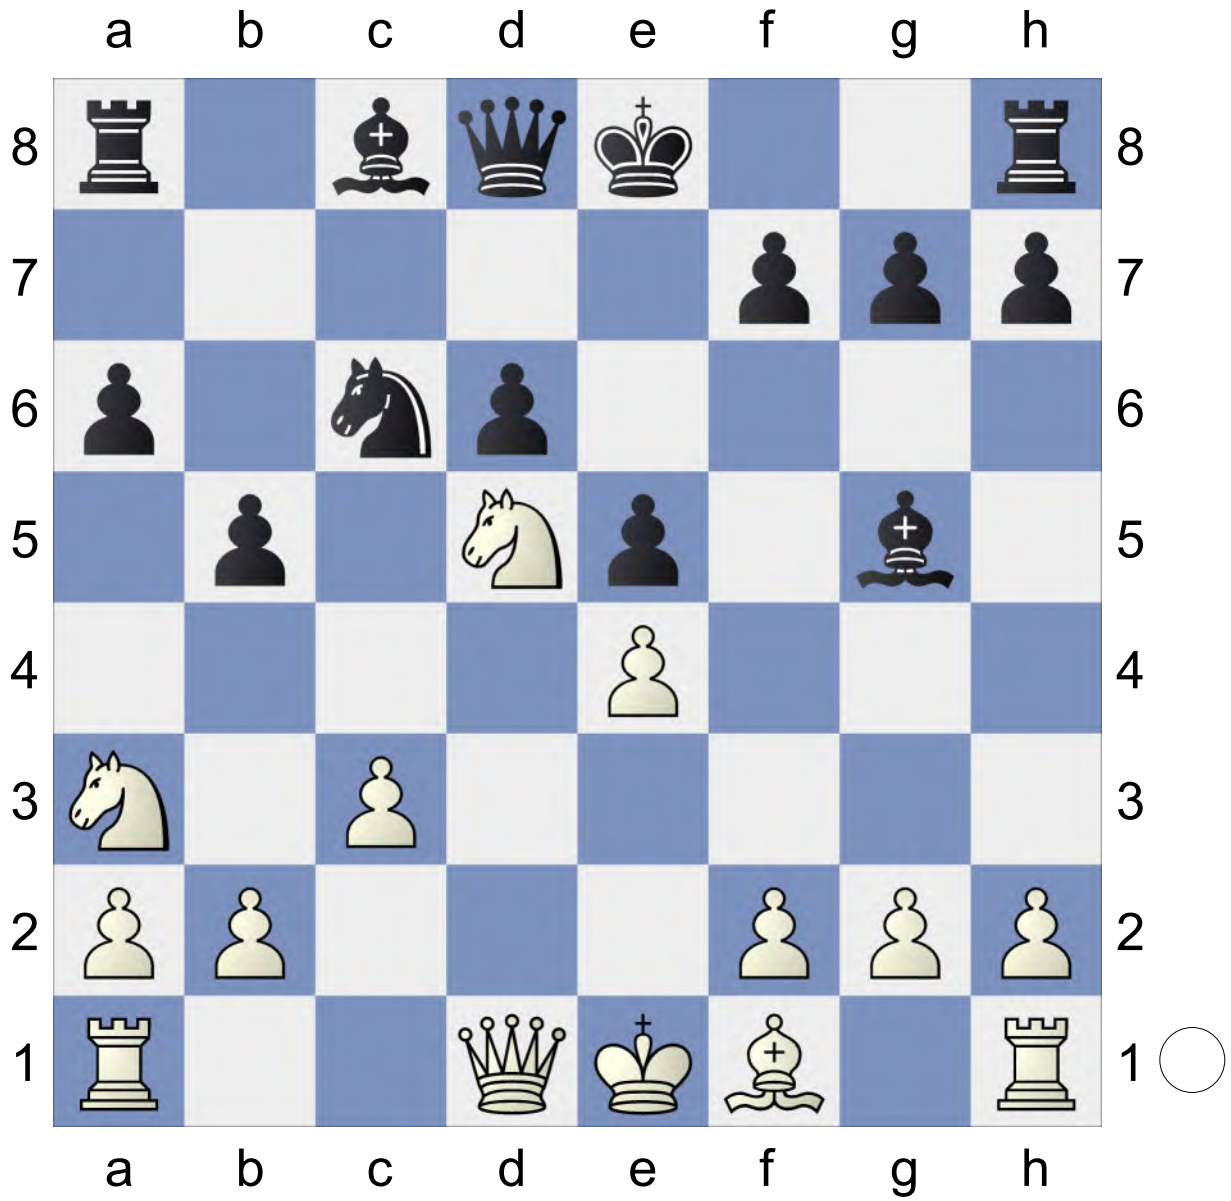
*[Larry Christiansen]*

This brings us to the hottest line of this variation, 11... Bg5 **1.e4 c5 2.Nf3 Nc6 3.d4 cxd4 4.Nxd4 Nf6 5.Nc3 e5 6.Ndb5 d6 7.Bg5 a6 8.Na3 b5 9.Nd5 Be7 10.Bxf6 Bxf6 11.c3 Bg5** Diagram

(Diagram)

**12.Nc2 0-0**
[ 12...Rb8 to discourage 13. a4 is also possible when 13.a3!? (preventing ... b4) a5 14.Bd3 Ne7 15.Nxe7 Qxe7 16.Qe2 Bd7 17.0-0 0-0 18.b4 Rfc8 19.bxa5 Qd8 *( 19...Rxc3!? 20.Nb4 Qe8* looks playable *)* 20.Nb4 Qxa5 21.c4 bxc4 22.Bxc4 gave White a small plus, Dominguez-Gongora, Cuba 2002. ]
**13.a4** is currently the most fashionable line of the 9. Nd5 variation, with lots of interest generated by the game Ponomariov-Kramnik, Wijk aan Zee 2005 and other games. **13...bxa4 14.Rxa4 a5 15.Bc4 Rb8** and now the subtle **16.Ra2** has taken hold on the world's experts of this line. The rook gets off an exposed outpost and guards the b2 pawn in preparation for events depending on circumstance. **16...Kh8** Black prepares to launch kingside activity with an eventual ...



f5. **17.Nce3 g6** Diagram

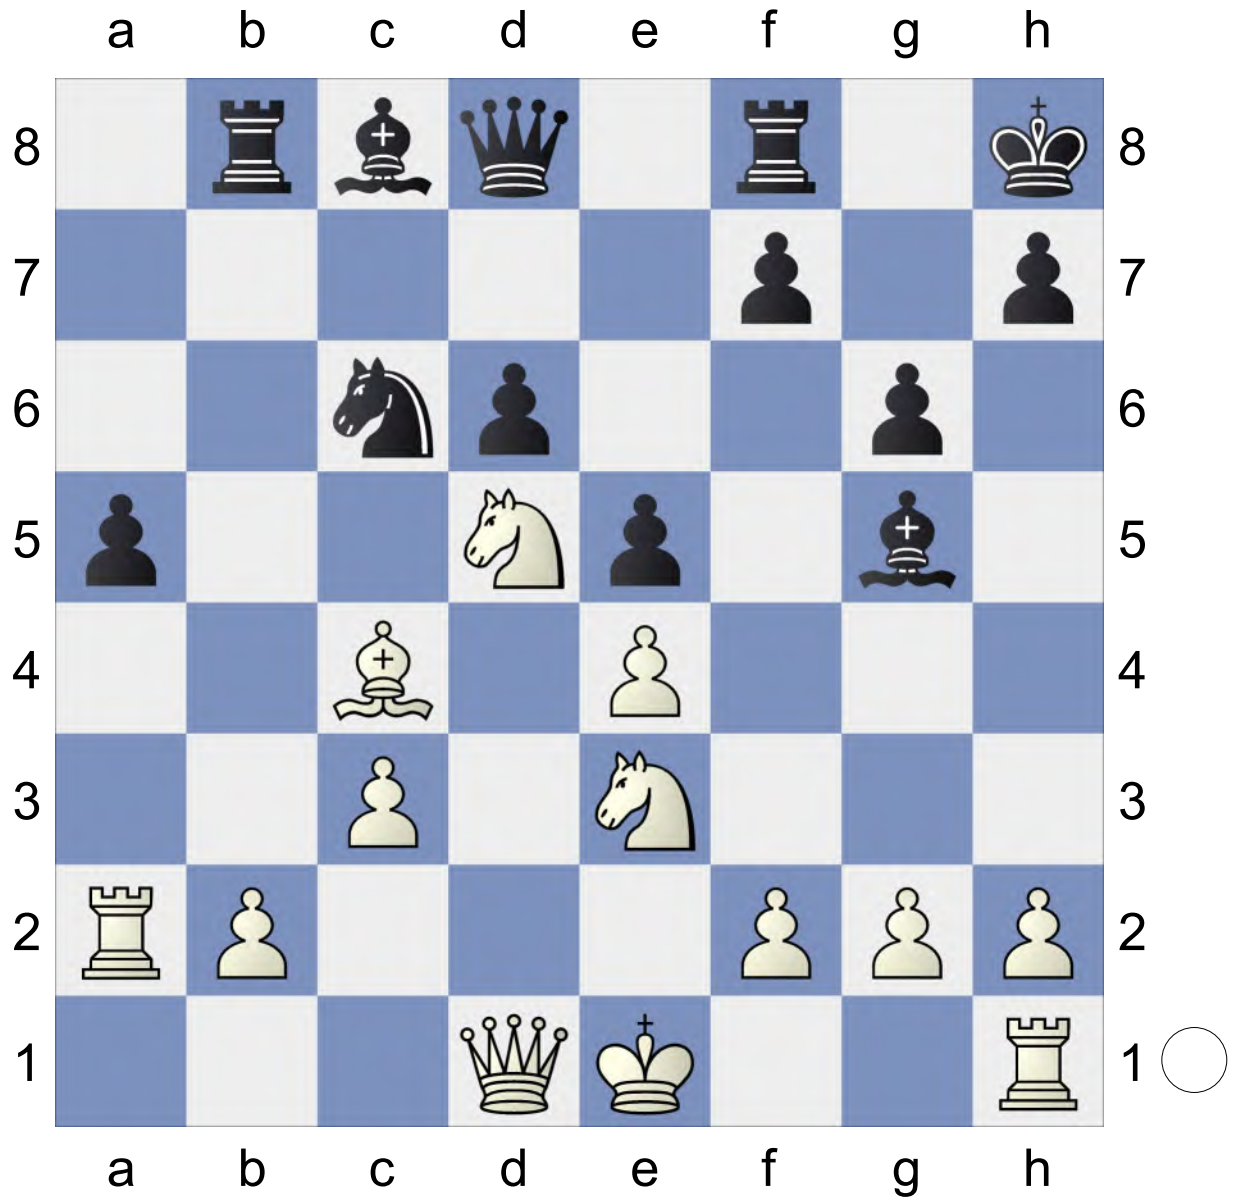
(Diagram)

Another parting of the ways. White can go with either 18. O-O or play the speculative sacrifice 18. h4!? **18.h4!?**

[The quieter alternative 18.0-0 had a recent test in Anand-Kasparov, Linares 2005 which continued f5 19.Qa4! Bd7 20.Bb5

**A)** 20...Nb4!? 21.Bxd7 Nxa2 looks like a try, ehen play might continue 22.exf5 Rxb2 23.Nc4 *( 23.Qa3!? )* 23...Nxc3 24.Nxc3 Rb4 25.Qc6 Rxc4 26.Qxc4 Qxd7 27.fxg6 hxg6 28.Qd5 and White has compensation for the pawn deficit;

**B)** 20...Rxb5 21.Qxb5 Nb4 22.Qxa5 Nxa2 23.Qxa2 fxe4 24.b4 Be6 25.c4 with a substantial plus for White, although the game was eventually drawn after



an intense battle ]

**18...Bxh4**

[ Declining the offer with 18...Bxe3 19.Nxe3 hands White a modest but durable advantage ]

**19.g3 Bg5**

[ Too passive is 19...Bf6?! 20.b3! Bg7 21.f4! with a powerful attack, Ponomariov-Kramnik, Wijk aan Zee 2005 ]

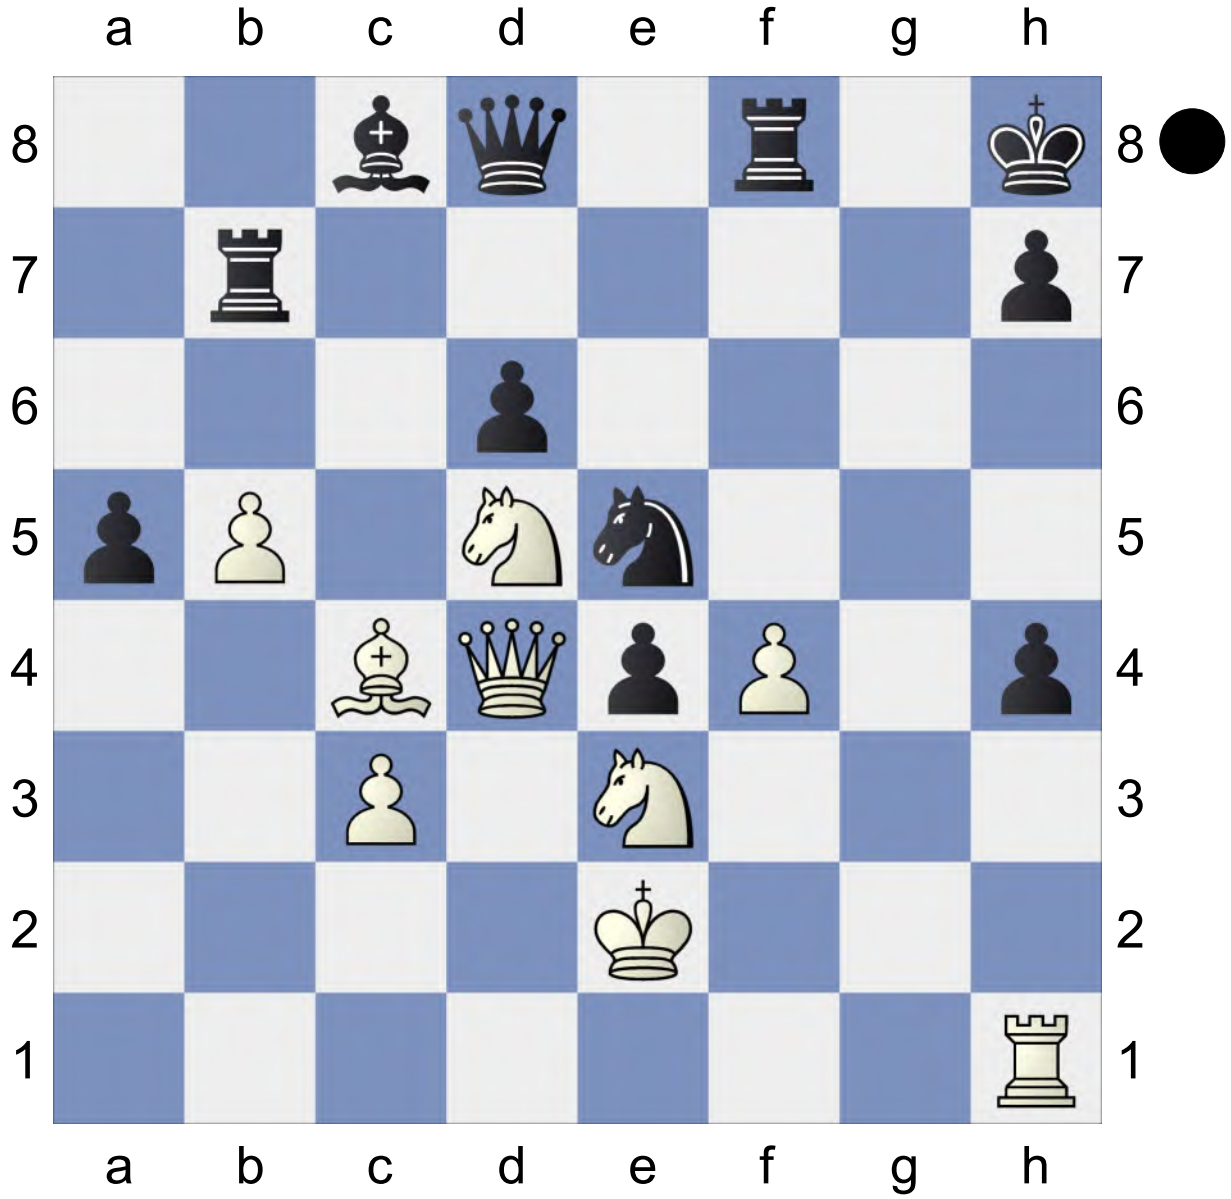
**20.f4 exf4 21.gxf4 Bh4+ 22.Kf1**

[ 22.Kd2?! is too slow. ]

**22...f5** This move looks imperative. Black needs to be able to guard h7 by means of ... Rb7 if need be. Of course he is also bearing down on White's own king with this move. **23.b4!** This has much more impact than

[ 23.b3?! because White needs to dislodge the knight which protects d4 with b4-b5

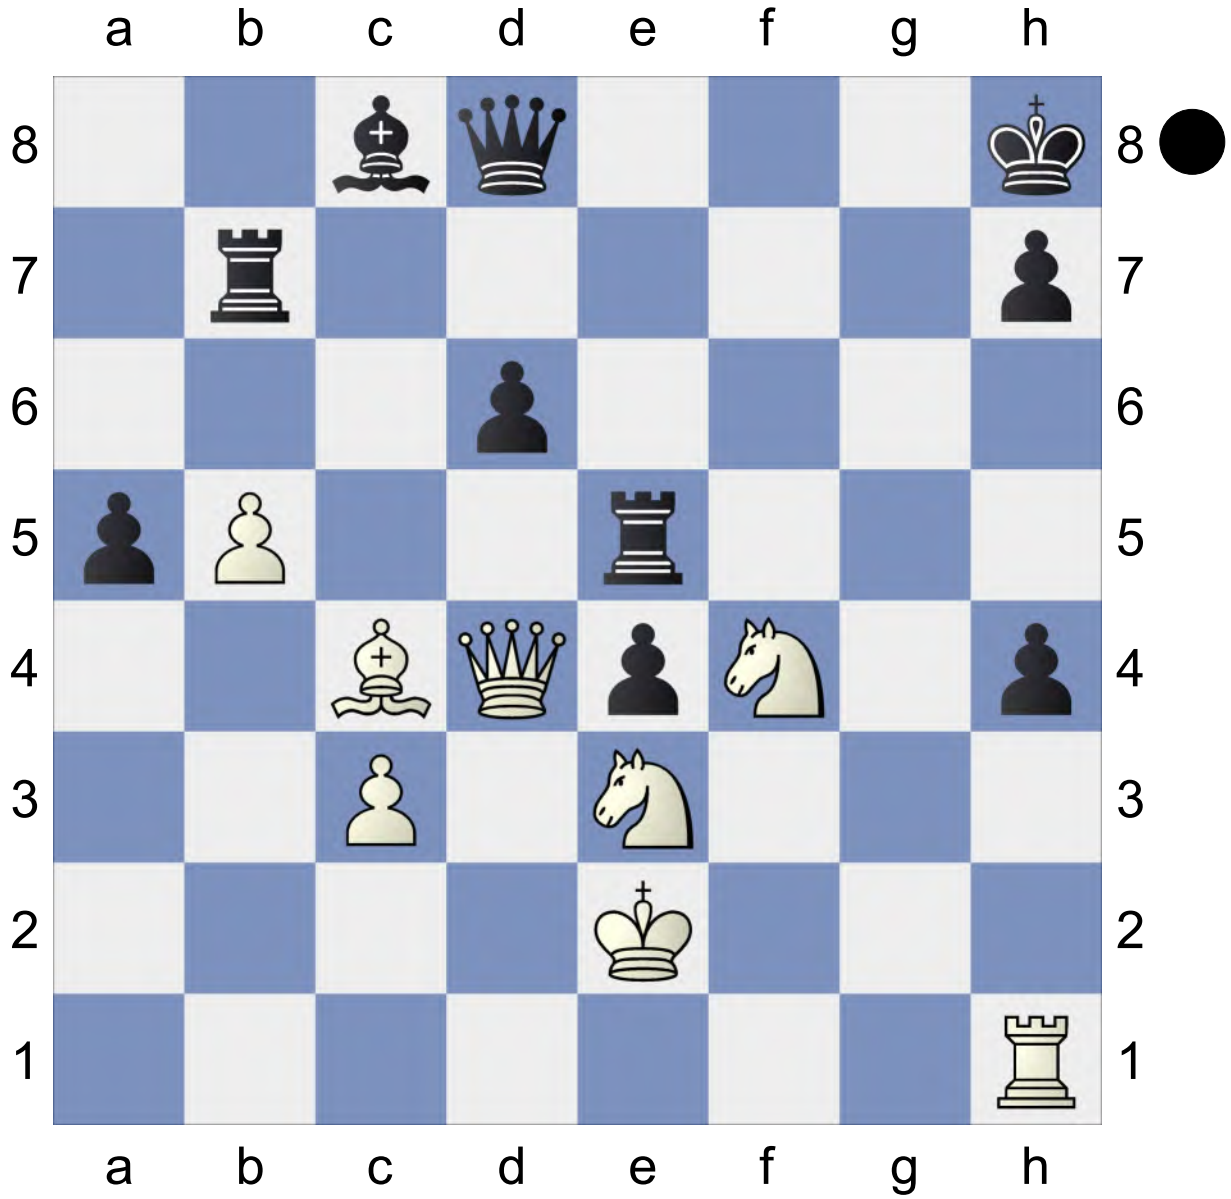
if his attack has any chance of succeeding. ]
**23...fxe4 24.Rah2 g5 25.b5 Ne5 26.Qd4 Rb7** Black is on the verge of playing ... Bg3, so White must now play Rxh4. **27.Rxh4 gxh4 28.Ke2!** Diagram
[ 28.Ke1? played in Holmsten-Filipov, Polanica 1999, which continued h3 29.fxe5 Rg7 30.exd6 Qxd6 31.Rg1 Qh6 32.Nf1?? *( 32.Qe5!* is unclear *)* 32...Qc1+ 33.Ke2 Bg4+ 34.Rxg4 Qxf1+ 35.Kd2 Rf2+ 0-1 ]



An improvement over **28...Re8 29.fxe5 Rxe5 30.Nf4** Diagram

(Diagram)

**30...Qg5?**
[ If 30...Bd7 (taking aim at the b5 pawn) the position is very tricky but better for



White after 31.Rg1! Bxb5 32.Bxb5 Rbxb5 33.Nc4 Qf6 34.Nxd6 and White seems to have the edge. ]

[ 30...Rg7 31.Rd1! also looks good for White, with the idea of Qf6 32.Rf1! ]

**31.Qxd6 Bg4+?!**

[ 31...Re8 offered more chances. ]

**32.Ke1!** Black cannot meet the threat of Qf8+ **32...Qxf4?**

[ 32...Re8 loses to 33.Rg1 h5 34.Nxg4 hxg4 35.Rxg4! Qxg4 36.Qh6+ Rh7 37.Ng6+ Qxg6 38.Qxg6 and wins. ]

**33.Qd8+ Kg7 34.Qg8+ Kh6?**

[ 34...Kf6 35.Nxg4+ Ke7 36.Nxe5 wins. ]

**35.Rxh4+** Black resigned Kramnik-Van Wely, Monte Carlo 2005. Conclusion: The 9. Nd5 variation of the Sveshnikov is currently very popular but Black seems to be doing fine in the 9...Qa5+ line at present. He also looks to be OK in the line 9... B7 10. Bxf6

Bxf6 11. c3 O-O 12. Nc2 Rb8 13. h4!? Be7! The dynamic 11...Bg5 12. Nc2 O-O 13. a4 bxa4 14. Rax4 a5 15. Bc4 Rb8 16. Ra2 Kh8 17. Nce3 g6 18. h4 seems to be under a cloud.

**B33**

☐ **11...Bg5**
■ **12.Nc2 Rb8**

**1.e4 c5 2.Nf3 Nc6 3.d4 cxd4 4.Nxd4 Nf6 5.Nc3 e5 6.Ndb5 d6 7.Bg5 a6 8.Na3 b5 9.Nd5 Be7 10.Bxf6 Bxf6 11.c3 Bg5** Note that

[ 11...0-0 12.Nc2 Rb8 was the classical way to get into this line, leaving the bishop on f6 for now, where White often tried to prove something with moves such as 13.h4!? But as we "just play the position" with 13.Be2 rather than trying to prove any deficiency with this move order (or the one given as the main line), it becomes largely irrelevant, as we shall see on page 214. ]

**12.Nc2 Rb8** This is one of the two classical main lines. Black is basically preventing White's a2-a4 break, but on the other hand, the rook is often not doing much else on b8.

[ 12...0-0 reaches the big main line, coverage of which begins on page 214, when 13.a4! is our reply. *(* I should mention that if *13.Be2* then Black would be better off playing something like *Ne7!?* to clarify the position in the centre straight away. *)*]

**13.Be2** White has a simple plan of development in mind: 0-0 and then put all his pieces on the light squares starting with Qd3 and a rook to d1 (sometimes the a-rook, sometimes the f-one).

[The critical main line has been played out. 13.a4 bxa4 14.Ncb4 Nxb4 White has two tries in this position, but neither will promise us a game. 15.cxb4 *(* and *15.Nxb4* were studied by us in great depth, but with no success in finding an edge or promising unexplored territory. *)*]

**13...0-0 14.0-0**

[An interesting alternative is: 14.Qd3!? a5 15.Rd1 A move order suggested by the great theoretician Lanka.

**A)** 15...Ne7 16.Nce3 Bxe3 17.Nxe3 Be6 18.Qxd6 shows the idea behind Lanka's move order. Qxd6 19.Rxd6 Bxa2 20.0-0 b4 21.Ra6 Ra8 22.Ra1 *( 22.Rxa8!* appears to be a bit more accurate. *Rxa8 23.Ra1 b3 24.Rd1±* and we have the same structure as in the game. *)* 22...b3 23.Rd1 a4 24.Rxa8 Rxa8 25.Nc4 h6 26.Na3 Kf8 27.Bc4+- The a2-bishop was dead in Lanka - Nokso Koivisto, Cappelle-la-Grande 1992.;

**B)** 15...b4 16.0-0 Be6 17.c4 transposes to the Huschenbeth - Caruana game below.;

**C)** 15...Be6 16.0-0 b4 17.c4 transposes to the Huschenbeth - Caruana game below. a4 With the threat to oust the c2-knight from the protection of d4. 18.b3 This position is occasionally reached with White to move in the 11.c4 variation. If

every 11. c4 line was as appealing, it would be my favoured line, but sadly Black has better ways to play against it. Qa5?! An instructive mistake by Black. The queen should keep contact with her kingside. 19.Qg3! Bd8 *( 19...Bh6 20.Bg4!± )* 20.Rd2!? Qc5 21.Rfd1 Kh8 22.Nde3 Bc7 So far we are following Huschenbeth - Caruana, Chur 2010, and now the German GM recommends the improvement: 23.Nf5! *( 23.Bg4* also gives White a good edge.*; 23.h4 Ne7 24.h5 f5* was OK for White in the Huschenbeth - Caruana game, perhaps even worth an edge, but Black's extra rating points told in the end. *)* 23...g6 24.Qh4! gxf5 *( 24...Bd8 25.Qh6 Rg8 26.Nxd6± )* 25.exf5 Bd8 26.Qe4 Bc7 *( 26...Bc8 27.Rd5 Qa7 28.f6 Ne7 29.Rxd6 Bb6 30.fxe7 Qxe7 31.Nxb4 Bxf2+ 32.Kxf2 Rxb4 33.Qd3± )* 27.fxe6 fxe6 28.Bf3± Huschenbeth thinks that due to the fact that White has the better bishop, he should be able to prove an advantage. ]

**14...Be6** I checked three other options. Returning to the main line, White can proceed in accordance with the plan described on page 209 in the notes to move 13.

[ 14...Ne7 15.Ncb4 Bb7 16.Qd3 *(*Also good for White is *16.Nxe7+ Qxe7 17.Nd5 Qd7 18.Qd3 a5 19.Rfd1 Bc6 20.b4±* Almasi - Van Wely, Monte Carlo 2003, but White can wait a bit for ...a5 before he exchanges on e7. *)* 16...Nxd5 17.Nxd5 g6 18.Rad1 f5 19.Bf3!? *( 19.exf5* was also strong, as if the rook takes White has Bg4 and if *gxf5* then *20.f4! )* 19...Kh8 20.a3 f4?! 21.Rd2 Rg8 22.Rc1 Bh6 23.c4 g5? 24.Bg4! Bc8 25.h3!+- Korneev - Capo Vidal, Salou 2006. ]

[ 14...g6 15.Qd3 f5 16.Bf3± is similar to the Korneev game above. ]

[ 14...a5 This was supposed to be fine for Black for many years, but recent practice proves that White keeps some advantage. 15.Na3! b4 *(*If *15...Na7* White can continue his plan with *16.Qd3 )* 16.Nb5

**A)** 16...Ne7 has been seen only once, but is worth a closer look as it was a high-level and interesting game: 17.cxb4 axb4 18.Qa4 f5 19.Qxb4 Nxd5 20.exd5 Ba6 21.a4! e4 22.f4! exf3 23.Rxf3 Qe7 24.Bf1 Be3+ 25.Kh1 Bxb5 26.Bxb5 f4 27.Re1 g5 28.h3 *(*I suggest improving with *28.Qc4!N* and if *g4 29.Rxf4 Rxf4 30.Qxf4± )* 28...Rfc8 29.Rfxe3!? fxe3 30.Qd4⇄ Laznicka - Sutovsky, Poikovsky 2015.;

**B)** 16...bxc3 The usual choice. 17.Ndxc3 Nd4 18.b3 Nxe2+ *( 18...Nxb5 19.Nxb5 Rb6 20.Bc4±* Schuster - Saboia Amorim, Brazil 1992. *)* 19.Qxe2 Be6 20.Rfd1 Rb6 21.g3 Qd7 22.h4 Bh6 23.Na3 Rc6 24.Nc4 Bg4 25.Qd3!N No need to weaken the dark squares yet! *( 25.f3 Be6 26.Nd5* was slightly better for White in Caire - Dorer, email 2010, but nothing much. *)* 25...Rfc8! *(*After *25...Bxd1?! 26.Rxd1±* White will get the d6 pawn and the a5 and e5-pawns will remain weak. *)* 26.Re1 *( 26.a4* allows Black to take the exchange and bail out by giving it back on c4: *Bxd1 27.Rxd1 Qe6 28.Nb5 Rxc4!= )* 26...Be6 27.Nd5± White has a slightly improved version of the Caire - Dorer game quoted above, as he has avoided weakening himself with f2-f3. ]

**15.Qd3! a5** The usual response.

[ 15...Bxd5?! 16.Qxd5 Qb6 17.Rfd1± was a positional concession from Black in Korneev - Pogorelov, Dos Hermanas 2003. ]

[ 15...Qd7 16.Qg3! is reminiscent of the Huschenbeth - Caruana game mentioned on page 210. f6 17.Rfd1 a5 18.Na3 Na7 19.h3 Kh8 20.Bg4 was Karpov - Dolmatov, Amsterdam 1980. White has a big advantage and went on to covert it in fine clear-cut fashion, offering a textbook example of how to play with a good knight versus a bad dark-squared bishop. ]

**16.Na3!?** A rare move, but undeservedly so, as it forces Black to make an uncomfortable choice.

[ 16.Rfd1 is the usual move and has been extensively analysed and explored: White has decent chances of an edge. ]

**16...Na7** Rather awkward-looking, but the correct choice.

[ 16...b4?! has been played in a few games. Now 17.Nb5!N is unpleasant for Black. Why everyone has gone to c4 I do not know. ]

**17.Rfd1!** The queenside rook will be needed on one of the three queenside files, while the kingside rook will hopefully not be needed on f1. **17...g6** One of many options.

[ 17...b4 18.Nc4 Nb5 19.Qc2! favours White, and the following lines show the usefulness of having the other rook on the queenside: g6 *( 19...bxc3 20.bxc3 a4 21.Rab1!± )* 20.a4 bxa3 21.Nxa3 Nxa3 22.Rxa3± ]

[ 17...Qd7 18.Qg3 h6 *(*The engine suggests the appropriately cold-blooded *18...Qd8!?* offering an odd repetition if we go back to d3. One idea is *19.Bg4!?* perhaps with b2-b4 to follow. *)* 19.h4 Bd8 20.Rd2 Kh8 21.Rad1± Nunn - Vukic, Reggio Emilia 1983. ]

[ 17...f5N is untested. One idea is 18.Bf3 provoking f4 when after 19.b4 White has play on the queenside, while Black's kingside ambitions are stymied. We will see a similar idea in the note to move 18 below. ]

**18.Ne3** Putting pressure on d6, but not the only promising path.

[ 18.b4!? is also a common plan. For example: f5 19.Bf3 Kh8 20.Nc2 axb4 21.Ncxb4 Qd7 Now we can profitably vary from Smirnov - Kuzubov, Rivne 2005: 22.exf5!?N gxf5 *( 22...Bxf5 23.Be4 Bg4 24.f3 Be6 25.Na6 Rbd8 26.Nac7± )* 23.Ne3 e4 24.Qxd6 Qxd6 25.Rxd6 Bg8 26.Bd1± ]

**18...Qb6**

[ Also possible is 18...b4 19.Nac4 Nb5 when 20.Bg4!? is an idea which should become a familiar ploy. ]

**19.Nac2 Bc4** One of just two moves to have been tested in this position.

[ 19...Nc6 was seen in Piscitelli - Portilho, Brazil 1980. My improvement is: 20.Bg4!N The exchange of the bishops is a natural part of making slow but steady progress; Black has not fully equalized. For example: Rfd8 21.Qe2 Qb7 22.g3 and White has clear ways to improve his position and create weaknesses in the black position; Black not so much. ]

**20.Qd2! Qc6 21.Bxc4 bxc4 22.Rab1 Qxe4** Now a vital improvement is: **23.f3!N** This tricky new move is necessary to retain an advantage.

[ Instead after 23.Qxd6 Nb5! 24.Qd5 Qxd5 25.Nxd5 *( 25.Rxd5?* is the active move White would like to be possible, but *Nxc3* wins of course *)* 25...Rfc8

White had nothing in Tseshkovsky - Giorgadze, Tbilisi 1978. ]

**23...Bxe3+** This is the most complicated option, but not the best.

[ 23...Qc6 allows White to play easy moves, but after 24.Qxd6 Qxd6 25.Rxd6± White has just an edge. Note that after Nb5 which was so effective in the Tseshkovsky game above, White has a strong reply in the retreat: 26.Rdd1 The c4-pawn is threatened and Rfc8 27.a4 leaves Black with the grim choice of Na7 *(* or *27...Nc7 28.Nxc4 )* 28.Rd5 ]

**24.Nxe3 Qf4 25.Qe2** White will soon win back the pawn while keeping some advantage. The following forcing line also works to our advantage: **25...e4 26.Nd5 exf3 27.Qf2 Qg5 28.h4 Qxg2+ 29.Qxg2 fxg2 30.Nf6+ Kg7 31.Nd7±** Only one side is playing for a win in this endgame.

**B33**

□ **11...Bg5**
■ **12.Nc2 Ne7**

**1.e4 c5 2.Nf3 Nc6 3.d4 cxd4 4.Nxd4 Nf6 5.Nc3 e5 6.Ndb5 d6 7.Bg5 a6 8.Na3 b5 9.Nd5 Be7 10.Bxf6 Bxf6 11.c3 Bg5** This move offers Black various options. We shall start with the plan to challenge the dominant knight with ... Ne7, but without allowing his structure to be shaken by a pawn-doubling exchange on f6, of the sort we saw in the 11...Ne7 section. Then we shall move on to ...Rb8 ideas. **12.Nc2 Ne7** This line was played by Magnus Carlsen when he was younger, perhaps inspired by Sveshnikov specialists such as Radjabov, Jakovenko and Halkias. Today the biggest expert in this line is probably Sergei Zhigalko of Belarus. In my opinion it is the most solid and durable line I have analysed for this book. This does not mean that White cannot create problems for his opponent though... **13.h4!** This is the most accurate move order, although it took some effort (not to mention an important novelty) to reach this conclusion.

[ It is worth seeing the problem with the alternative sequence: 13.a4?! bxa4 14.h4 As GM Dorian Rogozenko has pointed out, this is only a sensible move when the bishop cannot return to e7. *(* Feeble is: *14.Rxa4? Nxd5 15.Qxd5 Be6∓;* In order to understand why the move h2-h4 is desirable for White, the following is a model game from Black's point of view: *14.Ncb4 0-0 15.Rxa4 a5 16.Nxe7+ Qxe7 17.Bc4 Bd7 18.Nd5 Qe8 19.Ra2 Bd8!* The bishop finds a better job to do than just guarding the empty h6-c1 diagonal! *20.0-0 Rc8 21.Bb3 Rb8 22.Qc2 Kh8 23.Rfa1 f5 24.Ba4 Bxa4 25.Rxa4 fxe4 26.R4a2 Qf7 27.c4 Rb3∓* Smeets - Carlsen, Wijk aan Zee 2006. *)* 14...Nxd5!N *( 14...Bh6* would lead to our target position. *)* The text move is the big idea which changes the evaluation of this move order. 15.hxg5 *( 15.Qxd5 Be6 16.Qc6+ Bd7 17.Qxd6 Be7 18.Qxe5 0-0* would give Black excellent compensation. In the related variation mentioned in the notes to our main line below, White can castle queenside in safety. But in the present case, the addition of a2-a4 and ...bxa4 leaves the white king without any

safe haven. *)* 15...Nb6 16.Ne3 Rb8 I doubt that White has any advantage in this wildly unclear position. ]

**13...Bh6**

[ 13...Nxd5? is a poor relation of the strong novelty mentioned on the previous page. 14.Qxd5 Be6 15.Qc6+ Bd7 16.Qxd6± Black has no compensation here, as Be7 17.Qxe5 0-0 18.0-0-0! is excellent for White. ]

[ 13...Bxh4? loses a piece as Black's planned trick backfires: 14.Rxh4 Nxd5 15.Qxd5 Be6 16.Qb7! *( 16.Qc6+ Bd7* is less convincing *)* 16...Rb8 17.Qc6+ Bd7 18.Qxd6+- ]

**14.a4 bxa4** The text move reaches our target position, which has also occurred via the less accurate move order with 13.a4. would lead to our target position.

[ Our chosen move order gives Black an extra option of 14...Nxd5!? but I like White after: 15.Qxd5 Rb8 16.Qc6+!± ]

**15.Ncb4 0-0**

[ Castling is the right choice, but we should note why the following alternative is misguided: 15...Bd7?! This does not stop us taking the a4-pawn, so it is a waste of time. 16.Rxa4! Nxd5 *( 16...Bxa4 17.Qxa4+ Kf8 18.Nxe7 Qxe7 19.Qc6 Ra7 20.Bxa6±* gives us our typical exchange sacrifice scenario. White is better, but the game continues. For example: *g6 21.Nd5 Qd7 22.Qxd7 Rxd7 23.Ke2 Kg7 24.Ra1 f5 25.Bd3 Rb8 26.b4* Caliskan - Shivdasani, email 2012. A clear demonstration of the ineffectiveness of the h6-bishop. White won without it feeling as if it was a challenge at all.*; 16...a5 17.Nxe7 axb4 18.Rxa8 Qxa8 19.Nd5 0-0 20.cxb4* is good for White. Black has to sacrifice an exchange to stay in the game: *Rc8! 21.Ne7+ Kf8 22.Nxc8 Qxe4+ 23.Be2 Qxb4+ 24.Kf1 Bxc8 25.g3±* Black has some compensation for the exchange, but the simplified nature of the position means that White will untangle himself and try to convert the extra exchange. Having a passed pawn matters a lot in that respect. *)* 17.Nxd5 Bxa4 18.Qxa4+ Kf8 19.b4± White has the advantage, which has been confirmed in a number of games. Despite the sacrifice, he has still to lose a single game while winning several. The first game in this variation is worth blitzing through to cement some themes in your head: a5 20.b5 Rb8 21.g3 g6 22.Bh3 Kg7 23.0-0 Rf8 24.Ra1

**A)** and Black should have played the direct 24...f5 25.exf5 gxf5 though White is still better, as Rogozenko also pointed out. 26.Qxa5± is simple and good. *(*The trick Black was avoiding with 24...Kh8 was *26.Bxf5?!* but Black has a counter-trick: *Qe8!* with a likely draw as both f5 and b5 are under attack, and ... Qf7 is another possible source of counterplay. *)*;

**B)** 24...Kh8 As Rogozenko mentioned, this is too slow 25.Qxa5 Qe8 26.c4 f5 27.Qc7 Qf7 28.exf5 Qxc7 29.Nxc7 gxf5 30.Ra6 Rf7 31.Nd5 Bf8 32.Rc6 f4 33.Be6 Rg7 34.g4 Re8 35.Bf5 Be7 36.h5 Bg5 37.b6 e4 38.Rc8 Rxc8 39.Bxc8 e3 40.fxe3 fxe3 41.b7 1-0 Karjakin - Radjabov, Warsaw 2005, was smooth and convincing all the way. ]

**16.Rxa4** This is the most interesting try, as far as I am concerned. The position is

quite depressing for Black, who is trying to hold on to a draw, with no activity, or purpose, or will to live...

[ The more analysed variation is: 16.Qxa4 a5 17.Bb5 Nxd5 18.Nxd5 Be6 19.Bc6 Rb8 20.b4 axb4 21.cxb4 Kh8 22.b5 Bxd5 23.Bxd5 Qb6 But it is not really going anywhere. A recent rapid game saw a fine idea, but I doubt it is enough to carry the day: 24.Rh3! *( 24.Bc6 Be3!* is an important point; Black has equalized.*; 24.0-0 Qxb5 25.Qxb5 Rxb5* has led to dozens of dull draws, most recently Kulaots - Zhigalko, Tallinn 2016. *)* 24...Qxb5 25.Qxb5 Rxb5 26.g4 f6 27.Ra7 Rc8 28.Be6 Rc1+ 29.Ke2 Rb2+ 30.Kf3 Rb8 31.Kg2 Rc2? It is easy to blunder in rapid chess. *( 31...Rcb1 32.Rd7 R1b7 33.Rxd6 Rb6* and Black holds a draw. *)* 32.Rb3! Rf8 33.Kf3 Rd2 34.Rbb7 Rc2 35.Rf7 Re8 36.Bd5 Rc3+ 37.Kg2 Rcc8 38.g5 fxg5 39.hxg5 Bxg5 40.Rxg7 Re7 41.Rgxe7 1-0 Dominguez Perez - Zhigalko, Berlin (rapid) 2015. ]

**16...a5**

[ 16...Nxd5 17.Nxd5 a5 transposes. ]

**17.Nxe7+ Qxe7 18.Nd5 Qd8!**

[ Also fairly solid is: 18...Qb7 19.b3 Kh8 20.Bc4 Bd7 21.Ra2 f5 22.exf5 Bxf5 23.0-0 Be6?! In Zhang - Ushenina, Sochi 2015, Black was provoking an unfavourable exchange *(*wiser was *23...Bd7± )* 24.Ne3!N would have been a big improvement. Once the light-squared bishops come off, the advantage is obvious. And Bxe3? 25.Bxe6 Qe7 26.Bd5 wins the exchange. ]

I believe the text move to be Black's most resilient option. Having made the decision to avoid the drawish paths of the 16.Qxa4 variation, this is a key position where White needs to come up with a good plan. 'transposes.' **19.g3!** This is the natural way to make sense of having played h2-h4.

[ 19.Bc4 Kh8! with the intention of ...f7-f5 equalizes easily; Black had no problems in Herrera - Secer, email 2007. ]

**19...Rb8** There are other lines, but still problems for Black to solve everywhere. For example:

[ 19...Kh8 20.Bg2 f5 *( 20...Ba6 21.c4± )* 21.exf5 Bxf5 22.0-0± ]

[ 19...Bd7 20.Ra2 Kh8 21.Bg2 Bb5 22.b3 a4 23.c4 Bc6 24.b4± ]

**20.b3 Bd7 21.Ra3**

[ 21.Ra2!?N might be more flexible. It is not obvious to me that the b3-pawn needs defending. ]

**21...Kh8 22.Bg2 Bb5 23.c4 Bd7 24.0-0±** In Fusco - Real de Azua, Vicente Lopez 2007, White had a slight but definite edge; the h6-bishop is far from ideally placed, hitting nothing but fresh air.

**B33**

■ **2.d3**
*[GM Mihail Marin]*

**1.e4 c5 2.Nf3** The so-called King's Indian attack. In this and the next two lines I have recommended the same setup as in my Hedgehog database against the same white system. **2...Nc6 3.d4** The most typical way of developing. **3...cxd4 4.Nxd4 Nf6 5.Nc3 e5 6.Ndb5 d6 7.Bg5 a6 8.Na3** The start of a slow but consistent kingside attack. **8...Be7 9.Nc4 0-0!?N** In most games Black castles short early. I believe this untested move is better, as it keeps the possibility of castling long open, if White commits himself too much on the kingside. **10.Bxf6 Bxf6 11.Qxd6 Be6** Play is likely to become sharp. Here is an illustrative line: **12.0-0-0**

[ 12.Nd5 Bxd5 *( 12...Bg5 13.Qxd8 Raxd8 14.Ncb6 Rd6 )* 13.exd5 Nd4 14.Qxd8 Minasian,A (2570)-Nedobora,M (2435) Oviedo 1993 (0-1, 65) Raxd8 15.0-0-0 Rxd5 16.c3 b5 17.Ne3 Rc5= , with a comfortable Hedgehog. Black immediately starts to neutralize the bishop's latent pressure. If White exchanges it, he will be left with queenside weaknesses. But there are worthy alternatives. 18.Kb1 Ne6 19.g3 ]

**12...Qxd6**

[ 12...Be7 13.Qxd8 allows Rfxd8! *( 13...Raxd8 14.Be2 )* 14.Be2 b5 15.Ne3 Bg5 transposes to Line 23. The general opinion is that 16.Kb1 does not suit the KI attack too well. Nd4 17.Bd3 ]

[ 12...Bg5+ 13.Kb1 Qf6 14.f3 Rfd8 15.Nd5 Bxd5 *( 15...Qh6 16.Qc7=* Tsydypov,Z (2523)-Lysyj,I (2618) Khanty-Mansiysk 2017 (0-1, 44) *)* 16.Qxf6 gxf6 *( 16...Bxf6 17.exd5 )* 17.exd5 b5

**A)** 18.f4 , with good counterplay in a complex position, Florean,A (2441)-Simantsev,M (2403) Bucharest 2000 (1/ 2-1/2 64) exf4 *( 18...Bxf4 19.g3 Bg5 20.Bg2 )* 19.Be2;

**B)** 18.Na3 Ne7 19.c4 ]

**13.Nxd6 Bg5+ 14.Kb1 Rfd8 15.Be2**

[ 15.h4= Damljanovic,B (2596)-Sedlak,N (2553) Vrsac 2008 (0-1, 69) Be7 can be met in similar way as the main plan: 16.Nf5 Rxd1+ 17.Nxd1 Bc5 18.a3 Rd8 ]

**15...Nd4**

[ 15...b5= The careless 16.Nf5 allowed ]

[ 15...Be7!± in Tosic,M (2416)-Zivkovic,N (2198) Nis 2012 (0-1, 33) , as the bishop is hanging after the opening of the e-file. Caution is required: 16.Nc4? Bc5 17.Rxd8+ Rxd8 18.Rd1? Bd4 *( 18...Bxf2 19.Nxe5 )* 19.Ne3 Bxc3± *( 19...Bxe3 20.fxe3 )* 20.Rxd8+ Nxd8 21.bxc3 Kf8 22.Bc4 Ke7 23.Kb2 Bd7 24.Bd5 ]

**16.Nxb7 Rdc8 17.h4**

[ 17.Bd3 Rab8 reaches an inoffensive Scheveningen setup with a tempo less for White. 18.Nd5 Rxb7 19.Bxa6 Rxb2+ 20.Kxb2 Rxc2+ 21.Kb1 Rxf2 ]

**17...Be7 18.Rxd4 exd4 19.Nd5 Bf6**
[ 19...Bxd5= Instead, 20.exd5 Rc7 looks dangerous, as Black's kingside play is not that obvious. 21.Na5 Rd8 22.Bf3 ]
**20.Nxf6+**
[ 20.Nb6 Rcb8 21.Nxa8 Rxb7 ]
**20...gxf6** , with good play for Black. **21.Bd3**
[ 21.Na5 f5! The flexible 22.Bd3 delays g3-g4, so Black can already play fxe4 23.Bxe4 Ra7 24.Bd3 ]
**21...a5 22.Nd6** is also worth a try. **22...Rd8 23.Nf5 Bxf5 24.exf5** allows Black to open the kingside with dangerous counterplay. **24...h5** exposes the bishop to **25.b3**

**B33**

☐ **Chapter**
■ **2...c5**
A) 3...Nf6
*[Avrukh]*

**1.e4 c5 2.Nf3 Nc6 3.d4 cxd4 4.Nxd4! Nf6 5.Nc3 e5** Another option for Black that we will have to look at is: **6.Ndb5!** White's best move in my opinion. It is very important to discourage Black from playing 6...e5. **6...d6 7.Bg5 a6 8.Na3** Despite the queen swap, Black's position remains very passive and without proper coordination between his pieces. **8...b5** Black has other options: **9.Bxf6 gxf6 10.Nd5** White has a clear advantage in every line. **10...Bg7 11.Bd3 Ne7 12.Nxe7! Qxe7 13.0-0 0-0 14.c4!** A very good practical decision. **14...f5 15.Qh5 Rb8 16.exf5 e4 17.Rae1 Bb7 18.Kh1** White will have a very pleasant advantage with his strong knight on e4 against Black's passive bishop, Gleizerov - Berkell, Sweden 2002. **18...bxc4**
[ 18...Kh8 and White regains the material with dividends. Black is also lost after 19.Bxe4 Bxe4 20.f3 Bxf3 21.Qxf3 ]
[ 18...Qe5 19.f3 Qxb2 20.fxe4 Qxa3! followed by 14.Rxe4. 21.f6 ]
[ 18...Bxb2! is not so clear. 19.Nc2 Kh8 *( 19...Rfe8! 20.f3 bxc4 21.Bxc4 d5 22.Bb3 )* 20.Bxe4 Bxe4 21.f3 Bxf3! Threatening 9.Rc1. *( 21...bxc4 22.Rxe4* This position occurred in Goossens - M. Zaitsev, Belgium 2007. White could now seize a decisive advantage with: *)* 22.Rxf3 Qa7 23.c5 *( 23.f6 Qc5 )* 23...Qxc5 Black has serious problems with the development of his dark-squared bishop, while White easily seizes the initiative. 24.Rh3 ]
[ 18...Rfe8 19.cxb5 *( 19.f3 exf3 20.Rxe7 fxg2+ 21.Kg1 Rxe7 )* 19...axb5 *( 19...d5 20.bxa6* This is H. Olafsson - Westerinen, Reykjavik 1997. Here *Bc6 21.f3 Qf6* would have led to a great advantage for White. *22.fxe4?* just loses: White plays *dxe4* followed by 8.Qxe4. White could instead transfer the game to another theoretical line: *23.Be2 Rxb2 24.Nc4* etc, but the text is much stronger and leads to an obvious advantage. *Rxa2 25.Ne3* is not clear according to the

theory. *)* 20.Bxb5 Rec8 21.f3 exf3 22.gxf3 Qf6 23.Bd3 Qd4+- *( 23...Qxb2* Of course it is useful for White to keep the queens on the board. *24.Nc4 )* Or 24.Be4 d5 25.Nb5 *( 25.Bb1 Qxb2* is met by *)* 25...Qxb2 26.Bd3 ]

**19.Bxe4** does not change much. **19...Bxe4 20.f3 Rfc8**

[ 20...Qf6 21.fxe4 Rfc8 ]

**21.fxe4!** is also clearly better for White.

[ 21.Rxe4 Qf6 22.Rxc4 d5 With a decisive attack. 23.Rxc8+ loses to a nice line: Rxc8 ]

The text move is much stronger than **21...Bxb2**

[ 21...Be5 22.f6 Bxf6 as played in Wach - Penz, Austria 2002. 23.e5 Bxe5 24.Qg4+ Kh8 25.Nxc4 Rg8 26.Qe4 Freeing the f7-square for the king. Qe6 27.b3 ]

[ 21...Qf6 22.Re2 *( 22.e5! dxe5 23.Qe2 )* 22...c3! *( 22...Rxb2* with *23.Rxb2* but fortunately White has a very smooth refutation of Black's idea: *Qxb2 24.f6 )* 23.b3 a5 24.Nc2 Qh6 25.Qxh6 *( 25.Qg4 Kh8 26.Re3 Be5 27.Rh3 Qg7* with a large lead in development. I was discussing this line with one of my teammates in the Israeli league, Boris Kantsler, and he claimed that: *28.Qe2?* still works for Black, having once had the position in a game in some rapid tournament in Israel. The tricky idea is to meet: *)* 25...Bxh6 And with 19.Rc7 coming next, White is winning material, Gleizerov - Westerinen, Stockholm 2000. 26.Rf3!? comes into consideration as well Rc5 27.g4 Bd2 28.Rd3 ]

**22.e5**

[ 22.Nc2 f6 23.Ne3 claims an advantage with the bishop pair. Be5 ]

**22...Kh8**

[ 22...dxe5 23.Qg4+ Kf8! White exerts strong pressure on the dark forces. 24.Nxc4 f6± 25.Re4 ]

**23.f6**

[ 23.e6 f6 24.Nc2 ]

**23...Qb7**

[ 23...Qf8 24.Re4 ]

**24.Rf3 Bxa3**

[ 24...Rg8 which offers Black no relief. 25.e6?! Bxa3 *( 25...fxe6 26.f7 Rgf8 27.Nxc4!N* This is stronger than *)* 26.exf7 Rgf8 27.Rxa3 Qxf7 Black's position looks critical, with his king stuck in the centre, Portisch - Bronstein, Monte Carlo 1969. 11.0-0-0! ? is also worth a thought. ]

**25.Rxa3** and Black held this position somehow in Hjelm - Berkell, Sweden 2002.

**25...dxe5 26.Rg3 Qe4** was played in the encounter Psakhis - Gershkowich, Ashdod 2004. White has many ways to develop his initiative, but the most logical is **27.Rg1N Rg8 28.Rxg8+ Rxg8 29.Qxf7± c3 30.Qc7 Rxg2** was played in Donner - O'Kelly, Havana 1965. Now the easiest would be **31.Rxg2N Qe1+**

**B33**

☐ **Chapter**
■ **6...Nc6 & 7...Bg4**
C2) 14...Qc7

**1.e4 c5 2.Nf3 Nc6 3.d4 cxd4 4.Nxd4 Nf6 5.Nc3 e5 6.Ndb5 d6 7.Bg5 a6 8.Na3 Be6 9.Nc4 Rc8 10.Bxf6**
[ 10.Nd5 Bxd5 11.Bxf6 Black is doomed to a passive defence. gxf6 12.Qxd5 Nb4 was tried in Schwartzman - Gretarsson, USA 1990, and we already know White should meet this plan with 13.Qd2 d5 14.exd5± Nxc2+ 15.Qxc2 Bb4+ 16.Kd1 ]
**10...Qxf6** This is Black's main plan; obviously he is trying to play on the queenside.
[ 10...gxf6 but White created a dangerous attack after 11.Bd3 *( 11.Ne3 Bh6 )* 11...Ne7 *( 11...Bh6 12.0-0 Rg8 13.Nd5; 11...Rg8 12.0-0 )* 12.Ne3! Bh6 13.0-0!± in Wl. Schmidt - Troianescu, Poland 1971. Bxe3 In Wojtkiewicz - Docx, Antwerp 1994, Black's idea was to double rooks on the b-file. White should continue with: 14.fxe3N Qb6 15.Qc1! This is the best arrangement of White's minor pieces in most cases. It is important for White to keep an eye on Black's knight, as this is a key idea in restricting Black's activity on the queenside. Ng8 ]
**11.Nb6 Rb8 12.Ncd5 Qd8**
[ 12...Qg6 13.Qd3 Be7 14.Nc7+ Kd8 15.Ncd5 f5 16.0-0-0± Black failed to create any counterplay and his minor pieces are clearly misplaced on a4 and a5. White was much better in Stangl - Gretarsson, Reykjavik 1993. Black has also tried fxe4 17.Qc3 ]
**13.c3 Be7 14.Bc4** Now Black has three main lines: C1) 14...bxc4, C2) 14...Qc7 C3) 14...e5 **14...0-0 15.0-0 Bg5** Black has also tried several other moves here: **16.a4!** The knight is heading for e3, where it will be perfectly placed if Black plays ...exd5.
**16...Kh8**
[ 16...Ne7 17.Nxe7+ Bxe7 18.a5 Now the games diverged: ]
**17.Qe2 g6** This is Tkachiev - Krstic, Croatia 2002, and now I believe it is always desirable for White to recapture with the c-pawn. Probably White overlooked that after: **18.Rad1!N Bh6** He has a strong answer: **19.b4!** This would secure White's advantage. In two other games Black immediately released the tension in the centre, but in both cases he failed to equalize: **19...f5 20.Bd3 f4 21.f3 Rf7 22.Bc4 Bf8 23.a5**

**B33**

☐ **Chapter**
■ **6...Nc6 & 7...Bf5**
A) 9...c6

**1.e4 c5 2.Nf3 Nc6 3.d4 cxd4 4.Nxd4 Nf6 5.Nc3 e5 6.Ndb5 d6 7.Bg5 a6 8.Na3 b5 9.Bxf6 gxf6** With this move Black invites complications, and White should accept the challenge. **10.Nd5!** This principled move has not been so popular, but it is definitely the right way to fight for the advantage. Black has scored well against less ambitious moves such as 10.e4. **10...Bg7** This has been played in most of the games, but we should also consider: **11.Bd3 Ne7 12.Nxe7 Qxe7 13.0-0 0-0 14.c4** The text move was originally a novelty of mine, although it was played early in 2010, shortly before publication. **14...f5 15.Qh5!N** After the simple rook development White's position seems very promising, as shown by the following illustrative line: **15...Rb8 16.exf5 e4 17.Rae1 Bb7 18.Re3 bxc4 19.Bxc4!** White has serious attacking prospects, the principal threat being Qh4 and Ng5. In Nakauchi - Ly, Sydney 2010, White tried the enterprising but ultimately incorrect **19...Qe5 20.Rh3 h6?! 21.Nc2**

[ 21.Bb3 d5
**A)** 22.Rd1 Rbd8 *( 22...d4 23.Qg6 )* 23.Nc2 d4 24.Rg3 Kh8 25.Bxf7 Bc8 26.Rxg7 Qxg7 27.Bg6 Kg8;
**B)** 22.Nc2 d4 23.Rg3 Kh8 *( 23...Rbd8 24.Qg6 Rd6 25.f6 Qxf6 26.Qxf6 Rxf6 27.Nxd4 )* 24.Bxf7 Bc8 25.Rxg7 Qxg7 26.Bg6
**B1)** 26...Rxb2 27.Nxd4 Rd2 28.Ne2 Rxa2 *( 28...a5 29.h4 Ba6 30.Re1 )* 29.h4;
**B2)** 26...Kg8 27.b3 *( 27.Rd1 Rxb2 28.Nxd4 Rd8 )* 27...Rb5 28.Qg4 ]

**21...d5 22.Ne3 dxc4?! 23.Ng4 Qf4** and although he eventually won, his position at this stage is far from convincing. This straightforward capture is much stronger than **24.f6?! Bc8 25.fxg7 Kxg7 26.Rg3 Kh7 27.Ne3 Be6** with an unclear and double-edged game, Ivanchuk - Smirin, Odessa 2007. The alternative **28.Qe2?!** is hardly playable for Black. The game U. Nielsen - Hvenekilde, Denmark 1993, continued

[ 28.Qd1 Qe5 Danielian - Fierro Baquero, Istanbul 2009. 29.Ng4 Bxg4 30.Qxg4 Rxb2 ]

**28...Rfc8**

[ Black gets a normal position after 28...Qe5 29.Nxc4 Bxc4 30.Qxc4 Rxb2 31.Qxa6 ]

**29.Qc2 Rb5**

[ 29...Qe5 30.f4 ]
[ 29...h5 30.Nd1 ]
[ 29...f5 Black is very passive, while White can prepare the e2-e4 advance under favourable circumstances. It is too dangerous for Black to try: 30.Qc3?! Qc7 31.Qf6 *( 31.f4* followed by 20.Qxa7. White is also better after *Rd8 32.b3 Rd3 33.Qf6* Black has insufficient compensation after *Qf7 34.Qxf7+ Bxf7 35.bxc4!*

*Be6 36.Rc1* with Nd3 to follow. *)* 31...Qf7! 32.Qxf7+ Bxf7 33.Nxf5 Be6!**±**
Black certainly cannot play 34.Nd6? in view of ]

**30.a4 Rbc5**

[ 30...Rg5 31.Rxg5 hxg5 32.Qc3 ]

**31.Qc3 Qe5**

[ 31...Rg8 32.Rxg8 This position occurred in P.H. Nielsen - Nataf, Reykjavik (blitz) 2004. Now White should have played actively with: Kxg8N 33.Rd1 ]

**32.f4 Qxc3** With simple and natural moves White got a winning position. Also **33.bxc3** does not bring Black satisfaction: **33...Bd7**

[ 33...f5 34.Rb1 ]

**34.Rd1**

[ 34.f5 Bxa4 35.Rf4 Bd7 After a more or less forced sequence, we arrive at a rather unbalanced position. From a materialistic point of view Black is absolutely fine, but I believe that in this concrete situation White's two minor pieces are stronger than Black's rook and two pawns, as the rooks will have a hard time becoming active any time soon. Another important detail is the absence of dark-squared bishops, which makes Black's kings ide slightly more vulnerable. ]

**34...Bxa4 35.Rd6 R8c6 36.Rd4 Rb6**

[ 36...Rc7 37.f5 ]

**37.h3 f5**

[ 37...a5 Obviously the most ambitious reaction. 38.f5 Bc6 39.Rd6 ]

**38.Rd8 Rf6!±** Krogius - Shagalovich, Soviet Union 1967. **39.Rgg8**

□ **Backward Pawns**
■ **Korneev,Oleg**

1.e4 c5 2.Nf3 Nc6 3.d4 cxd4 4.Nxd4 Nf6 5.Nc3 e5 6.Ndb5 d6 7.Bg5 a6 8.Na3 b5 9.Nd5 Be7 10.Bxf6 Bxf6 11.c3 After the previous examples it is amazing that nowadays even leading grandmasters voluntarily concede complete control over d5 to their opponents. What is Black hoping to gain from this plan ? The really typical course of this game makes that clear. If you do not agree with this severe neglect of the central d5-square by Black, then you find yourself in good company. In the early 70s of the last century, there was little respect for the dynamic possibilities of this then very new opening. Evgeny Sveshnikov, after whom this system was named, explains in Kasparov's Revolution in the 70s how after a game Karpov recommended him to play a different variation. Petrosian was astonished that nobody had yet found a refutation and threatened to change his opening repertoire and himself turn to 1. e4 in order to find one. The d5-square will again be an issue later. For the moment we hold on to the fact that in return for his central outpost White had to pay the price of a clear lag in development: the knight on a3 will move a few more times before being properly developed. 11...Bg5 A clear difference is appearing between this and the previous games. In those White could cramp the

black kingside with f2 - f4 - f5. Here, on the other hand, Black cannot be prevented, after he has castled, from attacking the centre with ...f7 - f5, opening the f-file for his rook and making space for his pieces. 12.Nc2 Ne7 13.Ncb4 0-0 14.a4 With this White obtains the c4-square for his bishop. An isolated black pawn on b5 would be weak, so the exchange is practically forced. 14...bxa4 15.Qxa4 Nxd5 16.Nxd5 Bd7 17.Qd1 a5 18.Bc4 Kh8 19.0-0 f5 The reason for Black's set-up becomes clearer. The knight on d5 looks nice, but does not represent a threat. Moreover, it is blocking the d-file, so that it is difficult to attack the weak backward pawn on d6. On the other hand, the pawn lever ...f7 - f5 forces White into concessions in the centre. The exchange may not surrender control of the central squares e4 and d5, but it opens the f-file, down which Black can exert pressure in the direction of f2. Should White support the centre with f2 - f3, then ...f5 - f4 could follow, with attacking chances against the white king. 20.exf5 Bxf5 21.Qe2 21.Bd3 is an attempt to manage without the weakening move f2 - f3 which follows in the game. Since the dark-squared bishop no longer has a counterpart, the pawns on the kingside should, as far as possible, protect the dark squares and also keep the a7-g1 diagonal closed: 21... Bd7 21...e4 22.Bc2 += ; the e4-pawn is being attacked 22.Be4 = . Here White has achieved a king position which has not been weakened and a perfect blockade of the black central pawns. We prefer this to the game continuation; but it is not easy to cash in on it. 21...Qb8 22.Rfd1 Be6 23.Kh1 Ra7 24.f3 As we said: we would gladly have avoided this move. 24...Bd7 25.Bd3 g6 26.Be4 Be6 27.g3
It will become clear that this is not an improvement of the position. But in a practical game we always want to have an airhole for our king. 27...Bd8 Nimzowitsch would still have been satisfied. The blockade of the central pawn duo d6 and e5 with pieces is perfect and apparently unbreakable. We will meet this subject in a different form in the chapter 'Pawn chains'. Nevertheless, everything is fine for Black too. The weaknesses are protected and with his bishop pair he can intervene on both sides of the board. The semi-open f-file is also important. The black rooks will be very effectively posted there, whereas the white ones have no prospect of activity any time soon. 28.h4 Who is attacking whom ? It is not so clear whether White is dreaming of a future h4 - h5 or whether he is wanting to anticipate ...g6 - g5 by Black - probably the latter. Here we can see a typical scenario: the first softening of the structure with f2 - f3 is quickly followed by another one, g2 - g3, and this then gives rise to a third one: h2 - h4. Happy are those who have a solid pawn rampart in front of their king ! 28...Raf7 29.Kg2 Bf5 30.Rf1 Instead of attacking d6, the rook defends passively. After 30.Bxf5 gxf5 the weakening provoked by g2 - g3 and h2 - h4 makes itself felt. White has no antidote to the threatened doubling of the rooks on the g-file. 30...Bb6 31.Rad1 One way to equality was 31.Nxb6 Qxb6 32. Bd5 Rf6 33.f4 ! Be6 34.Bxe6 Rxe6 35.fxe5 = Both kings are 'equally badly placed' and for the rook on f1 the file is at last being opened. 35...Rb8 36. Rf2 Rxe5 37.Qg4 = (Moiseenko) . But it is psychologically understandable that Korneev did not want to give up his centrally posted knight. 31...Bc5 A good sign for Black. The once passive bishop is on an important diagonal and in addition is still protecting the backward pawn. 32.Rd2 Qc8

33.Kh2 White is now clearly forced on to the defensive. His central blockade is achieving nothing, Black is simply playing around it. A better way was 33.Bxf5 Qxf5 34.f4 = . 33...a4 34.Rd3 Qd8 35.Kg2 Bd7 Moiseenko deploys the bishop pair cleverly. After taking permanent control of the a7-g1 diagonal with the dark-squared one, he now swiftly changes sides of the board with the other one. 36.Rdd1 g5 Opening the g-file would make possible a strong attack for Black. 37.h5 Qe8 38.g4 Intending to set up a sort of fortress on the light squares. 38...Qc8 39.Kg3 Not a good place. 39...Qb8 40.Qd2 Bb5 41.Rh1 h6 42.Ne3 42.Rhe1 Bc4 or 42. Kg2 Bc4 , in each case with a clear advantage for Black. How did Moiseenko transform his positional superiority into something tangible ? 42...d5 The typical way of 'jemmying open' this sort of position. As long as the blockade held, White could still protect everything, despite the loosening up of his king position. After the disappearance of the central pawns all the diagonals are opened up, as is the f-file. The black pieces are ideally placed for the attack on the exposed white king. 43.Qxd5 The emergency brake. However, a piece down, he will have no realistic chances of saving the game. Other moves also lose: A. 43.Nxd5 Rxf3+ 44.Bxf3 e4+ 45.Kg2 Rxf3 45...exf3+ 46.Kh3 f2 47. Kg2 Qc8 -+ 46.Rh3 Qf8 47.Rxf3 Qxf3+ 48.Kh2 Bd6+ 49.Kg1 Qxg4+ 50.Kh1 Qh3+ 51. Kg1 Bc5+ ; B. 43.Bxd5 e4+ ; C. 43.Bf5 d4 44.Nd5 e4+ 45.Kh3 e3 46.Qe1 Rxf5 47. gxf5 Qe5 (analysis by Moiseenko) . 43...Bxe3 44.Qe6 Rf6 45.Qe7 Qa7 46.Qxa7 Bxa7 47.Rhe1 Bb8 48.Kg2 Bc6 49.Bxc6 Rxc6 50.Rd3 Rb6 51.Rd2 Bd6 52.Ree2 Kg7 53.Rd5 Kf6 54.Ra5 Rfb8 55.Rxa4 Rxb2 56.Ra2 Rxe2+ 57.Rxe2 Rb3 58.Rc2 Ba3 59.Kf2 Rb2 60.Rxb2 Bxb2 61.c4 Bd4+ 62.Ke2 e4 63.fxe4 Ke5 0-1. The permanent control over d5 brought White nothing in this game. After ...f7 - f5 Black was able to activate all his pieces and conduct operations on both sides of the board. Model games Adams-Salov (Dortmund 1992) , attacking the backward pawn Robatsch-Fischer (Havana 1965) Marin-Narciso Dublan (Solsona 2004) Karjakin-Shirov (Heraklion 2007) Geller-Fischer (Willemstad 1962) , transformation of the central structure with exd5, then creation of a passed pawn on the queenside Shirov-Topalov (Morelia/Linares 2008) , double rook endgame with the potential to become a classic.

■ **6...Nc6 & 7...e5**
D) 9...Nd7

**1.e4 c5 2.Nf3 Nc6 3.d4 cxd4 4.Nxd4 Nf6 5.Nc3 e5 6.Ndb5 d6 7.Bg5 a6 8.Na3 b5 9.Bxf6 gxf6 10.Nd5 f5** Besides this move, only 10...a5 is a serious alternative, and after 11.Nd3 this position is examined in the 9...a5 variation (line B). **11.Bd3 Be6** 11...Nf6 just transposes to our main line, while 11...h6 is covered in line C. **12.c3** A thematic central clash in this line. **12...Bg7** The alternatives are clearly worse: **13.Nxb5 axb5 14.Bxb5!?N** This natural move seems stronger than the modest 14.Kh1 which was played in A. Maric - Skripchenko, Kishinev 1995. **14...Rc8 15.Qa4 Bd7 16.exf5 0-0 17.0-0** The following sequence looks logical to me.
**17...e4 18.Rfe1 Ne5**
[ 18...Re8 19.Rxe4 ]
**19.Bxd7!**
[ 19.f6 Bxb5 20.Qxb5 Bxf6 21.Rxe4 *( 21.b4 Bg7 22.a4 f5 23.a5 f4 )* 21...Bg7 ]
**19...Nxd7 20.Qxe4 Nf6 21.Nxf6+**
[ 21.Ne7+ Kh8≅ 22.Qf3 Rc7 23.Nc6 *( 23.Nd5 Nxd5 24.Qxd5 Rc5 25.Qd3 d5 )* 23...Qa8 24.Nd4 Qxf3 25.Nxf3 Rb8 26.Re2 Rcb7 27.a4 Rxb2 28.Rxb2 Rxb2 29.a5 Rb8 30.a6 Ra8 31.a7 Ne4 32.Ra4 d5 33.Nd4 Bxd4 34.cxd4 Nd6 35.g4 Nc8 36.Ra5 Rxa7 37.Rxd5 ]
**21...Bxf6 22.Red1**
[ 22.a4 d5 *( 22...Qb6 23.Re2* This position is from the game Marin - Florean, Bucharest 1999. Now I really like: *Rfe8!?N* With the following idea: *24.Qxe8+ Rxe8* White is threatening to play 19.e5. *25.Rxe8+ Kg7 26.Re2* Otherwise White was threatening to play Ng5. *)* 23.Qg4+ Kh8 24.Red1 d4 ]
[ 22.Rad1 White has a fine initiative. It should be noted that Qb6 23.Qg4+ is clearly better for White. *( 23.Re2 Rfe8!* Otherwise Black might be alright. *24.Qxe8+ Rxe8 25.Rxe8+ Kg7* White is clearly better, especially due to the poorly placed knight on h6.*;* the point is that after *23.Qc2 Rfe8 24.Rxe8+ Rxe8 25.a4* White wins a pawn, but Black gets great compensation in return after *d5 )* White is simply better after 23...Kh8 24.Rd2± Black lacks activity. I also analysed: Rfe8 25.Rxe8+ Rxe8 26.Qd1 ]
**22...Qb6 23.Rd2** Black's knight has problems as, for example, White is threatening 24.N4. Black is practically forced to release the tension, as **23...Rfe8** runs into the

simple **24.Qf3** when White is obviously better. As we already know, if **24...Re5**
[ 24...d5 25.g3 Obviously this is a strange move, but I decided to examine it in order to show what White intends to do if Black makes some waiting move. ]
**25.g3 Rce8**
[ 25...Qc5 26.a4 Rxf5 Black faced serious difficulties in Huzman - Maes, Amsterdam 1994. White is also clearly better after 27.Qg4+ Kh8 28.a5 ]
**26.Rf1** then the arising pawn structure favours White and gives him a solid advantage, as in Grachev - Khadzhaev, Rybinsk 2000.
[ 26.Rad1 Re1+ 27.Kg2 Qa6 ]
**26...Qc5** may look a natural try, but it is badly timed, as it allows White to force a favourable pawn structure:

**B33**

☐ **Chapter**
■ **6...Nc6 & 7...Rb8**
C3) 9...Nd7

**1.e4 c5 2.Nf3 Nc6 3.d4 cxd4 4.Nxd4 Nf6 5.Nc3 e5 6.Ndb5 d6 7.Bg5 a6 8.Na3 b5 9.Bxf6 gxf6** This is best met by: **10.Nd5!** Before playing Be3 White provokes ...h7-h6 and later on will gain a tempo attacking this pawn with Qd2. **10...f5** Other possible moves are: **11.Bd3 Be6** Two other options are: **12.c3 Bg7** Certainly White can continue with 13.Rc1, which would transpose to a position that has been examined in the 10...b5 line, but White also has another interesting idea: **13.Nxb5!? axb5 14.Bxb5 Bd7 15.exf5 0-0 16.0-0 e4 17.a4! Re8 18.Qg4 Kh8 19.Rad1 Rc8 20.Rfe1! Re5 21.Ne3 Qf6 22.Qh3** White was a clear pawn up in Goldin - Smirin, Philadelphia 1996.
[ 22.Qe2 Bxf5 23.Nxf5! Qxf5 24.Rxd6 Nb8 ]
**22...Rc5** does not help Black:
[ 22...Bxf5 23.Nxf5 Qxf5! White is better, as the e5-pawn is poisoned due to the following variation: 24.Qxf5 Rxf5 25.Rxd6? ]
**23.g4**
[ 23.b4 Rxc3! I believe this is stronger than 24.Qh5 Qe5 which allows Black to create a clear plan. 25.Kh1 ]
[ 23.Rd2
**A)** 23...Ne5 It does not work, as after: 24.Bxd7 Nxd7 25.Red1 Bf8 26.Rd4 Black cannot play: *( 26.b4 Rxc3* It is essential to cover the c4-square. *27.Nd5 Rxh3 28.Nxf6 Nxf6 29.gxh3* Now in Wisniewski - Szoen, Frydek Mistek 2004, instead of the modest 17.Nb2, White should have played the principled: *d5!N* Attacking both the h6- and b4-pawns. *30.b5 )* 26...Re8 In view of: *( 26...Rb8 27.R1d2 )* 27.Qg4! With a clear advantage. Qe5 28.Qh4 Nf6 29.g4;
**B)** 23...Rd8 As always, this idea is not good enough to gain real counterplay 24.Red1 Bc8 25.Bxc6 *( 25.Qg4 Ne7* Now if Black tries to play on the

queenside with: *)* 25...Rxc6 This position occurred in Fernandez Lopez - Perez Aleman, Badalona 1993. Black intends 15...e5 which might lead to a closed and unclear position, so I propose the following improvement: 26.Qg4N ]

**23...Rg8**

[ 23...Ne5 24.Bxd7 Nxd7 25.Nd5 *( 25.Qg2* White has an obvious positional advantage due to the weak d6-pawn. There is no point in White embarking on the line *Qh4 26.Qxe4!* Or *Ne5 27.Qg2 )* 25...Qd8 In Ataman - Erdogdu, Turkey (ch) 2008, White could have played simply: 26.Rxe4N Nf6 27.Nxf6! Bxf6 ]

**24.Qg3!±** Black decides to engage in a tactical clash, but it ends in White's favour, so the lesser evil was **24...Ne5**

[ 24...Bf8 25.Kf1 ]

**25.Bxd7 Nxd7** even though after **26.Qxd6** White is slightly better. **26...Qxd6 27.Rxd6 Ne5 28.Kf1**

**B33**

□ **Chapter**
■ **Chigorin Defence**
D3) 5...h6
*[Avrukh]*

**1.e4 c5 2.Nf3 Nc6 3.d4 cxd4 4.Nxd4 Nf6 5.Nc3 e5** I believe this is the critical continuation, as it could be useful later on for Black to have inserted ...h6 and Bh4. **6.Ndb5** Once again Black has a choice: Once again Black has a choice: **6...d6 7.Bg5 a6 8.Na3 b5 9.Bxf6 gxf6 10.Nd5 f5 11.Bd3** Of course Black should react with the most principled move, fighting for the f4-square. **11...Be6!N** However, it is the position after moving the g-pawn two steps forward which is important for the assessment of this line, so I decided to analyse this improvement as well. However, it is the position after moving the g-pawn two steps forward which is important for the assessment of this line, so I decided to analyse this improvement as well. **12.c3** Other options are **12...Bg7 13.Nxb5 axb5 14.Bxb5 Bd7 15.exf5 0-0 16.0-0** This is much stronger than **16...e4 17.a4±** Black has managed to maintain control of the long diagonal and the e5-square, but still, with all his pieces in the game and Black's king stuck in the centre, I definitely prefer White. Conclusion: There are many sharp, forcing lines in this chapter, so the reader should study the analysis carefully, rather than rely on general principles to suggest a decent move. Obviously the 5.Bg5 line requires more analysis and tests, but at the moment the situation looks quite promising for White. Black has managed to maintain control of the long diagonal and the e5-square, but still, with all his pieces in the game and Black's king stuck in the centre, I definitely prefer White. Conclusion: There are many sharp, forcing lines in this chapter, so the reader should study the analysis carefully, rather than rely on general principles to suggest a decent move. Obviously the 5.Bg5 line requires more analysis and tests, but at the moment the situation looks quite

promising for White. **17...Re8?! 18.Qg4 Rc8**
[ 18...Kh8 19.Rad1 Chapter 26-Chigorin Defence D1) 5...a6 [Avrukh] Re5 20.Ne3 Qf6 21.Rd5 ]
**19.Rfd1**
[ The alternative is 19.Rad1 Kh8! when I considered the following options: And despite the opposite-coloured bishops, White's advantage is obvious, since there is no safe place for Black's king. A very important variation is: 20.Rfe1 *( 20.Kh1 )* 20...Re5 This gives White fantastic compensation. It is not clear how Black is going to develop his pieces. ]
[ 19.f4 Kh8 *( 19...exf3 20.Qxf3* which leads to double-edged play. *)* 20.Qh5 *( 20.Rfd1 Ne7 21.Qh4 Nxd5* where Black is by no means worse where Black is by no means worse and and *22.Qxd8 Rexd8 23.Rxd5 Bxb5 24.axb5 Rc5 )* 20...Kg8 *( 20...Ne7 21.f6 )* 21.Kh1 Rb8 *( 21...Ne7 22.Bxd7* Black is a pawn up, but all White's pieces are in play, while it is not clear how Black is going to get his pieces to play together. *Qxd7 23.Nb6 )* 22.f6 Bxf6 This also promises White rich play for the pawn. 23.g4!? Bg7 24.g5 ]
**19...Kh8 20.b4** when Black would have full compensation thanks to his strong dark-squared bishop.
[ 20.Ra3 Re5 21.Ne3 Qf6 offers White obvious compensation. ]
It is of course also natural to keep the extra pawn with: **20...Rb8** But this would allow White to open up a second front with:
[ 20...Ne5 21.Qxe4 Bxb5 22.axb5 ]
[ 20...Re5 21.Ne3 Qf6 22.Qe2 It seems that White has more than sufficient compensation. Bxf5 23.Bxc6 Rxc6 24.a5 With a powerful initiative. All the black minor pieces are out of play. ]
[ 20...Nb8 21.g3! Bxb5 22.f6 Bxf6 23.axb5 Nd7 24.Ra7 leaves White with an extra pawn. Ne5 25.Qxe4 Nc6 26.Re7 Rxe7 27.Qf3 leads to a position which is more or less identical to the one after 15...Rh7. Bxc3 28.bxc6 ]
**21.Qh5 Kg8**
[ 21...Ne5 22.Bxd7 Nxd7 23.b5 Nf6 24.Qxf7! A very nice sacrifice. Nxd5 25.Qxd5 ]
**22.Ra3**

☐ **7G) 2...Nc6: The Sveshnikov S**

■ **Sveshnikov Mainline With,N**

1.e4 c5 2.Nf3 Nc6 3.d4 cxd4 4.Nxd4 Nf6 5.Nc3 e5 6.Ndb5 d6 7.Bg5 a6 8.Na3 For comments up to this point, I refer you to the Overview variation in the Overview Chapter. 8...b5 Also the most common move in the position which is also very logical - Black prevents the knight on a3 from re-entering the game via c4 and

also threatens b4, forcing White's play a little bit. 9.Nd5 A very logical knight jump, avoiding the threat of b4 and exploiting the position of the bishop on g5 that ensures the control over the d5 square. 9. Bxf6 is another big line but it leads to a different type of positions. On the other hand, 9.Nab1 also has the right to exist and was even employed once by Vladimir Kramnik, but it is a bit too exotic for a repertoire. 9...Be7 The natural move, breaking the pin and forcing White to take a decision in regard to the tension between the pieces as now Nxd5 is threatened. 10.Bxf6 The best move in the position. White does give up the bishop pair, but for the moment, we eliminate the defender of the d5 knight and get to keep our knight on d5. Alas, our problem is that the other knight is still on a3 and that Black controls the c4 square, making it unable for our bishop to get there and support the battle for the d5 square. 10...Bxf6 This is virtually a forced recapture, since 10...gxf6 is quite bad, as we have just seen. 11.c4 This pawn move, undermining the queenside pawn structure and opening the c2 square for the retreat of the knight of a3 is one of the two mainlines in this position. White tries to undermine the structure and clamp down on the d5 square. The drawback is that this move weakens the d4 square and also allows Black to grab some queenside space with the b4 counter-advance. The move is arguably less critical than 11.c3 and is played 3 times less often. On the other hand, it is not nearly as theoretical - most books - especially older ones like Rogozenco's The Sveshnikov Reloaded Quality Chess Book from 2005 - focus heavily on 11.c3 and mentioned 11. c4 in brief passing.Since the general approach of this repertoire was not necessarily to maximize our objective opening chances, but to achieve a harmonious position with chances of obtaining a slight edge, I felt it fit well with its philosophy. Furthermore, since we have been placing our pawns on e4 and c4 whenever possible in this repertoire, I thought it would be consistent to do so against the Sveshnikov as well and obtain a 'Maroczy Bind' - or more precisely - a very specific and unique version of this very common structure. 11...Nd4 This knight jump is the second most common move in this position. The move is logical as Black takes a moment to jump in with the knight to a very active central post. The downside is, however, that b5 pawn is hanging - and we shouldn't shy away from capturing it. 12.cxb5 Be6 This seems a bit better than the alternative bishop development 12...Bb7 , although game would follow a very similar route either way. 13.Bc4 This is a good moment to put a break on our 'inner Yasser Seirawan' and refrain from capturing yet another pawn, as after 13.bxa6 Bxd5 14.exd5 Qa5 Black would have a very nice, Benko-like compensation. Instead, we develop the bishop and focus on the control of the critical d5 square. 13...axb5 Black's best move in this position is this capture, as it opens some lines on the queenside and virtually forces our next move. 14.Bxb5+ This is forced, as after 14.Nxb5 Bxd5 Qa5 is coming next and Black starts taking over. 14...Kf8 The best move by far and the only move played in practice in this position. Capturing the bishop with the d5 knight would be futile as after 14...Nxb5 15. Nxb5 Black has given up their best piece, our queen is covering the d5 square and any sort of Qa5 loses its venom due to the simple retreat Nbc3. 15.Bc4 It looks as if we are violating the opening principles by moving the bishop yet again in the

opening îîStartBracketîîîwhile being severely undevelopedîîEndBracketîîî, but we have to maintain control over the d5 knight. 15...Qa5+ This check activates the queen and tries to initiate play on the dark squares, which are always vulnerable for White in these Sveshnikov lines due to the decision to give our bishop very early in the opening. 16.Qd2 Bd8 The idea behind Black's previous move was to activate the bishop next with this standard Sicilian maneuver Bd8, that is also often seen in Najdorf, for example. 17.Qxa5 The simplest! Exchanging the queens gets rid of any immediate tactical issues and leaves us with an extra pawn. It is true that our king will also be discomforted with the bishop check on a5, but the loss of the castling rights is not as significant when the queens have been exchanged. 17.Nc3 is a more combative solution, although after 17...Qb4 some accurate 18.Bd5 is required to preserve the edge. I find the text move much more practical. 17...Bxa5+ 18.Kd1 A move to remember. This move looks a little bit artificial, but it does have a very concrete point of playing Nc2 next, trying to get rid of the very strong knight on d4. It was played by some 2500+ grandmasters such as Kotronias or Lintchevski and it also comes with the engine's stamp of approval. If we manage to exchange the knight, and then consolidate, say, by Ke2, Rfc1, b3, a4, we will have excellent winning chances due to our extra pawn and queenside pawn majority.

## ☐ 7G) 2...Nc6: The Sveshnikov S
## ■ Sveshnikov Mainline With,N

1.e4 c5 2.Nf3 Nc6 3.d4 cxd4 4.Nxd4 Nf6 5.Nc3 e5 6.Ndb5 d6 7.Bg5 a6 8.Na3 For comments up to this point, I refer you to the Overview variation in the Overview Chapter. 8...b5 Also the most common move in the position which is also very logical - Black prevents the knight on a3 from re-entering the game via c4 and also threatens b4, forcing White's play a little bit. 9.Nd5 A very logical knight jump, avoiding the threat of b4 and exploiting the position of the bishop on g5 that ensures the control over the d5 square. 9. Bxf6 is another big line but it leads to a different type of positions. On the other hand, 9.Nab1 also has the right to exist and was even employed once by Vladimir Kramnik, but it is a bit too exotic for a repertoire. 9...Be7 The natural move, breaking the pin and forcing White to take a decision in regard to the tension between the pieces as now Nxd5 is threatened. 10.Bxf6 The best move in the position. White does give up the bishop pair, but for the moment, we eliminate the defender of the d5 knight and get to keep our knight on d5. Alas, our problem is that the other knight is still on a3 and that Black controls the c4 square, making it unable for our bishop to get there and support the battle for the d5 square. 10...Bxf6 This is virtually a forced recapture, since 10...gxf6 is quite bad, as we have just seen. 11.c4 This pawn move, undermining the queenside pawn structure and opening the c2 square for the retreat of the knight of a3 is one of the two mainlines in this position. White tries to undermine the structure and clamp down on the d5 square. The

drawback is that this move weakens the d4 square and also allows Black to grab some queenside space with the b4 counter-advance.  The move is arguably less critical than 11.c3 and is played 3 times less often. On the other hand, it is not nearly as theoretical - most books - especially older ones like Rogozenco's The Sveshnikov Reloaded Quality Chess Book from 2005 - focus heavily on 11.c3 and mentioned 11. c4 in brief passing.Since the general approach of this repertoire was not necessarily to maximize our objective opening chances, but to achieve a harmonious position with chances of obtaining a slight edge, I felt it fit well with its philosophy. Furthermore, since we have been placing our pawns on e4 and c4 whenever possible in this repertoire, I thought it would be consistent to do so against the Sveshnikov as well and obtain a 'Maroczy Bind' - or more precisely - a very specific and unique version of this very common structure.  11...b4 The only sensible move Black has at their disposal, as we have just seen alternatives are not particularly inspiring. Black gains some space on the kingside and gains control over the dark-squares. In the long run, Black wants to push the a-pawn down the board and use it as a battering ram on a4 if White ever tries to consolidate on the queenside by moving the b-pawn. 12.Nc2 TheCbest square for the knight as we eye the d4 point but also hint at the potential Nce3 move, reinforcing the knight on d5. At first glance, it may seem that we are also gaining a tempo by attacking the b4 pawn, but as it turns out - Black can ignore this threat for now.  Even though one of the most common pieces of advice for Chessable authors is that there are never enough explanations and annotations, I believe the student will excuse me if I don't elaborate on why this move is better than 12.Nb5  On the other hand, 12.Nb1 is inferior as the knight is dominated by the pawn on c4 and can't go to c3. Now, Black has a choice between two big lines - castling and ignoring the b4 pawn or protecting it by advancing the a6 pawn. Alas, since both of these lines are extremely theoretical and very flexible in terms of the number of possibilities for our opponent, the resulting amount and depth of trainables will end up being deeper than for the rest of the course.I am sorry to bore you, dear student, with that much theory, but - as much as I tried to reduce the forest with the selection of specific moves, it is hard to avoid these theoretical discussions in an opening such as Sveshnikov îîStartBracketîîwhich was one of the reasons why I wasn't very thrilled when I realized that covering 2...Nc6 would make a lot of sense after allîîEndBracketîî.Once again, if this is not up to your taste - I recommend an alternative approach against 2... Nc6 - say Rossolimo or even 3.c3.  12...a5 Apart from 12...O-O , this move, defending the b4 pawn, is very logical and almost equally common at all levels. It was recommended by renowned theoreticians and one of the best chess authors out there, Greek Grandmaster Vassilios Kotronias in his Quality Chess Book Grandmaster Repertoires: The Sicilian Sveshnikov. Black does spend a tempo to move a pawn and not the king, but it is not entirely clear whether this time loss is that significant or to White's benefit.Apart from not leaving the b4 pawn hanging, in some variations where White tries to go for a quick endgame, it is to Black's benefit to keep the king in the center. On the other hand, Black does waste a tempo and also weakens the b5 square, which does lead to differences in

some other variations.As usual with modern chess theory - there are pluses and minuses of both 12...O-O and 12...a5 and it is hard to say one move is objectively better than the other - employing them from the Black side is largely a matter of preference/taste. 13.Qf3 Just as in the 12...O-O lines, this queen move, attacking the bishop on f6 and clearing the d1 square for the rook, will be the choice instead of the main and theoretical move with 13.g3 There are both pros and cons of the queen move against 12... a5 - on one hand, we are not really threatening to take on f6 immediately because the resulting endgames are not as favourable for us with the opponent's king still being in the center. But on the other hand, we do have some quick Rd1 ideas in mind. More importantly, it turns out that the most obvious and common move here 13... Bg5 - is not at all that great for Black in the 12...a5 move order compared to the 12...O-O move order.Now Black has a wide choice - and I analyzed 4 options in total. 13...Bg5 This move is the most common move in the lichess database. The idea is to put the bishop on the most typical Sveshnikov h6-c1 diagonal. But the move is surprisingly suboptimal due to the strong plan of pushing the h2 and g2 pawns in the very similar style as we have seen in the 12...O-O variation. 14.h4 Whenever the bishop appears on g5 and the rook is on h1, we can make this move almost automatically and force it to declare its intentions. In the present variation, it has even more sense because the typical retreat to h6 is simply bad for Black. 14...Bh6 The most common move in the position, but in the variation with 12...a5 played instead of 12...O-O, it is just bad. 15.g4 We have already seen this idea in the 12...O-O variation, but here it is very powerful because the line with f6 doesn't really work. 15...f6 In the 12...O-O variation we have seen this move was possible, but here it doesn't really prevent the g5 push as the king is still in the center. 16.g5 fxg5 17.Qh5+ This is the nasty check that wasn't possible in the previous variation. 17...Kf8 And this position with the king on f8 is extremely bad for Black. The most resolute way of capitalizing on our lead in development seems to be the strike of the c-pawn. 18.c5 Opening some more lines in the position. 18...dxc5 19.Qf3+ Kg8 The point of c5 was to open the c4 square for the bishop in case the king goes to g8. So here we have the very strong move at our disposal. 20.Nc7 With Bc4 coming. Black is completely losing.

**B33**

## ☐ 7G) 2...Nc6: The Sveshnikov S
## ■ Sveshnikov Mainline With,N

1.e4 c5 2.Nf3 Nc6 3.d4 cxd4 4.Nxd4 Nf6 5.Nc3 e5 6.Ndb5 d6 7.Bg5 a6 8.Na3 For comments up to this point, I refer you to the Overview variation in the Overview Chapter. 8...b5 Also the most common move in the position which is also very logical - Black prevents the knight on a3 from re-entering the game via c4 and also threatens b4, forcing White's play a little bit. 9.Nd5 A very logical knight jump, avoiding the threat of b4 and exploiting the position of the bishop on g5 that ensures

the control over the d5 square. 9. Bxf6 is another big line but it leads to a different type of positions. On the other hand, 9.Nab1 also has the right to exist and was even employed once by Vladimir Kramnik, but it is a bit too exotic for a repertoire. 9...Be7 The natural move, breaking the pin and forcing White to take a decision in regard to the tension between the pieces as now Nxd5 is threatened. 10.Bxf6 The best move in the position. In the long run, Black wants to push the a-pawn down the board and use it as a battering ram on a4 if White ever tries to consolidate on the queenside by moving the b-pawn. 12.Nc2 The best square for the knight as we eye the d4 point but also hint at the potential Nce3 move, reinforcing the knight on d5. At first glance, it may seem that we are also gaining a tempo by attacking the b4 pawn, but as it turns out - Black can ignore this threat for now. Even though one of the most common pieces of advice for Chessable authors is that there are never enough explanations and annotations, I believe the student will excuse me if I don't elaborate on why this move is better than 12.Nb5 On the other hand, 12.Nb1 is inferior as the knight is dominated by the pawn on c4 and can't go to c3. Now, Black has a choice between two big lines - castling and ignoring the b4 pawn or protecting it by advancing the a6 pawn. Alas, since both of these lines are extremely theoretical and very flexible in terms of the number of possibilities for our opponent, the resulting amount and depth of trainables will end up being deeper than for the rest of the course.I am sorry to bore you, dear student, with that much theory, but - as much as I tried to reduce the forest with the selection of specific moves, it is hard to avoid these theoretical discussions in an opening such

as Sveshnikov îîStartBracketîîwhich was one of the reasons why I wasn't very thrilled when I realized that covering 2...Nc6 would make a lot of sense after allîîEndBracketîî.Once again, if this is not up to your taste - I recommend an alternative approach against 2... Nc6 - say Rossolimo or even 3.c3. 12...0-0 Even though we are nominally attacking the pawn on b4, Black can ignore this threat and simply continue developing. This move was recommended both by Christof Sielecki in his repertoire Fight Like Magnus and by Marko Makaj in his repertoire The Fighting Sicilian here on Chessable. 13.Qf3 I wCll be honest - I don't think White has any objective advantage in this variation. I spent a long time analyzing various options available to us at this particular juncture and have ultimately decided to settle on this move because it is a bit surprising and rare and because it can also be executed against the other big move 12...a5 îîStartBracketîîalthough it is probably more dangerous in that move order than here, due to very specific reasons I will try to explain at a later pointîîEndBracketîî. It was covered by ever-so-thorough Christof Sielecki in his repertoire, but for example, it was not considered by Marko Makaj in his aforementioned Chessable repertoire. So what is the idea? Well, instead of embarking on a typical kingside play with 13.g3 îîStartBracketîîwhich would constitute a really big mainline, by the way. îîEndBracketîî White develops the queen with a triple purpose. First of all, the d1 square is vacated for the rook which can go to d1. Secondly, the bishop on f6 is threatened by the queen and the knight on d5.Thirdly, White intends to use the kingside pawns more aggressively and play g4-h4 instead of g3-h4 in the future. I personally feel this move has a bit more venom than the absolute mainlines - especially if our opponents are not fully prepared for it. Note, btw, that White shouldn't capture the pawn on b4 yet as after 13.Ncxb4 Nxb4 14. Nxb4 Qb6 Black regains it with ease. I think White has better practical chances for an advantage in other lines. 13...Bg5 ThiC is the most natural and most common move in the position that was the recommendation of Christof Sielecki in his course Play Like Magnus here on Chessable. Black moves the attacked bishop out of the way to its 'lawful' place on the h6-c1 diagonal. g5 is a very typical square for the bishop in the Sveshnikov and Bf6-Bg5 is a standard maneuver seen in the îîStartFENîîr1bq1rk1/5ppp/p1np1b2/3Np3/1pP1P3/8/ PPN2PPP/R2QKB1R w - - 2 13îîEndFENîî 13.g3 lines. But it is questionable whether it is better here than the quieter 13...Be7 that will constitute our mainline simply because of the fact that White's opening play was specifically aimed against this idea. 14.h4 This is a fairly typical move for White in the Sveshnikov, gaining space on the kingside and pushing the bishop to a less favourable square on h6. 14...Bh6 Black can't take on h4 and open the h-file as they would get checkmated rather soon. 15.g4 The point of our play and of the entire 13. Qf3 move order. Usually, in Sveshnikov, we have g3-h4 pawn construction and Black usually gets to play g6-Bg7-h5 regrouping, making it more difficult for us to achieve anything on the kingside. In this variation, on the other hand, we go for the immediate aggression on the kingside and completely change the character of the play. Black still has defensive resources, mind you, but it is a much more concrete and sharp battle. Given that Black players don't face this line

that often, it is reasonable to expect there are decent chances for us to out prepare them and for them to go wrong. 15...f6 ThiC move, violating one of the main Ben's Finegold axioms îîStartBracketîî'Never play f6'îîEndBracketîî is actually the best way to deal with the nasty threat of g5. Black simply covers the g5 square with the pawn and deals with the threat for now. The downside is that this move does weaken the kingside and the a2-g8 diagonal a little bit. This move is the most common move on the master level and the 2nd most common move in Lichess database and was, in fact, Christof Sielecki's recommendation. 16.Be2 This seems to me to be the best and most logical move. White finishes the development and overprotects the g4 pawn before committing to further preparation of the kingside pawns. It is worth noting that 16.Rd1 would be a nice idea were it not for 16...Qa5 , attacking the a2 pawn and threatening the nasty b3 shot. White is unable to play 17.Qb3 here due to 17...Bxg4 Curiously enough, 16.Rd1 scores 60% for White in the lichess database, which probably suggests you shouldn't always trust database statistics. Or engine evaluations, depending on which side of the coin you want to take a look at. 16...a5 Defending b4 has to happen sooner or later. 16...Be6 17.Rd1 would be very similar as Black probably has to play a5 at some point anyway. 17.Rd1 Now that the Qa5 resource has been ruled out, we execute another idea enabled by the early Qf3 move and place the rook on d1 where it is eyeing the weak d6 square and also saying hi to the queen on d8. 17.a3 is an interesting alternative, but after 17...bxa3 18.Qxa3 Ne7 I wasn't fully able to find a clear-cut way forward. 17...Be6 Finally, Black completes the development and asks us what exactly we want to do and how we want to handle the position. 18.Qg3 The queen naturally belongs to g3, where it gets away from the potential attack by the rook on f8 and helps execute the future g5 push. 18...Ra7 This move is fairly typical of the Sveshnikov and was recommended by Christof. The rook can be very useful on the 7th rank as it can go to d7 to defend the d6 point and it also helps bolster the kingside. 19.Kf1 ThiC crafty move was not mentioned by Christof in the course and he only analyzed 19.Rg1 , when his line continued 19...g6 20.c5 a4 21.cxd6 Qa5 with equality. However, in that line, instead of îîStartFENîî3q1rk1/r6p/2npbppb/p2Np3/1pP1P1PP/6Q1/PPN1BP2/3RK1R1 w - - 0 20îîEndFENîî 20.c5 , White can play îîStartFENîî3q1rk1/r6p/2npbppb/p2Np3/ 1pP1P1PP/6Q1/PPN1BP2/3RK1R1 w - - 0 20îîEndFENîî 20.Rh1 , switching back to the h5 plan and enticing 20...Rg7 , when after something like 21.b3 Kh8 22.Qd3 White retains control over the position and has some advantage. However, my problem after 19.Rg1 is the surprising move 19...Bxd5 20.Rxd5 Bc1!? trying to get the bishop to the active post on d4 or c3 via the queenside. White probably has to enter these complications and go for 21.c5 , but this is way messier than I would like it. The text move, thus, avoids this possibility as after îîStartFENîî3q1rk1/r5pp/ 2npbp1b/p2Np3/1pP1P1PP/6Q1/PPN1BP2/3R1K1R b - - 5 19îîEndFENîî 19...Bxd5 20.Rxd5 Bc1 is met with 21.c5 when after 21...Bxb2 22. Qb3! White is winning as 22... Bc3 is not a check. That is why Black probably has to play something like îîStartFENîî3q1rk1/r5pp/2npbp1b/p2Np3/1pP1P1PP/6Q1/ PPN1BP2/3R1K1R b - - 5 19îîEndFENîî 19...Kh8 when we will indeed go for the 20. Rg1 g6 21.Rh1 plan

without allowing this extra possibility of taking on d5. Now, with that being said, it is very debatable whether any Black player would go for the capture on d5 so the exact move order may not be too relevant. But the general point of this position is not to hurry as Black doesn't have that much counterplay and can only react to what we can do. We should slowly improve our pieces îîStartBracketîîsay, by playing Qd3 and potentially rerouting the knight from c2îîEndBracketîî and wait for the opportune moment to strike with g5. Even though White might not have objective advantage, I would never mind entering a position like this as it is clear we are the one calling the shots - and Black has to be very knowledgable to get here AND to treat this position well.

## ☐ 7G) 2...Nc6: The Sveshnikov S
## ■ Sveshnikov Mainline With,N

1.e4 c5 2.Nf3 Nc6 3.d4 cxd4 4.Nxd4 Nf6 5.Nc3 e5 6.Ndb5 d6 7.Bg5 a6 8.Na3 For comments up to this point, I refer you to the Overview variation in the Overview Chapter. 8...b5 Also the most common move in the position which is also very logical - Black prevents the knight on a3 from re-entering the game via c4 and also threatens b4, forcing White's play a little bit. 9.Nd5 A very logical knight jump, avoiding the threat of b4 and exploiting the position of the bishop on g5 that ensures the control over the d5 square. 9. Bxf6 is another big line but it leads to a different type of positions. On the other hand, 9.Nab1 also has the right to exist and was even employed once by Vladimir Kramnik, but it is a bit too exotic for a repertoire. 9...Be7 The natural move, breaking the pin and forcing White to take a decision in regard to the tension between the pieces as now Nxd5 is threatened. 10.Bxf6 The best move in the position. White does give up the bishop pair, but for the moment, we eliminate the defender of the d5 knight and get to keep our knight on d5. Alas, our problem is that the other knight is still on a3 and that Black controls the c4 square, making it unable for our bishop to get there and support the battle for the d5 square. 10...Bxf6 This is virtually a forced recapture, since 10...gxf6 is quite bad, as we have just seen. 11.c4 This pawn move, undermining the queenside pawn structure and opening the c2 square for the retreat of the knight of a3 is one of the two mainlines in this position. White tries to undermine the structure and clamp down on the d5 square. The drawback is that this move weakens the d4 square and also allows Black to grab some queenside space with the b4 counter-advance. The move is arguably less critical than 11.c3 and is played 3 times less often. On the other hand, it is not nearly as theoretical - most books - especially older ones like Rogozenco's The Sveshnikov Reloaded Quality Chess Book from 2005 - focus heavily on 11.c3 and mentioned 11. c4 in brief passing.Since the general approach of this repertoire was not necessarily to maximize our objective opening chances, but to achieve a harmonious position with chances of obtaining a slight edge, I felt it fit well with its philosophy.

Furthermore, since we have been placing our pawns on e4 and c4 whenever possible in this repertoire, I thought it would be consistent to do so against the Sveshnikov as well and obtain a 'Maroczy Bind' - or more precisely - a very specific and unique version of this very common structure. 11...bxc4 Before we get to the mainline with 11...b4 , let's try to see some alternatives to understand a bit better why exactly is 11...b4 a mainline. First of all, capturing on c4 wouldn't be good at all as it would provide a good square for the enemy pieces. 12.Bxc4 Even stronger than the alternative knight capture 12.Nxc4 White develops the bishop on an active square where it controls d5 and intends to reroute the knight to c2 where it will support the queenside pawn advance. 12...0-0 13.0-0 Bg5 A typical Sveshnikov move, activating the bishop on its most active h6-c1 diagonal. 14.Nc2 Also a very typical Sveshnikov maneuver, bringing the knight into play. Usually, the knight goes to e3 at some point in order to reinforce the d5 square, but in this particular case, with the queenside blasted open, there is no rush to maneuver as the knight is perfectly positioned on c2, given that it supports the b4 pawn advance and also prevents Black from jumping in with Nd4. 14...Kh8 In a few games that reached this position, this logical move, preparing f5 was played. And even though Black's practical results aren't too bad, this position shouldn't worry us too much as we can embark on the queenside expansion immediately. 15.b4 It turns out that the open queenside benefits White more than it benefits Black as we can utilize our central control to start pushing our pawn majority and grab some space on that side of the board. 15...f5 Black's typical pawn break in all kinds of Sveshnikovs/Sicilians. But we shouldn't be taken aback as we can simply capture. 16.exf5 Bxf5 17.a4 And since this isn't King's Indian, Black doesn't have any mating ideas on the kingside yet. Meanwhile, we have nice control over the light-squares in the center and can play moves like Qd3 if the bishop moves away from the b1-h7 diagonal to increase this control and also threaten the a6 pawn. We can retain the option of pushing either a5 or b5 on the queenside and Black faces a cheerless defence.

## ☐ 7G) 2...Nc6: The Sveshnikov S
## ■ Sveshnikov Mainline With,N

1.e4 c5 2.Nf3 Nc6 3.d4 cxd4 4.Nxd4 Nf6 5.Nc3 e5 6.Ndb5 d6 7.Bg5 a6 8.Na3 For comments up to this point, I refer you to the Overview variation in the Overview Chapter. 8...b5 Also the most common move in the position which is also very logical - Black prevents the knight on a3 from re-entering the game via c4 and also threatens b4, forcing White's play a little bit. 9.Nd5 A very logical knight jump, avoiding the threat of b4 and exploiting the position of the bishop on g5 that ensures the control over the d5 square. 9. Bxf6 is another big line but it leads to a different type of positions. On the other hand, 9.Nab1 also has the right to exist and was even employed once by Vladimir Kramnik, but it is a bit too exotic for a repertoire. 9...Be7

The natural move, breaking the pin and forcing White to take a decision in regard to the tension between the pieces as now Nxd5 is threatened. 10.Bxf6 The best move in the position. White does give up the bishop pair, but for the moment, we eliminate the defender of the d5 knight and get to keep our knight on d5. Alas, our problem is that the other knight is still on a3 and that Black controls the c4 square, making it unable for our bishop to get there and support the battle for the d5 square. 10...Bxf6 This is virtually a forced recapture, since 10...gxf6 is quite bad, as we have just seen. 11.c4 This pawn move, undermining the queenside pawn structure and opening the c2 square for the retreat of the knight of a3 is one of the two mainlines in this position. White tries to undermine the structure and clamp down on the d5 square. The drawback is that this move weakens the d4 square and also allows Black to grab some queenside space with the b4 counter-advance. The move is arguably less critical than 11.c3 and is played 3 times less often. On the other hand, it is not nearly as theoretical - most books - especially older ones like Rogozenco's The Sveshnikov Reloaded Quality Chess Book from 2005 - focus heavily on 11.c3 and mentioned 11. c4 in brief passing.Since the general approach of this repertoire was not necessarily to maximize our objective opening chances, but to achieve a harmonious position with chances of obtaining a slight edge, I felt it fit well with its philosophy. Furthermore, since we have been placing our pawns on e4 and c4 whenever possible in this repertoire, I thought it would be consistent to do so against the Sveshnikov as well and obtain a 'Maroczy Bind' - or more precisely - a very specific and unique version of this very common structure. 11...b4 The only sensible move Black has at their disposal, as we have just seen alternatives are not particularly inspiring. Black gains some space on the kingside and gains control over the dark-squares. In the long run, Black wants to push the a-pawn down the board and use it as a battering ram on a4 if White ever tries to consolidate on the queenside by moving the b-pawn. 12.Nc2 TheCbest square for the knight as we eye the d4 point but also hint at the potential Nce3 move, reinforcing the knight on d5. At first glance, it may seem that we are also gaining a tempo by attacking the b4 pawn, but as it turns out - Black can ignore this threat for now. Even though one of the most common pieces of advice for Chessable authors is that there are never enough explanations and annotations, I believe the student will excuse me if I don't elaborate on why this move is better than 12.Nb5 On the other hand, 12.Nb1 is inferior as the knight is dominated by the pawn on c4 and can't go to c3. Now, Black has a choice between two big lines - castling and ignoring the b4 pawn or protecting it by advancing the a6 pawn. Alas, since both of these lines are extremely theoretical and very flexible in terms of the number of possibilities for our opponent, the resulting amount and depth of trainables will end up being deeper than for the rest of the course.I am sorry to bore you, dear student, with that much theory, but - as much as I tried to reduce the forest with the selection of specific moves, it is hard to avoid these theoretical discussions in an opening such as Sveshnikov îîStartBracketîîwhich was one of the reasons why I wasn't very thrilled when I realized that covering 2...Nc6 would make a lot of sense after allîîEndBracketîî.Once again, if this is not up to your taste - I recommend an

alternative approach against 2... Nc6 - say Rossolimo or even 3.c3. 12...a5 Apart from 12...O-O , this move, defending the b4 pawn, is very logical and almost equally common at all levels. It was recommended by renowned theoreticians and one of the best chess authors out there, Greek Grandmaster Vassilios Kotronias in his Quality Chess Book Grandmaster Repertoires: The Sicilian Sveshnikov. Black does spend a tempo to move a pawn and not the king, but it is not entirely clear whether this time loss is that significant or to White's benefit.Apart from not leaving the b4 pawn hanging, in some variations where White tries to go for a quick endgame, it is to Black's benefit to keep the king in the center. On the other hand, Black does waste a tempo and also weakens the b5 square, which does lead to differences in some other variations.As usual with modern chess theory - there are pluses and minuses of both 12...O-O and 12...a5 and it is hard to say one move is objectively better than the other - employing them from the Black side is largely a matter of preference/taste. 13.Qf3 Just as in the 12...O-O lines, this queen move, attacking the bishop on f6 and clearing the d1 square for the rook, will be the choice instead of the main and theoretical move with 13.g3 There are both pros and cons of the queen move against 12... a5 - on one hand, we are not really threatening to take on f6 immediately because the resulting endgames are not as favourable for us with the opponent's king still being in the center. But on the other hand, we do have some quick Rd1 ideas in mind. More importantly, it turns out that the most obvious and common move here 13... Bg5 - is not at all that great for Black in the 12...a5 move order compared to the 12...O-O move order.Now Black has a wide choice - and I analyzed 4 options in total. 13...Be7 This move, avoiding any sort of Nxf6 tricks and preparing to castle is not the most common move at the club level, although it is quite popular at the master level. Since we have just seen the whole Bg5-Bh6 idea doesn't really work, it makes sense to retreat the bishop to a quieter place instead. This does allow White to go for the Rd1-c5 idea, but as it turns out - it is not the most dangerous idea in the world. 14.Rd1 One of the points behind moving the queen to f3. This move creates the threat of playing c5 and then playing Nf6 winning the queen. As it turns out, though, it is quite debatable whether White should actually go for that line, as we will soon see. 14...0-0 So, Black castles after all and invites us to go for the c5-Nf6 idea. This position is on of the critical positions of this line. 15.Be2 After long deliberation and analysis, I have decided to choose this natural developing move as my main recommendation in this line, simply because I am not 100% sure about the consequences of the 15.c5 line. However, I couldn't bring myself not to include that line as an alternative, as well. 15...Be6 A natural developing move, fighting for the light-squares. 16.0-0 Bg5 Now when we have castled Black finally embarks on this typical Sveshnikov maneuver because the idea of the quick h4-g4 does not exist without the rook on h1. 17.Qg3 As we have seen previously, White would very much like to exchange light-squared bishops as our light-squared bishop is quite passive and restricted by the pawns on c4 and e4, while the opponent's counterpart does a good job of fighting for the d5 square. Of course, we don't want to capture on e6 and grant Black the control over the d5 square, but we do want to

create tension between the two bishops. The text move prepares the Bg4-Qh3 idea which seems to be one attempt for White to make progress in this position. 17...f5 Black can strike immediately with f5 here, but this doesn't seem like the best approach. 18.exf5 As a rule of thumb in this type of structure, White is happy to exchange on f5 as we still have decent control over the d5 square and now can try to fight for the e4 square as well. 18...Bxf5 19.Bd3 And now our bishop is slowly starting to come to life. Obviously, exchange of the bishops would be hugely in our favour. But if Black retreats their bishop, we will gladly plant our bishop on e4. Hence, their reply is forced. 19...e4 20.Be2 AndĆwe have a very complex position on the board which might be ok for Black, but that is very difficult to play due to their compromised pawn structure. We have some easy moves on our radar - c5, Nce3, Bg4 and Black is the one who has to be precise and creative here. For example, the engine does claim equality after 20...Bh4 îîStartBracketîî apparently the only move after which Black isn't clearly worse îîEndBracketîî 21.Qe3 Bg5 22.Qb3 e3 23.f4 a4 24.Qxe3 Bxc2 25.Rd2 Bf6 but it is not the type of equality that immediately ends the game - and Black has to be very precise to even get there.

Nc6 - say Rossolimo or even 3.c3.  12...a5 Apart from 12...O-O , this move, defending the b4 pawn, is very logical and almost equally common at all levels. It was recommended by renowned theoreticians and one of the best chess authors out there, Greek Grandmaster Vassilios Kotronias in his Quality Chess Book Grandmaster Repertoires: The Sicilian Sveshnikov. Black does spend a tempo to move a pawn and not the king, but it is not entirely clear whether this time loss is that significant or to White's benefit.Apart from not leaving the b4 pawn hanging, in some variations where White tries to go for a quick endgame, it is to Black's benefit to keep the king in the center. On the other hand, Black does waste a tempo and also weakens the b5 square, which does lead to differences in some other variations.As usual with modern chess theory - there are pluses and minuses of both 12...O-O and 12...a5 and it is hard to say one move is objectively

better than the other - employing them from the Black side is largely a matter of preference/taste. 13.Qf3 Just as in the 12...O-O lines, this queen move, attacking the bishop on f6 and clearing the d1 square for the rook, will be the choice instead of the main and theoretical move with 13.g3 There are both pros and cons of the queen move against 12... a5 - on one hand, we are not really threatening to take on f6 immediately because the resulting endgames are not as favourable for us with the opponent's king still being in the center. But on the other hand, we do have some quick Rd1 ideas in mind. More importantly, it turns out that the most obvious and common move here 13... Bg5 - is not at all that great for Black in the 12...a5 move order compared to the 12...O-O move order.Now Black has a wide choice - and I analyzed 4 options in total. 13...Bg5 This move is the most common move in the lichess database. The idea is to put the bishop on the most typical Sveshnikov h6-c1 diagonal. But the move is surprisingly suboptimal due to the strong plan of pushing the h2 and g2 pawns in the very similar style as we have seen in the 12...O-O variation. 14.h4 Whenever the bishop appears on g5 and the rook is on h1, we can make this move almost automatically and force it to declare its intentions. In the present variation, it has even more sense because the typical retreat to h6 is simply bad for Black. 14...Bxh4 First of all, allow me to emphasize that taking on h4 is not good as White has a very forceful reply. 15.Rxh4 Diverting the queen from the c7 square. This leads to some complications that are favourable for us. The preparatory 15.c5 is also possible, with the idea of creating a weakness on c5 before grabbing the rook, but there is no need to be that sophisticated. 15...Qxh4 16.Nc7+
And we will pick up the rook on a8. The complications don't end yet, but if we find one nice idea, we should be more than fine. 16...Ke7 17.Nxa8 Bg4 This seems to be the problem as Black seemingly picks up the wayward knight on a8. However, we have a very nice riposte available at our disposal. 18.Ne3 Very nice geometrical idea. 18...Bxf3 Forced since the bishop on g4 was hanging. 19.Nf5+ The point of the previous move is this fork. 19...Kf6 20.Nxh4 And now again bishop is hanging so Black has to move it. 20...Bxe4 21.Nc7 And White remains a piece up which we should be able to convert. Not a necessary line by any means, but a good illustration of why Black doesn't take on h4 in many lines of the Sveshnikov.

**B33**

## ☐ 7.Nd5 Nxd5 8.exd5 Ne7

### ■ Overview

*[GM Alexander Khalifman]*

**1.e4 c5 2.Nf3 Nc6 3.d4 cxd4 4.Nxd4 Nf6 5.Nc3 e5 6.Ndb5 d6 7.Nd5 Nxd5 8.exd5 Ne7** After this retreat the knight won't stay there, because the kingside needs to be developed. Its further path is to g6, which will support the pawns' advance on the kingside. The knight's route to f5 hinders this goal a little, as it blocks the path for the f-pawn. On g6 it seems to stand well, but there White can disturb it with h2-h4-h5.

There is also such a moment that it still moves far away from the queenside and, accordingly, the knight cannot take part in defensive actions on that part of the board where White is active. This, of course, is a minus, but on the other hand, it is more active on the kingside. **9.c4**

[ 9.c3 This move is not exactly in the spirit of position because White has to be ready somewhere to move this pawn to c5, and the movement step by step looks slow. However, there is a smart trap. Nf5 *(*After the natural *9...Ng6?! 10.Qa4 Bd7 11.Qb4 Qb8 12.Qc4±* it turns out that the c4-square is available for the queen. ## ☐ 7G) 2...Nc6: The Sveshnikov S
## ■ Sveshnikov Mainline With,N

1.e4 c5 2.Nf3 Nc6 3.d4 cxd4 4.Nxd4 Nf6 5.Nc3 e5 6.Ndb5 d6 7.Bg5 a6 8.Na3 For comments up to this point, I refer you to the Overview variation in the Overview Chapter. 8...b5 Also the most common move in the position which is also very logical - Black prevents the knight on a3 from re-entering the game via c4 and also threatens b4, forcing White's play a little bit. 9.Nd5 A very logical knight jump, avoiding the threat of b4 and exploiting the position of the bishop on g5 that ensures the control over the d5 square. 9. Bxf6 is another big line but it leads to a different

type of positions. On the other hand, 9.Nab1 also has the right to exist and was even employed once by Vladimir Kramnik, but it is a bit too exotic for a repertoire. 9...Be7 The natural move, breaking the pin and forcing White to take a decision in regard to the tension between the pieces as now Nxd5 is threatened. 10.Bxf6 The best move in the position. White does give up the bishop pair, but for the moment, we eliminate the defender of the d5 knight and get to keep our knight on d5. Alas, our problem is that the other knight is still on a3 and that Black controls the c4 square, making it unable for our bishop to get there and support the battle for the d5 square. 10...Bxf6 This is virtually a forced recapture, since 10...gxf6 is quite bad, as we have just seen. 11.c4 This pawn move, undermining the queenside pawn structure and opening the c2 square for the retreat of the knight of a3 is one of the two mainlines in this position. White tries to undermine the structure and clamp down on the d5 square. The drawback is that this move weakens the d4 square and also allows Black to grab some queenside space with the b4 counter-advance. The move is arguably less critical than 11.c3 and is played 3 times less often. On the other hand, it is not nearly as theoretical - most books - especially older ones like Rogozenco's The Sveshnikov Reloaded Quality Chess Book from 2005 - focus heavily on 11.c3 and mentioned 11. c4 in brief passing.Since the general approach of this repertoire was not necessarily to maximize our objective opening chances, but to achieve a harmonious position with chances of obtaining a slight edge, I felt it fit well with its philosophy. Furthermore, since we have been placing our pawns on e4 and c4 whenever possible in this repertoire, I thought it would be consistent to do so against the Sveshnikov as well and obtain a 'Maroczy Bind' - or more precisely - a very specific and unique version of this very common structure. 11...b4 The only sensible move Black has at their disposal, as we have just seen alternatives are not particularly inspiring. Black gains some space on the kingside and gains control over the dark-squares. In the long run, Black wants to push the a-pawn down the board and use it as a battering ram on a4 if White ever tries to consolidate on the queenside by moving the b-pawn. 12.Nc2 TheCbest square for the knight as we eye the d4 point but also hint at the potential Nce3 move, reinforcing the knight on d5. At first glance, it may seem that we are also gaining a tempo by attacking the b4 pawn, but as it turns out - Black can ignore this threat for now. Even though one of the most common pieces of advice for Chessable authors is that there are never enough explanations and annotations, I believe the student will excuse me if I don't elaborate on why this move is better than 12.Nb5 On the other hand, 12.Nb1 is inferior as the knight is dominated by the pawn on c4 and can't go to c3. Now, Black has a choice between two big lines - castling and ignoring the b4 pawn or protecting it by advancing the a6 pawn. Alas, since both of these lines are extremely theoretical and very flexible in terms of the number of possibilities for our opponent, the resulting amount and depth of trainables will end up being deeper than for the rest of the course.I am sorry to bore you, dear student, with that much theory, but - as much as I tried to reduce the forest with the selection of specific moves, it is hard to avoid these theoretical discussions in an opening such as Sveshnikov îîStartBracketîîwhich was one of the reasons why I wasn't very thrilled

when I realized that covering 2...Nc6 would make a lot of sense after allîîEndBracketîî.Once again, if this is not up to your taste - I recommend an alternative approach against 2... Nc6 - say Rossolimo or even 3.c3. 12...0-0 Even though we are nominally attacking the pawn on b4, Black can ignore this threat and simply continue developing. This move was recommended both by Christof Sielecki in his repertoire Fight Like Magnus and by Marko Makaj in his repertoire The Fighting Sicilian here on Chessable. 13.Qf3 I wCll be honest - I don't think White has any objective advantage in this variation. I spent a long time analyzing various options available to us at this particular juncture and have ultimately decided to settle on this move because it is a bit surprising and rare and because it can also be executed against the other big move 12...a5 îîStartBracketîîalthough it is probably more dangerous in that move order than here, due to very specific reasons I will try to explain at a later pointîîEndBracketîî. It was covered by ever-so-thorough Christof Sielecki in his repertoire, but for example, it was not considered by Marko Makaj in his aforementioned Chessable repertoire. So what is the idea? Well, instead of embarking on a typical kingside play with 13.g3 îîStartBracketîîwhich would constitute a really big mainline, by the way. îîEndBracketîî White develops the queen with a triple purpose. First of all, the d1 square is vacated for the rook which can go to d1. Secondly, the bishop on f6 is threatened by the queen and the knight on d5.Thirdly, White intends to use the kingside pawns more aggressively and play g4-h4 instead of g3-h4 in the future. I personally feel this move has a bit more venom than the absolute mainlines - especially if our opponents are not fully prepared for it. Note, btw, that White shouldn't capture the pawn on b4 yet as after 13.Ncxb4 Nxb4 14. Nxb4 Qb6 Black regains it with ease. I think White has better practical chances for an advantage in other lines. 13...Bg5 ThiC is the most natural and most common move in the position that was the recommendation of Christof Sielecki in his course Play Like Magnus here on Chessable. Black moves the attacked bishop out of the way to its 'lawful' place on the h6-c1 diagonal. g5 is a very typical square for the bishop in the Sveshnikov and Bf6-Bg5 is a standard maneuver seen in the îîStartFENîîr1bq1rk1/5ppp/p1np1b2/3Np3/1pP1P3/8/ PPN2PPP/R2QKB1R w - - 2 13îîEndFENîî 13.g3 lines. But it is questionable whether it is better here than the quieter 13...Be7 that will constitute our mainline simply because of the fact that White's opening play was specifically aimed against this idea. 14.h4 This is a fairly typical move for White in the Sveshnikov, gaining space on the kingside and pushing the bishop to a less favourable square on h6. 14...Bh6 Black can't take on h4 and open the h-file as they would get checkmated rather soon. 15.g4 The point of our play and of the entire 13. Qf3 move order. Usually, in Sveshnikov, we have g3-h4 pawn construction and Black usually gets to play g6-Bg7-h5 regrouping, making it more difficult for us to achieve anything on the kingside. In this variation, on the other hand, we go for the immediate aggression on the kingside and completely change the character of the play. Black still has defensive resources, mind you, but it is a much more concrete and sharp battle. Given that Black players don't face this line that often, it is reasonable to expect there are decent chances for us to out prepare

them and for them to go wrong. 15...Bf4 This move, escaping the potential g5 threat, is the most common move in this position in the lichess database, played twice as often as the best move 15...f6 However, it is not at all optimal, which confirms my previous claim that it is quite easy for Black to go wrong in this position. The main drawback of this move is that it simply gives up a pawn for very questionable compensation. 16.Be2 This is much stronger than the immediate capture on f4. After 16.Nxf4 exf4 17.Qxf4 Ne5 we have some issues as it is not so easy to defend the g4 pawn due to the fork on d3 - 18.Be2 Bxg4!? Also, 18.Ne3 b3 19. axb3 Qb6 doesn't seem to be completely clear and seems to provide Black with some activity and counterplay. The text move is much safer as it is a prophylactic measure against Ne5-Bxg4 combos. The bishop on f4 is not going to run away and it is hard for Black to make an equally useful move in the meantime. 16...Be6 Now we happily capture on f4. 17.Nxf4 exf4 18.Qxf4 Ne5 19.Ne3 And everything is covered and we are enjoying an extra pawn. Here the counterplay with 19...b3 20.axb3 Qb6 is not as effective as we already have the bishop on e2 and can simply castle with 21.O-O , maintaining a large advantage and an extra pawn.

**B33**

**☐ 7G) 2...Nc6: The Sveshnikov S**
**■ Sveshnikov Mainline With,N**

1.e4 c5 2.Nf3 Nc6 3.d4 cxd4 4.Nxd4 Nf6 5.Nc3 e5 6.Ndb5 d6 7.Bg5 a6 8.Na3 For comments up to this point, I refer you to the Overview variation in the Overview Chapter. 8...b5 Also the most common move in the position which is also very logical - Black prevents the knight on a3 from re-entering the game via c4 and also threatens b4, forcing White's play a little bit. 9.Nd5 A very logical knight jump, avoiding the threat of b4 and exploiting the position of the bishop on g5 that ensures the control over the d5 square. 9. Black gains some space on the kingside and gains control over the dark-squares. In the long run, Black wants to push the a-pawn down the board and use it as a battering ram on a4 if White ever tries to consolidate on the queenside by moving the b-pawn. 12.Nc2 TheCbest square for the knight as we eye the d4 point but also hint at the potential Nce3 move, reinforcing the knight on d5. At first glance, it may seem that we are also gaining a tempo by attacking the b4 pawn, but as it turns out - Black can ignore this threat for now.  Even though one of the most common pieces of advice for Chessable authors is that there are never enough explanations and annotations, I believe the student will excuse me if I don't elaborate on why this move is better than 12.Nb5  On the other hand, 12.Nb1 is inferior as the knight is dominated by the pawn on c4 and can't go to c3. Now, Black has a choice between two big lines - castling and ignoring the b4 pawn or protecting it by advancing the a6 pawn. Alas, since both of these lines are extremely theoretical and very flexible in terms of the number of possibilities for our opponent, the resulting amount and depth of trainables will end up being deeper than for the rest of the course.I am sorry to bore you, dear student, with that much theory, but - as much as I tried to reduce the forest with the selection of specific moves, it is hard to avoid these theoretical discussions in an opening such as Sveshnikov îîStartBracketîîwhich was one of the reasons why I wasn't very thrilled when I realized that covering 2...Nc6 would make a lot of sense after allîîEndBracketîî.Once again, if this is not up to your taste - I recommend an alternative approach against 2... Nc6 - say Rossolimo or even 3.c3.  12...a5 Apart from 12...O-O , this move, defending the b4 pawn, is very logical and almost equally common at all levels. It was recommended by renowned theoreticians and one of the best chess authors out there, Greek Grandmaster Vassilios Kotronias in his Quality Chess Book Grandmaster Repertoires: The Sicilian Sveshnikov. Black does spend a tempo to move a pawn and not the king, but it is not entirely clear whether this time loss is that significant or to White's benefit.Apart from not leaving the b4 pawn hanging, in some variations where White tries to go for a quick endgame, it is to Black's benefit to keep the king in the center. On the other hand, Black does waste a tempo and also weakens the b5 square, which does lead to differences in some other variations.As usual with modern chess theory - there are pluses and minuses of both 12...O-O and 12...a5 and it is hard to say one move is objectively

better than the other - employing them from the Black side is largely a matter of preference/taste. 13.Qf3 Just as in the 12...O-O lines, this queen move, attacking the bishop on f6 and clearing the d1 square for the rook, will be the choice instead of the main and theoretical move with 13.g3 There are both pros and cons of the queen move against 12... a5 - on one hand, we are not really threatening to take on f6 immediately because the resulting endgames are not as favourable for us with the opponent's king still being in the center. But on the other hand, we do have some quick Rd1 ideas in mind. More importantly, it turns out that the most obvious and common move here 13... Bg5 - is not at all that great for Black in the 12...a5 move order compared to the 12...O-O move order.Now Black has a wide choice - and I analyzed 4 options in total. 13...Be6 Before we get to the more obvious options of moving the bishop from f6, let us take a moment to examine the question - does the bishop need to move in the first place? As mentioned above, with the king on e8, we are not necessarily threatening to capture on f6 so Black tries to make a developing move instead. This move was, in fact, the Kotronias' recommendation in the aforementioned Quality Chess book. Note that 13...O-O 14.Nxf6 Qxf6 15. Qxf6 gxf6 would transpose to the endgame analyzed via 12...O-O move-order when White can try to claim a small edge due to the fact Black's king is on g8 instead of e8 - which is an inferior post in an endgame. 14.Rd1 This move reveals another idea behind moving the queen to f3 - the rook is deployed on a semi-open file and eyes the enemy queen on d8. Here it is important that the a5 square is occupied by the pawn so Black doesn't have any Qa5 resources. Note that 14.Nxf6 Qxf6 15.Qxf6 gxf6 would illustrate the previous point - the endgame with the king on e8 is completely fine for Black despite apparent structural weaknesses, as there is no easy way for White to capitalize on them, as Kotronias rightly assessed in his book. Now Black has several options. 14...a4 Thi☪ dynamic move, initiating immediate counterplay on the queenside and leaving the b4 pawn hanging, was in fact Kotronias' recommendation in the aforementioned book.I would be quite surprised if I would encounter this move at the club level unless someone is really well acquainted with Kotronias' analysis or with the games at the highest level îîStartBracketîîand most people aren'tîîEndBracketîî.Black tries to force the play, but I feel the resulting position is a bit tricky to navigate for the second player as they have to play rather dynamic chess and sacrifice some pawns. 15.Be2 We continue developing and refuse to be tempted with the capture on b4 as 15. Ncxb4 Nxb4 16.Nxb4 Qb8 would give Black nice compensation. 15...b3 This forcing move was in fact Kotronias' main recommendation. It is definitely not the most obvious pawn sacrifice, but opening the b-file does make some sense. 16.axb3 Rb8 The point of the previous move is this pawn sacrifice. 16...axb3 simply loses a pawn after 17.Qxb3 when the compensation is non-existent. Now White has two ways of preserving the pawn and since both of them retain some practical chances, I have decided to offer both of them as an option in this chapter. 17.bxa4 White simply captures the a-pawn. This move is less ambitious than the main move 17.b4 , but also outwardly simpler to handle as we just grab the offered material. It also wasn't mentioned by Kotronias in the

aforementioned book. 17...Rxb2 18.Qc3 Defending the knight and hitting the rook on b2. Black already has to find the only move to survive. 18...Qa5 Forcing the queen exchange is the only way to go. 19.Qxa5 Nxa5 20.Bd3 And for the moment we manage to keep everything defended. It is true Black will obtain a lot of play on the queenside and quickly bring the other rook there, but our knights are very annoying and we can play Ncb4 or Na3-Nb5 at some point in the future. I don't think White has an objective advantage here, but the burden on proving equality is on Black's shoulders.

1908 Prague 1908
*[Paul Motwani]*

G11.10: "Black attacks give White a fright!" Four Knights Game, Code C48. Amongst the world's really top chess competitors, there is currently a great choice of super-grandmasters whom one might consider as inspirational role-models to emulate in terms of playing-style. For example, the games of Russia's 25-year-old Vladimir Kramnik nearly always contain the irresistible ingredients of power and control which recently bested Garry Kasparov in the Brain Games Network World Championship match. So, it's well-worth studying precisely what Kramnik plays, right from the very first move. At the moment, his favourite response to White's most popular 1 e4 is 1... e5, which also brought Black a beautiful victory in today's main featured game from Prague back in 1908. In fact, Kramnik seems to have so much respect for the move 1... e5, that as White he prefers to prevent it with 1 d4 or 1 Nf3! The latter option is the subject of a highly informative new 240-page Chess Stars book entitled "Opening for White according to Kramnik: 1 Nf3", written by super-GM Alexander Khalifman, the 1999 FIDE World Champion. His and other fine publications from Chess Stars can be ordered at the website www.gmchess.com, but now it's time for an action-packed encounter here. **1.e4 c5 2.Nf3 Nc6 3.d4 cxd4 4.Nxd4 Nf6** Black chooses the Rubinstein Variation against White's Four Knights Opening. **5.Nc3 e5 6.Ndb5 d6 7.Bg5?!** This greedy capture lands White in hot water, as was also the case in the Banas-Lukacs game above. **7...a6 8.Na3? b5 9.Nd5 Be7!! 10.Bxf6 Bxf6 11.c3 Bg5! 12.Nc2 Rb8 13.Qd3 0-0!** White resigned in view of 14 Qxd8 Bxh2. **14.Be2** is a more tenacious defence, but Black's attack still breaks through with **14...Be6!** followed by ... Qg5+ or ... Qh4-h3. Reader's Challenge P11. 10.1 How can Black win now? Look out...the answer is coming on the very next move! Solution to puzzle P11.10.1 Black was happy to allow the capture **15.0-0** when it's wasn't check, since he would have won with **15...g6 16.Rad1 Rb7!!** threatening 14...Qh3 15 Ndf4 gxf4 16 Nxf4 Qg4+ 17 Ng2 Qxg2.

□ **Anatoly The Twelfth**
■ **Karpov,Anatoly**

A month and a half later the double-round IBM tournament of eight players began in Amsterdam. Before it started Larsen and Timman declared that they would fight for first place and 'put an end to Karpov's victories'. And whereas Larsen, who was out of form, ended up at the bottom of the tournament table, Timman kept his promise and competed with the champion right to the finish.Karpov arrived at this tournament with one of the new hopes of Soviet chess, the 1978 world junior champion Sergey Dolmatov. The young player's repertoire included the fashionable Chelyabinsk Variation of the Sicilian Defence. Dolmatov, naturally, also employed it against Karpov. This instructive game requires a short introduction.The peak of Karpov's strength coincided with the rapid development of the Chelyabinsk Variation, but the champion's suffocating style scared off Black players from the thought of employing this strategically risky set-up against him. The game with Dolmatov confirmed these fears, and for a long time it made grandmasters unwilling to play this against Karpov. Only in 1994 did Lautier venture to do this and he easily gained a draw, but by that time Karpov would only rarely begin a game with 1. e4. 1.e4 c5 2.Nf3 Nc6 3.d4 cxd4 4.Nxd4 Nf6 5.Nc3 e5 6.Ndb5 d6 7.Bg5 a6 8.Na3 b5 A tabiya of the

Chelyabinsk Variation. Its development will be described in detail in Volume 6. 9.Nd5 Karpov employed only this variation, which is strategically the most solid. He played four games with it and won two of them, one on the 101st (!) move against Yurtaev in 1979. 9...Be7 10.Bxf6 Bxf6 11.c3 0-0 12.Nc2 Rb8 At that time this rook move, inhibiting the undermining advance a2-a4, was considered to be an important subtlety, since the position after 12...Bg5 13.a4 bxa4 14.Rxa4 was judged to favour White. 13.Be2 When playing 12... Rb8, in the first instance Black must be prepared for 13. h4 ! - cf. Volume 6. 13...Bg5 14.0-0 Be6 14...a5 is deemed to be more accurate, depriving the white knight of the b4-square and preparing to contest the outpost at d5 by ...Nc6-e7. 15.Qd3 Qd7 A natural development of the queen with the aim of connecting the rooks, but here too 15...a5 was better. 16.Qg3 f6 Persisting in his aim to keep control of the e3-square, Black goes in for a completely unnecessary weakening of the light squares and in addition he deprives his bishop of the excellent route g5-d8-b6. Meanwhile, 16...Bd8 17.Nce3 g6 was quite possible, deferring the exchange of this bishop until better times. 17.Rfd1 a5 Now this advance, which literally a move ago promised definite counterplay, is no longer effective. 18.Na3 An excellent and unexpected decision ! The bishop is watching for the appearance of the knight at e3, in order to promptly exchange it, and so the knight goes a different way. For a player who blindly believes in the classical rules, it is hard to imagine that the return of the knight to the edge of the board is the strongest continuation. By beginning a battle on the queenside, White forces his opponent to gradually turn to passive defence. 18...Na7 The further pawn advance on the queenside - 18...b4 would merely have worsened Black's position after 19.Nc4 bxc3 20.bxc3 : his bishop is cut off from d8, and the white rook already stands at d1. 19.h3 The planned exchange of the light-squared bishops is clearly advantageous to White. 19...Kh8 It should be said that Black's inaccurate play in the opening has by no means led to an immediate strategic fiasco, since there are no obvious weaknesses in his position and all that is evident is not too great a difference in the activity of the pieces. But from this moment the game is transformed into a splendid, textbook example of how to break down the opponent's defences by the accumulation of small pluses. In such work for a long time Karpov had no equals ! 20.Bg4 Rfc8 Nevertheless, Black should have played 20...f5 and, after bringing his bishop into play (but not exchanging it for a knight) , set up a defence after the exchanges 21.exf5 Bxf5 22. Nc2 Bxg4 23.Qxg4 Qxg4 24.hxg4. Although White still holds the initiative, it is not at all easy for him to achieve anything real, for example: 24...Nc6 25.Nce3 g6 26.a4 Ne7 27.Nxe7 Bxe7 28.b4 axb4 29.cxb4 bxa4 30.Rxa4 Rf7 31.Nd5 Bg5 , and the limited amount of material remaining allows Black to hope for a draw. 21.Bxe6 Qxe6 22.Qd3 Rc5 Again a natural and rather weak manoeuvre, allowing White to begin active play. The immediate 22...g6 was better. All the same Black cannot get by without his thematic move, preparing ...f6-f5. 23.Nc2 g6 24.b4 Karpov begins a new and far from obvious operation, aimed at removing the pawn obstructions on the queenside and clearing the way for his rook. He has already outlined the contours of the future offensive. 24...axb4 25.Ncxb4 Rb7 26.a4 bxa4 27.Rxa4 f5 28.Ra6

Nc8 Black has to retreat, since the active 28... Nb5 would have allowed the white pieces to approach the king along the undefended 8th rank: 29.Ra8+ Kg7 30.Na6 Rc8 31.exf5 ! (choosing the right moment for this exchange enables the king's fortress to be weakened even more) 31...gxf5 32.Rxc8 Qxc8 33.Rb1 ! Ra7 34.Qxb5 Qxa6 35.Qb8 ! Therefore Dolmatov blocks the dangerous line with his knight. 29.Ra8 Kg7 A new phase of the battle begins. To win, White must find a way to break up the opponent's still solid defences. 30.Qe2 30.Qa6 ! Qd7 31.exf5 ! was more energetic, forcing Black to take with the pawn, which weakens his king's shelter: 31...gxf5 32. Qd3 Qf7 33.Rda1. 30...fxe4 This capture breaks up Black's pawn chain and creates the danger of increasing the opponent's domination on the light squares (which in fact happened in the end) . But the exchange of knights - 30...Ne7 31.Nxe7 Bxe7 would also not have eased Black's position, since the key d5-square would again be occupied by a knight - 32.Nd5 Bg5 33.c4. 31.Qxe4 Qf5 32.Qe2 Rf7 33.c4 Bh4 34.Rf1 Ne7 According to Dvoretsky, this is a definite positional mistake: 'Why exchange the 'superfluous' white knight at b4 ? 'True, after 34. ..e4 !? - with the idea of ...Qe5-d4 - many years later Yuri Yakovich pointed out a very strong reply: 35.Ra3 ! - threatening Re3, and if 35...Bg5 , then 36. f4 ! not 36.f3 Qe5 36...Bf6 37.g4 Qe6 38.Kh1 followed by 39 Re3. 'Therefore Black does better to restrict himself to the waiting move 34...Bg5 ! , and if 35.Rfa1 , then either continue waiting tactics 35...h5 ; 35...Bh4 , or nevertheless play 35...e4 !? , not fearing 36.Re1 Bh4 37.Qb2+ Qe5 38. Qxe5+ dxe5 39.g3 Bf6 40.Nxf6 Rxf6 41.Rxe4 Nd6 with a probable draw.' In my view, retaining the linkage of the white knights would also have threatened Black with serious unpleasantness Thus if 34...Bg5 35.Rfa1 e4 36.Re1 Bh4 , then 37. g3 Bd8 38.Nc2 is very strong, when the 'superfluous' knight successfully comes into play: 38...Ba5 39.Nce3 Qxh3 40.Qb2+ Kg8 41.Ra1 Bd8 42.Qd4. White's total domination in the centre, combined with the activity of his rooks, makes Black's position barely defensible, for example: 42...Qe6 43.R1a6 ! Qe5 44. Qxe5 dxe5 , and a sudden leap by the knight decides the game - 45.Nc3 ! Bg5 46. Nxe4 Bxe3 47.Nxc5 Rxf2 48.Ne4 ! Things are also difficult for Black after 34.. .Bg5 35.Rfa1 and now 35...Bh4 36.g3 Bd8 the piece sacrifice 36...Qxh3 is insufficient: 37.gxh4 Qxh4 38.Ne3 Nb6 39.R8a7 37.h4. 35.Ra6 The immediate 35.Nxe7 Bxe7 36.Nd5 would have allowed Black to bring his rook, stuck at c5, back into play - 36...Rc8 ! 35...Qd7 This move suggests itself, but it deserves serious criticism - Black is unable to hold out by passive play. The best practical chance was the pawn sacrifice 35...Nxd5 36.Nxd5 e4 ! 37.Rxd6 Qe5 38. Ra6 Qd4 , activating the pieces with chances of a draw. 36.Qe4 Nxd5 37.Nxd5 Be7 38.Rfa1 Bf8 Black can no longer activate his game - 38...Qf5 39.Qe2 Bh4 40.g3. 39.Qe2 Rc6 40.R6a3 Karpov's ability to see the entire board is staggering. After doubling rooks on the a-file, he suddenly sharply changes the direction of the attack and makes an unexpected manoeuvre, which decisively strengthens his position. Since Black does not have a more useful move than the return of his rook to c5, White removes the rook at f7 from the game, thereby weakening the defence of the king. His other rook can now threaten not only to invade on the a-file, but also to switch to the kingside via a3 and f3. What becomes

noticeable here is the dominating role of the knight at d5, which prevents the rook at c5 from returning in time to the aid of its king, leaving it performing the role of an observer. 40...Rc5 41.Rf3 Rxf3 42.Qxf3 Qf7 43.Qg4 h5 Black is forced to go in for this new weakening, in order to safeguard his monarch. 44.Qe4 Rc8 After 44... Kh7 a shuttle raid by the rook concludes the battle: 45.Ra3 Bg7 46.g4 ! Qd7 47.Rf3 ! the technical endgame after 47.gxh5 Qf5 48.hxg6+ Qxg6+ 49.Qxg6+ Kxg6 50.Rg3+ Kf7 51.Rg4 is too small a reward for such a successful campaign 47...hxg4 48.hxg4 Qe6 49.Ra3 ! Qf7 50.Rf3 Qe8 50...Qe6 51.Nf6+ 51.Rf6 ! Nothing is changed by 44... Kh6 45.Ra8 Bg7 46.g4 ! 45.Ra3 Qf5 This prevents the invasion of the rook on the f-file, but it now strikes a blow from the opposite flank. After 45...Rb8 46.Rf3 the counter-invasion 46...Qb7 47.Kh2 Qb1 is ineffective: 48. Qh4 Qc1 49.Qf6+ Kh7 50. Qf7+ Bg7 51.Qc7 Rb1 52.Rf7 Qg1+ 53.Kg3 Rb3+ 54.f3 h4+ 55.Kxh4 Qf2+ 56.g3 and wins. After 45...Rb8 46.Rf3 Qd7 47.Rf6 Qe8 , the win of the queen by 48.Nc7 Kxf6 49.Qf3+ Ke7 50.Nxe8 Rxe8 gives Black hopes of setting up a fortress, but after 45... Rb8 46.Rf3 Qd7 47.Rf6 Qe8 , the energetic 48.f4 ! quickly forces capitulation: 48... exf4 49.Re6 Qf7 50.Nxf4. And in the event of 45...Rb8 46.Rf3 Qe6 (perhaps the toughest defence) 47.Qh4 ! White should not win either the queen - 47.Rf6 Qxf6 , or a pawn - 47.Nf4 Qf5 48.Qxf5 gxf5 49.Nxh5+ Kg6 with counterplay after 47...e4 47... Rb7 48.Rf6 Be7 49.Rxe6 Bxh4 50.g3 48.Re3 Qe5 49.Qxe4 the win is technically simple. 46.Ra7+ Kh6 If 46...Kh8 the elegant tactical blow 47.Nf6 ! is decisive, taking play into a simply won queen endgame: 47...Qxf6 47...Bg7 48.Qb7 Qxf6 49. Qxc8+ is also hopeless 48.Qb7 ! Qg7 49.Qxc8 Qxa7 50.Qxf8+ Kh7 51.Qxd6. 47.Qe3+ g5 48.Qe2 Rb8 49.g4 hxg4 Even so, Black should not have opened the h-file. The immediate 49...Qb1+ 50.Kg2 Rb7 51.Rxb7 Qxb7 was more tenacious, although after 52.Qf3 Bg7 53.gxh5 the game would have gone into an endgame where Black has no way of opposing his opponent's light-squared domination. 50.hxg4 Qb1+ 51.Kg2 The black queen has been sidelined, White has acquired an outpost at f5 for his knight, and the route a7-a3-h3 is open for the rook. 51...Rb7 It is not possible to weaken the terrible effect of White's manoeuvre by 51...e4 52. Ra3 Kg6 , since after 53.c5 ! Black cannot take the pawn, and 53...Rc8 , 53... dxc5 ? 54.Qa6+ ! the only seemingly acceptable continuation, allows a pretty concluding attack: 54.Qc4 ! Rxc5 55.Qd4 ! Bg7 56.Ne7+ Kf7 57.Qxd6 etc. Therefore Black's desire to exchange rooks is logical and appears to be a measure that eases his position. 52.Rxb7 Qxb7 53.Qf3 There are hardly any pieces left on the board, but the difference in the strengths of the two small armies is such that the battle concludes immediately. 53...Qc8 It transpires that the black queen is unable to come to the aid of its king on account of a trivial mate: 53...Qg7 54.Qh3+ Kg6 55.Qh5#. 54.Qf6+ Kh7 55.Qf7+ Black resigned - if 55...Kh8 , then 56.Nf6 is decisive, while if 55...Kh6 - 56.Ne3.

## ☐ 7G) 2...Nc6: The Sveshnikov S
## ■ Sveshnikov Mainline With,N

1.e4 c5 2.Nf3 Nc6 3.d4 cxd4 4.Nxd4 Nf6 5.Nc3 e5 6.Ndb5 d6 7.Bg5 a6 8.Na3 For comments up to this point, I refer you to the Overview variation in the Overview Chapter. 8...b5 Also the most common move in the position which is also very logical - Black prevents the knight on a3 from re-entering the game via c4 and also threatens b4, forcing White's play a little bit. 9.Nd5 A very logical knight jump, avoiding the threat of b4 and exploiting the position of the bishop on g5 that ensures the control over the d5 square. 9. Bxf6 is another big line but it leads to a different type of positions. On the other hand, 9.Nab1 also has the right to exist and was even employed once by Vladimir Kramnik, but it is a bit too exotic for a repertoire. 9...Be7 The natural move, breaking the pin and forcing White to take a decision in regard to the tension between the pieces as now Nxd5 is threatened. 10.Bxf6 The best move in the position. White does give up the bishop pair, but for the moment, we eliminate the defender of the d5 knight and get to keep our knight on d5. Alas, our problem is that the other knight is still on a3 and that Black controls the c4 square, making it unable for our bishop to get there and support the battle for the d5 square. 10...Bxf6 This is virtually a forced recapture, since 10...gxf6 is quite bad, as we have just seen. 11.c4 This pawn move, undermining the queenside pawn structure and opening the c2 square for the retreat of the knight of a3 is one of the two mainlines in this position. White tries to undermine the structure and clamp down on the d5 square. The drawback is that this move weakens the d4 square and also allows Black to grab some queenside space with the b4 counter-advance. The move is arguably less critical than 11.c3 and is played 3 times less often. On the other hand, it is not nearly as theoretical - most books - especially older ones like Rogozenco's The Sveshnikov Reloaded Quality Chess Book from 2005 - focus heavily on 11.c3 and mentioned 11. c4 in brief passing.Since the general approach of this repertoire was not necessarily to maximize our objective opening chances, but to achieve a harmonious position with chances of obtaining a slight edge, I felt it fit well with its philosophy. Furthermore, since we have been placing our pawns on e4 and c4 whenever possible in this repertoire, I thought it would be consistent to do so against the Sveshnikov as well and obtain a 'Maroczy Bind' - or more precisely - a very specific and unique version of this very common structure. 11...b4 The only sensible move Black has at their disposal, as we have just seen alternatives are not particularly inspiring. Black gains some space on the kingside and gains control over the dark-squares. In the long run, Black wants to push the a-pawn down the board and use it as a battering ram on a4 if White ever tries to consolidate on the queenside by moving the b-pawn. 12.Nc2 The best square for the knight as we eye the d4 point but also hint at the potential Nce3 move, reinforcing the knight on d5. At first glance, it may seem that we are also gaining a tempo by attacking the b4 pawn, but as it turns out - Black can ignore this threat for now. Even though one of the most common pieces of advice

for Chessable authors is that there are never enough explanations and annotations, I believe the student will excuse me if I don't elaborate on why this move is better than 12.Nb5  On the other hand, 12.Nb1 is inferior as the knight is dominated by the pawn on c4 and can't go to c3. Now, Black has a choice between two big lines - castling and ignoring the b4 pawn or protecting it by advancing the a6 pawn. Alas, since both of these lines are extremely theoretical and very flexible in terms of the number of possibilities for our opponent, the resulting amount and depth of trainables will end up being deeper than for the rest of the course.I am sorry to bore you, dear student, with that much theory, but - as much as I tried to reduce the forest with the selection of specific moves, it is hard to avoid these theoretical discussions in an opening such as Sveshnikov îîStartBracketîîwhich was one of the reasons why I wasn't very thrilled when I realized that covering 2...Nc6 would make a lot of sense after allîîEndBracketîî.Once again, if this is not up to your taste - I recommend an alternative approach against 2... Nc6 - say Rossolimo or even 3.c3.  12...a5 Apart from 12...O-O , this move, defending the b4 pawn, is very logical and almost equally common at all levels. It was recommended by renowned theoreticians and one of the best chess authors out there, Greek Grandmaster Vassilios Kotronias in his Quality Chess Book Grandmaster Repertoires: The Sicilian Sveshnikov. Black does spend a tempo to move a pawn and not the king, but it is not entirely clear whether this time loss is that significant or to White's benefit.Apart from not leaving the b4 pawn hanging, in some variations where White tries to go for a quick endgame, it is to Black's benefit to keep the king in the center. On the other hand, Black does waste a tempo and also weakens the b5 square, which does lead to differences in some other variations.As usual with modern chess theory - there are pluses and minuses of both 12...O-O and 12...a5 and it is hard to say one move is objectively better than the other - employing them from the Black side is largely a matter of preference/taste.  13.Qf3 Just as in the 12...O-O lines, this queen move, attacking the bishop on f6 and clearing the d1 square for the rook, will be the choice instead of the main and theoretical move with 13.g3 There are both pros and cons of the queen move against 12... a5 - on one hand, we are not really threatening to take on f6 immediately because the resulting endgames are not as favourable for us with the opponent's king still being in the center. But on the other hand, we do have some quick Rd1 ideas in mind. More importantly, it turns out that the most obvious and common move here 13... Bg5 - is not at all that great for Black in the 12...a5 move order compared to the 12...O-O move order.Now Black has a wide choice - and I analyzed 4 options in total.  13...Be7 This move, avoiding any sort of Nxf6 tricks and preparing to castle is not the most common move at the club level, although it is quite popular at the master level. Since we have just seen the whole Bg5-Bh6 idea doesn't really work, it makes sense to retreat the bishop to a quieter place instead. This does allow White to go for the Rd1-c5 idea, but as it turns out - it is not the most dangerous idea in the world.  14.Rd1 One of the points behind moving the queen to f3. This move creates the threat of playing c5 and then playing Nf6 winning the queen. As it turns out, though, it is quite debatable whether White should actually go for that

line, as we will soon see. 14...0-0 So, Black castles after all and invites us to go for the c5-Nf6 idea. This position is on of the critical positions of this line. 15.Be2 After long deliberation and analysis, I have decided to choose this natural developing move as my main recommendation in this line, simply because I am not 100% sure about the consequences of the 15.c5 line. However, I couldn't bring myself not to include that line as an alternative, as well. 15...Be6 A natural developing move, fighting for the light-squares. 16.0-0 Bg5 Now when we have castled Black finally embarks on this typical Sveshnikov maneuver because the idea of the quick h4-g4 does not exist without the rook on h1. 17.Qg3 As we have seen previously, White would very much like to exchange light-squared bishops as our light-squared bishop is quite passive and restricted by the pawns on c4 and e4, while the opponent's counterpart does a good job of fighting for the d5 square. Of course, we don't want to capture on e6 and grant Black the control over the d5 square, but we do want to create tension between the two bishops. The text move prepares the Bg4-Qh3 idea which seems to be one attempt for White to make progress in this position. 17...g6 This move, trying to prepare f5 and creating some space for the bishop on g5 is another logical reply I will analyze in this position. 18.Bg4 White executes the desired idea and intends to follow things up with Qh3 at a later stage. 18...Ra7 One of many possible moves in the position. It is a bit hard for Black to play as they don't have a clear plan and have to react to what we are doing. 19.b3 Probably a bit more precise than the immediate Qh3. 19...Rd7 Avoiding any potential c5 ideas. The position is very complicated and hard to analyze, so for simplicity sake I will give just one trainable that demonstrates White's main idea in the position. I don't necessarily think overburdening the student with zillions of computer moves will be the most relevant for the practical play - especially for a chapter that is already far more theoretical than any other chapter in the course. 20.Qh3 Now we create pressure on the e6 bishop. If Black decides to to weaken the king, then after 20...f5 21.exf5 gxf5 22.Bh5 we can claim some edge with f4 on cards. Seemingly the best move is 20... Re8 when we have a surprising move 21.Nde3 at our disposal. The idea is to clean the d-file, prepare to double the rooks and also hint at the potential c5 pawn break, for example, if 21...Kg7 22.Rd3 Nb8 the knight is heading to c5 via a6, but we prevent it with 23.Bxe6 fxe6 24. c5!? when we have ample compensation for the sacrificed pawn in the form of better structure and a nice outpost for the knight on c4. Of course, this is more for illustrative purposes since it would be very shocking if your game reached this point - especially at the club level.

It was recommended by renowned theoreticians and one of the best chess authors out there, Greek Grandmaster Vassilios Kotronias in his Quality Chess Book Grandmaster Repertoires: The Sicilian Sveshnikov. Black does spend a tempo to move a pawn and not the king, but it is not entirely clear whether this time loss is that significant or to White's benefit.Apart from not leaving the b4 pawn hanging, in some variations where White tries to go for a quick endgame, it is to Black's benefit to keep the king in the center. On the other hand, Black does waste a tempo and also weakens the b5 square, which does lead to differences in some other variations.As usual with modern chess theory - there are pluses and minuses of both 12...O-O and 12...a5 and it is hard to say one move is objectively better than the other - employing them from the Black side is largely a matter of preference/taste.  13.Qf3 Just as in the 12...O-O lines, this queen move, attacking the bishop on f6 and clearing the d1 square for the rook, will be the choice instead of the main and theoretical move with 13.g3 There are both pros and cons of the queen move against 12... a5 - on one hand, we are not really threatening to take on f6 immediately because the resulting endgames are not as favourable for us with the opponent's king still being in the center. But on the other hand, we do have some quick Rd1 ideas in mind. More importantly, it turns out that the most obvious and common move here 13... Bg5 - is not at all that great for Black in the 12...a5 move order compared to the 12...O-O move order.Now Black has a wide choice - and I analyzed 4 options in total.  13...Be6 Before we get to the more obvious options of moving the bishop from f6, let us take a moment to examine the question - does the bishop need to move in the first place? As mentioned above, with the king on e8, we are not necessarily threatening to capture on f6 so Black tries to make a developing move instead. This move was, in fact, the Kotronias' recommendation in the aforementioned Quality Chess book.  Note that 13...O-O 14.Nxf6 Qxf6 15. Qxf6 gxf6 would transpose to the endgame analyzed via 12...O-O move-order when White can try to claim a small edge due to the fact Black's king is on g8 instead of e8 - which is an inferior post in an endgame.  14.Rd1 This move reveals another idea behind moving the queen to f3 - the rook is deployed on a semi-open file and eyes the enemy queen on d8. Here it is important that the a5 square is occupied by the pawn so Black doesn't have any Qa5 resources. Note that 14.Nxf6 Qxf6 15.Qxf6 gxf6 would illustrate the previous point - the endgame with the king on e8 is completely fine for Black despite apparent structural weaknesses, as there is no easy way for

White to capitalize on them, as Kotronias rightly assessed in his book. Now Black has several options. 14...a4 ThiC dynamic move, initiating immediate counterplay on the queenside and leaving the b4 pawn hanging, was in fact Kotronias' recommendation in the aforementioned book.I would be quite surprised if I would encounter this move at the club level unless someone is really well acquainted with Kotronias' analysis or with the games at the highest level îîStartBracketîîand most people aren'tîîEndBracketîî.Black tries to force the play, but I feel the resulting position is a bit tricky to navigate for the second player as they have to play rather dynamic chess and sacrifice some pawns. 15.Be2 We continue developing and refuse to be tempted with the capture on b4 as 15. Ncxb4 Nxb4 16.Nxb4 Qb8 would give Black nice compensation. 15...b3 This forcing move was in fact Kotronias' main recommendation. It is definitely not the most obvious pawn sacrifice, but opening the b-file does make some sense. 16.axb3 Rb8 The point of the previous move is this pawn sacrifice. 16...axb3 simply loses a pawn after 17.Qxb3 when the compensation is non-existent. Now White has two ways of preserving the pawn and since both of them retain some practical chances, I have decided to offer both of them as an option in this chapter. 17.b4 This move was the main move of Kotronias' analysis. It is definitely critical, but also a bit tricky to navigate, which is why I also included the outwardly simpler 17. bxa4 as the alternative. 17...Bxd5 The only move. Black has to be able to recapture the b4 pawn, which is why they remove one of its defenders. 18.Rxd5 Far superior to capturing with either pawn as it keeps White's pieces more active. Furthermore, the rook keeps the option of going to b5, creating a strong passed pawn on the b-file. 18...Nxb4 19.Nxb4 Rxb4 20.Qa3 A key move, attacking the b4 rook and defending the b2 pawn. White intends to go Rb5 on the next move. 20...Qb6 Defending the rook and threatening the b2 pawn. 21.0-0 Okay, Black is not really threatening to take on b2 so we simply take a moment to castle. 21...0-0 Of course, 21...Rxb2 is way too risky as after 22.Qxa4 Kf8 White has a tremendous position and maybe even a direct win after 23.c5 dxc5 24.Rd7! But you don't need to be an engine to see that taking the b2 is definitely not worth losing the castling rights and the a4 pawn. 22.Rb5 The point of White's play. We get an ugly pawn structure, but we do get a passed pawn on the b-file. 22...Rxb5 23.cxb5 Qd4 The only move for Black, attacking the e4 pawn and defending the a4 pawn. 24.b3 A vCry strong move. White's idea is to open the b-file and use the passed b5 pawn as the winning asset. The idea is that after 24...axb3 25.Qxb3 Qxe4 26.Bf3 the combined power of the passed pawn and our strong light-squared bishop makes our opponent's life extremely difficult. Instead, Black should play 24...Qxe4 25.Bf3 Qd3 26.Qxa4 d5!? when they should have reasonable drawing chances. Kotronias went on to analyze the position for a further 16 îîStartBracketîî !! îîEndBracketîî moves to prove the equality, but I think this is a good moment to stop as I feel we still have some practical chances to push due to our strong b5 pawn - and remember that Black needs to know A LOT to even get to this point.

At first glance, it may seem that we are also gaining a tempo by attacking the b4 pawn, but as it turns out - Black can ignore this threat for now. Even though one of the most common pieces of advice

for Chessable authors is that there are never enough explanations and annotations, I believe the student will excuse me if I don't elaborate on why this move is better than 12.Nb5  On the other hand, 12.Nb1 is inferior as the knight is dominated by the pawn on c4 and can't go to c3. Now, Black has a choice between two big lines - castling and ignoring the b4 pawn or protecting it by advancing the a6 pawn. Alas, since both of these lines are extremely theoretical and very flexible in terms of the number of possibilities for our opponent, the resulting amount and depth of trainables will end up being deeper than for the rest of the course.I am sorry to bore you, dear student, with that much theory, but - as much as I tried to reduce the forest with the selection of specific moves, it is hard to avoid these theoretical discussions in an opening such as Sveshnikov îîStartBracketîîwhich was one of the reasons why I wasn't very thrilled when I realized that covering 2...Nc6 would make a lot of sense after allîîEndBracketîî.Once again, if this is not up to your taste - I recommend an alternative approach against 2... Nc6 - say Rossolimo or even 3.c3.  12...0-0 Even though we are nominally attacking the pawn on b4, Black can ignore this threat and simply continue developing. This move was recommended both by Christof Sielecki in his repertoire Fight Like Magnus and by Marko Makaj in his repertoire The Fighting Sicilian here on Chessable.  13.Qf3 I wCll be honest - I don't think White has any objective advantage in this variation. I spent a long time analyzing various options available to us at this particular juncture and have ultimately decided to settle on this move because it is a bit surprising and rare and because it can also be executed against the other big move 12...a5 îîStartBracketîîalthough it is probably more dangerous in that move order than here, due to very specific reasons I will try to explain at a later pointîîEndBracketîî. It was covered by ever-so-thorough Christof Sielecki in his repertoire, but for example, it was not considered by Marko Makaj in his aforementioned Chessable repertoire.  So what is the idea? Well, instead of embarking on a typical kingside play with 13.g3 îîStartBracketîîwhich would constitute a really big mainline, by the way. îîEndBracketîî White develops the queen with a triple purpose. First of all, the d1 square is vacated for the rook which can go to d1. Secondly, the bishop on f6 is threatened by the queen and the knight on d5.Thirdly, White intends to use the kingside pawns more aggressively and play g4-h4 instead of g3-h4 in the future. I personally feel this move has a bit more venom than the absolute mainlines - especially if our opponents are not fully prepared for it.  Note, btw, that White shouldn't capture the pawn on b4 yet as after 13.Ncxb4 Nxb4 14. Nxb4 Qb6 Black regains it with ease. I think White has better practical chances for an advantage in other lines.  13...a5 The good thing about the Qf3 line is that it somewhat reduces Black's options in the 12...O-O move order, since any move that doesn't involve moving the bishop from f6 will be met by capturing twice on f6 and going for a better endgame. 13...Be6 14.Nxf6  and 13. ..Rb8 14.Nxf6 are very similar to the text and probably don't need to be examined separately from the opening standpoint!  14.Nxf6+ We are happy to go in an endgame with a much superior pawn structure here. Quite often in Sveshnikov, these endgames can be considered fine for Black, but here I feel the fact that they have castled and put the king on g8 works to

our advantage as the king is far away from defending the d6 pawn. This move doesn't have as good percentage as the move 14.Rd1 that scores over 60% in the lichess database - which is somewhat surprising given that Black can play 14...Be7 and reach lines very similar to those with the immediate 13...Be7 where it is tough for White to find an advantage. I believe that we should take the opportunity to capture on f6 once we get it. 14...Qxf6 Of course, Black is not interested in capturing with the g-pawn as it would be even worse to weaken the king's shelter while keeping the queens on the board. 15.Qxf6 gxf6 16.0-0-0 Targeting the d6 pawn. Now we can see Black would be very happy to be able to play Ke7 and defend the pawn but they are unable to do so and have to put the rook on the passive d8 square. I think White has slightly the more pleasant endgame here. We will continue with natural moves such as b3-Kb2-Be2 and then attempt to double on the d-file if we get the chance. I analyzed the sample continuation 16...Rd8 17.b3 and now after both 17...a4 18.Be2 and 16... Rd8 17.b3 f5 18.exf5 Bxf5 19.Bd3 White seems to retain a small plus. I don't mind having such a position as a result of an opening as it is objectively very hard to find a greater plus elsewhere in the 7.Bg5 Sveshnikov - which is probably why 7.Nd5 has become more mainstream nowadays.

**B33**

## ☐ 7G) 2...Nc6: The Sveshnikov S
## ■ Sveshnikov Mainline With,N

1.e4 c5 2.Nf3 Nc6 3.d4 cxd4 4.Nxd4 Nf6 5.Nc3 e5 6.Ndb5 d6 7.Bg5 a6 8.Na3 For comments up to this point, I refer you to the Overview variation in the Overview Chapter. 8...b5 Also the most common move in the position which is also very logical - Black prevents the knight on a3 from re-entering the game via c4 and also threatens b4, forcing White's play a little bit. 9.Nd5 A very logical knight jump, avoiding the threat of b4 and exploiting the position of the bishop on g5 that ensures the control over the d5 square. 9. Bxf6 is another big line but it leads to a different type of positions. On the other hand, 9.Nab1 also has the right to exist and was even employed once by Vladimir Kramnik, but it is a bit too exotic for a repertoire. 9...Be7 The natural move, breaking the pin and forcing White to take a decision in regard to the tension between the pieces as now Nxd5 is threatened. 10.Bxf6 The best move in the position. White does give up the bishop pair, but for the moment, we eliminate the defender of the d5 knight and get to keep our knight on d5. Alas, our problem is that the other knight is still on a3 and that Black controls the c4 square, making it unable for our bishop to get there and support the battle for the d5 square. 10...Bxf6 This is virtually a forced recapture, since 10...gxf6 is quite bad, as we have just seen. 11.c4 This pawn move, undermining the queenside pawn structure and opening the c2 square for the retreat of the knight of a3 is one of the two mainlines in this position. White tries to undermine the structure and clamp down on the d5 square. The drawback is that this move weakens the d4 square and also allows Black to grab

some queenside space with the b4 counter-advance.  The move is arguably less critical than 11.c3 and is played 3 times less often. On the other hand, it is not nearly as theoretical - most books - especially older ones like Rogozenco's The Sveshnikov Reloaded Quality Chess Book from 2005 - focus heavily on 11.c3 and mentioned 11. c4 in brief passing.Since the general approach of this repertoire was not necessarily to maximize our objective opening chances, but to achieve a harmonious position with chances of obtaining a slight edge, I felt it fit well with its philosophy. Furthermore, since we have been placing our pawns on e4 and c4 whenever possible in this repertoire, I thought it would be consistent to do so against the Sveshnikov as well and obtain a 'Maroczy Bind' - or more precisely - a very specific and unique version of this very common structure.  11...b4 The only sensible move Black has at their disposal, as we have just seen alternatives are not particularly inspiring. Black gains some space on the kingside and gains control over the dark-squares. In the long run, Black wants to push the a-pawn down the board and use it as a battering ram on a4 if White ever tries to consolidate on the queenside by moving the b-pawn. 12.Nc2 TheČbest square for the knight as we eye the d4 point but also hint at the potential Nce3 move, reinforcing the knight on d5. At first glance, it may seem that we are also gaining a tempo by attacking the b4 pawn, but as it turns out - Black can ignore this threat for now.  Even though one of the most common pieces of advice for Chessable authors is that there are never enough explanations and annotations, I believe the student will excuse me if I don't elaborate on why this move is better than 12.Nb5  On the other hand, 12.Nb1 is inferior as the knight is dominated by the pawn on c4 and can't go to c3. Now, Black has a choice between two big lines - castling and ignoring the b4 pawn or protecting it by advancing the a6 pawn. Alas, since both of these lines are extremely theoretical and very flexible in terms of the number of possibilities for our opponent, the resulting amount and depth of trainables will end up being deeper than for the rest of the course.I am sorry to bore you, dear student, with that much theory, but - as much as I tried to reduce the forest with the selection of specific moves, it is hard to avoid these theoretical discussions in an opening such as Sveshnikov îîStartBracketîîwhich was one of the reasons why I wasn't very thrilled when I realized that covering 2...Nc6 would make a lot of sense after allîîEndBracketîî.Once again, if this is not up to your taste - I recommend an alternative approach against 2... Nc6 - say Rossolimo or even 3.c3.  12...a5 Apart from 12...O-O , this move, defending the b4 pawn, is very logical and almost equally common at all levels. It was recommended by renowned theoreticians and one of the best chess authors out there, Greek Grandmaster Vassilios Kotronias in his Quality Chess Book Grandmaster Repertoires: The Sicilian Sveshnikov. Black does spend a tempo to move a pawn and not the king, but it is not entirely clear whether this time loss is that significant or to White's benefit.Apart from not leaving the b4 pawn hanging, in some variations where White tries to go for a quick endgame, it is to Black's benefit to keep the king in the center. On the other hand, Black does waste a tempo and also weakens the b5 square, which does lead to differences in some other variations.As usual with modern chess theory - there are pluses and

minuses of both 12...O-O and 12...a5 and it is hard to say one move is objectively better than the other - employing them from the Black side is largely a matter of preference/taste. 13.Qf3 Just as in the 12...O-O lines, this queen move, attacking the bishop on f6 and clearing the d1 square for the rook, will be the choice instead of the main and theoretical move with 13.g3 There are both pros and cons of the queen move against 12... a5 - on one hand, we are not really threatening to take on f6 immediately because the resulting endgames are not as favourable for us with the opponent's king still being in the center. But on the other hand, we do have some quick Rd1 ideas in mind. More importantly, it turns out that the most obvious and common move here 13... Bg5 - is not at all that great for Black in the 12...a5 move order compared to the 12...O-O move order.Now Black has a wide choice - and I analyzed 4 options in total. 13...Be7 This move, avoiding any sort of Nxf6 tricks and preparing to castle is not the most common move at the club level, although it is quite popular at the master level. Since we have just seen the whole Bg5-Bh6 idea doesn't really work, it makes sense to retreat the bishop to a quieter place instead. This does allow White to go for the Rd1-c5 idea, but as it turns out - it is not the most dangerous idea in the world. 14.Rd1 One of the points behind moving the queen to f3. This move creates the threat of playing c5 and then playing Nf6 winning the queen. As it turns out, though, it is quite debatable whether White should actually go for that line, as we will soon see. 14...0-0 So, Black castles after all and invites us to go for the c5-Nf6 idea. This position is one of the critical positions of this line. 15.c5 This move, trying to open the d-file and create the threat of a discovered attack on the enemy queen, is the most common move in the position and a direct attempt to justify the previous play. However, I am not 100% sure how good this whole line is in case Black does accept the challenge and sacrifice the queen, which is why I have decided to provide it as an alternative. 15...dxc5 This is the most natural and human reaction in this position, accepting the challenge. 15...Be6 is a move that does exist and which was played in some games when White should continue with either 16.Bc4 , leading to a very complicated position or 16.Bb5 Rc8 17.cxd6 Bxd6 18.O-O with more or less equal and stable, but nevertheless complicated position. Since we are speaking about a very rare line in an alternative variation, I will refrain from digging deeper or providing it a separate trainable, but be aware something like this also exists and feel free to investigate it further on your own! 16.Nf6+ The point of the whole sequence is this discovered attack on the queen. 16...Bxf6 17.Rxd8 Rxd8 18.Bc4 So, it is time to take stock of the position. Black has a rook, a bishop and a pawn for the queen, which is nominally not enough material. However, due to their strong central presence and the strong d4 outpost, they have more than sufficient compensation for the pawn. Both objectively and practically, the chances are approximately equal after, say, 18...Nd4 19.Nxd4 Rxd4 20.Bd5 Rb8 21.O-O You might want to enter this position and try to outplay your opponent, but I wouldn't say it is completely risk-free. I think mentioning this possibility and giving it as an alternative is justified, but I don't think it has enough venom to be featured as the main line. Conclusion: Sicilian Sveshnikov is a very healthy and sound opening in

which it is objectively hard for White to demonstrate a real advantage. Practice shows that Black's dynamic possibilities and counterplay involving a6-b5 and f5 pawn breaks more than compensated for the weak d5 square. If Team Caruana was unable to obtain a definite advantage in the 2018 World Championship Match, I won't even claim I managed to do so with my feeble CM title. With that being said, the Sveshnikov is still not the easiest Sicilian to handle - especially at club level. There are many different setups White can try and Black really needs to know a lot of theory and concrete, sharp lines, to reach that objective equality.In this course, I have decided to revert to the old mainline with 7.Bg5 and decided to go for a relatively rare setup involving the advance of the c-pawn to c4. Within that rare setup, I have opted to go for the rare but venomous Qf3 line against both 12...a5 and 12...O-O. The main reason why I like this move is because it makes the standard Sveshnikov play with Bg5-Bh6 much less appealing. Black does really need to know some stuff to handle the position well and even if they do, we can expect to find ourselves on the good side of equality. I think such a practical approach to a very theoretical opening is very much in line with the philosophy of this repertoire and I do hope you will have a lot of success trying out these lines in your own games.

**B33**

## ☐ 7G) 2...Nc6: The Sveshnikov S
## ■ Sveshnikov Mainline With,N

1.e4 c5 2.Nf3 Nc6 3.d4 cxd4 4.Nxd4 Nf6 5.Nc3 e5 6.Ndb5 d6 7.Bg5 a6 8.Na3 For comments up to this point, I refer you to the Overview variation in the Overview Chapter. 8...b5 Also the most common move in the position which is also very logical - Black prevents the knight on a3 from re-entering the game via c4 and also threatens b4, forcing White's play a little bit. 9.Nd5 A very logical knight jump, avoiding the threat of b4 and exploiting the position of the bishop on g5 that ensures the control over the d5 square. 9. Alas, since both of these lines are extremely theoretical and very flexible in terms of the number of possibilities for our opponent, the resulting amount and depth of trainables will end up being deeper than for the rest of the course.I am sorry to bore you, dear student, with that much theory, but - as much as I tried to reduce the forest with the selection of specific moves, it is hard to avoid these theoretical discussions in an opening such as Sveshnikov îîStartBracketîîwhich was one of the reasons why I wasn't very thrilled when I realized that covering 2...Nc6 would make a lot of sense after allîîEndBracketîî.Once again, if this is not up to your taste - I recommend an alternative approach against 2... Nc6 - say Rossolimo or even 3.c3.  12...a5 Apart from 12...O-O , this move, defending the b4 pawn, is very logical and almost equally common at all levels. It was recommended by renowned theoreticians and one of the best chess authors out there, Greek Grandmaster Vassilios Kotronias in his Quality Chess Book Grandmaster Repertoires: The Sicilian Sveshnikov. Black does spend a tempo to move a pawn and not the king, but it is not entirely clear whether this time loss is that significant or to White's benefit.Apart from not leaving the b4 pawn hanging, in some variations where White tries to go for a quick endgame, it is to Black's benefit to keep the king in the center. On the other hand, Black does waste a tempo and also weakens the b5 square, which does lead to differences in some other variations.As usual with modern chess theory - there are pluses and

minuses of both 12...O-O and 12...a5 and it is hard to say one move is objectively better than the other - employing them from the Black side is largely a matter of preference/taste. 13.Qf3 Just as in the 12...O-O lines, this queen move, attacking the bishop on f6 and clearing the d1 square for the rook, will be the choice instead of the main and theoretical move with 13.g3 There are both pros and cons of the queen move against 12... a5 - on one hand, we are not really threatening to take on f6 immediately because the resulting endgames are not as favourable for us with the opponent's king still being in the center. But on the other hand, we do have some quick Rd1 ideas in mind. More importantly, it turns out that the most obvious and common move here 13... Bg5 - is not at all that great for Black in the 12...a5 move order compared to the 12...O-O move order.Now Black has a wide choice - and I analyzed 4 options in total. 13...Be6 Before we get to the more obvious options of moving the bishop from f6, let us take a moment to examine the question - does the bishop need to move in the first place? As mentioned above, with the king on e8, we are not necessarily threatening to capture on f6 so Black tries to make a developing move instead. This move was, in fact, the Kotronias' recommendation in the aforementioned Quality Chess book. Note that 13...O-O 14.Nxf6 Qxf6 15. Qxf6 gxf6 would transpose to the endgame analyzed via 12...O-O move-order when White can try to claim a small edge due to the fact Black's king is on g8 instead of e8 - which is an inferior post in an endgame. 14.Rd1 This move reveals another idea behind moving the queen to f3 - the rook is deployed on a semi-open file and eyes the enemy queen on d8. Here it is important that the a5 square is occupied by the pawn so Black doesn't have any Qa5 resources. Note that 14.Nxf6 Qxf6 15.Qxf6 gxf6 would illustrate the previous point - the endgame with the king on e8 is completely fine for Black despite apparent structural weaknesses, as there is no easy way for White to capitalize on them, as Kotronias rightly assessed in his book. Now Black has several options. 14...Bg5 Moving the bishop now comes a bit too late as White now can execute one of the ideas associated with the Rd1 move. 15.c5 Opening the d-file, but more importantly - also the f1-a6 diagonal. Due to the fact that the pawn has been moved to a5, the bishop will find a nice spot on b5, pressuring the c6 knight. 15...dxc5 It is probably better not to castle but then White has a definite edge as the restricted f1 bishop springs to life. The text move is more principled but it allows White to demonstrate the main idea. 16.Bb5 The pin on the knight is quite nasty. 16...Rc8 17.h4 Even stronger than the immediate 17.Ndxb4 , which is also good. The idea is to divert the bishop from the defence of the queen on d8 and win her majesty under more favourable circumstances. 17...Bh6 Retreating to h6 is very typical in the Sveshnikov, but here it is just bad due to the pin on the d-file. 18.Ndxb4 Discovering the attack on the queen on d8. 18...axb4 There is nothing better! 19.Rxd8+ Kxd8 This is forced as the rook has to stay on c8 to keep defending the c6 knight. But now White has a very favourable version of the queen vs rook+bishop scenario as Black's king can't castle any longer. 20.0-0 And White should be technically winning due to the nominal material advantage, for which Black can't claim sufficient compensation.

**B33**

☐ **Chapter**
■ **N,N**

**1.e4 c5 2.Nf3 Nc6 3.d4 cxd4 4.Nxd4 Nf6 5.Nc3 e5 6.Ndb5 d6 7.Bg5 a6 8.Na3 b5 9.Bxf6 gxf6 10.Nd5 f5 11.Bd3 Be6 12.c3 Bg7 13.Nxb5**
Black chooses the e7-square for the bishop more often than d6, although let me remind you that this can be considered an inferior version of the Carlsen Variation of the next chapter, in which Black provokes the c2-c3 move. Black has two main ideas here: B21) 13...c5 and B22) 13...0-0. **13...axb5 14.Bxb5** B21) **14...Bd7 15.exf5** B22) **15...0-0 16.0-0 e4 17.a4 Re8 18.Qg4 Kh8** This is a lot more flexible than 18... Rc8. Now we should consider various tries to increase our understanding of the position. Initially, I had been very happy about B21) 19. Rfe1, but for reasons I will explain below, I feel White has to be more inventive. So I now prefer B22) 19. Qf4!?N or B23) 19. Rad1 when my novelty arrives a move later. **19.Rad1** This has been played in almost all the games, and is of course the most logical continuation. The next move is rather forced: B23)

[ 19.Rfe1 B21) ]

[ 19.Qf4 B22) ]

[ 19.Rfd1 Rb8! I'd really like to play 20.Qf4 , but after Be5 21.Qh6 Rg8 22.f6 Qc8! the move Rfd1 feels as though it was inappropriate. ]

**19...Rc8** B21)

[ 19...Re5 20.Ne3 Qf6 21.Rd5± shows the idea behind Rad1. We need one final split: B231) 20. Kh1!?N or B232) 20. Rfe1. ]

☐ **Lesson Sveshnikov The,P**
■ **Sveshnikov 9.Nd5 Be7 10.Nxe7**

1.e4 c5 2.Nf3 Nc6 3.d4 cxd4 4.Nxd4 Nf6 5.Nc3 e5 6.Ndb5 d6 Today we will look at the second part of the three lessons on the Sveshnikov. 7.Bg5 The main move and definitely the most challenging one. Nd5 is threatened, Black's next move is practically forced. 7...a6 8.Na3 b5 Obviously the best move in the position, White wants to get the knight closer to the d5-square, this move prevents that plan and threatens ...b4 as well. 9.Nd5 So today we are going to study this move, 9.Nd5, a kind of positional system. It has been played countless times on the top level. Now Black has to be very accurate, after listening to this course you will have good knowledge of the nuances of this system and if your opponent is not so well-prepared then you have considerable chances to get a certain advantage out of the opening. 9...Be7 TheConly move to fight for equality, and even if Black most often equalizes on the top level, just one wrong move and White will get a significant advantage. Definitely, a rather risk-free variation for White if you know what you are doing. For those of you who want to play this line with Black, I'll try to give a detailed analysis of the current state of theory, the best directions and certain concrete variations - that will already be enough information for you to play it with Black îîStartBracketîîif you are not in the top 10 of the worldîîEndBracketîî. 9...Be6 is a mistake, you'll understand this more after watching the next lesson. 10.Bxf6 gxf6 11.c3 f5 12.exf5 Bxf5 and Black simply lost a tempo. 10.Nxe7 This move is harmless. 10...Qxe7 Even this move is doing very well and I can show you briefly the ideas. 11.c4 The only way White can really challenge Black. 11...Nd4 Not the only move but the most direct one. 11...O-O 12.cxb5 Nd4 and Black manages to equalize thanks to the usual Sveshnikov counterplay. 12.cxb5 The most challenging, now Black can equalize in two different ways. 12...0-0 I also discovered that this move is doing perfectly fine for Black, threatening ...Qb7. 13.Nc2 Ne6 14.Bxf6 Qxf6 15.bxa6 Qh4 A very important move. It is very uncomfortable for White to defend the e4-pawn. Although the position is equal according to the engines, practically this position is much easier and more interesting from the Black perspective. 16.Bd3 Nf4 ...Nf4 is fine here and Black is doing great.

**B33**

☐ **Lesson Sveshnikov The,P**
■ **Sveshnikov 9.Nd5 Be7 10.Nxe7**

1.e4 c5 2.Nf3 Nc6 3.d4 cxd4 4.Nxd4 Nf6 5.Nc3 e5 6.Ndb5 d6 Today we will look at the second part of the three lessons on the Sveshnikov. 7.Bg5 The main move and definitely the most challenging one. Nd5 is threatened, Black's next move is practically forced. 7...a6 8.Na3 b5 Obviously the best move in the position, White

wants to get the knight closer to the d5-square, this move prevents that plan and threatens ...b4 as well. 9.Nd5 So today we are going to study this move, 9.Nd5, a kind of positional system. It has been played countless times on the top level. Now Black has to be very accurate, after listening to this course you will have good knowledge of the nuances of this system and if your opponent is not so well-prepared then you have considerable chances to get a certain advantage out of the opening. 9...Be7 TheConly move to fight for equality, and even if Black most often equalizes on the top level, just one wrong move and White will get a significant advantage. Definitely, a rather risk-free variation for White if you know what you are doing. For those of you who want to play this line with Black, I'll try to give a detailed analysis of the current state of theory, the best directions and certain concrete variations - that will already be enough information for you to play it with Black îîStartBracketîîif you are not in the top 10 of the worldîîEndBracketîî. 9...Be6 is a mistake, you'll understand this more after watching the next lesson. 10.Bxf6 gxf6 11.c3 f5 12.exf5 Bxf5 and Black simply lost a tempo. 10.Nxe7 This move is harmless. 10...Qxe7 Even this move is doing very well and I can show you briefly the ideas. 11.c4 The only way White can really challenge Black. 11...Nd4 Not the only move but the most direct one. 11...O-O 12.cxb5 Nd4 and Black manages to equalize thanks to the usual Sveshnikov counterplay. 12.Bd3 0-0 13.0-0 Ne6 14.Bh4 The position can become unclear and very dangerous for White. 14...g5 A good plan for Black. 15.Bg3 h5 Black will get very active on the kingside. 16.h3 h4 17.Bh2 The best setup for White according to the engines. 17...Kh7 And now one of the many ways to play this position is a move offered by the engine, just trying to checkmate White's king. 18.cxb5 Rg8 ...C4 is a real threat with the knight still stuck on the other edge of the board îîStartBracketîîa3îîEndBracketîî. 19.f3 Nh5 Black follows up with ...Ng3 or ...Nf4. For one small pawn, I would definitely take Black here, even if the position is objectively equal according to the machines.

**B33**

☐ **Lesson Sveshnikov The,T**
■ **Sveshnikov 9.Bxf6 gxf6 10.Nd5**

1.e4 c5 2.Nf3 Nc6 3.d4 cxd4 4.Nxd4 Nf6 5.Nc3 e5 6.Ndb5 d6 7.Bg5 a6 8.Na3 b5 9.Bxf6 We will analyze 9.Bxf6 in this lesson. 9...gxf6 9...Qxf6 doesn't make any sense as after 10.Nd5 Qd8 Black gets a worse version of the 9.Nd5 variation. 10.Nd5 First of all, I would like to apologize in advance because in this lesson, there will be a lot of theory and a lot of variations. But what to do? The Sveshnikov is a very important variation and in this line, the price of a move is very high. Quite often both sides will have to make only moves. Of course, there are general ideas: Black is trying to push ...f5 by all means and White is trying to play c2-c3 to get the knight into the game. White will usually need also to blockade the centre while trying to use the central squares to create strategic and tactical possibilities.

On the other hand, despite Black's weird pawn structure, he gets a powerful center. But frankly, all of these details won't be relevant as you will see the variations are very direct in many lines and you just need to know the theory move by move. 10...Bg7 Although not the mainline, according to modern theory this is a decent way of playing. I don't see a real advantage for White here. You need to know that this variation is much more forcing than 10...f5 and Black is basically trying to make a forced draw, therefore you really need to memorize the following variations. 11.Bd3 The main move here in this position. 11...Ne7 Since Bd3 cut the queen's access to the d5-square, this is the perfect timing to attack it with Ne7. 12.Nxe7 Qxe7 This is the position where play gets very direct. 13.0-0 0-0 It is pretty clear that sooner or later White willl try to get his knight into the game and he has two different ways to do it: c4 and c3. 14.c4 Used to be by far the main move theoretically at some point, but it's actually analyzed very heavily and it looks like Black is holding a draw in every line, nothing more than that though. 14...f5 Black almost always wants to follow up f5 with d5 freeing up the g7 bishop even at the cost of a pawn sometimes. 15.Qh5 Now I think that Black has two ways to equalize and be fine. 15...d5 The engines discovered this very direct way of handling this Qh5 system. 16.cxd5 Forced. 16...Qd8 This is a move that a human will never find on his own. It looks strange but it's the best move in the position. The idea behind it is if we take 16...fxe4 17.Bxe4 and now play 17...f5 , there is 18. d6 , attacking the rook on a8. If you try to play the same idea but with 16... Qd6 instead then White has the very annoying 17.Rac1 with Rc6 coming sometimes. That's why we go 16...Qd8. 17.exf5 The computers believe that this move should be played now, and I agree. 17...Qxd5 18.Rad1 e4 Again the game is very forced. 19.Bxb5 Qxf5 20.Qxf5 Bxf5 21.Bd7 Bxd7 22.Rxd7 Bxb2 23.Nc4 Bg7 Well White has a certain initiative because Black's damaged structure and White's active pieces. White might be pressing a bit but frankly it shouldn't be hard to draw this position. This is why 15...d5 is considered forced equality.

**B33**

☐ **Lesson Sveshnikov The,T**
■ **Sveshnikov 9.Bxf6 gxf6 10.Nd5**

1.e4 c5 2.Nf3 Nc6 3.d4 cxd4 4.Nxd4 Nf6 5.Nc3 e5 6.Ndb5 d6 7.Bg5 a6 8.Na3 b5 9.Bxf6 We will analyze 9.Bxf6 in this lesson. 9...gxf6 9...Qxf6 doesn't make any sense as after 10.Nd5 Qd8 Black gets a worse version of the 9.Nd5 variation. 10.Nd5 First of all, I would like to apologize in advance because in this lesson, there will be a lot of theory and a lot of variations. But what to do? The Sveshnikov is a very important variation and in this line, the price of a move is very high. Quite often both sides will have to make only moves. Of course, there are general ideas: Black is trying to push ...f5 by all means and White is trying to play c2-c3 to get the knight into the game. White will usually need also to blockade the centre

while trying to use the central squares to create strategic and tactical possibilities. On the other hand, despite Black's weird pawn structure, he gets a powerful center. But frankly, all of these details won't be relevant as you will see the variations are very direct in many lines and you just need to know the theory move by move. 10...f5 This was my preferred choice when I was playing the Sveshnikov. White has plenty of replies here so let's look at them one by one. 11.c3 This move gives me mixed memories because in my first game ever in the Sveshnikov variation which I played in the last round of the U14 Soviet Championship, I was 12 at the time, and in the game, my opponent played this c3 move. 11...Bg7 This is the correct move here. 12.exf5 Bxf5 13.Nc2 WhaC is good about this position is that you can get it against both Bf5 and Bg7. This was causing quite some trouble for Black in the 90s as I painfully recollect now. But finally now it seems that Black has found îîStartBracketîîI can say partly thanks to my effortsîîEndBracketîî a way to equalize against this move. 13...0-0 14.Nce3 Be6 14.C.Bd7 is not popular at all and honestly looks a bit strangeîîStartBracketîîthe bishop on e6 looks better placedîîEndBracketîî but it might be an interesting move. 15.a4 Not a serious try. 15...Ne7 A direct draw. 16.Nxe7+ Qxe7 17.axb5 axb5 18.Rxa8 Rxa8 19.Bxb5 Qb7 20.c4 d5 A tactical opportunity, White is not better at all.

**B33**

☐ **Lesson Sveshnikov The,P**
■ **Sveshnikov 9.Nd5 10.Bxf6 11.c**

1.e4 c5 2.Nf3 Nc6 3.d4 cxd4 4.Nxd4 Nf6 5.Nc3 e5 6.Ndb5 d6 Today we will look at the second part of the three lessons on the Sveshnikov. 7.Bg5 The main move and definitely the most challenging one. Nd5 is threatened, Black's next move is practically forced. 7...a6 8.Na3 b5 Obviously the best move in the position, White wants to get the knight closer to the d5-square, this move prevents that plan and threatens ...b4 as well. 9.Nd5 So today we are going to study this move, 9.Nd5, a kind of positional system. It has been played countless times on the top level. Now Black has to be very accurate, after listening to this course you will have good knowledge of the nuances of this system and if your opponent is not so well-prepared then you have considerable chances to get a certain advantage out of the opening. 9...Be7 TheConly move to fight for equality, and even if Black most often equalizes on the top level, just one wrong move and White will get a significant advantage. Definitely, a rather risk-free variation for White if you know what you are doing. For those of you who want to play this line with Black, I'll try to give a detailed analysis of the current state of theory, the best directions and certain concrete variations - that will already be enough information for you to play it with Black îîStartBracketîîif you are not in the top 10 of the worldîîEndBracketîî. 9...Be6 is a mistake, you'll understand this more after watching the next lesson. 10.Bxf6 gxf6 11.c3 f5 12.exf5 Bxf5 and Black simply lost a tempo. 10.Bxf6 Bxf6 In this position for many many

years White would practically immediately play c3, which I believe that it's still the strongest move, trying to follow it up with Nc2. 11.c3 Bg5 The most fashionable system nowadays, coupled with Rb8-O-O-b4. It might be even better to start with 11...Rb8 , as Nxf6+ is never really a threat. 12.Nc2 Bg5 and now the point is that h4 doesn't work anymore. 13.h4 Bxh4 and there is no mate on the h-file of course. 12.Nc2 Rb8 Black wants to get the same position without allowing Garry's annoying h4. 13.a4 bxa4 14.Ncb4 A very serious attempt by White. Here you need to know and memorize some theory but it is only one major critical line and it seems that if you analyze it well and remember all the details there is a very good chance Black will equalize. 14...Nxb4 15.Nxb4 This is practically a forced draw 15...Bd7 An important move. 16.Bxa6 Qa5 Simple and good. 17.Qxd6 Rb6 18.Qd3 Be7 18...Be6 is also possible. 19.Nd5 Rxb2 19...Rxa6?? What a painful blunder! 20. Qxa6 and White wins. 20.0-0 Qc5 Probably the simplest, modern engines are able to easily equalize this position. 21.Rab1 Rxb1 22.Rxb1 0-0 23.Bb5 Bxb5 24.Rxb5 Qa7 This is basically a forced draw now. 25.Qe3 Qd7 26.Ra5 Rb8 27.Nxe7+ Qxe7 28.g3 Qd6 29.Kg2 Qc6 30.Qd3 f5

1.e4 c5 2.Nf3 Nc6 3.d4 cxd4 4.Nxd4 Nf6 5.Nc3 e5 6.Ndb5 d6 Today we will look at the second part of the three lessons on the Sveshnikov. 7.Bg5 The main move and definitely the most challenging one. Nd5 is threatened, Black's next move is practically forced. 7...a6 8.Na3 b5 Obviously the best move in the position, White wants to get the knight closer to the d5-square, this move prevents that plan and threatens ...b4 as well. 9.Nd5 So today we are going to study this move, 9.Nd5, a kind of positional system. It has been played countless times on the top level. Now Black has to be very accurate, after listening to this course you will have good knowledge of the nuances of this system and if your opponent is not so well-prepared then you have considerable chances to get a certain advantage out of the opening. 9...Be7 TheÇonly move to fight for equality, and even if Black most often equalizes on the top level, just one wrong move and White will get a significant advantage. Definitely, a rather risk-free variation for White if you know what you are doing. For those of you who want to play this line with Black, I'll try to give a detailed analysis of the current state of theory, the best directions and certain concrete variations - that will already be enough information for you to play it with Black îîStartBracketîîif you are not in the top 10 of the worldîîEndBracketîî. 9...Be6 is a mistake, you'll understand this more after watching the next lesson. 10.Bxf6 gxf6 11.c3 f5 12.exf5 Bxf5 and Black simply lost a tempo. 10.Bxf6 Bxf6 In this position for many many years White would practically immediately play c3, which I believe that it's still the strongest move, trying to follow it up with Nc2. 11.c3 Bg5 The most fashionable

system nowadays, coupled with Rb8-O-O-b4. It might be even better to start with 11...Rb8 , as Nxf6+ is never really a threat. 12.Nc2 Bg5 and now the point is that h4 doesn't work anymore. 13.h4 Bxh4 and there is no mate on the h-file of course. 12.Nc2 Rb8 Black wants to get the same position without allowing Garry's annoying h4. 13.Nce3 0-0 14.a4 Bxe3 This is quite harmless, Black is doing fine 15.Nxe3 bxa4 16.Qxa4 Ne7 Black will definitely manage to create counterplay with f5.

**B33**

☐ **Lesson Sveshnikov The,P**
■ **Sveshnikov 9.Nd5 10.Bxf6 11.c**

1.e4 c5 2.Nf3 Nc6 3.d4 cxd4 4.Nxd4 Nf6 5.Nc3 e5 6.Ndb5 d6 Today we will look at the second part of the three lessons on the Sveshnikov. 7.Bg5 The main move and definitely the most challenging one. Nd5 is threatened, Black's next move is practically forced. 7...a6 8.Na3 b5 Obviously the best move in the position, White wants to get the knight closer to the d5-square, this move prevents that plan and threatens ...b4 as well. 9.Nd5 So today we are going to study this move, 9.Nd5, a kind of positional system. It has been played countless times on the top level. Now Black has to be very accurate, after listening to this course you will have good knowledge of the nuances of this system and if your opponent is not so well-prepared then you have considerable chances to get a certain advantage out of the opening. 9...Be7 TheConly move to fight for equality, and even if Black most often equalizes on the top level, just one wrong move and White will get a significant advantage. Definitely, a rather risk-free variation for White if you know what you are doing. For those of you who want to play this line with Black, I'll try to give a detailed analysis of the current state of theory, the best directions and certain concrete variations - that will already be enough information for you to play it with Black îîStartBracketîîif you are not in the top 10 of the worldîîEndBracketîî. 9...Be6 is a mistake, you'll understand this more after watching the next lesson. 10.Bxf6 gxf6 11.c3 f5 12.exf5 Bxf5 and Black simply lost a tempo. 10.Bxf6 Bxf6 In this position for many many years White would practically immediately play c3, which I believe that it's still the strongest move, trying to follow it up with Nc2. 11.c3 0-0 12.Nc2 Bg5 After Garry practically refuted the Rb8 move order, I switched to Bg5 first. This is a very solid system and Black is able to equalize with very accurate play, but it is not easy. 13.a4 bxa4 Practically forced. 14.Rxa4 a5 15.Bc4 Rb8 This a big tabia. 16.Ra2
In around 2003, Ponomariov played this very dangerous plan against me in a very interesting game that I advise you to study and check. 16...Kh8 17.h4 Bh6 18.Nce3 Bxe3 19.Nxe3 Ne7 20.h5 h6 21.g4 Qc7 Black can equalize but it will require accuracy.

**B33**

☐ **Lesson Sveshnikov The,P**
■ **Sveshnikov 9.Nd5 10.Bxf6 11.c**

1.e4 c5 2.Nf3 Nc6 3.d4 cxd4 4.Nxd4 Nf6 5.Nc3 e5 6.Ndb5 d6 Today we will look at the second part of the three lessons on the Sveshnikov. 7.Bg5 The main move and definitely the most challenging one. Nd5 is threatened, Black's next move is practically forced. 7...a6 8.Na3 b5 Obviously the best move in the position, White wants to get the knight closer to the d5-square, this move prevents that plan and threatens ...b4 as well. 9.Nd5 So today we are going to study this move, 9.Nd5, a kind of positional system. It has been played countless times on the top level. Now Black has to be very accurate, after listening to this course you will have good knowledge of the nuances of this system and if your opponent is not so well-prepared then you have considerable chances to get a certain advantage out of the opening. 9...Be7 TheConly move to fight for equality, and even if Black most often equalizes on the top level, just one wrong move and White will get a significant advantage. Definitely, a rather risk-free variation for White if you know what you are doing. For those of you who want to play this line with Black, I'll try to give a detailed analysis of the current state of theory, the best directions and certain concrete variations - that will already be enough information for you to play it with Black îîStartBracketîîif you are not in the top 10 of the worldîîEndBracketîî. 9...Be6 is a mistake, you'll understand this more after watching the next lesson. 10.Bxf6 gxf6 11.c3 f5 12.exf5 Bxf5 and Black simply lost a tempo. 10.Bxf6 Bxf6 In this position for many many years White would practically immediately play c3, which I believe that it's still the strongest move, trying to follow it up with Nc2. 11.c4 This move started to get more and more popular sometime around the end of the 20th century, and was causing Black some problems for a while. Nevertheless, I believe that Black found a convincing way to deal with the text move. Black tried the move 11...Nd4 for a while, sacrificing the b-pawn for some compensation, but it's not very convincing. 11...b4 The most logical reply. 12.Nc2 a5 The problem for White in this setup is that the d4-square is terminally weakened. So the knight on c2 is tasked with defending it, trying to hold the knight on c6 for as long as possible. White's plan ideally is to exchange the bad light-squared bishop, should he achieve that task White will end up in a strategically winning position. Nevertheless, I must emphasize that it goes against my classical positional education to put the White pawn on c4 limiting the light-squared bishop on c1, with a potential hole on d4 I don't believe this should ever give White any advantage. 13.g3 The main idea in this line. 13...0-0 14.h4 WhiCe's main try. A multifunctional move, firstly stopping ...Bg5, now Black has a problem to solve with his dark-squared bishop. Secondly preparing Bh3 and trying somehow to exchange the bishop. Black didn't manage to equalize here for quite a while, but by now, people îîStartBracketîîor their enginesîîEndBracketîî finally figured out a solid and good setup against it. Actually, it is not a setup, but Black rather organizes tactical counterplay quickly and it seems to work! 14...Be6 15.Bh3 The most

dangerous and straightforward way of playing for White. White now has ideas of Bf5-h5 and Kf1-Kg2. Black has certain difficulties finding moves here, the dark-squared bishop remains passive on f6 and ...Qd7 is never possible because of Nb6. 15...a4 A very important move. Black simply wants to play ...b3 next. 16.b3 It's a very bad idea for White to stop b3 by playing it! 16...Nd4 17.Nxd4 exd4 The difference is that now White is not in time to block the d4-pawn! 18.Qd3 Bxd5 19.cxd5 axb3 20.Qxb3 d3 And Black is clearly winning.

**B33**

☐ **Lesson Sveshnikov The,P**
■ **Sveshnikov 9.Nd5 10.Bxf6 11.c**

1.e4 c5 2.Nf3 Nc6 3.d4 cxd4 4.Nxd4 Nf6 5.Nc3 e5 6.Ndb5 d6 Today we will look at the second part of the three lessons on the Sveshnikov. 7.Bg5 The main move and definitely the most challenging one. Nd5 is threatened, Black's next move is practically forced. 7...a6 8.Na3 b5 Obviously the best move in the position, White wants to get the knight closer to the d5-square, this move prevents that plan and threatens ...b4 as well. 9.Nd5 So today we are going to study this move, 9.Nd5, a kind of positional system. It has been played countless times on the top level. Now Black has to be very accurate, after listening to this course you will have good knowledge of the nuances of this system and if your opponent is not so well-prepared then you have considerable chances to get a certain advantage out of the opening. 9...Be7 TheConly move to fight for equality, and even if Black most often equalizes on the top level, just one wrong move and White will get a significant advantage. Definitely, a rather risk-free variation for White if you know what you are doing. For those of you who want to play this line with Black, I'll try to give a detailed analysis of the current state of theory, the best directions and certain concrete variations - that will already be enough information for you to play it with Black îîStartBracketîîif you are not in the top 10 of the worldîîEndBracketîî. 9...Be6 is a mistake, you'll understand this more after watching the next lesson. 10.Bxf6 gxf6 11.c3 f5 12.exf5 Bxf5 and Black simply lost a tempo. 10.Bxf6 Bxf6 In this position for many many years White would practically immediately play c3, which I believe that it's still the strongest move, trying to follow it up with Nc2. 11.c4 This move started to get more and more popular sometime around the end of the 20th century, and was causing Black some problems for a while. Nevertheless, I believe that Black found a convincing way to deal with the text move. Black tried the move 11...Nd4 for a while, sacrificing the b-pawn for some compensation, but it's not very convincing. 11...b4 The most logical reply. 12.Nc2 a5 The problem for White in this setup is that the d4-square is terminally weakened. So the knight on c2 is tasked with defending it, trying to hold the knight on c6 for as long as possible. White's plan ideally is to exchange the bad light-squared bishop, should he achieve that task White will end up in a strategically winning position. Nevertheless, I must emphasize that it goes against

my classical positional education to put the White pawn on c4 limiting the light-squared bishop on c1, with a potential hole on d4 I don't believe this should ever give White any advantage. 13.Qf3 There is this idea of playing Qf3. Also, I'm not impressed with it. 13...Be7 Losing a tempi but it is not a big deal because Qf3 is not a big tempi gain for White either. 14.a3 Another idea behind this Qf3 move. This definitely makes sense, trying to get some play on the queenside. 14...bxa3 15.Qxa3 0-0 16.Be2 A very typical Sveshnikov position. 16...Be6 17.0-0 Although the white queen is better placed on a3 in this variation, with some pressure on the d6-square, the position is very drawish. 17...Bg5 18.Rfd1 Qb8 The move 18...Rb8 is equally fine. Even if Black somehow manages to lose the d6-pawn, Black retains plenty of compensation thanks to the bishop pair and the open b-line. In the long run, Black has nothing to worry about, and this Qa3 idea is harmless. All you need to know is that you can afford to lose a tempo with Be7.

**B33**

☐ **Lesson Sveshnikov The,T**
■ **Sveshnikov 9.Bxf6 gxf6 10.Nd5**

1.e4 c5 2.Nf3 Nc6 3.d4 cxd4 4.Nxd4 Nf6 5.Nc3 e5 6.Ndb5 d6 7.Bg5 a6 8.Na3 b5 9.Bxf6 We will analyze 9.Bxf6 in this lesson. 9...gxf6 9...Qxf6 doesn't make any sense as after 10.Nd5 Qd8 Black gets a worse version of the 9.Nd5 variation. 10.Nd5 First of all, I would like to apologize in advance because in this lesson, there will be a lot of theory and a lot of variations. But what to do? The Sveshnikov is a very important variation and in this line, the price of a move is very high. Quite often both sides will have to make only moves. Of course, there are general ideas: Black is trying to push ...f5 by all means and White is trying to play c2-c3 to get the knight into the game. White will usually need also to blockade the centre while trying to use the central squares to create strategic and tactical possibilities. On the other hand, despite Black's weird pawn structure, he gets a powerful center. But frankly, all of these details won't be relevant as you will see the variations are very direct in many lines and you just need to know the theory move by move. 10...Bg7 Although not the mainline, according to modern theory this is a decent way of playing. I don't see a real advantage for White here. You need to know that this variation is much more forcing than 10...f5 and Black is basically trying to make a forced draw, therefore you really need to memorize the following variations. 11.Bd3 The main move here in this position. 11...Ne7 Since Bd3 cut the queen's access to the d5-square, this is the perfect timing to attack it with Ne7. 12.Nxe7 Qxe7 This is the position where play gets very direct. 13.0-0 0-0 It is pretty clear that sooner or later White willl try to get his knight into the game and he has two different ways to do it: c4 and c3. 14.c4 Used to be by far the main move theoretically at some point, but it's actually analyzed very heavily and it looks like Black is holding a draw in every line, nothing more than that though. 14...f5 Black almost always wants

to follow up f5 with d5 freeing up the g7 bishop even at the cost of a pawn sometimes. 15.Qh5 Now I think that Black has two ways to equalize and be fine. 15...d5 The engines discovered this very direct way of handling this Qh5 system. 16.cxd5 Forced. 16...Qd8 This is a move that a human will never find on his own. It looks strange but it's the best move in the position. The idea behind it is if we take 16...fxe4 17.Bxe4 and now play 17...f5 , there is 18. d6 , attacking the rook on a8. If you try to play the same idea but with 16... Qd6 instead then White has the very annoying 17.Rac1 with Rc6 coming sometimes. That's why we go 16...Qd8. 17.f3 This is a very dangerous move for White. 17...f4 Now there is a serious issue with the queen on h5. 18.Kh1 Rb8 And the rook is coming for the white queen along the 6th rank. 19.g4 The only way for White to play. 19...Rb6 20.g5 Rg6 Black has great compensation for the pawn. Keep in mind that the g7 bishop will eventually go to c5 probably via f8. By the way this is one of the important factors in this position is that seemingly passive bishop on g7 becomes extremely dangerous when it comes to the other diagonal.

**B33**

☐ **Lesson Sveshnikov The,T**
■ **Sveshnikov 9.Bxf6 gxf6 10.Nd5**

1.e4 c5 2.Nf3 Nc6 3.d4 cxd4 4.Nxd4 Nf6 5.Nc3 e5 6.Ndb5 d6 7.Bg5 a6 8.Na3 b5 9.Bxf6 We will analyze 9.Bxf6 in this lesson. 9...gxf6 9...Qxf6 doesn't make any sense as after 10.Nd5 Qd8 Black gets a worse version of the 9.Nd5 variation. 10.Nd5 First of all, I would like to apologize in advance because in this lesson, there will be a lot of theory and a lot of variations. But what to do? The Sveshnikov is a very important variation and in this line, the price of a move is very high. Quite often both sides will have to make only moves. Of course, there are general ideas: Black is trying to push ...f5 by all means and White is trying to play c2-c3 to get the knight into the game. White will usually need also to blockade the centre while trying to use the central squares to create strategic and tactical possibilities. On the other hand, despite Black's weird pawn structure, he gets a powerful center. But frankly, all of these details won't be relevant as you will see the variations are very direct in many lines and you just need to know the theory move by move. 10...f5 This was my preferred choice when I was playing the Sveshnikov. White has plenty of replies here so let's look at them one by one. 11.Bd3 Be6 12.0-0 Bxd5 Now this move is necessary. 13.exd5 Ne7 There's a lot of discussions and from time to time there are games at the top level here. There are some nuances but all in all I believe Black is holding here. 14.c3 The main move for quite some time. 14...Bg7 15.Qh5 e4 The most important thing for you now is to study many games from this position. More or less everything is shown how to equalize and studying games will help you grasp and remember the concepts. 16.Be2 0-0 17.Nc2 Kh8 The preferred move by the engine. 17... Re8 and 17...f4 are also okay. 18.Rad1 f4

19.f3 e3 20.Qg5 Ng6 21.Qxd8 Rfxd8 With the rook on a1 White would have had the a4 plan. Here there is no a4 and Black is at least not worse.

**B33**

☐ **Lesson Sveshnikov The,T**
■ **Sveshnikov 9.Bxf6 gxf6 10.Nd5**

1.e4 c5 2.Nf3 Nc6 3.d4 cxd4 4.Nxd4 Nf6 5.Nc3 e5 6.Ndb5 d6 7.Bg5 a6 8.Na3 b5 9.Bxf6 We will analyze 9.Bxf6 in this lesson. 9...gxf6 9...Qxf6 doesn't make any sense as after 10.Nd5 Qd8 Black gets a worse version of the 9.Nd5 variation. 10.Nd5 First of all, I would like to apologize in advance because in this lesson, there will be a lot of theory and a lot of variations. But what to do? The Sveshnikov is a very important variation and in this line, the price of a move is very high. Quite often both sides will have to make only moves. Of course, there are general ideas: Black is trying to push ...f5 by all means and White is trying to play c2-c3 to get the knight into the game. White will usually need also to blockade the centre while trying to use the central squares to create strategic and tactical possibilities. On the other hand, despite Black's weird pawn structure, he gets a powerful center. But frankly, all of these details won't be relevant as you will see the variations are very direct in many lines and you just need to know the theory move by move. 10...f5 This was my preferred choice when I was playing the Sveshnikov. White has plenty of replies here so let's look at them one by one. 11.c3 This move gives me mixed memories because in my first game ever in the Sveshnikov variation which I played in the last round of the U14 Soviet Championship, I was 12 at the time, and in the game, my opponent played this c3 move. 11...Bg7 This is the correct move here. 12.exf5 Bxf5 13.Nc2 WhaC is good about this position is that you can get it against both Bf5 and Bg7. This was causing quite some trouble for Black in the 90s as I painfully recollect now. But finally now it seems that Black has found îîStartBracketîîI can say partly thanks to my effortsîîEndBracketîî a way to equalize against this move. 13...0-0 14.Nce3 Be6 14.C.Bd7 is not popular at all and honestly looks a bit strangeîîStartBracketîîthe bishop on e6 looks better placedîîEndBracketîî but it might be an interesting move. 15.Bd3 The main move by far. 15...f5 And here during the 1990s I had a lot of games in this position, it wasn't easy at the time but nowadays it is clear that Black is more or less fine in this position. 16.Bc2 For quite a while this was considered as a dangerous move, but the modern engines in less than a second found a forced draw here. 16...f4 This was supposed to be bad because of Qh5. 17.Qh5 Rf7 A very important variation to know, because if not for f4 then White would have a serious advantage here. Nevertheless, now it's a forced draw. 18.Bxh7+ Kf8 19.Bf5 Qe8 This move is very strong. 20.Bxe6 Qxe6 21.Qg4 Qh6 White is a pawn up but now is forced to repeat moves 22.Nf5 Qe6 23.Nfe3 Qh6 24.0-0 If White castles we need to remember our next move. 24...e4 Very important. White quickly has to repeat to make a draw. 25.Nf5 Qe6 26.Nfe3 With a repetition.

☐ **Lesson Sveshnikov The,T**
■ **Sveshnikov 9.Bxf6 gxf6 10.Nd5**

1.e4 c5 2.Nf3 Nc6 3.d4 cxd4 4.Nxd4 Nf6 5.Nc3 e5 6.Ndb5 d6 7.Bg5 a6 8.Na3 b5 9.Bxf6 We will analyze 9.Bxf6 in this lesson. 9...gxf6 9...Qxf6 doesn't make any sense as after 10.Nd5 Qd8 Black gets a worse version of the 9.Nd5 variation. 10.Nd5 First of all, I would like to apologize in advance because in this lesson, there will be a lot of theory and a lot of variations. But what to do? The Sveshnikov is a very important variation and in this line, the price of a move is very high. Quite often both sides will have to make only moves. Of course, there are general ideas: Black is trying to push ...f5 by all means and White is trying to play c2-c3 to get the knight into the game. White will usually need also to blockade the centre while trying to use the central squares to create strategic and tactical possibilities. On the other hand, despite Black's weird pawn structure, he gets a powerful center. But frankly, all of these details won't be relevant as you will see the variations are very direct in many lines and you just need to know the theory move by move. 10...f5 This was my preferred choice when I was playing the Sveshnikov. White has plenty of replies here so let's look at them one by one. 11.Bxb5 This is better than the knight sacrifice on b5. Here it might be even enough for White to make a draw. Of course objectively White is never fighting for an advantage here but the positions are really crazy and you need to check it yourself with a powerful engine. 11...axb5 12.Nxb5 Ra4 The most popular way. 13.Nbc7+ Kd7 What a crazy position. 14.0-0 Rg8 Black has more or less a forced draw with this move, stopping Qh5. 15.Qh5 Qg5 The idea behind Rg8. 16.Qxf7+ Be7 17.g3 Qg6 After we exchange queens Black will comfortably win this position.

**B33**

☐ **Lesson Sveshnikov The,T**
■ **Sveshnikov 9.Bxf6 gxf6 10.Nd5**

1.e4 c5 2.Nf3 Nc6 3.d4 cxd4 4.Nxd4 Nf6 5.Nc3 e5 6.Ndb5 d6 7.Bg5 a6 8.Na3 b5 9.Bxf6 We will analyze 9.Bxf6 in this lesson. 9...gxf6 9...Qxf6 doesn't make any sense as after 10.Nd5 Qd8 Black gets a worse version of the 9.Nd5 variation. 10.Nd5 First of all, I would like to apologize in advance because in this lesson, there will be a lot of theory and a lot of variations. But what to do? The Sveshnikov is a very important variation and in this line, the price of a move is very high. Quite often both sides will have to make only moves. Of course, there are general ideas: Black is trying to push ...f5 by all means and White is trying to play c2-c3 to get the knight into the game. White will usually need also to blockade the centre while trying to use the central squares to create strategic and tactical possibilities. On the other hand, despite Black's weird pawn structure, he gets a powerful center.

But frankly, all of these details won't be relevant as you will see the variations are very direct in many lines and you just need to know the theory move by move. 10...Bg7 Although not the mainline, according to modern theory this is a decent way of playing. I don't see a real advantage for White here. You need to know that this variation is much more forcing than 10...f5 and Black is basically trying to make a forced draw, therefore you really need to memorize the following variations. 11.Bd3 The main move here in this position. 11...Ne7 Since Bd3 cut the queen's access to the d5-square, this is the perfect timing to attack it with Ne7. 12.Nxe7 Qxe7 This is the position where play gets very direct. 13.0-0 0-0 It is pretty clear that sooner or later White willl try to get his knight into the game and he has two different ways to do it: c4 and c3. 14.c3 As White in my opinion, I suggest you try this move c3. Even though it is out of fashion I think it is very playable. Black is okay objectively but it is less forcing and Black will have to make some accurate moves to get there. 14...f5 Of course. 15.Nc2 Black is at a crossroad now, what to do with the center? 15...d5 16.exf5 e4 17.Be2 Rd8 Not a lot of games here at the top level, I think Black still needs to play accurately to equalize this position. 18.Bg4 Qg5 19.g3 Bxf5 20.Bxf5 Qxf5 21.a4 There is a very tiny tiny edge for White. Black still has to show how exactly he's making a draw. This is my recommendation for White because honestly I don't see what else. It is smart to sometime test your opponent if they know their stuff in the c4 lines but frankly if he's very well prepared the lines are pretty direct.

**B33**

☐ **Lesson Sveshnikov The,T**
■ **Sveshnikov 9.Bxf6 gxf6 10.Nd5**

1.e4 c5 2.Nf3 Nc6 3.d4 cxd4 4.Nxd4 Nf6 5.Nc3 e5 6.Ndb5 d6 7.Bg5 a6 8.Na3 b5 9.Bxf6 We will analyze 9.Bxf6 in this lesson. 9...gxf6 9...Qxf6 doesn't make any sense as after 10.Nd5 Qd8 Black gets a worse version of the 9.Nd5 variation. 10.Nd5 First of all, I would like to apologize in advance because in this lesson, there will be a lot of theory and a lot of variations. But what to do? The Sveshnikov is a very important variation and in this line, the price of a move is very high. Quite often both sides will have to make only moves. Of course, there are general ideas: Black is trying to push ...f5 by all means and White is trying to play c2-c3 to get the knight into the game. White will usually need also to blockade the centre while trying to use the central squares to create strategic and tactical possibilities. On the other hand, despite Black's weird pawn structure, he gets a powerful center. White has plenty of replies here so let's look at them one by one. 11.Bd3 Be6 12.0-0 Bxd5 Now this move is necessary. 13.exd5 Ne7 There's a lot of discussions and from time to time there are games at the top level here. There are some nuances but all in all I believe Black is holding here. 14.Re1 Bg7 15.c3 0-0 Black needs to be careful here and not push e4 too quickly. 16.Qh5 The idea behind my plan is to play Qh5 here. 16...e4 17.Bf1 This is the most dangerous position for Black in this whole Bd3 line. Even if it is objectively okay here Black must be pretty careful. 17...b4 This looks good but things are not so easy actually. 18.cxb4 Bxb2 19.Rab1 There's this trick! 19...Bxa3 20.Rb3 With Rh3 threatened, this is quite dangerous for Black.

**B33**

☐ **Lesson Sveshnikov The,P**
■ **Sveshnikov 9.Nd5 10.Bxf6 11.c**

1.e4 c5 2.Nf3 Nc6 3.d4 cxd4 4.Nxd4 Nf6 5.Nc3 e5 6.Ndb5 d6 Today we will look at the second part of the three lessons on the Sveshnikov. 7.Bg5 The main move and definitely the most challenging one. Nd5 is threatened, Black's next move is practically forced. 7...a6 8.Na3 b5 Obviously the best move in the position, White wants to get the knight closer to the d5-square, this move prevents that plan and threatens ...b4 as well. 9.Nd5 So today we are going to study this move, 9.Nd5, a kind of positional system. It has been played countless times on the top level. Now Black has to be very accurate, after listening to this course you will have good knowledge of the nuances of this system and if your opponent is not so well-prepared

then you have considerable chances to get a certain advantage out of the opening. 9...Be7 TheConly move to fight for equality, and even if Black most often equalizes on the top level, just one wrong move and White will get a significant advantage. Definitely, a rather risk-free variation for White if you know what you are doing. For those of you who want to play this line with Black, I'll try to give a detailed analysis of the current state of theory, the best directions and certain concrete variations - that will already be enough information for you to play it with Black îîStartBracketîîif you are not in the top 10 of the worldîîEndBracketîî. 9...Be6 is a mistake, you'll understand this more after watching the next lesson. 10.Bxf6 gxf6 11.c3 f5 12.exf5 Bxf5 and Black simply lost a tempo. 10.Bxf6 Bxf6 In this position for many many years White would practically immediately play c3, which I believe that it's still the strongest move, trying to follow it up with Nc2. 11.c4 This move started to get more and more popular sometime around the end of the 20th century, and was causing Black some problems for a while. Nevertheless, I believe that Black found a convincing way to deal with the text move. Black tried the move 11...Nd4 for a while, sacrificing the b-pawn for some compensation, but it's not very convincing. 11...b4 The most logical reply. 12.Nc2 a5 The problem for White in this setup is that the d4-square is terminally weakened. So the knight on c2 is tasked with defending it, trying to hold the knight on c6 for as long as possible. White's plan ideally is to exchange the bad light-squared bishop, should he achieve that task White will end up in a strategically winning position. Nevertheless, I must emphasize that it goes against my classical positional education to put the White pawn on c4 limiting the light-squared bishop on c1, with a potential hole on d4 I don't believe this should ever give White any advantage. 13.g3 The main idea in this line. 13...0-0 14.h4 WhiCe's main try. A multifunctional move, firstly stopping ...Bg5, now Black has a problem to solve with his dark-squared bishop. Secondly preparing Bh3 and trying somehow to exchange the bishop. Black didn't manage to equalize here for quite a while, but by now, people îîStartBracketîîor their enginesîîEndBracketîî finally figured out a solid and good setup against it. Actually, it is not a setup, but Black rather organizes tactical counterplay quickly and it seems to work! 14...Be6 15.Bh3 The most dangerous and straightforward way of playing for White. White now has ideas of Bf5-h5 and Kf1-Kg2. Black has certain difficulties finding moves here, the dark-squared bishop remains passive on f6 and ...Qd7 is never possible because of Nb6. 15...a4 A very important move. Black simply wants to play ...b3 next. 16.Kf1 b3 The direct move ...b3 works when White tries to play slowly. You can see now that the black knight will secure the very important d4-square with a great position for Black. 17.Nce3 Maybe it is better for White to start with this move instead of taking on b3. 17...Nd4 18.a3 Blocking the a-file. 18...Rc8 19.Rc1 g6 I don't really see what is White's plan. On the other hand, Black has different ideas such as ...Bg7 followed by ...f5 at some point. The future of the white king looks bleak.

**B33**

☐ **Lesson Sveshnikov The,P**
■ **Sveshnikov 9.Nd5 10.Bxf6 11.c**

1.e4 c5 2.Nf3 Nc6 3.d4 cxd4 4.Nxd4 Nf6 5.Nc3 e5 6.Ndb5 d6 Today we will look at the second part of the three lessons on the Sveshnikov. 7.Bg5 The main move and definitely the most challenging one. Nd5 is threatened, Black's next move is practically forced. 7...a6 8.Na3 b5 Obviously the best move in the position, White wants to get the knight closer to the d5-square, this move prevents that plan and threatens ...b4 as well. 9.Nd5 So today we are going to study this move, 9.Nd5, a kind of positional system. It has been played countless times on the top level. Now Black has to be very accurate, after listening to this course you will have good knowledge of the nuances of this system and if your opponent is not so well-prepared then you have considerable chances to get a certain advantage out of the opening. 9...Be7 TheConly move to fight for equality, and even if Black most often equalizes on the top level, just one wrong move and White will get a significant advantage. Definitely, a rather risk-free variation for White if you know what you are doing. For those of you who want to play this line with Black, I'll try to give a detailed analysis of the current state of theory, the best directions and certain concrete variations - that will already be enough information for you to play it with Black îîStartBracketîîif you are not in the top 10 of the worldîîEndBracketîî. 9...Be6 is a mistake, you'll understand this more after watching the next lesson. 10.Bxf6 gxf6 11.c3 f5 12.exf5 Bxf5 and Black simply lost a tempo. 10.Bxf6 Bxf6 In this position for many many years White would practically immediately play c3, which I believe that it's still the strongest move, trying to follow it up with Nc2. 11.c3 0-0 12.Nc2 Bg5 After Garry practically refuted the Rb8 move order, I switched to Bg5 first. This is a very solid system and Black is able to equalize with very accurate play, but it is not easy. 13.a4 bxa4 Practically forced. 14.Rxa4 a5 15.Bc4 Rb8 This a big tabia. 16.b4
It is too early for b4 16...Bd7 17.Ra1 axb4 18.Ncxb4 Nxb4 19.cxb4 Strategically speaking if White can just put his king into safety followed by Qb1 he would for sure be better. 19...Be6 20.b5 Qc8 It is very important here that the bishop on g5 is controlling the c1 square. 21.Qb3 Qc5 And Black is definitely fine here with Rfc8 coming next.

**B33**

☐ **Lesson Sveshnikov The,P**
■ **Sveshnikov 9.Nd5 10.Bxf6 11.c**

1.e4 c5 2.Nf3 Nc6 3.d4 cxd4 4.Nxd4 Nf6 5.Nc3 e5 6.Ndb5 d6 Today we will look at the second part of the three lessons on the Sveshnikov. 7.Bg5 The main move and definitely the most challenging one. Nd5 is threatened, Black's next move is practically forced. 7...a6 8.Na3 b5 Obviously the best move in the position, White

wants to get the knight closer to the d5-square, this move prevents that plan and threatens ...b4 as well. 9.Nd5 So today we are going to study this move, 9.Nd5, a kind of positional system. It has been played countless times on the top level. Now Black has to be very accurate, after listening to this course you will have good knowledge of the nuances of this system and if your opponent is not so well-prepared then you have considerable chances to get a certain advantage out of the opening. 9...Be7 TheČonly move to fight for equality, and even if Black most often equalizes on the top level, just one wrong move and White will get a significant advantage. Definitely, a rather risk-free variation for White if you know what you are doing. For those of you who want to play this line with Black, I'll try to give a detailed analysis of the current state of theory, the best directions and certain concrete variations - that will already be enough information for you to play it with Black ÎîStartBracketîîif you are not in the top 10 of the worldîîEndBracketîî. 9...Be6 is a mistake, you'll understand this more after watching the next lesson. 10.Bxf6 gxf6 11.c3 f5 12.exf5 Bxf5 and Black simply lost a tempo. 10.Bxf6 Bxf6 In this position for many many years White would practically immediately play c3, which I believe that it's still the strongest move, trying to follow it up with Nc2. 11.c4 This move started to get more and more popular sometime around the end of the 20th century, and was causing Black some problems for a while. Nevertheless, I believe that Black found a convincing way to deal with the text move. Black tried the move 11...Nd4 for a while, sacrificing the b-pawn for some compensation, but it's not very convincing. 11...b4 The most logical reply. 12.Nc2 a5 The problem for White in this setup is that the d4-square is terminally weakened. So the knight on c2 is tasked with defending it, trying to hold the knight on c6 for as long as possible. White's plan ideally is to exchange the bad light-squared bishop, should he achieve that task White will end up in a strategically winning position. Nevertheless, I must emphasize that it goes against my classical positional education to put the White pawn on c4 limiting the light-squared bishop on c1, with a potential hole on d4 I don't believe this should ever give White any advantage. 13.g3 The main idea in this line. 13...0-0 14.h4 WhiČe's main try. A multifunctional move, firstly stopping ...Bg5, now Black has a problem to solve with his dark-squared bishop. Secondly preparing Bh3 and trying somehow to exchange the bishop. Black didn't manage to equalize here for quite a while, but by now, people ÎîStartBracketîîor their enginesîîEndBracketîî finally figured out a solid and good setup against it. Actually, it is not a setup, but Black rather organizes tactical counterplay quickly and it seems to work! 14...Be6 15.Bg2 g6 I like this route more than taking on d5. Black simply wants to play ...Bg7 and ...Rc8 and maybe ...f5 one day. The position is not so clear for White because the knight on c2 is still stuck and whenever you play Nce3, Black will immediately pounce with ...Nd4. 16.Bh3 White is trying to pretend this is a serious move, but he is not really threatening anything. Taking on e6 will deprive White of the strong outpost on d5. 16...Bg7 17.h5 The only logical continuation. White can't castle because the bishop on h3 would hang. Nevertheless, it is quite clear that White doesn't have enough resources to organize a serious attack on the black king. 17...Rb8 A typical

Sveshnikov move, hinting at ...b3 on an opportune moment. 18.Qd3 Qc8 19.Bg2 Qd8 Hinting at ...Qg5. If I was White, I'd be in a hurry to repeat moves because it is very easy to end up in a terrible position here.

**B33**

■ **Sveshnikov 9.Nd5 10.Bxf6 11.c**

1.e4 c5 2.Nf3 Nc6 3.d4 cxd4 4.Nxd4 Nf6 5.Nc3 e5 6.Ndb5 d6 Today we will look at the second part of the three lessons on the Sveshnikov. 7.Bg5 The main move and definitely the most challenging one. Nd5 is threatened, Black's next move is practically forced. 7...a6 8.Na3 b5 Obviously the best move in the position, White wants to get the knight closer to the d5-square, this move prevents that plan and threatens ...b4 as well. 9.Nd5 So today we are going to study this move, 9.Nd5, a kind of positional system. It has been played countless times on the top level. Now Black has to be very accurate, after listening to this course you will have good knowledge of the nuances of this system and if your opponent is not so well-prepared then you have considerable chances to get a certain advantage out of the opening. 9...Be7 TheConly move to fight for equality, and even if Black most often equalizes on the top level, just one wrong move and White will get a significant advantage. Definitely, a rather risk-free variation for White if you know what you are doing. For those of you who want to play this line with Black, I'll try to give a detailed analysis of the current state of theory, the best directions and certain concrete variations - that will already be enough information for you to play it with Black îîStartBracketîîif you are not in the top 10 of the worldîîEndBracketîî. 9...Be6 is a mistake, you'll understand this more after watching the next lesson. 10.Bxf6 gxf6 11.c3 f5 12.exf5 Bxf5 and Black simply lost a tempo. 10.Bxf6 Bxf6 In this position for many many years White would practically immediately play c3, which I believe that it's still the strongest move, trying to follow it up with Nc2. 11.c3 0-0 12.Nc2 Rb8 This move in this order was supposed to be clear-cut equality until... 13.h4 Garry Kasparov came up with move! Practically a refutation of this move order. A very powerful move, not only because it is a strong novelty but at the time Garry really understood the core ideas behind it. It is very important for White to limit the bishop. 13...g6 This almost makes sense, trying to play in the same way as in the c4 variation. But the difference is quite cruical. 14.g3 Bg7 15.h5 Be6 16.Nce3 A resource that was never available in the c4 lines because the knight had to guard the d4 square. 16...Ne7 17.Bh3 This is not the Sveshnikov variation that Black is happy with. White is better.

**B33**

☐ **Lesson Sveshnikov The,P**
■ **Sveshnikov 9.Nd5 10.Bxf6 11.c**

1.e4 c5 2.Nf3 Nc6 3.d4 cxd4 4.Nxd4 Nf6 5.Nc3 e5 6.Ndb5 d6 Today we will look at the second part of the three lessons on the Sveshnikov. 7.Bg5 The main move and definitely the most challenging one. Nd5 is threatened, Black's next move is practically forced. 7...a6 8.Na3 b5 Obviously the best move in the position, White wants to get the knight closer to the d5-square, this move prevents that plan and threatens ...b4 as well. 9.Nd5 So today we are going to study this move, 9.Nd5, a kind of positional system. It has been played countless times on the top level. Now Black has to be very accurate, after listening to this course you will have good knowledge of the nuances of this system and if your opponent is not so well-prepared then you have considerable chances to get a certain advantage out of the opening. 9...Be7 The only move to fight for equality, and even if Black most often equalizes on the top level, just one wrong move and White will get a significant advantage. Definitely, a rather risk-free variation for White if you know what you are doing. For those of you who want to play this line with Black, I'll try to give a detailed analysis of the current state of theory, the best directions and certain concrete variations - that will already be enough information for you to play it with Black îîStartBracketîîif you are not in the top 10 of the worldîîEndBracketîî. 9...Be6 is a mistake, you'll understand this more after watching the next lesson. 10.Bxf6 gxf6 11.c3 f5 12.exf5 Bxf5 and Black simply lost a tempo. 10.Bxf6 Bxf6 In this position for many many years White would practically immediately play c3, which I believe that it's still the strongest move, trying to follow it up with Nc2. 11.c3 0-0 12.Nc2 Rb8 This move in this order was supposed to be clear-cut equality until... 13.h4 Garry Kasparov came up with move! Practically a refutation of this move order. A very powerful move, not only because it is a strong novelty but at the time Garry really understood the core ideas behind it. It is very important for White to limit the bishop. 13...Ne7 I played this move once because I vaguely recalled once that I saw in some book that h4 is a bad move and Ne7 is one of the simple ways to equalize. But at the board I started to look at the position and somehow I couldn't understand what to do with Black. A key difference to notice from the positions we studied previously with c4 is that the d4 square is firmly protected whereas now White simply continues with Ne3-g3 and develops a very serious attack. I don't see how to equalize this position with Black. 14.Nxf6+ gxf6 White is just better. 15.Bd3 The strongest and approved by modern engines. In the game against me, Garry played 15...Qh5 is also a very dangerous move, yet I managed somehow to complicate matters and get a playable position. 15...d5 This has to be played otherwise White will play Ne3. 16.exd5 Qxd5 17.Ne3 Qe6 18.Qh5 f5 19.0-0-0 Black has a nice center and a seemingly pleasant position but his king in reality is very weak. Bc2-Bb3 is coming, g4 is also on the agenda. 19...e4 20.Bc2 Qg6 21.Qg5 A very unpleasant move. If you exchange on g5 the

endgame is very difficult for Black. This is why I believe that the Rb8 move order is borderline unplayable.

**B33**

☐ **Lesson Sveshnikov The,P**
■ **Sveshnikov 9.Nd5 10.Bxf6 11.c**

1.e4 c5 2.Nf3 Nc6 3.d4 cxd4 4.Nxd4 Nf6 5.Nc3 e5 6.Ndb5 d6 Today we will look at the second part of the three lessons on the Sveshnikov. 7.Bg5 The main move and definitely the most challenging one. Nd5 is threatened, Black's next move is practically forced. 7...a6 8.Na3 b5 Obviously the best move in the position, White wants to get the knight closer to the d5-square, this move prevents that plan and threatens ...b4 as well. 9.Nd5 So today we are going to study this move, 9.Nd5, a kind of positional system. It has been played countless times on the top level. Now Black has to be very accurate, after listening to this course you will have good knowledge of the nuances of this system and if your opponent is not so well-prepared then you have considerable chances to get a certain advantage out of the opening. 9...Be7 TheConly move to fight for equality, and even if Black most often equalizes on the top level, just one wrong move and White will get a significant advantage. Definitely, a rather risk-free variation for White if you know what you are doing. For those of you who want to play this line with Black, I'll try to give a detailed analysis of the current state of theory, the best directions and certain concrete variations - that will already be enough information for you to play it with Black îîStartBracketîîif you are not in the top 10 of the worldîîEndBracketîî. 9...Be6 is a mistake, you'll understand this more after watching the next lesson. 10.Bxf6 gxf6 11.c3 f5 12.exf5 Bxf5 and Black simply lost a tempo. 10.Bxf6 Bxf6 In this position for many many years White would practically immediately play c3, which I believe that it's still the strongest move, trying to follow it up with Nc2. 11.c3 0-0 12.Nc2 Bg5 After Garry practically refuted the Rb8 move order, I switched to Bg5 first. This is a very solid system and Black is able to equalize with very accurate play, but it is not easy. 13.a4 bxa4 Practically forced. 14.Rxa4 a5 15.Bc4 Rb8 This a big tabia. 16.Ra2 In around 2003, Ponomariov played this very dangerous plan against me in a very interesting game that I advise you to study and check. 16...Kh8 17.Nce3 Bxe3 The safest and what I would recommend you to play as Black. 18.Nxe3 Ne7 Maybe it is a little better for White but I believe a draw is the logical result of this game. 19.0-0 f5 20.exf5 Nxf5 21.Nxf5 Bxf5 22.b3 Followed by Rb2. In most of the analysis, most of the lines ended up with some 3vs4 rook endgame with or without the queens on the board, it still looked very drawish.

**B33**

**Lesson Sveshnikov The,P**
**Sveshnikov 9.Nd5 10.Bxf6 11.c**

1.e4 c5 2.Nf3 Nc6 3.d4 cxd4 4.Nxd4 Nf6 5.Nc3 e5 6.Ndb5 d6 Today we will look at the second part of the three lessons on the Sveshnikov. 7.Bg5 The main move and definitely the most challenging one. Nd5 is threatened, Black's next move is practically forced. 7...a6 8.Na3 b5 Obviously the best move in the position, White wants to get the knight closer to the d5-square, this move prevents that plan and threatens ...b4 as well. 9.Nd5 So today we are going to study this move, 9.Nd5, a kind of positional system. It has been played countless times on the top level. Now Black has to be very accurate, after listening to this course you will have good knowledge of the nuances of this system and if your opponent is not so well-prepared then you have considerable chances to get a certain advantage out of the opening. 9...Be7 TheConly move to fight for equality, and even if Black most often equalizes on the top level, just one wrong move and White will get a significant advantage. Now Black has to be very accurate, after listening to this course you will have good knowledge of the nuances of this system and if your opponent is not so well-prepared then you have considerable chances to get a certain advantage out of the opening. 9...Be7 TheConly move to fight for equality, and even if Black most often equalizes on the top level, just one wrong move and White will get a significant advantage. Definitely, a rather risk-free variation for White if you know what you are doing. For those of you who want to play this line with Black, I'll try to give a detailed analysis of

the current state of theory, the best directions and certain concrete variations - that will already be enough information for you to play it with Black îîStartBracketîîif you are not in the top 10 of the worldîîEndBracketîî. 9...Be6 is a mistake, you'll understand this more after watching the next lesson. 10.Bxf6 gxf6 11.c3 f5 12.exf5 Bxf5 and Black simply lost a tempo. 10.Bxf6 Bxf6 In this position for many many years White would practically immediately play c3, which I believe that it's still the strongest move, trying to follow it up with Nc2. 11.c3 Bg5 The most fashionable system nowadays, coupled with Rb8-O-O-b4. It might be even better to start with 11...Rb8 , as Nxf6+ is never really a threat. 12.Nc2 Bg5 and now the point is that h4 doesn't work anymore. 13.h4 Bxh4 and there is no mate on the h-file of course. 12.Nc2 Rb8 Black wants to get the same position without allowing Garry's annoying h4. 13.a4 bxa4 14.Ncb4 A very serious attempt by White. Here you need to know and memorize some theory but it is only one major critical line and it seems that if you analyze it well and remember all the details there is a very good chance Black will equalize. 14...Nxb4 15.cxb4 All of the top players are taking with the pawn now. 15...0-0 16.Rxa4 a5 If you want to equalize in a very straightforward way then this is definitely what you should do. 17.b5 Bd7 18.Nc3 d5 19.exd5 e4 This is why White needs to include h4 first, misplacing the bishop on h6 first. 20.h4 What happens if White tries to get the same position as if he played h4 first? 20...Bf6 Of course we don't go to h6 21.Rxe4 Re8 22.Bd3 Bxb5 This is more or less a forced draw.

**B33**

☐ **Lesson Sveshnikov The,P**
■ **Sveshnikov 9.Nd5 10.Bxf6 11.c**

1.e4 c5 2.Nf3 Nc6 3.d4 cxd4 4.Nxd4 Nf6 5.Nc3 e5 6.Ndb5 d6 Today we will look at the second part of the three lessons on the Sveshnikov. 7.Bg5 The main move and definitely the most challenging one. Nd5 is threatened, Black's next move is practically forced. 7...a6 8.Na3 b5 Obviously the best move in the position, White wants to get the knight closer to the d5-square, this move prevents that plan and threatens ...b4 as well. 9.Nd5 So today we are going to study this move, 9.Nd5, a kind of positional system. It has been played countless times on the top level. Now Black has to be very accurate, after listening to this course you will have good knowledge of the nuances of this system and if your opponent is not so well-prepared then you have considerable chances to get a certain advantage out of the opening. 9...Be7 TheConly move to fight for equality, and even if Black most often equalizes on the top level, just one wrong move and White will get a significant advantage. Definitely, a rather risk-free variation for White if you know what you are doing. For those of you who want to play this line with Black, I'll try to give a detailed analysis of the current state of theory, the best directions and certain concrete variations - that will already be enough information for you to play it with Black îîStartBracketîîif you are not in the top 10 of the worldîîEndBracketîî. 9...Be6 is a mistake, you'll

understand this more after watching the next lesson. 10.Bxf6 gxf6 11.c3 f5 12.exf5 Bxf5 and Black simply lost a tempo. 10.Bxf6 Bxf6 In this position for many many years White would practically immediately play c3, which I believe that it's still the strongest move, trying to follow it up with Nc2. 11.c3 Bg5 The most fashionable system nowadays, coupled with Rb8-O-O-b4. It might be even better to start with 11...Rb8 , as Nxf6+ is never really a threat. 12.Nc2 Bg5 and now the point is that h4 doesn't work anymore. 13.h4 Bxh4 and there is no mate on the h-file of course. 12.Nc2 Rb8 Black wants to get the same position without allowing Garry's annoying h4. 13.a4 bxa4 14.Ncb4 A very serious attempt by White. Here you need to know and memorize some theory but it is only one major critical line and it seems that if you analyze it well and remember all the details there is a very good chance Black will equalize. 14...Nxb4 15.cxb4 All of the top players are taking with the pawn now. 15...Bd7 This is another good option for Black, played often by the Sveshnikov specialist Daniil Dubov. 16.Bxa6 0-0 17.0-0 Qe8 Trying to play Bd8, an important strategical resource transferring the bishop via d8. 18.b3 axb3 19.Qxb3 Bd8 And Dubov managed to make a draw quite easily in a game vs. Karjakin. Kh8 followed by f5 should be good enough.

**B33**

☐ **Lesson Sveshnikov The,P**
■ **Sveshnikov 9.Nd5 10.Bxf6 11.c**

1.e4 c5 2.Nf3 Nc6 3.d4 cxd4 4.Nxd4 Nf6 5.Nc3 e5 6.Ndb5 d6 Today we will look at the second part of the three lessons on the Sveshnikov. 7.Bg5 The main move and definitely the most challenging one. Nd5 is threatened, Black's next move is practically forced. 7...a6 8.Na3 b5 Obviously the best move in the position, White wants to get the knight closer to the d5-square, this move prevents that plan and threatens ...b4 as well. 9.Nd5 So today we are going to study this move, 9.Nd5, a kind of positional system. It has been played countless times on the top level. Now Black has to be very accurate, after listening to this course you will have good knowledge of the nuances of this system and if your opponent is not so well-prepared then you have considerable chances to get a certain advantage out of the opening. 9...Be7 TheConly move to fight for equality, and even if Black most often equalizes on the top level, just one wrong move and White will get a significant advantage. Definitely, a rather risk-free variation for White if you know what you are doing. For those of you who want to play this line with Black, I'll try to give a detailed analysis of the current state of theory, the best directions and certain concrete variations - that will already be enough information for you to play it with Black îîStartBracketîîif you are not in the top 10 of the worldîîEndBracketîî. 9...Be6 is a mistake, you'll understand this more after watching the next lesson. 10.Bxf6 gxf6 11.c3 f5 12.exf5 Bxf5 and Black simply lost a tempo. 10.Bxf6 Bxf6 In this position for many many years White would practically immediately play c3, which I believe that it's still the

strongest move, trying to follow it up with Nc2. 11.c4 This move started to get more and more popular sometime around the end of the 20th century, and was causing Black some problems for a while. Nevertheless, I believe that Black found a convincing way to deal with the text move. Black tried the move 11...Nd4 for a while, sacrificing the b-pawn for some compensation, but it's not very convincing. 11...b4 The most logical reply. 12.Nc2 a5 The problem for White in this setup is that the d4-square is terminally weakened. So the knight on c2 is tasked with defending it, trying to hold the knight on c6 for as long as possible. White's plan ideally is to exchange the bad light-squared bishop, should he achieve that task White will end up in a strategically winning position. Nevertheless, I must emphasize that it goes against my classical positional education to put the White pawn on c4 limiting the light-squared bishop on c1, with a potential hole on d4 I don't believe this should ever give White any advantage. 13.g3 The main idea in this line. 13...0-0 14.Bg2 Another way to play this position for White. 14...Bg5 This is probably easier for Black. 15.0-0 There were some games here, but frankly, I think it is White who is starting to run out of ideas. 15...Be6 16.f4 This makes sense for White, but this will open up diagonals for Black and his pieces might end up very active. 16...exf4 17.gxf4 Bf6 This works out tactically for Black! It looks like White can win a piece now but Black is at least not worse. 18.e5 dxe5 19.Nxf6+ Qxf6 20.Bxc6 Rad8 21.Qe2 exf4 Black has a very powerful initiative. White's king is very weak and even with accurate play, I doubt that White holds this position comfortably, I would recommend you to stay away from this position with White.

**B33**

☐ **Lesson Sveshnikov The,P**
■ **Sveshnikov 9.Nd5 10.Bxf6 11.c**

1.e4 c5 2.Nf3 Nc6 3.d4 cxd4 4.Nxd4 Nf6 5.Nc3 e5 6.Ndb5 d6 Today we will look at the second part of the three lessons on the Sveshnikov. 7.Bg5 The main move and definitely the most challenging one. Nd5 is threatened, Black's next move is practically forced. 7...a6 8.Na3 b5 Obviously the best move in the position, White wants to get the knight closer to the d5-square, this move prevents that plan and threatens ...b4 as well. 9.Nd5 So today we are going to study this move, 9.Nd5, a kind of positional system. It has been played countless times on the top level. Now Black has to be very accurate, after listening to this course you will have good knowledge of the nuances of this system and if your opponent is not so well-prepared then you have considerable chances to get a certain advantage out of the opening. 9...Be7 The only move to fight for equality, and even if Black most often equalizes on the top level, just one wrong move and White will get a significant advantage. Definitely, a rather risk-free variation for White if you know what you are doing. For those of you who want to play this line with Black, I'll try to give a detailed analysis of the current state of theory, the best directions and certain concrete variations - that

will already be enough information for you to play it with Black îîStartBracketîîif you are not in the top 10 of the worldîîEndBracketîî. 9...Be6 is a mistake, you'll understand this more after watching the next lesson. 10.Bxf6 gxf6 11.c3 f5 12.exf5 Bxf5 and Black simply lost a tempo. 10.Bxf6 Bxf6 In this position for many many years White would practically immediately play c3, which I believe that it's still the strongest move, trying to follow it up with Nc2. 11.c3 Bg5 The most fashionable system nowadays, coupled with Rb8-O-O-b4. It might be even better to start with 11...Rb8 , as Nxf6+ is never really a threat. 12.Nc2 Bg5 and now the point is that h4 doesn't work anymore. 13.h4 Bxh4 and there is no mate on the h-file of course. 12.Nc2 Rb8 Black wants to get the same position without allowing Garry's annoying h4. 13.a4 bxa4 14.Ncb4 A very serious attempt by White. Here you need to know and memorize some theory but it is only one major critical line and it seems that if you analyze it well and remember all the details there is a very good chance Black will equalize. 14...Nxb4 15.Nxb4 This is practically a forced draw 15...Bd7 An important move. 16.Qxd6 Thanks to Bd7, this is not good for White. 16...Be7 17.Qxe5 0-0 Black is fighting for an advantage now! 18.Bxa6 Bxb4 White maybe manages to make a draw, but Black definitely has the upper hand.

**B33**

☐ **Lesson Sveshnikov The,P**
■ **Sveshnikov 9.Nd5 10.Bxf6 11.c**

1.e4 c5 2.Nf3 Nc6 3.d4 cxd4 4.Nxd4 Nf6 5.Nc3 e5 6.Ndb5 d6 Today we will look at the second part of the three lessons on the Sveshnikov. 7.Bg5 The main move and definitely the most challenging one. Nd5 is threatened, Black's next move is practically forced. 7...a6 8.Na3 b5 Obviously the best move in the position, White wants to get the knight closer to the d5-square, this move prevents that plan and threatens ...b4 as well. 9.Nd5 So today we are going to study this move, 9.Nd5, a kind of positional system. It has been played countless times on the top level. Now Black has to be very accurate, after listening to this course you will have good knowledge of the nuances of this system and if your opponent is not so well-prepared then you have considerable chances to get a certain advantage out of the opening. 9...Be7 TheConly move to fight for equality, and even if Black most often equalizes on the top level, just one wrong move and White will get a significant advantage. Definitely, a rather risk-free variation for White if you know what you are doing. For those of you who want to play this line with Black, I'll try to give a detailed analysis of the current state of theory, the best directions and certain concrete variations - that will already be enough information for you to play it with Black îîStartBracketîîif you are not in the top 10 of the worldîîEndBracketîî. 9...Be6 is a mistake, you'll understand this more after watching the next lesson. 10.Bxf6 gxf6 11.c3 f5 12.exf5 Bxf5 and Black simply lost a tempo. 10.Bxf6 Bxf6 In this position for many many years White would practically immediately play c3, which I believe that it's still the

strongest move, trying to follow it up with Nc2. 11.c3 0-0 12.Nc2 Rb8 This move in this order was supposed to be clear-cut equality until... 13.Be2 Bg5 14.0-0 a5 15.Qd3 Be6 After 15...Ne7 , Black is also perfectly fine. 16.Na3 Na7 After 16...b4 17.Nb5 , White is much better and scored well in practice. 17.Nc2 Nc6 This is quite harmless. Black can easily get ...f5 in.

**B33**

☐ **Lesson Sveshnikov The,P**
■ **Sveshnikov 9.Nd5 10.Bxf6 11.c**

1.e4 c5 2.Nf3 Nc6 3.d4 cxd4 4.Nxd4 Nf6 5.Nc3 e5 6.Ndb5 d6 Today we will look at the second part of the three lessons on the Sveshnikov. 7.Bg5 The main move and definitely the most challenging one. Nd5 is threatened, Black's next move is practically forced. 7...a6 8.Na3 b5 Obviously the best move in the position, White wants to get the knight closer to the d5-square, this move prevents that plan and threatens ...b4 as well. 9.Nd5 So today we are going to study this move, 9.Nd5, a kind of positional system. It has been played countless times on the top level. Now Black has to be very accurate, after listening to this course you will have good knowledge of the nuances of this system and if your opponent is not so well-prepared then you have considerable chances to get a certain advantage out of the opening. 9...Be7 TheConly move to fight for equality, and even if Black most often equalizes on the top level, just one wrong move and White will get a significant advantage. Definitely, a rather risk-free variation for White if you know what you are doing. For those of you who want to play this line with Black, I'll try to give a detailed analysis of the current state of theory, the best directions and certain concrete variations - that will already be enough information for you to play it with Black îîStartBracketîîif you are not in the top 10 of the worldîîEndBracketîî. 9...Be6 is a mistake, you'll understand this more after watching the next lesson. 10.Bxf6 gxf6 11.c3 f5 12.exf5 Bxf5 and Black simply lost a tempo. 10.Bxf6 Bxf6 In this position for many many years White would practically immediately play c3, which I believe that it's still the strongest move, trying to follow it up with Nc2. 11.c3 0-0 12.Nc2 Bg5 After Garry practically refuted the Rb8 move order, I switched to Bg5 first. This is a very solid system and Black is able to equalize with very accurate play, but it is not easy. 13.h4 Bh6 The point behind this move. We take care of the problematic dark-squared bishop before White gets to play the restricting h4. 14.g4 The main idea behind this line. This variation is quite tricky but it shouldn't cause any problems for Black if he knows what he's doing. 14...Bf4 A critical move. 15.Qf3 Very direct play, otherwise White would be worse. 15...Rb8 This is another interesting and more dynamic way to play this position. 16.Be2 The best move. 16...a5 17.Nxf4 exf4 18.Qxf4 b4 Even here Black seems to be in time to organize his counterplay. White still needs to lose time playing g5 before castling.

**B33**

☐ **Lesson Sveshnikov The,P**
■ **Sveshnikov 9.Nd5 10.Bxf6 11.c**

1.e4 c5 2.Nf3 Nc6 3.d4 cxd4 4.Nxd4 Nf6 5.Nc3 e5 6.Ndb5 d6 Today we will look at the second part of the three lessons on the Sveshnikov. 7.Bg5 The main move and definitely the most challenging one. Nd5 is threatened, Black's next move is practically forced. 7...a6 8.Na3 b5 Obviously the best move in the position, White wants to get the knight closer to the d5-square, this move prevents that plan and threatens ...b4 as well. 9.Nd5 So today we are going to study this move, 9.Nd5, a kind of positional system. It has been played countless times on the top level. Now Black has to be very accurate, after listening to this course you will have good knowledge of the nuances of this system and if your opponent is not so well-prepared then you have considerable chances to get a certain advantage out of the opening. 9...Be7 TheConly move to fight for equality, and even if Black most often equalizes on the top level, just one wrong move and White will get a significant advantage. Definitely, a rather risk-free variation for White if you know what you are doing. For those of you who want to play this line with Black, I'll try to give a detailed analysis of the current state of theory, the best directions and certain concrete variations - that will already be enough information for you to play it with Black îîStartBracketîîif you are not in the top 10 of the worldîîEndBracketîî. 9...Be6 is a mistake, you'll understand this more after watching the next lesson. 10.Bxf6 gxf6 11.c3 f5 12.exf5 Bxf5 and Black simply lost a tempo. 10.Bxf6 Bxf6 In this position for many many years White would practically immediately play c3, which I believe that it's still the strongest move, trying to follow it up with Nc2. 11.c4 This move started to get more and more popular sometime around the end of the 20th century, and was causing Black some problems for a while. Nevertheless, I believe that Black found a convincing way to deal with the text move. Black tried the move 11...Nd4 for a while, sacrificing the b-pawn for some compensation, but it's not very convincing. 11...b4 The most logical reply. 12.Nc2 a5 The problem for White in this setup is that the d4-square is terminally weakened. So the knight on c2 is tasked with defending it, trying to hold the knight on c6 for as long as possible. White's plan ideally is to exchange the bad light-squared bishop, should he achieve that task White will end up in a strategically winning position. Nevertheless, I must emphasize that it goes against my classical positional education to put the White pawn on c4 limiting the light-squared bishop on c1, with a potential hole on d4 I don't believe this should ever give White any advantage. 13.g3 The main idea in this line. 13...0-0 14.h4 WhiCe's main try. A multifunctional move, firstly stopping ...Bg5, now Black has a problem to solve with his dark-squared bishop. Secondly preparing Bh3 and trying somehow to exchange the bishop. Black didn't manage to equalize here for quite a while, but by now, people îîStartBracketîîor their enginesîîEndBracketîî finally figured out a solid and good setup against it. Actually, it is not a setup, but Black rather organizes tactical counterplay quickly and it seems to work! 14...Be6 15.Bh3 The most

dangerous and straightforward way of playing for White. White now has ideas of Bf5-h5 and Kf1-Kg2. Black has certain difficulties finding moves here, the dark-squared bishop remains passive on f6 and ...Qd7 is never possible because of Nb6. 15...a4 A very important move. Black simply wants to play ...b3 next. 16.Kf1 b3 The direct move ...b3 works when White tries to play slowly. You can see now that the black knight will secure the very important d4-square with a great position for Black. 17.axb3 axb3 18.Nce3 18...Ra2 is also a very interesting move. Black is taking over the initiative. 18...Nd4 A very strong move, the knight is extremely powerful. 19.Rxa8 Qxa8 20.Nxf6+ gxf6 This is horrible for White. The knight on d4 is a bomb and e4 is permanently weak, Black can only be better.

**B33**

☐ **Lesson Sveshnikov The,P**
■ **Sveshnikov 9.Nd5 10.Bxf6 11.c**

1.e4 c5 2.Nf3 Nc6 3.d4 cxd4 4.Nxd4 Nf6 5.Nc3 e5 6.Ndb5 d6 Today we will look at the second part of the three lessons on the Sveshnikov. 7.Bg5 The main move and definitely the most challenging one. Nd5 is threatened, Black's next move is practically forced. 7...a6 8.Na3 b5 Obviously the best move in the position, White wants to get the knight closer to the d5-square, this move prevents that plan and threatens ...b4 as well. 9.Nd5 So today we are going to study this move, 9.Nd5, a kind of positional system. It has been played countless times on the top level. ■ **Game #2: Caruana,Fabiano vs. Carlsen**

1.e4 c5 2.Nf3 Nc6 3.d4 cxd4 4.Nxd4 Nf6 5.Nc3 e5 6.Ndb5 d6 7.Nd5 Nxd5 8.exd5 Nb8 This is a funky way to play. The knight will later come around to d7 and then join in an attack on White's kingside. Magnus has been defending this line a lot, with great success in fact. 8...Ne7 is of course a serious alternative, played many times. 9.c4 Nf5 10.Bd3 Be7 11.O-O O-O has been debated many times. Both sides have their chances. 9.a4 Be7 10.Be2 0-0 11.0-0 Nd7 12.Bd2 f5 Magnus was faced with the new idea 12. Bd2 and went for the typical idea. Black is gearing up for a kingside counterattack. This approach seems riskier than our repertoire choice, but is also interesting. 12...a6 13.Na3 a5 is our repertoire recommendation , as played by Grischuk against Svidler. We are slowing down White's play on the queenside , as frequently seen in this variation. See lines #24-30 in the 7. Nd5 chapter for more details. 13.a5 a6 14.Na3 e4 14...f4 ! Was apparently the choice of Alpha Zero, as explained by Matthew Sadler in a Youtube video. Sadler was close to the Alpha Zero team as he had access to that program for his book 'Gamechanger'. Although ...f4 seems like a positional blunder, in fact things aren't so clear. White can't get a knight to the e4-square very easily, and the cramping effects of this move are considerable. 15.Bb4 Rf6 and Black has great coordination. As Sadler explains, there is this sense where Alpha Zero is like a mad hacker at times, really finding these aggressive plans in order to put pressure on the opponent's king. The rook is also defending the pawn on d6. 16.Re1 Rh6 17.Nc4 Bf8 18.Ra3 Qg5 19.g3 e4 With the sort of mess that could make White feel very uncomfortable. 20.Qd4 Nf6 21.Bxd6 Bxd6 22.Nxd6 e3 White is being set very dangerous problems on every move. Very difficult to solve over the board ! 15.Nc4 Ne5 16.Nb6 Rb8 17.f4 exf3 18.Bxf3 g5 Perhaps this is over-aggressive here. Black weakens his king, without gaining any great attacking chances in return. 18...Nd7 19.Be3 Bf6 was a sounder way to play. 20.Bd4 Re8 with close to equality. 19.c4 Also advocated by Alpha Zero. White's plan is now consistent and clear, play Bc3, and then c5, pushing the pawn through as far as possible. 19...f4 20.Bc3 Bf5 This seems to accelerate White's advantage. 20...Qc7 ! was preferable, at least holding up the c5 break. 21.Rc1 21.Nxc8 Qxc8 probably

doesn't offer White a great deal. 21... Bf6 22.Bxe5 Bxe5 23.c5 Bxb2 24.Rc4 Bf5 25. c6 Rbe8 26.Bg4 Bg7 and now White has a couple of alternatives, 27.Kh1 However here Black is still under some pressure - Black's queen is tied down to c7, as if it moves then the advance c6-c7 will be incredibly strong. Or even the mad hacking 27. h4 !? 21.c5 Nxf3+ 22.Qxf3 dxc5 23.Rad1 23.Rae1 was a serious alternative, but there was nothing wrong with what Caruana played. Rf7 24.Be5 Bd6 25.Nc4 with a growing edge for White. 23...Bd6 24.h3 Too tentative. 24.Qh5 ! was incredibly powerful. One of the main ideas is to tie the Black's queen down to the defence of g5. Bg6 24...Qe8 25.Qxg5+ Qg6 26.Qxg6+ hxg6 27.Nc4 is a thoroughly depressing ending for Black. 25.Qh3 Rf7 26.Nc4 Qf8 27.Rfe1 !! and Black is probably close to being busted here. 24...Qe8 Now Black is out of danger. At world championship level, that's all it takes. One slip and the win has gone ! 25.Nc4 Qg6 26.Nxd6 Qxd6 27.h4 gxh4 28.Qxf4 Qxf4 29.Rxf4 h5 White's d-pawn is not as a strong as it usually is here, as in this situation it can be easily blockaded on d7. 30.Re1 Bg4 31.Rf6 Rxf6 32.Bxf6 Kf7 33.Bxh4 Re8 34.Rf1+ Kg8 35.Rf6 Re2 36.Rg6+ Kf8 37.d6 Rd2 38.Rg5

**B33**

☐ **Model Games Sveshnikov**
■ **Game #1: Navara,David vs. Carlsen**

1.e4 c5 2.Nf3 Nc6 3.d4 cxd4 4.Nxd4 Nf6 5.Nc3 e5 6.Ndb5 d6 7.Nd5 Nxd5 8.exd5 Nb8 9.a4 A positional approach, restraining any ...b5 breaks by Black while also supporting the knight on b5. 9.c4 is a serious alternative with heaps of theory behind it. But let's not be afraid and get on with our counterplay. Be7 10.Be2 O-O 11. O-O a6 12.Nc3 f5 13.f4 Nd7 Black has his usual dynamic counterplay. 9...Be7 10.Be2 0-0 11.0-0 Nd7 12.Kh1 a6 13.Na3 a5 This is our typical idea, but the timing is not ideal. In general we like to meet a4 by playing ...a5, to hold up White's queenside play. Although we hand the light squares to White, the benefits outweigh the drawbacks. We secure a nice square on c5 for the knight, and we can look to play ...Nc5 followed by .. .f5, building a potential kingside attack. In the game we will see why the idea is correct, but the timing can be improved. 13...f5 14.f4 Qc7 15.Nc4 b6 is an alternative way to play for Black, but I prefer the choice of Magnus. It's more straightforward. 13...Nc5 ! This seems best and was played by Magnus some weeks later in a game against Maxime Vachier-Lagrave. The point is that Black first provokes Nc4 and only then plays ...a5. More on that in lines #17-18 in the 7. Nd5 theoretical section. 14.f4 f5 15.Nc4 15.Nb5 This is an improvement on the game and the reason why it is better to first make sure that the knight goes to c4 - 13... Nc5 !. The key difference between having the knight on b5 or c4 is that from b5 it may go to d4 later, after the e-pawn and f-pawn are traded. From c4 this is not possible and the knight does not have a good route to improve. 15...b6 Now everything is back in order. We can see now that by playing ...a5 and ...b6, Magnus has made it very

difficult for his opponent to create anything real on the queenside. Now he can look to the kingside, where he can create his own play. 16.Ra3 In some ways thematic, but Magnus proves that this is too ambitious. 16.c3 e4 16...Qc7 !? keeping the centre as fluid as possible, is also playable. 17.Be3 Qc7 = 16...exf4 17.Bxf4 Nc5 18.Re3 18.Rg3 g6 was a safer way to go. Although Black looks very solid here as well. 18...g5 Once again Magnus plays in very aggressive Alpha Zero style. He is playing very concretely. It used to be that players were afraid to push their pawns on the kingside, but the influence of computers has seen today's generation have an about-turn on this. Now they don't care about generalizations so much. it's all about whether it's the best move or not 😁 19.Rxe7 19.Rg3 Ne4 Wins the exchange for Black. 20. Be3 Nxg3+ Black could even ignore the rook on g3 and play something sadistic like 20...g4 !? 21. Bxb6 Nxg3+ Only now do we cash in 22.hxg3 Qe8 our plan now is obvious (but difficult to stop.) Play ...Qh5, ...Rg6 and go for mate ! 21.hxg3 Rb8 21... Bf6 just to show that losing the b-pawn isn't such a big deal. 22.Bxb6 Qe7 and Black is for preference. 22.Bd3 and White has compensation, but I think I'd rather take Black. I like having the extra material. 19...gxf4 20.Re6 20.Nxb6 Qxe7 20...Qxb6 ? 21.Qd4 Is White's idea. 21.Nxa8 Qa7 Trapping the knight. 20...Nxe6 21.dxe6 Bxe6 22.Rxf4 Bxc4 23.Bxc4+ Kh8 Now the game has effectively become a technical exercise, a nightmare for Navara, as Magnus is one of the best technical players of all time. 24.g4 Qf6 25.c3 Qe5 26.Qf1 Rae8 27.gxf5 Rf6 The rook stands well here, blocking the f-pawn's advance while freeing up Black's queen for active duties. 28.Qf2 28.h3 d5 29.Bb3 Rg8 ! And Black is already eyeing up the g3-square for the rook. 28...Qc5 29.Kg2 Qc6+ 30.Kh3 Qc5 31.Kg2 Qxf2+ 32.Rxf2 Re4 33.Be6 Rxa4 34.Kf3 Kg7 35.Rd2 Kh6 36.Rxd6 Kg5 37.Rd8 Rh6 38.Rg8+ Kf6 39.Rb8 Rxh2 40.Rxb6 Kg5 41.f6 Rf4+ 42.Kg3 Rhf2 43.Rb5+ Kxf6 44.Bg4 a4 45.c4 Kg6 46.c5 a3 47.bxa3 h5 48.Rb4 Rf8 49.Bd1 Rd2 50.Bf3 Rd3 51.Rf4 h4+ 52.Kg4 Rxf4+ 53.Kxf4 Rxa3 54.c6 Rc3 55.Bd5 h3 56.Ke5 Rc5 57.Kd6 Rxd5+ 58.Kxd5 h2

**B33**

☐ **Model Games Sveshnikov**
■ **Game #4: Andreikin,Dmitry vs. Carlsen**

1.e4 Just looking at the names you'd think that this game was played in one of the major tournaments in 2019, but it is actually a game from the 2003 European Youth Championship Under 14! Magnus already played the Sveshnikov well in his younger years (he was 12 at the time) . 1...c5 2.Nf3 Nc6 3.d4 cxd4 4.Nxd4 Nf6 5.Nc3 e5 6.Ndb5 d6 7.Bg5 a6 8.Na3 b5 9.Nd5 Be7 10.Bxf6 Bxf6 11.c3 0-0 12.Nc2 Rb8 13.g3 This is a fairly rare move and not examined in our theoretical section. Black's setup against it is fairly standard: fight for the d5-square. 13...Bg5 14.Bg2 a5 The most popular choice. Black fights for control over the queenside. 14...Be6 15.O-O a5 16.Qd3 Ne7 is also possible. In general in these lines both sides are fairly solid,

and there are a high percentage of draws. 15.0-0 Ne7 16.f4 16.Nce3 is the main move here. However Black doesn't experience any problems in this line either, as long as he is consistent and continues the fight for the d5-square. Bxe3 Taking on e3 is by no means forced. 16...Be6 seems eminently playable if you want to keep the position a bit more funky and retain those two bishops. 17.Qd3 Nxd5 18. Nxd5 b4 With the usual counterplay, chipping away at White's queenside. 17. Nxe3 Be6 18. Qd2 Qb6 19.Rfd1 Rfd8 20.b3 Rbc8 where once again, Black is solid and fine. He is holding d6 fairly comfortably. 16...Nxd5 17.Qxd5 Be6 18.Qd2 Bh6 The bishop looks rather passive on h6, but this isn't really a problem for Black. His position is tough and hard for White to really lay a glove on. Already, the engine prefers Black. 18...exf4 19.gxf4 Bf6 is another fairly reasonable way to play if you don't want the bishop stuck on h6. We'll follow up with a quick ...b4, gaining obvious counterplay on the queenside. 19.Ne3 Qb6 20.Kh1 Qc5 21.b4 Qc7 22.Rad1 22.f5 Bc4 23.Rfe1 Ra8 when one potential threat is to take on b4 and then play ... Ra3. 22...Rbc8 23.bxa5 Qxa5 24.Qxd6 exf4 25.gxf4 Qxa2 26.Qe5 g6 27.Qxb5 Rxc3 28.Nd5 Bh3 29.Rg1 Under pressure, White goes astray. 29.Nf6+ Kh8 30.Bxh3 Rxh3 31.Ng4 was a better chance to defend. 29...Rc2 30.Qf1 30.Ne3 Rf2 31.Qd5 Bxf4 is also hopeless for White. That's the danger when you play this f4 move early on in the game like Andreikin did here: you leave your kingside much more vulnerable to a counter-attack later in the game. 30...Rf2 Sealing the win. 31.Qxf2 Qxf2 32.Bxh3 Bxf4 33.Rg2 Qh4 34.Rg4 Qxh3 35.Rxf4 Rb8 36.Rf2 Rb2 Magnus never misses a tactical opportunity. 37.Rdf1 37.Rxb2 Qf3+ 38.Kg1 Qxd1+ 39.Kg2 f5 ! and White is crumbling. 40.exf5 Qxd5+ -+ 37...Qd3 38.Nf6+ Kg7 39.Kg2 Qd4 40.Ne8+ Kf8 41.Rxb2 Qxb2+ 42.Rf2 Qxf2+ 43.Kxf2 Kxe8 44.Kf3 Ke7 45.Kf4 Ke6 46.Kg5 Ke5 47.h4 Kxe4 48.Kf6 Kf4 49.Kxf7 Kg4 50.Kg7 Kxh4

**B33**

☐ **Model Games Sveshnikov**
■ **Game #3: Smeets,Jan vs. Carlsen**

1.e4 c5 2.Nf3 Nc6 3.d4 cxd4 4.Nxd4 Nf6 5.Nc3 e5 6.Ndb5 d6 7.Bg5 a6 8.Na3 b5 9.Nd5 Be7 10.Bxf6 Bxf6 11.c3 Bg5 Our repertoire choice is 11...O-O - see the 11. c3 chapter - but Black has a wide range of lines available. This game is still very useful to study , as it features many fascinating middlegame ideas. 12.Nc2 Ne7 A solid choice for Black, trying to quickly challenge White's control over d5. 13.Ncb4 0-0 14.a4 14.Nxe7+ Qxe7 15.Nd5 Qb7 = After the coming ...Be6 White is not able to maintain the knight on d5. 14...bxa4 15.Rxa4 15.Qxa4 a5 16.Bb5 !? Nxd5 17.Nxd5 This was played in G.Kamsky-M. Carlsen, Khanty Mansyisk 2005. Black is not in bad shape, but the white side seems to be easier to play. 15.h4 Bh6 16.Rxa4 16.Qxa4 a5 17.Bb5 Nxd5 18.Nxd5 Be6 19.Bc6 Rb8 should also be ok for Black. 16...a5 17.Nxe7+ Qxe7 18.Nd5 Qb7 19.b3 Kh8 and Black should have good chances here. He has his counter-attacking idea ...f5 in the locker, and it's not clear

what White has achieved with all this h4 stuff. Perhaps he has just weakened the kingside without achieving much in return. 15...a5 It's important to cause some disruption to this powerful Nb4/d5 set-up that White has. 16.Nxe7+ 16.Bb5 Bd7 16... Bh3 !? is also interesting, with the desperado bishop. 17.Nxe7+ 17.gxh3 axb4 feels like a gain for Black - White's king will always be somewhat exposed. 17. ..Qxe7 18. Nd5 Qb7 A funny line, but Black is fine here. 17.Nxe7+ Bxe7 18.Bxd7 axb4 and it's completely equal. 16...Qxe7 16...Bxe7 !? 17.Nd5 Rb8 is once again, fine for Black. all our moves are natural and easy to play. We'll probably follow up later with the usual plan of ...Kh8 and ...g6 and then ...f5. 17.Bc4 17.Nd5 Qb7 A good square for the queen. We attack b2 and ...Bd7 comes next. 17...Bd7 18.Nd5 Qe8 19.Ra2 19.Nc7 ? Bxa4 -+ 19...Bd8 19...a4 !? , clamping the pawn on b2, is also not a bad idea. 20.Nc7 ? Qc8 21.Nxa8 Qxc4 -+ 19...Rc8 ? 20.Nb6 Rc7 21.Nxd7 Qxd7 22.b3 ± should probably be avoided by Black. The pawn on a5 is weak and so White's pressure with the light-squared bishop might prove important this time. 20.0-0 Rc8 21.Bb3 21.b3 a4 Of course Black is happy to get rid of this liability. 21...Rb8 22.Qc2 Kh8 23.Rfa1 Too optimistic. The pawn a5 is well protected and the rook is clearly misplaced on a1. In fact with the bishop on b3 and the queen on c2, White lacks coordination and needs to find a plan to keep the balance. 23.Ne3 Be6 24.Bd5 This is a sensible way to regroup. Bb6 Black finally gets his bishop on a more active post. The position is about equal. 23.Ba4 ? This is strategically desirable, but fails due to a tactic. White's move in the game prepares Ba4. Bxa4 24.Rxa4 Rxb2 That's the problem ! 25.Qxb2 Qxa4 And Black has just won a pawn. 23...f5 24.Ba4 The idea of the previous move, but now Black quickly creates counterplay. We can also check some alternatives, but they don't convince, either. 24.exf5 Bxf5 25.Qd1 Qg6 Black's play gains momentum while White's forces are stuck on the queenside. 24.f3 fxe4 25. fxe4 Qg6 Again Black has taken over the initiative. 24...Bxa4 25.Rxa4 fxe4 26.R4a2 26.Rxe4 Qb5 A key point: Black has a double attack on d5 and b2. 26...Qf7 The start of an amazing manoeuvre: who could guess that the rook on b8 will get to f3 in just 3 moves ! 27.c4 Rb3 A typical idea by Carlsen to discover unexpected tactical resources. The rook finds the quickest way to the kingside. 28.Re1 Bh4 29.g3 The alternative was 29.Re2 and although Black has several attractive continuations, White also has resources to defend. 29...e3 !? 30.f3 The only move, there was no way to avoid it. 30...Bf2+ 31.Kh1 Rfb8 Black has strong pressure, but there is nothing clear yet. 29...Rf3 The rook has arrived near the target, a very impressive journey. 30.b3 f2 needed some help. 30...Bd8 31.Rxe4 h5 Invite everybody to the party ! Black uses every imaginable force to attack - even the h-pawn. 32.Re2 32.h4 g5 ! Very powerful play. 33.hxg5 Bxg5 Now ...h4 is going to be very powerful. White only has one move to defuse this idea. 34.Qe2 Rxb3 The simple answer that gives Black a clear advantage. 34...h4 35.Nf4 This trick is keeping White in the game. Now things are not clear at all. 32...h4 33.Rb2 g6 This is not just a waiting move, as we will see. 34.Kg2 This loses by force. Correct was something like 34.Qd2 Kg7 35.Re3 and Black has nothing concrete yet. Generally with precise moves White should be able to defend, but in a practical game

it is very difficult to hold such a position. 34...hxg3 35.hxg3 Rxg3+ 36.Kf1 36.Kxg3 Qf3+ 37.Kh2 Kg7 and mate 36.fxg3 Qf1+ 37. Kh2 Kg7 38.Re4 Rh8+ 39. Rh4 Bxh4 40.gxh4 Rxh4+ 41.Kg3 Rh3+ 42.Kg4 Qf3+ 43.Kg5 Rh5# 36...Qf3 37.Qe4 Qh5 38.Ne3 Bg5 39.Ke1 Rgf3 Black is a pawn up and has a deadly attack. 40.Nf1 Bc1 41.Ra2 41.Rb1 Ba3 ! ...Bb4 is going to be decisive. 41...Rxb3 42.Ng3 Qh6 43.Qg4 Rxg3 44.Qxg3 44.fxg3 Qh1# 44...Qh1+

■ **Strejczek Dariusz Vs Zhigalk,Katowice**

1.e4 c5 2.Nf3 Nc6 3.d4 cxd4 4.Nxd4 Nf6 5.Nc3 e5 6.Nb3 TheCposition arose from a Sveshnikov, but can commonly arise from a Kalashnikov îîStartBracketîîîîStartFENîîrnbqkbnr/pppppppp/8/8/8/8/PPPPPPPP/RNBQKBNR w KQkq - 0 1îîEndFENîî 1.e4 c5 2.Nf3 Nc6 3.d4 cxd4 4.Nxd4 e5 5.Nb3 Nf6 6.Nc3 Bb4 etcîîEndBracketîî. If White declines to play Nb5, then I already believe that Black has equalised the position. That is certainly borne out by this game. 6...Bb4 Excellent move, putting immediate pressure on the e4 pawn. 7.Bd3 0-0 In the repertoire, I recommend 7...d5 8.exd5 Nxd5 9.Bd2 Nxc3 10.bxc3 Bd6 which I believe offers Black excellent chances of an advantage. Nevertheless, it is hard to complain about such a natural move as castling. 8.0-0 Bxc3 9.bxc3 InsCead of breaking with ...d5, Black continues with a very different strategy that is also promising: damaging the queenside pawns and setting up a strong pawn chain in the middle îîStartBracketîîd6 and e5îîEndBracketîî. There are some similarities with Black's strategy in the Nimzo-Indian Defence. 9...d6 10.h3 Re8 Black must have been concerned about White playing f4, but actually, the natural developing move 10...Be6 was fine: 11.f4 exf4 12. Bxf4 Ne5 . A beautiful blockading square, shutting out the bishop on d3 If 13.Bg5 13. Nd4 Qc7 is also comfortable for Black. Qb6+ 14.Nd4 Nfd7 escapes the pin with a rock-solid position. 11.Bg5 11.f4 exf4 12.Bxf4 Nxe4 13.Bxe4 Rxe4 14.Bxd6 Re6 Is certainly better for Black in view of White's damaged pawns. 11...h6 12.Bh4 Is the pin problematic? Not at all! 12...g5 This cuts through White's strategy. Black can get away with this 'weakening' of the kingside because the centre is closed, White is unable to open lines on the kingside, and it is impossible for him to transfer minor pieces over to the kingside. More than that, this pawn thrust allows Black to take the initiative on the kingside. 13.Bg3 Be6 14.f3 Black has two possible plans: play ...Rc8, move the knight on c6 and target the c3 pawn; or attack on the kingside. 14...Nh5 15.Bf2 Nf4 16.Be3 Rc8 It looks like Black is going to do both! 17.Bxf4 It was difficult for White to find an active plan, but this grants Black an easy attack on the g-file. 17...gxf4 18.Kh2 Kh7 19.Rg1 Rg8 20.Nc1 Qh4 21.Qe1 Rg3 21...Rxg2+ wins immediately: 22.Rxg2 22.Kxg2 Rg8+ 23.Kf1 Rxg1+ Qxe1 22.Qf1 Rcg8 23.Ne2 R3g5 24.Qe1 A blunder in a bad position. 24.Rb1 b6 25.a3 Rh5 26. Rd1 Rg3 is a good way to finish off the attack: ...Bxh3 is coming soon. 24...Rxg2+

24...Rxg2+ 25.Rxg2 Qxh3+ 26.Kg1 Qxg2 In general, the pawn structure that results from the opening is more than fine for Black. However, bear in mind that the dark-squared bishop is White's only potential asset and that the pin from g5 can be an issue. This game shows that very often that pin can be broken by simply playing ...g5 and there are few consequences - certainly not for Black.

■ **Leko,Peter**

TheCbattle of the two best specialists of the Sveshnikov Variation at that time was of great interest, and even today it is. :îîEndBracketîî So let's check their game which corresponds with our opening suggestion. 1.e4 c5 2.Nf3 Nc6 3.d4 cxd4 4.Nxd4 Nf6 5.Nc3 e5 6.Ndb5 d6 7.Nd5 At that time, this direction was not that famous. People religiously used to play the mainline with 7.Bg5 a6 8.Na3 b5 and all those forcing lines. As the theory exploded, White had to come back and seek a new direction and that's how the new trend of 7. Nd5 was revived once again. So in this old game, this was relatively new. 7...Nxd5 8.exd5 Nb8 This retreat is the main move here. The knight comes to d7, where he can choose later which direction to go: c5, e5, or f6. Apart from 8.. .Nb8 there is also 8...Ne7 which is dealt with extensively in the opening section. This whole tabiya became extremely popular after the World Championship match between Carlsen and Caruana. 9.c4 Buidling up a formidable centre. 9...Be7 10.Bd3 a6 11.Nc3 0-0 12.0-0 f5 Logical moves from both sides. For deviations and other Black options, you can always head to the opening section. Our main criteria is to learn the typical ideas and plans from the game, so let's quickly hop to the critical juncture where the opening sort of ends. 13.f3 Bg5 14.Kh1 14.Qc2 is the critical move suggested by me in the opening section creating pressure along the c2-h7 diagonal. It is more effective but the move played in the game is also natural. 14...Nd7 15.b4 Both sides make 'their' moves. White traditionally seizes space on the Queenside, while Black is trying to create something in center and on the Kingside. But one point to add is that 15. b4 is imprecise here and 15. a3 has to be played, preparing the b4 push with the same notion. So why 15. a3 and not 15. b4? The simple point is that Black now gets to break with 15...a5 . After 15.a3 he has to wait for one more move as 15...a5 without us playing b4 weakens the b5 square, without any counterplay in return. So after 15. a3 we get formidable support for our b4 pawn when we push it on the next move. 15...a5 16.a3 axb4 16...e4 here is a brilliant resource and typical pawn sacrifice for Black which we have to be aware of always as after 17.fxe4 Black has a strong maneuver with 17...Bf6 18.Bd2 Be5 and the Queen is arriving to h4 with great counterplay. 17.Bxg5 Qxg5 18.axb4 Rxa1

19.Qxa1 Now the position has fizzled out. That's is also one of the reasons why we should play 16. a3 and then b4, maintaining the flexibility. 19...Qe3 20.Be2 Prepares 21. Qc1 next, using the fact that endgame favours White and as well the Queen is quite annoying on e3. 20...e4 Krasenkow is not willing to play a passive position and is looking for immediate activity and his move 20...e4 showcases it. One of Black's typical breaks but only in this position it is not that effective as White gets Qc1 in time and Black will have to either exchange it which loses all his ambition or retract back which will slow his activity. Instead 20... Nf6 was required: 21.Qc1 Qb6 22.Nb5 Bd7 23.c5 Qa6 and apparently Black is holding this complex game. 21.Qc1 Qb6 Exchanging the Queens will only help White to a greater extent: 21...Qxc1 22. Rxc1 exf3 23.gxf3! quite important and next White is pouncing with Nb5 and c5. 22.fxe4 23.Nb5 was necessary as the b4 pawn was hanging and White is the boss there. 22...fxe4 22...Qxb4 would have equalised easily: 23.exf5 Ne5 and Black is back in the game. 23.Rxf8+ Nxf8 24.Nb5 Now Black is again in a doomed situation as his e4 pawn stands lonely. Also, c5 is a dangerous threat now. 24...Ng6 24...Qf2 is faced by 25.Qf1 . 25.c5 dxc5 26.bxc5 Extremely natural, but the computers don't agree. They prefer 26. Qxc5 with a huge advantage whereas 26. bxc5 simply loses all our advantage. This is such a drastic difference, but I can understand now why is that as 26. Qxc5 simply kills the active piece of Black whereas in the other case it does not. So 26.Qxc5 Qd8 27.d6 is winning for White. 26...Qf6 And once again Black is back in the game with the Knight heading to f4. 27.Nd6 Nf4 Finally, Black has some activity. 28.Nxe4 28.Bc4 might be more challenging but after the only brilliant move 28...Nd3 which is tough to spot, Black is fine in the ensuing complications. 29.Bxd3 exd3 30.Nxc8 is a blunder and would allow d2 and Qf2 and Black is winning. So after 28...Nd3 White has to play 29.Qb1 with a complex game. 28...Qe5 29.Bf3 Nxd5 Black has equalised completely but he still has some things to solve before shaking hands. 30.Nd6 Be6 31.Nxb7 Nf4 32.c6 The position is heating up and Black has to find only concrete moves to save the position from drowning. 32...Nd3 33.Qf1 Ne1 Sealing White's pieces. 34.Be2 Nc2 Missing the chance to force matters: 34...Nxg2!! would most likely have given him a draw. But it's not an easy move to spot. The line continues with 35.Kxg2 Bd5+ 36 Bf3 Qg5 37.Kf2 Bxf3 38.Kxf3 Qf5+ 39.Ke2 Qe5 40.Kd2 Qb2 and Black achieves a perpetual. But the text move is possible and Black is still not losing. 35.Bc4 Ne3 Now comes the big blunder. 35...Bxc4 would have kept drawing chances alive after 36.Qxc4 Kh8 37.Qc5 Qa1+ 38.Qg1 Qe5 and it not easy for White to advance his c pawn. 36.Bxe6+ Qxe6 37.Qf4 The only winning move, with the point that 37...Qxc6 38.Qb8 Kf7 39.Nd8 is game over. 37...h6 38.Nc5 Qe8 39.Nd3 Covering the e1 square as the last trap was 39.c7 Nd5 and 40... Nxc7. 39...Kh7 40.c7 Qe6 41.Qe5 And White won the game. So many interesting ideas and plans to learn from this game.

☐ **Model Games**
■ **Caruana,Fabiano**

1.e4 c5 2.Nf3 Nc6 3.d4 cxd4 4.Nxd4 Nf6 5.Nc3 e5 6.Ndb5 d6 7.Nd5 Nxd5 8.exd5 Nb8 9.a4 Be7 10.Be2 0-0 So far we have been following the theoreticalchapter. 11.0-0 Nd7 12.Bd2 f5 13.a5 a6 14.Na3 e4 15.Nc4 Ne5 16.Nb6 Rb8 17.f4 exf3 18.Bxf3 g5 Too optimistic. A safer option for Black is 18... Bf6 19.c3 although White still looks preferable. 19.c4 Black is pushing the kingside pawn, White is pushing the queenside pawns. 19...f4 20.Bc3 With the idea of playing c5. 20...Bf5 20.↻.Bf6 21.c5! quite typical positional pawn sacrifice. White gets the passed d-pawn, the d5 square and opens the diagonals for the bishop and the queen îîStartBracketîîa2-g8, and h1-a8îîEndBracketîî. 21...dxc5 22.d6 Nxf3+ 23. gxf3 taking with the rook is also good. 23...Bxc3 24.bxc3 Be6 25.Re1 when White is strategically winning. The knight on b6 and the pawn on d6 fully dominate. 21.c5 Nxf3+ If Black rejects the pawn sacrifice, 22. c6 is coming. 22.Qxf3 dxc5 23.Rad1 The most natural move. 23.g4! is a very powerful move. It kicks away Black's bishop from its ideal square on f5. After 23...Bg6 23...fxg3 24.Qxg3 is just game over for Black. White has too many threats. 24.Rad1! Bd6 25.Rfe1 Black cannot defend against Re6. Nc4 is another huge threat. 25...c4 26.Re6 Qc7 27. Qh3 Rxg6 is undefendable threat. 23.Rae1 Bf6 24.h4 also looks promising. 23...Bd6 24.h3 This spoils everything White has done so far. 24.Qh5 looks like a natural move to me. 24...Bg6 25.Qh3 Bf5 is replied by the typical 26.g4! Bg6 27.Rfe1 f3 28.Re6 and now Rxg6 is a threat. Once the white rook gets to e6 Black's defences fall apart. 24...Qe8 Black got that one extra tempo which he needed. 25.Nc4 Qg6 The rooks are connected, the bishops are safe, and the d6 square is under control. 26.Nxd6 Qxd6 27.h4 gxh4 28.Qxf4 Qxf4 29.Rxf4 h5 The last precise move. It secures the g4 square. 30.Re1 Bg4 31.Rf6 Rxf6 32.Bxf6 Kf7 33.Bxh4 Re8 34.Rf1+ Kg8 35.Rf6 Re2 36.Rg6+ Kf8 37.d6 Rd2 38.Rg5

**B33**

☐ **Lesson Sveshnikov The,T**
■ **Sveshnikov 9.Bxf6 gxf6 10.Nd5**

1.e4 c5 2.Nf3 Nc6 3.d4 cxd4 4.Nxd4 Nf6 5.Nc3 e5 6.Ndb5 d6 7.Bg5 a6 8.Na3 b5 9.Bxf6 We will analyze 9.Bxf6 in this lesson. 9...gxf6 9...Qxf6 doesn't make any sense as after 10.Nd5 Qd8 Black gets a worse version of the 9.Nd5 variation. 10.Nd5 First of all, I would like to apologize in advance because in this lesson, there will be a lot of theory and a lot of variations. But what to do? The Sveshnikov is a very important variation and in this line, the price of a move is very high. Quite often both sides will have to make only moves. Of course, there are general ideas: Black is trying to push ...f5 by all means and White is trying to play c2-

c3 to get the knight into the game. White will usually need also to blockade the centre while trying to use the central squares to create strategic and tactical possibilities. On the other hand, despite Black's weird pawn structure, he gets a powerful center. But frankly, all of these details won't be relevant as you will see the variations are very direct in many lines and you just need to know the theory move by move. 10...f5 This was my preferred choice when I was playing the Sveshnikov. White has plenty of replies here so let's look at them one by one. 11.Bd3 Be6 12.0-0 Bxd5 Now this move is necessary. 13.exd5 Ne7 There's a lot of discussions and from time to time there are games at the top level here. There are some nuances but all in all I believe Black is holding here. 14.Re1 Bg7 15.c3 0-0 Black needs to be careful here and not push e4 too quickly. 16.Qh5 The idea behind my plan is to play Qh5 here. 16...e4 17.Bf1 This is the most dangerous position for Black in this whole Bd3 line. Even if it is objectively okay here Black must be pretty careful. 17...Re8 18.Nc2 Nxd5 I think that this move is good enough. 19.Qxf5 There was a game I believe here, Topalov-Mamedov, an important one that is relevant to our analysis. 19...Re5 20.Qh3 White of course has certain structural advantages, but in a very typical Sveshnikov way Black manages to equalize thanks to his counterplay and active pieces. 20...Qb6 21.Rad1 Rae8 Black wants to play e3 and exchange everything, so Topalov sacrificed an exchange to prevent that. 22.Rxe4 Rxe4 23.Rxd5 R4e5 White of course has enough compensation for the exchange but I don't think he can really be better. This is the current state of theory of 9.Bxf6. I tried to give you the most important and relevant information, I think you can already play it with both colours and if you want to study it further, I encourage you to explore more master games and follow the top grandmasters. It was a long session with a lot of variations, but at least you can see that the play is very lively, which is what attracted me very much to this opening. All in all, I think Black is holding well in the Sveshnikov. Now I feel that you know what to do in the Sveshnikov, everyone who studied this course better than most of the players in the world because I know a lot about this opening. I gave you all of the lines that I was preparing myself and I would play myself with both colours. We finished our Sveshnikov journey.

**B33**

☐ **Lesson Sveshnikov The,T**
■ **Sveshnikov 9.Bxf6 gxf6 10.Nd5**

1.e4 c5 2.Nf3 Nc6 3.d4 cxd4 4.Nxd4 Nf6 5.Nc3 e5 6.Ndb5 d6 7.Bg5 a6 8.Na3 b5 9.Bxf6 We will analyze 9.Bxf6 in this lesson. 9...gxf6 9...Qxf6 doesn't make any sense as after 10.Nd5 Qd8 Black gets a worse version of the 9.Nd5 variation. 10.Nd5 First of all, I would like to apologize in advance because in this lesson, there will be a lot of theory and a lot of variations. But what to do? The Sveshnikov is a very important variation and in this line, the price of a move is very high. Quite often both sides will have to make only moves. Of course, there are

general ideas: Black is trying to push ...f5 by all means and White is trying to play c2-c3 to get the knight into the game. White will usually need also to blockade the centre while trying to use the central squares to create strategic and tactical possibilities. On the other hand, despite Black's weird pawn structure, he gets a powerful center. But frankly, all of these details won't be relevant as you will see the variations are very direct in many lines and you just need to know the theory move by move. 10...Bg7 Although not the mainline, according to modern theory this is a decent way of playing. I don't see a real advantage for White here. You need to know that this variation is much more forcing than 10...f5 and Black is basically trying to make a forced draw, therefore you really need to memorize the following variations. 11.Bd3 The main move here in this position. 11...Ne7 Since Bd3 cut the queen's access to the d5-square, this is the perfect timing to attack it with Ne7. 12.Nxe7 Qxe7 This is the position where play gets very direct. 13.0-0 0-0 It is pretty clear that sooner or later White willl try to get his knight into the game and he has two different ways to do it: c4 and c3. 14.c4 Used to be by far the main move theoretically at some point, but it's actually analyzed very heavily and it looks like Black is holding a draw in every line, nothing more than that though. 14...f5 Black almost always wants to follow up f5 with d5 freeing up the g7 bishop even at the cost of a pawn sometimes. 15.Qf3 At some point this move became very popular and actually it was creating a lot of problems for Black. Luckily, powerful engines have unravelled amazing ideas to equalize after 15.Qf3. 15...Qb7 The engines discovered this position and again the position almost feels like a forced draw now. 16.exf5 The most challenging. 16...Qxf3 17.gxf3 e4 Amazing stuff. 18.Bxe4 d5 Absolutely only move. 19.Bxd5 White is three pawns up and it is still not enough for White to get an edge. 19...Rb8 This is even easier for Black than 19...Bxf5. We just play a slow move as if we are not three pawns down. 20.Rad1 Bxb2 21.Nc2 Bxf5 Two pawns back, only one more left to collect. 22.Ne3 Bh3 And the position should end in a draw fairly soon after exchanging on c4. This is the state of affairs after 14.c4 f5, in my opinion, the engines managed to completely neutralize it if Black is of course very well prepared.

**B33**

☐ **Lesson Sveshnikov The,T**
■ **Sveshnikov 9.Bxf6 gxf6 10.Nd5**

1.e4 c5 2.Nf3 Nc6 3.d4 cxd4 4.Nxd4 Nf6 5.Nc3 e5 6.Ndb5 d6 7.Bg5 a6 8.Na3 b5 9.Bxf6 We will analyze 9.Bxf6 in this lesson. 9...gxf6 9...Qxf6 doesn't make any sense as after 10.Nd5 Qd8 Black gets a worse version of the 9.Nd5 variation. 10.Nd5 First of all, I would like to apologize in advance because in this lesson, there will be a lot of theory and a lot of variations. But what to do? The Sveshnikov is a very important variation and in this line, the price of a move is very high. Quite often both sides will have to make only moves. Of course, there are

general ideas: Black is trying to push ...f5 by all means and White is trying to play c2-c3 to get the knight into the game. White will usually need also to blockade the centre while trying to use the central squares to create strategic and tactical possibilities. On the other hand, despite Black's weird pawn structure, he gets a powerful center. But frankly, all of these details won't be relevant as you will see the variations are very direct in many lines and you just need to know the theory move by move. 10...Bg7 Although not the mainline, according to modern theory this is a decent way of playing. I don't see a real advantage for White here. You need to know that this variation is much more forcing than 10...f5 and Black is basically trying to make a forced draw, therefore you really need to memorize the following variations. 11.Bd3 The main move here in this position. 11...Ne7 Since Bd3 cut the queen's access to the d5-square, this is the perfect timing to attack it with Ne7. 12.Nxe7 Qxe7 This is the position where play gets very direct. 13.0-0 0-0 It is pretty clear that sooner or later White willl try to get his knight into the game and he has two different ways to do it: c4 and c3. 14.c4 Used to be by far the main move theoretically at some point, but it's actually analyzed very heavily and it looks like Black is holding a draw in every line, nothing more than that though. 14...f5 Black almost always wants to follow up f5 with d5 freeing up the g7 bishop even at the cost of a pawn sometimes. 15.Qh5 Now I think that Black has two ways to equalize and be fine. 15...Rb8 The old way, the simplest and most direct I would say probably. Now Black wants to take on e4 and play f5, so White has to react first. 16.exf5 e4 17.Rae1 There are other moves and honestly you can check it with an engine, the play is so direct you don't really my explanation here. There is nothing positional, just forced variations here and there. 17...Bb7 18.Qg4 Rbe8 19.cxb5 Kh8 20.bxa6 Ba8 Black is three pawns down but in return has a very big initiative. Rg8 is coming. 21.Bb5 Rb8 A very complicated position, the engines say that its 0.0 but without any forced draws. I like Black's prospects thanks to the bishop pair and open g-line, but of course the position is extremely sharp.

**B33**

☐ **Lesson Sveshnikov The,T**
■ **Sveshnikov 9.Bxf6 gxf6 10.Nd5**

1.e4 c5 2.Nf3 Nc6 3.d4 cxd4 4.Nxd4 Nf6 5.Nc3 e5 6.Ndb5 d6 7.Bg5 a6 8.Na3 b5 9.Bxf6 We will analyze 9.Bxf6 in this lesson. 9...gxf6 9...Qxf6 doesn't make any sense as after 10.Nd5 Qd8 Black gets a worse version of the 9.Nd5 variation. 10.Nd5 First of all, I would like to apologize in advance because in this lesson, there will be a lot of theory and a lot of variations. But what to do? The Sveshnikov is a very important variation and in this line, the price of a move is very high. Quite often both sides will have to make only moves. Of course, there are general ideas: Black is trying to push ...f5 by all means and White is trying to play c2-c3 to get the knight into the game. White will usually need also to blockade the centre

while trying to use the central squares to create strategic and tactical possibilities. On the other hand, despite Black's weird pawn structure, he gets a powerful center. But frankly, all of these details won't be relevant as you will see the variations are very direct in many lines and you just need to know the theory move by move. 10...f5 This was my preferred choice when I was playing the Sveshnikov. White has plenty of replies here so let's look at them one by one. 11.Bd3 Be6 12.0-0 Bxd5 Now this move is necessary. 13.exd5 Ne7 There's a lot of discussions and from time to time there are games at the top level here. There are some nuances but all in all I believe Black is holding here. 14.c4 Another option for White, trying quickly to break the pawn structure on the queenside. 14...Bg7 Black has very strong play now. 15.Rb1 e4 16.Be2 0-0 17.cxb5 axb5 18.Bxb5 Ng6 Black definitely has plenty of compensation.

**B33**

☐ **Lesson Sveshnikov The,T**
■ **Sveshnikov 9.Bxf6 gxf6 10.Nd5**

1.e4 c5 2.Nf3 Nc6 3.d4 cxd4 4.Nxd4 Nf6 5.Nc3 e5 6.Ndb5 d6 7.Bg5 a6 8.Na3 b5 9.Bxf6 We will analyze 9.Bxf6 in this lesson. 9...gxf6 9...Qxf6 doesn't make any sense as after 10.Nd5 Qd8 Black gets a worse version of the 9.Nd5 variation. 10.Nd5 First of all, I would like to apologize in advance because in this lesson, there will be a lot of theory and a lot of variations. But what to do? The Sveshnikov is a very important variation and in this line, the price of a move is very high. Quite often both sides will have to make only moves. Of course, there are general ideas: Black is trying to push ...f5 by all means and White is trying to play c2-c3 to get the knight into the game. ☐ **Main Line**
■ **Rare Th Moves**

**1.e4 c5 2.Nf3 Nc6 3.d4 cxd4 4.Nxd4 Nf6 5.Nc3 e5 6.Ndb5 d6 7.Bg5 a6 8.Na3 b5 9.Nd5 Be7 10.Bxf6 Bxf6 11.c3 0-0 12.Nc2 Bg5 13.a4 bxa4 14.Rxa4 a5** This move is certainly more challenging than the alternatives mentioned on page 216. **15.Bc4** Other options have been tried here, but the text move has been the main choice since the birth of the Sveshnikov Variation in the 1970s.
**15...Rb8 16.b3** The most logical move.

[ 16.Ra2 is the other main line here. This is more dangerous in the attacking lines where Black weakens his king's cover with ...g6 and White sacrifices a pawn with h4 (such as the modern classic Esserman - Fedorowicz in 2011, where White opened the second rank for the rook with b2-b4! at the right moment), but in the more positional lines where Black takes on e3 (as in the lines presented here) the rook is not so active at a2 and the move b2-b3 is much more useful. As White has good play in the attacking lines anyway (see Game 21) it is best to choose 16.b3, as most of the elite players do these days. ]

**16...Kh8 17.Nce3** This move "may be regarded as the ultimate main line of the Sveshnikov according to current theory" wrote Kotronias. With an opening as sound as the Sveshnikov, we need to use the best available weapons. Black has tried a number of options. In the next game we will see 17...Ne7, before moving on to the absolute main line 17.. .g6. Before all that though, we will start with a few sidelines.
**17...Bxe3** With the rook on a2, this is playable and most probably fine for Black, but with the rook active on a4, Black cannot equalize.

[ 17...Be6 18.h4!? also leaves Black short of equality. For example: Bxe3 19.Nxe3 Bxc4 20.Nxc4 f5 21.Nxd6± ]

[ 17...f5? This has been played quite often, but only by lower-rated players. In this case the ...f5-break merely opens lines for White's attack. 18.Nxf5 Bxf5 19.exf5 Rxf5 20.h4! White has scored 6/6 from here, and indeed his position is already overwhelming.

**A)** Or 20...Be7 21.Bd3 Rf7 White can crash through with either 22.Rc4 *(*or *22.Qh5 Qg8 23.Rc4 )*;

**B)** 20...Bxh4 21.g3 And h7 is going. We can follow a Lanka game (often a good idea) to its quick end: Bxg3 22.fxg3 e4 23.Qg4 Rg5 24.Rxh7+ Kxh7 25.Qh4+ Kg6 26.Nf4+ 1-0 Lanka - Korsus, Kiel 2003. ]

**18.Nxe3 Ne7**

[ Or 18...f5 is likely to transpose. Following 19.exf5 Bxf5 20.0-0 Black has no

better option than *(*Instead Bg6 *20.Qd2* followed by Rd1 puts quick pressure on d6. *)*]

**19.0-0⩲** To quote Rogozenko on this position: "White can play for a win without any risk of losing." **19...f5 20.exf5 Bxf5**

[Instead 20...Nxf5?! is the main line with the rook at a2 and the pawn on b2 (see for example the game Carlsen - Van Wely, Schagen 2006) but here it is not good. 21.Nxf5 Bxf5 22.Qd5 Ra8 23.Rfa1 Qb6 24.R1a2! *(*Just for the record *24.Rxa5* is also possible as *Be4* can be met by Clever stuff, but White's advantage is greater after the text move. *)* 24...Bb1 25.Rd2 Qd8 26.Ra1 Bg6 27.Qxd6⩲ Vuckovic - Bogosavljevic, Mataruska Banja 2008. ]

**21.Ra2!** Rerouting to d2 is the most effective plan.

[After 21.Nxf5 Rxf5 22.Bd3 Rf6 23.Bc2 Qb6 24.b4 axb4 25.Rxb4 Qc7 26.Qd3 White's edge was not so big in Karjakin - Khalifman, Amsterdam 2007. ]

**21...Be4** Here and on the following moves, both sides (but especially White!) have various plausible options.

[For example 21...Rf6 22.Re1⩲ is the usual pleasant niggle. ]

**22.Rd2 Rb6 23.Re1** One of several promising moves. In what follows I will give several examples to give a better picture of how to play this variation.

[ 23.Qa1!? is a useful move in this and similar positions. ]

[ 23.Be6!? Rf6 24.Bd5 is more purposeful than it may at first appear. After Bxd5 25.Nxd5 Black must exchange again, so Nxd5 26.Rxd5 and the presence of the rook on f6 weakens the back rank. h6 *(*The back-rank issue shows up after *26...Qb8 27.c4 Rxb3 28.c5⩱* and a strong pawn will appear on d6. *)*

Now in Kasimdzhanov - Tregubov, Bastia (rapid) 2006, White, no doubt due to time shortage, wasted his chance with: 27.Rxe5?! *(*Instead *27.c4⩱* would have kept a handy edge. *)* 27...Rxb3 28.Rxa5 Rxc3= ]

[In contrast, the apparently more direct 23.Bd5 Nxd5 24.Nxd5 allows Black to avoid the second exchange with Rb7 when Black is close to level. ]

**23...Qb8 24.f3**

[ 24.Qa1 is again a good alternative. For example: Qc7 25.Red1 *( 25.Qa3!? )* 25...d5 A cold-blooded way to simplify into an inferior but holdable ending. *(*Instead *25...h6 26.h3 Bb7 27.Qa3 Rd8 28.Be6 Qxc3 29.Rxd6±* led to a convincing win in Leko - Radjabov, Morelia/Linares 2008. *)* 26.Nxd5 Nxd5 27.Bxd5 Bxd5 28.Rxd5 Rxb3 29.Rxa5 *( 29.Qxa5 Qxa5 30.Rxa5 Rxc3 31.Rxe5* gives White the better side of a draw, as in Pawlowski - Schwenck, email 2008. *)* 29...Rxc3 30.Ra8 Rg8 31.Rxg8+ Kxg8 32.Qa2+ Kf8 33.h4⩲ Black's position is unpleasant, but should be defendable. ]

**24...Ba8 25.Qa1 d5?!** Another "simplify and grimly hang on" approach, but the resulting position is nasty.

[More reliable was 25...e4 26.fxe4 Bxe4 when White keeps an edge with 27.Qa3!⩲ *(*However, please note that the hasty *27.Qxa5?* allows drawish liquidation after *d5 )*]

**26.Nxd5 Bxd5 27.Bxd5 Nxd5 28.Rxd5 Rxb3 29.Qxa5 e4 30.fxe4±** In Gappel -

Balosetti, corr. 2009, Black somehow managed to hold this endgame, but it is clearly a borderline case: engines will find defensive resources, but try to defend it yourself and you will find how difficult it is.

□ **Lesson Sveshnikov Without**
■ **6.Ndb5 d6 7.Nd5 #5**

1.e4 c5 2.Nf3 Nc6 3.d4 cxd4 4.Nxd4 Nf6 5.Nc3 e5 In this lesson we will introduce the Sveshnikov and White's alternatives to the main line 7. Bg5. According to current theory, it is very difficult for White to prove an advantage against the Sveshnikov. It is successfully employed by numerous grandmasters - I have played it throughout my career and it is one of the main weapons of world champion Magnus Carlsen, who prepared it for his 2018 match with Fabiano Caruana - and it is one of the most popular Sicilians at any level. After all, it is not so often that Black can play with the initiative right from the opening! 6.Ndb5 Of course both 6.Nf3 and 6.Nb3 don't work because of 6...Bb4 , indirectly attacking e4 and preparing ...d5. 6...d6 Black has tried 6...h6 but it doesn't work, for several reasons, the most immediate being 7.Nd5 . 7.Nd5 It is White's main alternative to 7.Bg5 7...Nxd5 8.exd5 And now Black can choose between 8...Nb8 and 8...Ne7, both of which are sound. The first is safer, positional, but gives White more opportunities to fight for an advantage. After the second, on the other hand, the game becomes sharper and it is important to know the theory move by move. 8...Nb8 The positional approach. 9.a4 It is more recent, becoming popular in recent years, and can be considered the main line. White's idea is still to play on the queenside, and if ...a6 then Na3 followed by Nc4. 9...Be7 10.Be2 0-0 11.0-0 Nd7 12.Kh1 This was my idea when I first worked on this line. 12...a6 13.Na3 Nc5 This was Magnus' choice in his game against Vachier-Lagrave, Stavanger 2019. 14.Nc4 a5 An important move, preventing White from further advancing. 15.f4 exf4 16.Bxf4 f5 Another very important move. Black is not only securing the e4-square for his knight, he's also preparing ...g5. 17.Qd2 b6 18.Rae1 Ba6 The last important move to keep in mind in this line. 19.b3 Ne4 And Black has an equal position.

**B33**

☐ **Lesson Sveshnikov The,T**
■ **Sveshnikov 9.Bxf6 gxf6 10.Nd5**

1.e4 c5 2.Nf3 Nc6 3.d4 cxd4 4.Nxd4 Nf6 5.Nc3 e5 6.Ndb5 d6 7.Bg5 a6 8.Na3 b5 9.Bxf6 We will analyze 9.Bxf6 in this lesson. 9...gxf6 9...Qxf6 doesn't make any sense as after 10.Nd5 Qd8 Black gets a worse version of the 9.Nd5 variation. 10.Nd5 First of all, I would like to apologize in advance because in this lesson, there will be a lot of theory and a lot of variations. But what to do? The Sveshnikov is a very important variation and in this line, the price of a move is very high. Quite often both sides will have to make only moves. Of course, there are general ideas: Black is trying to push ...f5 by all means and White is trying to play c2-c3 to get the knight into the game. White will usually need also to blockade the centre while trying to use the central squares to create strategic and tactical possibilities. On the other hand, despite Black's weird pawn structure, he gets a powerful center. But frankly, all of these details won't be relevant as you will see the variations are very direct in many lines and you just need to know the theory move by move. 10...f5 This was my preferred choice when I was playing the Sveshnikov. White has plenty of replies here so let's look at them one by one. 11.c3 This move gives me mixed memories because in my first game ever in the Sveshnikov variation which I played in the last round of the U14 Soviet Championship, I was 12 at the time, and in the game, my opponent played this c3 move. 11...Bg7 This is the correct move here. 12.exf5 Bxf5 13.Nc2 WhaC is good about this position is that you can get it against both Bf5 and Bg7. This was causing quite some trouble for Black in the 90s as I painfully recollect now. But finally now it seems that Black has found îîStartBracketîîI can say partly thanks to my effortsîîEndBracketîî a way to equalize against this move. 13...0-0 14.Nce3 Be6 14.C.Bd7 is not popular at all and honestly looks a bit strangeîîStartBracketîîthe bishop on e6 looks better placedîîEndBracketîî but it might be an interesting move. 15.Bd3 The main move by far. 15...f5 And here during the 1990s I had a lot of games in this position, it wasn't easy at the time but nowadays it is clear that Black is more or less fine in this position. 16.Qh5 e4 17.Bc2 Ne7 I played two or three games here with Black and there were small issues here and there but with the help of modern engines I can be sure that this is safe for Black. 18.Rd1 b4 Not the only, but for sure the best move to equalize the position. Very often, you need to watch out for this move with both colors! 19.Nxb4 a5 20.Nbd5 Nxd5 21.Nxd5 Rb8 Suddenly Black is just simply better, the b2 pawn is weak.

**B33**

☐ **Lesson Sveshnikov The,T**
■ **Sveshnikov 9.Bxf6 gxf6 10.Nd5**

1.e4 c5 2.Nf3 Nc6 3.d4 cxd4 4.Nxd4 Nf6 5.Nc3 e5 6.Ndb5 d6 7.Bg5 a6 8.Na3 b5 9.Bxf6 We will analyze 9.Bxf6 in this lesson. 9...gxf6 9...Qxf6 doesn't make any sense as after 10.Nd5 Qd8 Black gets a worse version of the 9.Nd5 variation. 10.Nd5 First of all, I would like to apologize in advance because in this lesson, there will be a lot of theory and a lot of variations. But what to do? The Sveshnikov is a very important variation and in this line, the price of a move is very high. Quite often both sides will have to make only moves. Of course, there are general ideas: Black is trying to push ...f5 by all means and White is trying to play c2-c3 to get the knight into the game. White will usually need also to blockade the centre while trying to use the central squares to create strategic and tactical possibilities. On the other hand, despite Black's weird pawn structure, he gets a powerful center. But frankly, all of these details won't be relevant as you will see the variations are very direct in many lines and you just need to know the theory move by move. 10...Bg7 Although not the mainline, according to modern theory this is a decent way of playing. I don't see a real advantage for White here. You need to know that this variation is much more forcing than 10...f5 and Black is basically trying to make a forced draw, therefore you really need to memorize the following variations. 11.Bd3 The main move here in this position. 11...Ne7 Since Bd3 cut the queen's access to the d5-square, this is the perfect timing to attack it with Ne7. 12.Nxe7 Qxe7 This is the position where play gets very direct. 13.0-0 0-0 It is pretty clear that sooner or later White willl try to get his knight into the game and he has two different ways to do it: c4 and c3. 14.c4 Used to be by far the main move theoretically at some point, but it's actually analyzed very heavily and it looks like Black is holding a draw in every line, nothing more than that though. 14...f5 Black almost always wants to follow up f5 with d5 freeing up the g7 bishop even at the cost of a pawn sometimes. 15.Qf3 At some point this move became very popular and actually it was creating a lot of problems for Black. Luckily, powerful engines have unravelled amazing ideas to equalize after 15.Qf3. 15...Qb7 The engines discovered this position and again the position almost feels like a forced draw now. 16.Rad1 Against this move and any other logical reply by White, Black replies in the same way. 16...d5 17.cxd5 fxe4 18.Bxe4 f5 19.Bb1 e4 20.Qb3 Kh8 21.Nc2 Bd7 It is a slow game but Black has enough compensation for the pawn.

**B33**

**Lesson Sveshnikov Without**
**6.Ndb5 d6 7.Nd5 #3**

1.e4 c5 2.Nf3 Nc6 3.d4 cxd4 4.Nxd4 Nf6 5.Nc3 e5 In this lesson we will introduce the Sveshnikov and White's alternatives to the main line 7. Bg5. According to current theory, it is very difficult for White to prove an advantage against the Sveshnikov. It is successfully employed by numerous grandmasters - I have played it throughout my career and it is one of the main weapons of world champion Magnus Carlsen, who prepared it for his 2018 match with Fabiano Caruana - and it is one of the most popular Sicilians at any level. After all, it is not so often that Black can play with the initiative right from the opening! 6.Ndb5 Of course both 6.Nf3 and 6.Nb3 don't work because of 6...Bb4 , indirectly attacking e4 and preparing ...d5. 6...d6 Black has tried 6...h6 but it doesn't work, for several reasons, the most immediate being 7.Nd5 . 7.Nd5 It is White's main alternative to 7.Bg5 7...Nxd5 8.exd5 And now Black can choose between 8...Nb8 and 8...Ne7, both of which are sound. The first is safer, positional, but gives White more opportunities to fight for an advantage. After the second, on the other hand, the game becomes sharper and it is important to know the theory move by move. 8...Nb8 The positional approach. 9.c4 Be7 9...a6 10.Qa4 Black is already in trouble. 10. ..Nd7 If 10...Bd7 11.Qa3 and Black is forced to give up the bishop; 11...Bxb5 12.cxb5 11.c5 dxc5 11...Rb8 is what I played back in 1992 in Gausdal, against GM Westerinen. 12.Nxd6+ Bxd6 13.cxd6 O-O and even if I managed to win after slowly taking back the pawn, White is objectively better. 12.d6 axb5 13.Qxa8 Bxd6 14.Bxb5 But now Black has maybe enough compensation for the exchange. 10.Bd3 White's best try. 10.c5 ca be used as a surprise weapon but isn't dangerous for Black. 10...O-O 11.cxd6 Bxd6 10...0-0 11.0-0 a6 11...Bd7 12.a4 was also tried. 12.Nc3 f5 13.f3 Nd7 It becomes difficult for both players to win the initiative, and the game becomes more positional. 14.Kh1 White can also try 14.a3 Bg5 15.b4 but Black can simply reply with ...b6, and has nothing to worry about White's play on the queenside. 14...Bg5 Taking control of the dark squares. After 14...b6 15.Be3 Bg5 16.Bg1 White's king is safe, and White can start organizing his play on the queenside with b4-c5. 15.b4 a5 15...b6 is ok too. 16.a3 axb4 17.Bxg5 Qxg5 18.axb4 Rxa1 19.Qxa1 Qe3 I had this position on the board back in the 1990s when I was preparing for my match with Yudasin. 20.Be2 Nb8 Clearing the way for the bishop and maneuvering to attack the b4-pawn. Black is fine.

**B33**

**Lesson Sveshnikov Without**
**6.Ndb5 d6 7.Nd5 #11**

1.e4 c5 2.Nf3 Nc6 3.d4 cxd4 4.Nxd4 Nf6 5.Nc3 e5 In this lesson we will introduce the Sveshnikov and White's alternatives to the main line 7. Bg5. According to current theory, it is very difficult for White to prove an advantage against the Sveshnikov. It is successfully employed by numerous grandmasters - I have played it throughout my career and it is one of the main weapons of world champion Magnus Carlsen, who prepared it for his 2018 match with Fabiano Caruana - and it is one of the most popular Sicilians at any level. After all, it is not so often that Black can play with the initiative right from the opening! 6.Ndb5 Of course both 6.Nf3 and 6.Nb3 don't work because of 6...Bb4 , indirectly attacking e4 and preparing ...d5. 6...d6 Black has tried 6...h6 but it doesn't work, for several reasons, the most immediate being 7.Nd5 . 7.Nd5 It is White's main alternative to 7.Bg5 7...Nxd5 8.exd5 And now Black can choose between 8...Nb8 and 8...Ne7, both of which are sound. The first is safer, positional, but gives White more opportunities to fight for an advantage. After the second, on the other hand, the game becomes sharper and it is important to know the theory move by move. 8...Ne7 It makes sense to immediately transfer the knight to the kingside, because that is where Black's game develops. 9.c4 9.a4 can become dangerous for White, as Black will continue with ...Ng6 or ... Nf5, bringing his knight closer to the enemy king. 9...Ng6 AftCr 9...Nf5 10.Bd3 Be7 11.O-O O-O 12.f4 a6 13.Nc3 White has a very nice initiative, also thanks to the shaky position of the f5-knight. So it might be easy to get confused, but it is best not to: after îîStartFENîîr1bqkb1r/pp2nppp/3p4/1N1Pp3/8/8/PPP2PPP/R1BQKB1R w KQkq - 1 9îîEndFENîî 9.c3 , 9...Ng6 is wrong, and 9...Ng5 is correct. While it is the other way around after îîStartFENîîr1bqkb1r/pp2nppp/3p4/1N1Pp3/8/8/PPP2PPP/ R1BQKB1R w KQkq - 1 9îîEndFENîî 9.c4: 9...Nf5 is wrong, and 9...Ng6 is correct. 10.Qa4 10.Be2 is very good for Black, after 10...a6 11.Nc3 Be7 10.h4 too doesn't give anything to White after 10...a6 11.Nc3 Be7 12.h5 Nh4 13.c5 O-O 14. h6 g6 10...Bd7 11.Qb4 Qb8 With the pawn on c4, White misses the Qc4 maneuver. If 11... Bf5 then 12.h4 is unpleasant. 12.h4 The point of the White play. If, for instance, 12. Be2 then 12...Be7 and Black quickly takes the initiative. 12...h5 Black needs to stop the white pawn. If 12...a6 13.h5 axb5 14.hxg6 White is better. 13.Be2 13.Be3 transposes. 13...a6 14.Nc3 Be7 15.g3 Black cannot castle because of the weak h5 pawn. White will proceed with Be3, taking advantage of the b6 square, if Black does not quickly come up with something. 15...b5 All of a sudden, Black begins his counterplay on the other side of the board. 16.cxb5 axb5 Black has at his disposal an annoying maneuver, .... Bd8-a5 or ... Bd8-b6-c5. Therefore White usually takes on b5. 17.Nxb5 0-0 18.a4 f5 An extremely complicated position, requiring further analysis certainly, but one that is dynamically balanced. It can be played with both colors.

**B33**

☐ **Lesson Sveshnikov The,P**
■ **Sveshnikov 9.Nd5 10.Bxf6 11.c**

1.e4 c5 2.Nf3 Nc6 3.d4 cxd4 4.Nxd4 Nf6 5.Nc3 e5 6.Ndb5 d6 Today we will look at the second part of the three lessons on the Sveshnikov. 7.Bg5 The main move and definitely the most challenging one. Nd5 is threatened, Black's next move is practically forced. 7...a6 8.Na3 b5 Obviously the best move in the position, White wants to get the knight closer to the d5-square, this move prevents that plan and threatens ...b4 as well. 9.Nd5 So today we are going to study this move, 9.Nd5, a kind of positional system. It has been played countless times on the top level. Now Black has to be very accurate, after listening to this course you will have good knowledge of the nuances of this system and if your opponent is not so well-prepared then you have considerable chances to get a certain advantage out of the opening. 9...Be7 TheConly move to fight for equality, and even if Black most often equalizes on the top level, just one wrong move and White will get a significant advantage. Definitely, a rather risk-free variation for White if you know what you are doing. For those of you who want to play this line with Black, I'll try to give a detailed analysis of the current state of theory, the best directions and certain concrete variations - that will already be enough information for you to play it with Black îîStartBracketîîif you are not in the top 10 of the worldîîEndBracketîî. 9...Be6 is a mistake, you'll understand this more after watching the next lesson. 10.Bxf6 gxf6 11.c3 f5 12.exf5 Bxf5 and Black simply lost a tempo. 10.Bxf6 Bxf6 In this position for many many years White would practically immediately play c3, which I believe that it's still the strongest move, trying to follow it up with Nc2. 11.c3 0-0 12.Nc2 Bg5 After Garry practically refuted the Rb8 move order, I switched to Bg5 first. This is a very solid system and Black is able to equalize with very accurate play, but it is not easy. 13.a4 bxa4 Practically forced. 14.Rxa4 a5 15.Bc4 Rb8 This a big tabia. 16.Ra2
In around 2003, Ponomariov played this very dangerous plan against me in a very interesting game that I advise you to study and check. 16...Kh8 17.Nce3 g6 18.h4 The novelty that I faced. A very strong one! 18...Bxh4 19.g3 Bf6 Still very bad. 20.b3 Bg7 21.f4 exf4 22.gxf4 Re8 23.Qf3 The rook will join the attack via the h-file. This looks extremely unpleasant for Black.

☐ **Chapter Pelikan**
■ **7.Nd5 Nxd5 8.ed5 Ne7**
*[GM Ivan Cheparinov]*

**1.e4 c5 2.Nf3 Nc6 3.d4 cxd4 4.Nxd4 Nf6 5.Nc3 e5 6.Ndb5 d6 7.Nd5 Nxd5 8.exd5 Ne7**
[ 8...Nb8 will be the subject of the next Chapter. ]

**9.c4! Ng6** The logical follow-up.

[ 9...Nf5?! has been almost sent to the archive by the textmove - 10.Bd3 and now:

**A)** 10...Be7?! 11.0-0 0-0 and here comes a reminder of how insecure the errant knight is - 12.f4 *( 12.a4!? )* 12...a6 *( 12...Qb6+?!* , in spite of the possible exchange of the problematic piece after *13.Kh1 a6 14.Nc3 Ne3 15.Bxe3 Qxe3 16.f5!±* , is a strategical failure for Black*; 12...exf4 13.Bxf4* is already a concession, see the notes to 13...exf5 below *)* 13.Nc3

**A1)** 13...exf4 14.Bxf4 Nh4 *( 14...Qb6+?* may end even worse after *15.Kh1 Qxb2 16.Bd2+- )* 15.c5! Ng6 *( 15...dxc5 16.d6 Bf6 17.Nd5± )* 16.Bg3 f5 17.Qc2 dxc5 18.Bxf5**±**;

**A2)** 13...Nd4 14.Be3 *(*once again *14.f5!?* deserves serious attention, for the possession of the e4-square may well have the decisive role *b5 15.b3 )* 14...f5 15.Qd2**±**;

**B)** 10...a6? 11.Qa4!+-;

**C)** 10...g6 11.0-0 a6 *( 11...Bg7?! 12.Qa4 0-0 13.Qa3± )* 12.Bg5!? *( 12.Nc3 Bg7 13.Bxf5!? Bxf5 14.Be3 0-0* has taken place in Shirov - Fedoseev, Belgrade, 2022; even though White's chances are preferable after *15.Qd2 Qc7 16.b3±* it would have been pleasant to play further on Nf5, as the leading line confirms *)* 12...Be7 *( 12...Qxg5? 13.Nc7+ Kd8 14.Nxa8+- )* 13.Bxe7 Qxe7 14.Nc3 0-0 15.Qd2 Bd7 16.f4 f6 17.Rae1**±** ]

[ 9...a6?? 10.Qa4!+- ]

**10.Qa4 Bd7 11.Qb4 Qb8**

[ 11...Bf5 is the main alternative:

**A)** 12.Be3 a6 13.Nc3 Be7! △14.Qxb7 0-0 15.0-0-0 e4**⩲**;

**B)** Here 12.Bg5 is not convincing at all - Qxg5! 13.Nc7+ Kd8 14.Nxa8 Qf4 and Black is at least not worse, as witnessed by:

**B1)** 15.Be2 Nh4 16.0-0 Qe4 17.f3 Qxe2 18.Rf2 Qe3 19.Qxb7 Ng6 20.Raf1 *( 20.g3?! h5→ )* 20...Nf4⇄;

**B2)** 15.Qa5+ b6 16.Qxa7 Qe4+ 17.Kd1 Qc2+ 18.Ke1 Qe4+=;

**C)** 12.Qa4 Bd7 13.Qb4 Bf5=;

**D)** 12.h4! It is this energetic thrust, which can really disturb the opponent:

**D1)** 12...a6?! 13.h5! Nf4 *( 13...axb5 14.hxg6 bxc4 15.Qxb7 Be7 16.gxf7+ Kxf7 17.Bxc4± )* 14.Bxf4!N *(*a possible improvement over *14.Nc3 Be7 15.Be3 Nd3+ 16.Bxd3 Bxd3 17.h6 0-0* Nepomniachtchi - Dubov, Moscow, 2019, with mutual chances, e.g. *18.hxg7 Re8 19.0-0-0 Bg6 20.Qxb7 Bg5⩲ )* 14...exf4 15.Nd4 Bd7 16.0-0-0 Be7 17.h6 g6 18.Qc3! 0-0 *( 18...Bf6?! 19.Re1+ Kf8 20.Bd3± )* 19.Nc6 Bf6 20.Nxd8 Bxc3 21.Nxb7 Be5 22.Re1! Rfc8 23.Rxe5! dxe5 24.Nd6 Rc7 25.Ne4 Bf5 26.Nc3 Kf8 27.b3**±**;

**D2)** 12...Be7?! is dubious because of the typical resource 13.Bg5! *( ≤13.h5 Nf4 )* 13...a6 14.Bxe7 Kxe7 15.Nc3 Qc7 So far A. Voronin - I. Pelekh, ICCF email, 2011, when White couls enlarge his advantage with the help of the instructive sequence 16.h5 Nf4 17.Nd1! g6 18.Qd2**±** and the knight is not

in safety even on the f4-square!;

**D3)** 12...h5 13.Bg5 *(*here is once again this principled sally instead of just repeating moves by *13.Qa4 Bd7 14.Qb4= )* 13...Qb8 *( 13...Qd7?! 14.Qa5! b6 15.Qa4 f6 16.Be3 Kf7 17.Qd1±;* indeed, White would be happy to see *13...f6?! 14.Be3±* on the board *)* 14.Qd2!?N *(*An attempt to improve Karjakin's play in two identical games of his from 2019 - *14.Be2 a6 15.Nc3 Qc7 16.g3 Be7 17.Be3 e4 18.0-0 0-0! 19.Bxh5 Ne5 20.Be2 Qd7⩱* Karjakin - Carlsen, Shamkir, 2019*;* and respectively *14.g3 a6 15.Nc3 Be7 16.Be3 0-0 17.Be2 e4 18.Bxh5 Ne5 19.Be2 Qc8⩱* Karjakin - Inarkiev, Nazran, 2019. Remarkably enough, he has lost both of them, which has yet to demonstrate how dangerous an assault against the king can be. *)* 14...a6 15.Nc3 Be7 *( 15...Qc7 16.Be2 Be7* - 15...Be7 *)* 16.Be2 *(*Only now! It is not worth to precede it by *16.Bxe7 Nxe7* , as shown by *17.Be2 Qc7 18.Rc1* and here Black has the rock-solid move *Bg6= )*

**D3a)** 16...Bxg5 17.Qxg5 *(*after *17.hxg5* Black does not give time to his opponent for realizing the dream of winning the h5-pawn - *Qc7 18.b3 Rc8 19.g3 b5* (the point of the queenside counterplay) *20.Rc1 bxc4 21.Bxc4 Qa5= )* 17...Qc8 18.g3**±**;

**D3b)** 16...Qc7 17.Rc1**±**;

**D3c)** 16...Qd8 is the way to continue the fight for the d8-h4 diagonal:

**D3c1)** 17.g3 e4 18.Kf1 Bxg5 *( ≤18...Ne5 19.Qf4 g6 20.Bxe7 Qxe7 21.Nxe4 0-0 22.Nd2± )* 19.Qxg5 Qxg5 20.hxg5 Kd7 21.Rxh5 *( 21.Rd1 Ne5 22.Rd4 Nf3 23.Bxf3 exf3 24.Rf4 Bg6 25.Rxf3 Rae8 26.Rf4 Re5= )* 21...Rxh5 22.Bxh5 Ne5 23.Be2 Rc8⩱;

**D3c2)** 17.b3!? By this symmetrical prophylaxis White is anticipating the b7-b5 break:

**D3c21)** 17...Bxg5 18.hxg5 Compared to the same exchange on the previous move, here the h5-pawn is really hanging. h4 *( 18...Qd7 19.Qe3 h4 20.0-0-0±; 18...Nf4 19.Bf1! )* 19.g4! Bc8 *( 19...hxg3?! 20.Rxh8+ Nxh8 21.fxg3± )* 20.Ne4 b6 21.0-0 Nf4 22.Kh2 White is wisely trying to consolidate his kingside before expanding on the other wing, for instance f6 23.gxf6 gxf6 24.Rg1 f5 25.gxf5 Bxf5 and he is staying on top due to the temporary sac 26.Bg4! Bxe4 27.Rae1 Qf6 28.Rxe4**±**;

**D3c22)** 17...e4 18.0-0-0 Rc8 19.Kb2**±**;

**D3c23)** 17...Rc8 18.g3**±**;

**D3c24)** 17...Nxh4 is, if not the best, the most consequent move at least. After opening the h-file and the relevant exchanges 18.Bxe7 Qxe7 19.g3 Ng6 20.Rxh5 Rxh5 21.Bxh5 0-0-0 22.0-0-0 Rh8 it makes sense for White to shift his attention to the queenside and the vulnerable dark squares near Kc8 by means of 23.Bxg6 Bxg6 24.Kb2 (or 24.Qe3 at once) Kb8 25.Na4**±** ]

[ 11...Bxb5? 12.Qxb5+ Qd7 13.a4**±** ]

**12.h4! h5 13.Be2**

[ Besides, after 13.Bd3?! this bishop will be soon attacked by the e5-pawn - a6 *( 13...Be7!? )* 14.Nc3 f5 15.Be3 Be7⇄ Vachier Lagrave - Carlsen, Moscow, 2019 ]

[ 13.Be3 a6 14.Nc3 Be7 Here very attractive is 15.Na4!? *( 15.g3 0-0 16.Be2* has been Karjakin's later try, to which the World Champion reacted in the spirit of the main text with the pawn sacrifice *b5!? 17.cxb5 axb5 18.Bxh5 Bd8 19.0-0 Ne7⇄* Karjakin - Carlsen, Stavanger, 2021 *)* 15...Qc7 16.g3 *( 16.Nb6 Rd8* may transpose*; 16.Bb6 Qc8 17.Ba5!?* is curious, though it is questionable whether White has more than a repetition after the cool *Rb8 18.Nb6 Qc7∞ )* 16...Bg4 17.Nb6 Rd8 18.Bg2 0-0 19.f3 Bc8 *( 19...Bf5?! 20.0-0! )* 20.0-0-0 Bf5! (an adequate reaction) 21.Qb3 Bf6 22.Rhg1 Rfe8= Vieites - Kural, ICCF email, 2018. ]

**13...a6**

[ 13...Be7 14.g3 may easily transpose, but there are tricky move orders, e.g. e4 *( 14...f5 15.a4±* is practically the same as the deviation with 15...f5 16.a4!, see below*; 14...a6 15.Nc3* - 13...a6 *)* 15.Bg5! *( 15.Nc3* is not a successful idea, for Black does not mind this pawn in return for a fast march of his f-pawn, e.g. *0-0 16.Nxe4 f5 17.Ng5 f4⩱; 15.Be3 0-0 16.Bd4 a5 17.Qd2 Bxb5 18.cxb5 Qc8 19.Bxh5 Qf5 20.Be2 Rac8⇄ )*

**A)** 15...f5? 16.0-0-0 *(* regarding the latest central advances, White has a good reason to consider the break *16.c5!? dxc5 17.Qc3 )* 16...Bxb5 17.Qxb5+ Kf7 Shankland - Grischuk, chess24.com INT, 2021, White is much better after the natural 18.Bxe7 Nxe7 19.f3**±**;

**B)** 15...a5 16.Qb3 0-0 17.a4! *(* the h5-pawn is doomed, but White should better prepare to eliminate it under the most favorable conditions instead of the impatient *17.Bxh5 Bxg5 18.hxg5 Bxb5 19.Qxb5 Qd8= )* 17...Bxb5 18.axb5 *( ≤18.Qxb5 Qc8 19.Bxh5 Bxg5 20.hxg5 Ne5⩱ )* 18...Qe8 19.Bd2! *( ≤19.Bxh5 Bxg5 20.hxg5 Qe5= )* 19...Ne5 20.Rxa5 Rxa5 21.Bxa5 Bd8 22.Bxd8 Qxd8 23.0-0 f5 24.Qe3 Qc8 25.Qf4 Qc5 26.b3**±** ]

**14.Nc3 Be7** The most natural move, it is hard to recommend anything else:

[ 14...f5?! looks untimely on the account of 15.a4! Be7 16.a5 e4 17.Ra3**±** ]

[ The preliminary maneuver 14...Ne7 15.a4! Nf5 improves the knight, but probably not Black's position in itself - 16.a5 *(* or *16.Bg5!? f6 17.Bd2* at once *)* 16...Be7 *( 16...Nd4?! 17.Bd3± )* 17.Bg5 f6 *( 17...Qd8 18.Ne4± )* 18.Bd2 Nd4 19.Bd3 Bf5 20.Qa4+ Kf7 21.Bxf5 Nxf5 22.Ne4 Nd4 and this new location is immediately challenged by 23.Be3 b5 24.axb6 Qxb6 25.0-0↑ Woznica - Jacewicz, ICCF email, 2020. ]

**15.g3 b5!** This must be the last proper moment for this vigorous counterstrike:

[ 15...f5 16.a4! e4 *( 16...a5 17.Qb3 e4 18.Be3 Ne5 19.0-0-0±* with the c4-c5 break in the air, Avila Rodriguez - Cabezas Solano, Pereira, 2022 *)* 17.Be3! *( 17.a5 f4! 18.Nxe4 0-0 19.Bxh5 Bf5∞ )* 17...Ne5 18.a5 0-0 19.Bf4 Bf6 20.0-0**±** with a stable blockade on the kingside, while White has every chance to make

maximal use of his own majority on the opposite flank. ]
[ 15...Bf5?! fails to impress for the least reason this bishop steps on the way of the f7-pawn. The possible knight transfer 16.Be3 Nf8 17.a4 Nd7 seems insufficient after 18.a5± ]
[ 15...a5?! 16.Qb3 a4 is worse in the view of 17.Qd1± , sealing the fate of the h5-pawn. ]

**16.cxb5 axb5 17.Nxb5 0-0 18.a4 f5 19.Bd2N**

[ Black is getting close to the enemy king after 19.Bg5 f4!⇄ A. Pasti - B. Roux, Corte, 2022 ]
[ 19.Bxh5 Bxb5 20.Bxg6 Bd8! *( 20...Qb7!? )* 21.Bd2 *( 21.Qb3 Ba5+ 22.Bd2 Bxd2+ 23.Kxd2 Qa7 24.Qe3 Qa5+ 25.Qc3 Qb6=* resulted in a logical draw by repetition, Shankland - Praggnanandhaa, Wijk aan Zee, 2022 *)* 21...Qb7 22.Qb3 Qb6 23.Qc3 Qb7 24.Qb3 Qb6= with the same outcome in Arjun - Ivic, Riga, 2021. ]

**19...f4 20.Ra3 Bd8!** Here too, this manoeuvre is the key to counterplay.
[ 20...Qb7?! 21.Rg1 ]

**21.Qxd6** The capture of this pawn is equivalent to an exchange sacrifice, which must be compensated by the passed pawns. Also, all Black's remaining pawns are on the kingside and, given the hanging one on h5, one can expect their number to be reduced.
[ 21.Qe4 Bf5 22.Qb4 Bd7= ]
[ The insecure location of Ke1 remains a key factor in case of 21.Bxh5 fxg3 22.fxg3 Ba5 as well, for example 23.Qxd6 *( 23.Qb3 Bxd2+ 24.Kxd2 Ne7⩱; 23.Qe4* leads to a draw by force after *Bxd2+ 24.Kxd2 Bxb5 25.axb5 Qxb5 26.Rxa8 Qxb2+ 27.Qc2 Qd4+= )* 23...Qc8! 24.b4 Rf6 25.Qc5 Qxc5 26.bxc5 Bxb5 27.axb5 Bxd2+ 28.Kxd2 Rxa3 and this extraordinary endgame seems balanced after all, as shown by 29.Re1! Rxg3 30.Bxg6 Rfxg6 31.c6 Ra3! 32.c7 *(* similar is *32.Re2!? Ra5 33.Rxe5 Rxb5 34.c7 Rc5= )* 32...Ra8 33.Rb1 Rb6 34.d6 Rxd6+ 35.Ke3 Rc8 *(* but not *35...Rb6? 36.Rd1! )* 36.b6 Rxb6 37.Rxb6 Rxc7= ]

**21...Qxd6 22.Nxd6 Be7 23.Ne4**

[ 23.Bxh5 Bxd6 24.Bxg6 Bxa3 25.bxa3 fxg3 26.fxg3 Rf3= ]

**23...Bxa3 24.bxa3 Ne7!** Going for the potentially dangerous d-pawn.
[ 24...Bxa4 25.Bb4± ]

**25.Bb4**

[ 25.d6 Nf5 26.gxf4 exf4 27.0-0= ]

**25...Nxd5** The simplest. **26.Bc4** An attempt to pose some additional problems.
[ 26.Bxf8 Kxf8 27.0-0 Bxa4 with inevitable draw - 28.Bxh5 Bc2 29.Bf3 Rxa3 30.Ng5 Nf6= ]

**26...Be6**

[ 26...Bc6 looks natural, as it keeps an eye on the a4-pawn , but then White has the curious possibility for 27.0-0!? Rfd8 28.a5± and the pin of Nd5 is more unpleasant than the X-ray along the big diagonal. Now the threat 27....Rfc8 does

not leave another choice than ]

**27.Bxf8 Kxf8 28.Nc5**

[ If 28.Bb5 , then is initiating sufficient counterplay by means of Bf5 29.Ng5 Nc3 △30.0-0 Nxb5 31.axb5 Rxa3 32.Re1 *( 32.gxf4 exf4= )* 32...fxg3 33.Rxe5 gxf2+ 34.Kxf2 Bg4= ]

**28...Ke7**

[ 28...Bf7 29.Bb5 will most probably transpose. ]

**29.Bb3**

[ In case of 29.Nxe6 Kxe6 30.Bb5 the eventual rook ending after fxg3 31.fxg3 Nc3= is likely to transform in the annihilation of most of the pawns. ]

**29...Bf7 30.Kd2 fxg3 31.fxg3 Nb6 32.Kc3 Bxb3 33.Kxb3 Nd7=** Without these knights the central passed pawn should counterbalance the ones on the rook's file.

□ **Chapter Pieces Model**
■ **Aagaard,Jacob**

Exchanges Hopefully all readers of this book will know that you should exchange your bad Bishop for the opponent's good Bishop and that you should focus on which pieces remain after exchanges more than on the ones you exchange. But beyond these basic ideas, exchanges in chess is a theme that deserves a longer investigation than I am able to give it right here. My only angle on this occasion will be related to the worst-placed piece, as I think this is a good way of looking at things. The following game illustrates this nicely 1.e4 c5 2.Nf3 Nc6 3.d4 cxd4 4.Nxd4 Nf6 5.Nc3 e5 6.Ndb5 d6 Preparing for this game I saw that my opponent had played a number of games in long theoretical lines and done well out of them. The prospect of having to find a novelty on move 32 of the Sveshnikov was not appealing to me, so I decided to play a less critical move, which would quickly lead to an independent game. 7.Nd5 Nxd5 8.exd5 Nb8 9.a4 This line is not especially dangerous for Black. The idea is Nb5-a3-c4-b6, but this rarely happens in practice, and if it does, then only after Black has made great gains on the Kingside. On the other hand the move is not bad and White is not worse. 9...Be7 10.Be2 0-0 11.0-0 Nd7 12.Be3 a6 13.Na3 This is the critical position of the game. Black needs to find his path forward. Most of his pieces are not well-placed and need to find a function (note that finding a function/future is not necessarily the same as moving !) . A good strategy for this position would include a vision for all of the Black pieces. This is what you would usually expect from a strong grandmaster. 13...Bg5 If you think too superficially, this is a great-looking move. Black needs to exchange his bad Bishop before developing the Queenside. But as you have probably gathered, the problem is not in the first part of this sentence, but in the second part. Beyond the exchange of Bishops, Black has no plan for the rest of his pieces, nor any idea of what will happen after the exchange. I was quite pleasantly surprised by this move, as it gives me extra time to spend on the Queenside. 13...f5 has been played in a number of games, with Black starting action on the Kingside. This is certainly the right way to play. The Bishop is likely to stay on c8 for a very long time, until a good square is available for it. However, it would have a future. As the game goes, there is no function available for

the Bishop until eventually it is exchanged for White's bad Bishop. 14.Bxg5 Apparently this was a novelty, but it is the only move that makes sense. 14.f4 ? exf4 15.Bxf4 Re8 16.Nc4 Bxf4 17.Rxf4 Ne5 = was played in Muhren - Kalinitschew, Dieren 2004. 14...Qxg5 15.Nc4 Black has not managed to get the Bc8 into play and is now faced with an attack on the d6 pawn. Already things are getting more difficult for Black and the right move is no longer easy to find. 15...Qe7 Black is playing as if he has achieved something and has all the time in the world, but the contrary is the case. He has no active counterplay and White is progressing rapidly on the Queenside. The White Knight will land on b6 and the pawns will come rolling forward to support it. The more active 15...Nf6 ! was the right way to play, whether or not it is entirely correct. The point is 16.Nxd6 Rd8 17.Nxc8 Nxd5 ! when in order to keep the advantage White has to play 18.Bg4 ! h5 19.Bf3 Nf4 20.Nd6 Qe7 21.Qe1 ! += Not an easy line for White to find. 16.a5 Rb8 17.b4 Nf6 White is also better after 17...f5 18.Qd2 Nf6 19.Nb6 f4 20.c4 but maybe this was a better chance than the game ? 18.Nb6 Nd7 18...Bf5 was necessary, even though White is better after 19.c4 += 19.c4 Nxb6 20.axb6 Bd7 21.Qd2 f5 22.Rac1 White has a clear advantage. There is no way he is going to be mated on the kingside. The remainder of the game was quite easy; I think my opponent was dispirited by this point. 22...Rfc8 23.c5 Kh8 24.Rfd1 Ba4 25.Re1 Qf8 26.Qa2 Bb5 26...Be8 27.c6 and White wins. 27.Bxb5 axb5 28.Qa7 Re8 29.c6 Ra8 30.Qxb7 Reb8 31.Qc7 Black resigned without giving me the chance to play 31...Rc8 32.Qxc8 when the pawns will win.

**B33**

☐ **Chapter Pelikan**
■ **7.Nd5 Nxd5 8.exd5 Nb8**
*[GM Ivan Cheparinov]*

**1.e4 c5 2.Nf3 Nc6 3.d4 cxd4 4.Nxd4 Nf6 5.Nc3 e5 6.Ndb5 d6 7.Nd5!? Nxd5 8.exd5 Nb8 9.a4!?**
[ The old main line is 9.c4 Be7 etc. Nowadays White has other ideas about the c4-square. ]
**9...Be7**
[ 9...a6?! must be considered as a concession, the knight is on its desired route after 10.Na3 Be7 11.Nc4 Nd7 12.a5 0-0 13.Be2 f5 14.Bd2! e4 *( 14...f4 15.Bb4 Rf6 16.Qd3± )* 15.Bb4 We are still going to see more of this maneuver, Black's queenside is in trouble:
**A)** 15...Rf6?! 16.Qd2 *(*White can also calmly complete his development by *16.0-0!? f4 17.Re1 )* 16...Rg6 17.g3 Qc7 18.h4± Nepomniachtchi - Ivic, Chess.com INT, 2021;
**B)** 15...f4 16.0-0 Nf6 *( 16...Qe8 17.Re1± )* 17.Nb6 Rb8 18.Qd4 Qe8 19.f3± ]
**10.b4!?** In combination with the previous move - a fresh and very ambitious

approach.

[ 10.a5?! is premature in the view of a6 , which forces 11.Nc3 0-0⇄ ]

[ The main theoretical line is 10.Be2 0-0 11.0-0 ]

[ 10.Bd2!? is the other way to prepare the retreat of the knight to the a3-square after the intended a4-a5 push. ]

**10...0-0**

[ Black can try to clarify the situation on the queenside by 10...a5!? 11.bxa5 Qxa5+ *(* very similar, if not the same, is *11...Rxa5 12.Be2 0-0 13.0-0* , when Ra5 will most probably retreat to its initial square *)* 12.Bd2 Qd8 13.a5 0-0 14.Be2 and now:

**A)** 14...f5 15.0-0 Nd7 *( 15...f4 16.Bg4 Na6 17.c4± )* 16.Bb4! Nf6 17.Qd3 *( 17.f4± )* 17...f4 *( 17...e4?! 18.Qd4 f4 19.Ra3± )* 18.f3**±**;

**B)** 14...Na6 15.0-0 f5 16.Be3 Bd7 17.c4**±**;

**C)** 14...Bd7! 15.Rb1 *( 15.0-0* allows *Bxb5 16.Bxb5 Bg5 17.Bb4 Na6=;* but *15.c4!? Na6 16.0-0 Nc5 17.Bb4* deserves to be tested *)* 15...b6! A well-timed trade of this annoying pawn. 16.axb6 Qxb6 17.Be3 Qd8 *( ≤17...Qa5+ 18.Qd2 )* 18.0-0 Bxb5! *( 18...f5 19.f3±; 18...Na6 19.Na7! )* 19.Bxb5 Bg5! Analogously to the line after 15.0-0 from above - one more precise exchange, after which Black is very close to full equality. 20.Bxg5 Qxg5 21.Ra1 White's last chance is to restrict the knight to utmost. Rxa1 22.Qxa1 Qe7 23.Qa4 h5 24.Ra1 Rd8 25.Qa7 Nd7 26.Qc7 Otherwise 26...Kf8 would have cemented Black's position, now the latter is just in time to initiate counterplay in the view of the threatened 27.Ra7 by means of e4! 27.Re1 Stopping the march of the pawn, but there is sufficient compensation for the material deficit after f5 28.f3 Kf7! 29.fxe4 Ne5 30.Qxe7+ Kxe7 31.exf5 Kf6= ]

[ 10...a6 11.Na3 is on the verge of reaching the main text, but there are some subtleties:

**A)** Here 11...a5 is more obliging, White gets an extra opportunity for 12.Bb5+!

**A1)** 12...Nd7 is usually directing the knight to the c5-square, but White can fight for it by 13.c3!? *( 13.Bd2 axb4 14.Bxb4 0-0 15.0-0± )* 13...0-0 14.Nc4 axb4 15.cxb4 f5 16.0-0**±**;

**A2)** 12...Bd7 13.bxa5 *( 13.c3!?* is once again worth of attention - *0-0 14.0-0 Bxb5 15.Nxb5 Nd7 16.Qb3± )* 13...Bxb5 *( 13...Rxa5 14.c4 0-0 15.0-0±; 13...Qxa5+ 14.Bd2 Qd8 15.Qe2± )* 14.Nxb5 Qxa5+ 15.Bd2 Qd8 16.0-0 0-0 17.Ra3**±**;

**B)** Castling at once and 11...Nd7 12.a5 0-0 are both transposing to the leading lines;

**C)** 11...b6 is directed against the queenside expansion. 12.Be2 0-0 13.Nc4 Nd7 14.0-0 f5 *( 14...a5 15.b5 Qc7 16.f4 f5* will be examined via the move order 14...f5 15. f4 a5, see below *)* 15.f4 A typical measure against Black's central pair of pawns and now:

**C1)** 15...Bb7 16.Kh1 brings us at the next crossroads:

**C1a)** 16...Rc8 17.Be3 exf4 18.Bxf4 Nf6 *( 18...Qc7 19.Qd3± )* 19.Ne3

Ne4 20.Bd3±;

**C1b)** 16...Qc7 17.Rb1!? Rad8 18.a5 b5 19.Na3 and, with 20.c4 coming next, White will rely on his queenside majority. Here are several sample lines, in which it is transformed into a far-advanced a-pawn, often at the cost of the d5-pawn. Qc8! *( 19...Nf6?! 20.c4 bxc4 21.Bxc4 Kh8 22.Qd3± )* 20.c4 bxc4 21.Bxc4 Kh8 22.b5 *( 22.Qb3 Qa8; 22.Be3!? Qa8 23.b5 Nf6 24.Bb6 Rc8 25.bxa6 Bxd5 26.Bxd5 Nxd5 27.Nb5 Nxf4 28.Rxf4 exf4 29.a7⩲ )* 22...axb5 23.Qb3 Nc5 24.Qxb5 Qa8 25.Be3 Bxd5 26.Bxd5 Qxd5 27.Nc4⩲;

**C2)** 15...a5 16.b5! Qc7 *( 16...Bb7?! 17.Ba3! Rf6 18.Qd2 Rc8 19.Rad1↑ )* 17.Ra3! *(*this attractive rook lift should better precede the immediate *17.Ba3 exf4! 18.Rxf4 g6∞ )* 17...Bb7 18.Re3 Rad8 19.Ba3 e4 20.Rh3± Nc5 21.g4! △Nxa4 22.g5→;

**D)** 11...Bf5 12.a5 Nd7 13.Be2 0-0 14.0-0 and now Bg6 has, apart from the thematic advance of the f7-pawn, the idea to press along the c-file in case of Na3-c4. So, it makes sense to switch to the traditional plan with 15.c4 , when the new location of the knight is adding nuances in carrying out the thematic c4-c5 break:

**D1)** 15...Rc8 16.h3!? *( 16.Nc2 f5 17.f4 Bf6 18.Ra3 Re8∞; 16.Qb3 e4 17.Bf4 Bf6 18.Rac1 Ne5= )* 16...f5 *( 16...Bg5 17.Qb3± )* 17.c5!? dxc5 18.b5⩲;

**D2)** 15...e4?! 16.Bf4±;

**D3)** 15...Kh8 16.Nc2 Bg5 was Cheparinov - Gukesh, Sharjah, 2023, White stays on top after 17.Bxg5 Qxg5 18.Qc1 Qe7 19.Qd2± f5?! 20.f4!;

**D4)** 15...f5 16.c5! dxc5 17.Nc4 *(*White does not have anything better than the same jump and a transposition to the featured line after *17.d6 Bf6 )* 17...cxb4 *( 17...e4?! 18.d6 Bf6 19.Rb1± )* 18.d6 Bf6 19.Qb3 Kh8 20.Qxb4⩲ ]

[ 10...Nd7 11.a5 transposes to the main text. ]

**11.a5 f5**

[ 11...a6 12.Na3 Nd7 13.Be2 is going to transpose as well. ]

**12.Be2**

[ As said, 12.c4 is not always a part of White's desired set-up. The position is double-edged after a6 13.Nc3 Nd7 14.Be2 e4 15.0-0 Ne5∞ ]

**12...a6** Black will have to play this soon or later.

[ 12...Nd7 13.0-0 must be therefore of no independent significance. ]

**13.Na3 Nd7**

[ In case of 13...f4 14.Nc4 Black should not underestimate the imminent jump, for example Bf5?! *( 14...Nd7* - 13...Nd7 *)* 15.Nb6 Ra7 16.0-0 Nd7 17.Nxd7 Qxd7 18.c4± ]

**14.Nc4 f4**

[ 14...e4?! misses 15.Bf4! g5 16.Bxd6 Bxd6 17.Nxd6 Qf6 18.Nc4 Qc3+ 19.Nd2 Nf6 20.0-0± ]

**15.0-0 e4** The mutual fight for an opening advantage has reached its climax. Black's queenside is cramped, but he is ready to strike on the opposite flank. **16.Nd2!**
[ 16.Ra3 at once is not that clear because of Ne5 17.Nxe5 dxe5 18.Rb3 Qd6 19.c4 Qg6⇄ ]
**16...Bf6**
[ 16...Nf6 defends the central pawn, but the knight is finding itself on the way of its army to the kingside, for example 17.Ra3! Qe8 *( 17...Qd7 18.Nc4 Qf5 19.Nb6 Rb8 20.c4 Bd8 21.Re1±; 17...Bf5 18.Nb3!± )* 18.Nc4! f3 *( 18...Nd7?!* reaches the position in the line with 16. Ra3 from above, in which Black has answered with 16...Qe8 **Δ**Qg6, but this idea can be hindered by *19.Bh5! Qd8 20.Re1 Nf6 21.Be2± )* 19.gxf3 Bh3 *( 19...Qg6+ 20.Kh1 exf3 21.Rxf3 Bf5 22.Rg1 Bxc2 23.Qe1 Qe4 24.Bh6 Rf7 25.Rg2 Bf8 26.Ne3±; 19...exf3 20.Rxf3 Bg4 21.Rg3 Bxe2 22.Qxe2 Nxd5 23.Qe4± )* 20.f4! Bxf1 21.Kxf1 Qf7 22.Nb6 Rae8 23.Rg3 *(*or *23.c4!?* with ample compensation for the exchange as well *)* 23...Bd8 24.Bb2→ ]
[ 16...f3?! 17.gxf3 exf3 *( 17...Bf6 18.Ra3± )* 18.Nxf3**±** ]
**17.Ra3 Qe7 18.Bg4!** An essential move, the e4-pawn is the target again.
[ After 18.Re1 Bh4!⇄ ]
[ and 18.c4 Bd4!⇄ White should reckon with the next step of the central pawn. ]
**18...Ne5** The sharpest reaction, Black is striving at maximum activity.
[ 18...e3 19.fxe3 fxe3 20.Be6+ Kh8 21.Nc4 *(*a strictly strategical decision, instead, *21.Ne4 Be5 22.Rxe3* might be the most critical continuation, after *Rxf1+* White can take with the king, but there is also an intriguing exchange sacrifice by *23.Qxf1* in order to get the key to the vulnerable d6-pawn. Black, in his turn, can postpone Be5-d4 in favour of the preliminary *Nf6 24.Nxf6 Bxe6 25.dxe6 Qxf6 26.Qxf6 gxf6±* , when it is already the opponent's e-pawn, which is doomed *)* 21...Ne5 22.Nxe3 Bxe6 23.dxe6 Qxe6 24.Nd5 Rac8 25.Rh3**±** ]
**19.Bxc8 Raxc8 20.Nxe4 f3!** The point of Black's move 18.
[ Besides, the rook belongs better to the c4-square, e.g. 20...Nc4?! 21.Nxf6+ Qxf6 22.Rf3**±** ]
**21.Re1!**
[ 21.gxf3 Ng6 22.Kh1 Be5**⩲** ]
[ 21.Bb2 fxg2 22.Kxg2 Rc4**⩲** ]
**21...fxg2 22.Bf4** Bringing the bishop to the h2-b8 diagonal is White's best bet, as seen in:
[ 22.Bb2 Rc4**⩲** ]
[ 22.Kxg2 Rc4**⩲** ]
**22...Rc4**
[ If 22...Bh4 , then after 23.Bg3**±** Rc4 White is by no means obliged to transpose to the next annotation. Instead, he can create the threat 25.Nxd6 by 24.Qe2! ]
**23.Bg3**
[ 23.Rb3 preserves the extra pawn for the moment, but Black has the witty Bh4! , thus releasing the pressure on the d6-pawn by trading the bishops - 24.Bg3

Bxg3 25.hxg3 and now the promising queen transfer Qd7! 26.Kxg2 Qf5 △27.f3 Qg6⩲ ]

**23...Rxb4 24.Rae3 Qc7 25.Qh5±** Given the e6-forepost and the vulnerability of the d6-pawn in addition, White's prospects on the kingside are higher.

☐ **Chapter Sveshnikov**
■ **7.Nd5 Nxd5 8.exd5 Ne7**
*[IM Kushager Krishnater]*

In the fourth chapter, we will cover the 8...Ne7 line in the Sveshnikov. **1.e4 c5 2.Nf3 Nc6 3.d4 cxd4 4.Nxd4 Nf6 5.Nc3 e5 6.Ndb5 d6 7.Nd5 Nxd5 8.exd5 Ne7** the starting point of this chapter. **9.c4!?** We gain space in the center and prepare a potential Qa4. **9...Ng6** The most played move. Black prepares ...Be7-f5.
[ 9...Nf5 This move avoids Qa4, but stops ... f5. 10.Bd3!? we develop normally and claim a strategic edge due to the extra space. g6!? the modern way of reacting to this variation. *( 10...Be7* this natural move can be met with *11.0-0 0-0 12.f4 a6 13.Nc3 exf4 14.Bxf4±* White keeps an edge due to the extra space and lead in development. *)* 11.0-0 a6!? *( 11...Bg7?!* runs into *12.Qa4! 0-0 13.Qa3 Re8 14.Bxf5 Bxf5 15.Nxd6 Bf8 16.c5±* White keeps an edge due to the extra pawn. *)* 12.Bg5 Be7 13.Bxe7 Qxe7 14.Nc3 0-0 15.Qd2± with the simple idea of pushing f4 next. Black has weaknesses on the kingside. ]
**10.Qa4!? Bd7 11.Qb4** Black has two major choices now. **11...Qb8** The main move

in this position.

[ 11...Bf5!? This was the choice of Magnus in their Wch match. 12.h4!?

**A)** 12...Be7 13.h5 Nf4 14.Be3 0-0 15.0-0-0± with an unquestionable edge.;

**B)** 12...a6 13.h5

**B1)** 13...axb5 runs into 14.hxg6 Bxg6?? *( 14...fxg6 15.Qxb5+± )* 15.c5 dxc5 16.Qxb5+ Qd7 17.Qb6+-;

**B2)** 13...Nf4!? 14.Nc3 Be7 15.Be3 0-0-0 is coming up next. Nd3+ The only way to keep some chances. 16.Bxd3 Bxd3 17.0-0-0 e4 18.h6!? poking holes on the other flank. g6 19.Rxd3! exd3 20.Qxb7 0-0 21.Rd1± we'll win the second pawn next. White keeps pressure due to the weak Black king and poor pawn structure.;

**C)** 12...Nxh4?? 13.Rxh4 Qxh4 14.Nc7++-;

**D)** 12...h5 The most played move. 13.Bg5 Qb8!? *( 13...f6 14.Be3* the h4-pawn cannot be attacked anymore. *a6 15.Nc3 Qd7 16.Na4±; 13...Qd7 14.Qa5 b6 15.Qa4± )* 14.Be2 a6 15.Nc3 Qc7!? *( 15...Nf4 16.Bxf4 exf4 17.Rd1 g6 18.Bd3±; 15...Be7 16.g3±* we want to play Be3-Na4 next. *)* 16.g3 preparing Be3. Be7 17.Be3 e4 18.Qa4+ Bd7 *( 18...Kf8* runs into *19.Rd1 Ne5 20.c5!?± )* 19.Qb3 f5 20.0-0-0 Ne5 21.Kb1 0-0 22.Rd2± White keeps an easier game due to the weak h5-pawn. Our plan is to play Na4-c5-Rc1 next. ]

**12.h4!?** simple and strong. **12...h5!?**

[ 12...a6?! is weaker. After 13.h5 axb5 14.hxg6 Ra4 15.Qb3 fxg6 16.cxb5 Qa8 17.Bd3± Black is struggling. ]

**13.Be3 a6 14.Nc3 Be7** Here, I recommend playing the correspondence speciality **15.Na4!?** delaying g3 for the moment. **15...Qc7** preparing against Nb6.

[ 15...Nxh4 16.Nb6± ]

**16.g3!?** Black has two choices here. **16...Bg4**

[ 16...0-0 17.Nb6 Rae8 18.Be2 Bf5 preparing .. .e4-Ne5. 19.f3!? avoiding ...e4. White keeps an easier game due to the extra space. ]

**17.Bg2 0-0 18.f3 Bd7 19.Nb6 Rab8 20.0-0-0±** our king is safe and we keep extra space. White wants to play a4-a5 & f4 at some point.

**B33**

## ☐ Chapter Sveshnikov
## ■ 7.Nd5 Nxd5 8.exd5 Nb8

*[IM Kushager Krishnater]*

In the third chapter, we will cover the alternate system for White with 7.Nd5. In this chapter, we will cover the positionally sound '8...Nb8'. **1.e4 c5 2.Nf3 Nc6 3.d4 cxd4 4.Nxd4 Nf6 5.Nc3 e5 6.Ndb5 d6 7.Nd5!?** This became popular after the Carlsen-Caruana match. White gives us the hope of controlling the d5-square with a piece in hopes of gaining more space in the center. **7...Nxd5 8.exd5 Nb8!?** Black's most solid response.

[ 8...Ne7 This is covered in the next chapter. ]

**9.Qf3** A dual-purpose move. We threaten Qc3. At the same time, we want to stop ... a6 via Qa3. **9...a6** The critical response.

[ 9...Be7 This is a bit weaker. After 10.Qc3 Na6 11.Be3 White has a good chance of winning the a7-pawn. 0-0 *( 11...b6?? 12.Qc6++-; 11...Bd7 12.Nxa7± )* 12.Nxa7!? Accepting the pawn without fearing any ghosts. Bg5 *( 12...Bd7 13.Bxa6 bxa6 14.0-0-0± )* 13.Nb5 Bxe3 14.Qxe3 f5 15.Qa3 Rf6 16.0-0-0± White keeps a clear due to the extra pawn. ]

**10.Qa3 Be7** The most played move.

[ 10...b6?! This is played by some players but is weaker. After 11.Bg5 Black is under some pressure. *( 11.c4?! Bb7 12.Nc3 Be7=* Black is able to develop comfortably here. *)* 11...f6 12.Bd2 keeping an eye on the weak d6-pawn. Bb7!? *( 12...Be7* This was played in a single game. However, after *13.Bb4 0-0 14.Bxd6 axb5 15.Bxe7 Qxd5 16.Qd3±* Black is struggling. *)* 13.Nc3 Be7 14.0-0-0 0-0 15.g4! Nd7 16.Kb1± White keeps an easier game due to the potential to gain space on the kingside. ]

**11.Bg5** hoping to deflect the e7-bishop. **11...f6** most played.

[ 11...Bf5!? 12.Bxe7 Kxe7 13.Be2!? While this remains objectively equal, I find it hard to believe that anyone will choose this in a practical game. ]

[ 11...Bxg5?? runs into 12.Nxd6++- ]

**12.Bd2 0-0**

[ 12...b6 13.Bb4± transposes. ]

**13.Bb4** Black has a couple of choices here. **13...axb5!?** The more principled choice. Black sacrifices an exchange to trap our queen on the corner of the board.

[ 13...Qd7 This is the other important move. 14.0-0-0 b6 *( 14...Rd8 15.f4 b6* transposes. *)* 15.f4!? a rare, but a principled try. We increase the pressure in the center. Rd8! *(*the natural *15...Bb7?!* runs into *16.Nxd6!* and after *a5 17.Bb5 axb4 18.Bxd7 bxa3 19.Be6+ Kh8 20.Nxb7±* White remains on top. d6 is coming up next. *)* 16.fxe5 fxe5 17.Bd2 Qb7! The only way to equalise. *(*the natural *17...Bb7* runs into *18.Nc3 b5 19.h4±* White will follow up with g4-g5 next. Black has issues with development of the Queenside minor pieces. *)* 18.Nc3 b5 19.Qb4 stopping ...b4. Nd7 20.Be3 Nf6 *( 20...Nc5* runs into *21.Bxc5 dxc5 22.Qe4±* White keeps good attacking prospects due to the potential pressure on the kingside. *)* 21.Bd3∞ with a sharp position on the board. Objectively, it remains balanced. ]

**14.Qxa8 Na6 15.Bd2 Qc7!?** The best move for Black.

[ 15...Qb6?! This has been played much more frequently but after 16.Be3 Black is significantly worse. Qa5+!? *( 16...Qc7 17.c3 f5 18.Qa7+-* our Queen gets away.*; 16...Nc5+- 17.b4+- )* 17.c3 f5 *( 17...b4? 18.Bxa6 bxc3 19.0-0+-* White's queen escapes. *)* 18.Qa7 Bd8 19.f3!? trying to maintain the bishop on the g1-a7 diagonal. Qa4 20.Bf2± b6!? *( 20...f4?? 21.Bd3+- )* 21.Rd1 Qxa2 22.Bd3 Qxb2 23.0-0± White's queen escapes. ]

**16.c3!?** This rare move by Arjun caught my attention. White prepares Qa7. **16...Qc5!**

The cleanest way to equalize. Black stops Qa7.
[ the natural 16...Bf5? runs into 17.Qa7 Nc5 18.Be3 Nd3+ 19.Bxd3 Bxd3 20.Rd1 e4 21.Rxd3 exd3 22.Qb6± with a clear advantage for White. ]
[ 16...Be6?? 17.Qa7 Bxd5 18.Bxb5+- ]
[ 16...f5!? this is natural but after 17.Qa7 Black has to be very precise to hold. f4!? *(* the natural *17...Nc5!? 18.Be3 Bd7!* is possible too. A sample line is *19.Qa3 b6 20.Be2 f4 21.Bxc5 bxc5 22.Qb3 c4 23.Qc2 Bf5 24.Qd2 Bg5 25.0-0* where White keeps some chances. *)* 18.b4 Qd7 *( 18...Bf5 19.Bxb5+-; 18...f3? 19.gxf3 Rxf3 20.Be2 Rf8 21.Qe3+-* White remains significantly better. *)* 19.0-0-0 Nc7 20.Be1⩲ we keep an edge due to the extra material. ]
**17.Be3 Qxd5 18.Qa7 f5 19.f3!?** While this position is objectively balanced, the position still remains quite sharp from a practical point of view. Here are some sample lines. **19...f4!?**
[ the natural 19...Nc5 can be met with 20.Bxb5 Bh4+ 21.Kf1 f4 22.Bxc5 dxc5 23.Qa4 and here Black has only way to equalize. Qd2!? 24.Qc4+ Kh8 25.Qe2!? Rd8! 26.Ba4 White still keeps some chances here. Black needs to be extremely precise to equalise. ]
**20.Bf2 Bf5**
[ 20...Bf6 21.Rd1 Qxa2 22.Bxb5± ]
[ 20...e4? 21.Qd4± ]
**21.Be2 e4 22.Qd4 Qe6 23.fxe4 Bxe4 24.0-0-0** It seems like White is significantly better, but after **24...Nc5!** Black is able to hold with concrete play.
[ 24...Bf6? 25.Bg4!+- ]
**25.Bxb5 f3!** the only way to hold. **26.Rhe1 Bg5+ 27.Be3 f2 28.Bc4 fxe1R 29.Rxe1 d5 30.Bxg5 dxc4 31.Qxc5=**

**B33**

□ **Chapter Sveshnikov Kalas**
■ **Sveshnikov,Ne7**

1.e4 c5 2.Nf3 Nc6 3.d4 cxd4 4.Nxd4 Nf6 5.Nc3 The starting position of the Sveshnikov. 5...e5 The Sveshnikov Variation was pioneered by Evgeny Sveshnikov and Gennadi Timoshchenko in the 1970s. Before their efforts, the variation was called the Lasker–Pelikan Variation. Emanuel Lasker played it once in his world championship match against Carl Schlechter, and Jorge Pelikan played it a few times in the 1950s, but Sveshnikov's treatment of the variation was the key to its revitalization.The move 5...e5 seems anti-positional as it leaves Black with a backward d pawn and a weakness on d5. Also, Black would have to accept the doubled f-pawns in the mainline of the opening. However, in return, Black gets a foothold in the centre and gains time on White's knight, which has been driven to the edge of the board on a3. Today, it is extremely popular among grandmasters and amateurs alike. Top players who have used this variation include Magnus Carlsen,

Vladimir Kramnik, Veselin Topalov, Teimour Radjabov, Boris Gelfand, Michael Adams and Alexander Khalifman, among many others.And the Sveshnikov Variation became even more popular after Magnus Carlsen employed it in his World Championship Match against Caruana. 6.Ndb5 The theoretically critical move, threatening Nd6+. 6...d6 The mainline preventing Nd6 invasion. Next Black will play ...a6 and kick the Knight to the rim of the board. 7.Nd5 7.BC5 is the old mainline with tons of games and complicated theoretical battles.Recently this idea of 7.Nd5 became insanely popular thanks to Vladimir Kramnik, who was one of the few elite players to initiate this tabiya in modern times. He is indeed the trendsetter: îîEndBracketîî when it comes to opening ideas. 7...Nxd5 Forced, otherwise White was coming for Nc7+. 8.exd5 And here there are two main Knight retreats 8...Ne7 and 8...Nb8 The former is more concrete and leads to a narrow path where only moves are required to survive the initiative from White. And the latter, with 8... Nb8, is more logical to develop the Knight to d7 in the future and is more solid. 8...Ne7 So Black with this option wants to get the Knight immediately to the Kingside, either to f5 or g6. 9.c4 The critical move strengthening the pawn on d5 and paving way for the Queen on d1 to a4 to create a stir before Black consolidates. 9...Ng6 So Black's intention is to play Be7, castle followed by the pawn roll with ...f5. And once again direct 9...a6 fails to the standard 10.Qa4 and Black cannot interpose with 10...Bd7 due to 11.Nxd6 mate. 10.Qa4 With discovered threats floating in the air; also White's main idea to maneuver the Queen to a3 or b4 to target the d6 pawn is on the cards. 10...Bd7 The only move, blocking the a4-e8 diagonal. 11.Qb4 Exerting pressure on the d6 pawn. 11...Bf5 12.h4 Threatening h5 to corner the Knight on g6. 12...h5 Looks very logical to prevent the advance of Harry further. 13.Bg5 Exploiting the drawback of h5 advance from Black. We have got a nice square for our dark squared Bishop, restricting Black's f8 Bishop and now that piece is passive. 13...Qb8 TheCe are few options here like 13. ..f6 , played in the game of my compatriots S.L. Narayanan against Vidit in Asian Continental 2019, which was dubious as it only weakened Black's position. After 14.Be3 a6 15.Nc3 Qd7 16.Na4 Black had huge problems and was clearly worse as the Knight was heading to the b6 square. And if 13...Qd7 then 14.Qa5 is a strong manoeuver provoking some weakness in Black's camp, 14...b6 is forced as Nc7+ was on the cards 15.Qa4 threatening Nc7+ once more and 15...f6 16.Be3 Kf7 moving away from Nc7+, but White can grab the b6 pawn now due to the pin on the a-file after 17.Bxb6 and he wins. Now you can see why it is useful to provoke pawn pushes :îîEndBracketîî Finally, Note that îîStartFENîîr2qkb1r/pp3pp1/3p2n1/1N1PpbBp/1QP4P/8/PP3PP1/R3KB1R b KQkq - 1 13îîEndFENîî 13...Be7 would be a blunder because after 14.Bxe7 Black would need to recapture with the King not to lose material. 14.Be2 Keeping an eye on the h5 pawn. 14...a6 The Knight has to be kicked away from b5, which is creating a big nuisance. 15.Nc3 Qc7 Bringing Her Majesty back into the game. 16.g3 Restricting the Knight on g6. 16...Be7 Happened in the game of Karjakin-Carlsen, Shamkir 2019. 17.Be3 Nf8 Planning to reroute the Knight to d7 was seen in Alekseenko-Kuzubov, 2019. 18.a4 Sealing the Queenside, threatening a5 next. 18...Nd7 19.a5

Bg6 Protecting the h5 pawn so that he can castle next. 20.Na4 Eyeing the b6 square. 20...0-0 21.Nb6 Rae8 22.Nxd7 Qxd7 23.Qd2 Bringing the Queen back now that we have ample space on the Queenside and there is no attack for Black on the Kingside as well for instance if 23... f5 then there is always 24.f4 .

**B33**

☐ **Chapter Sveshnikov Kalas**
■ **Sveshnikov,Nb8**

1.e4 c5 2.Nf3 Nc6 3.d4 cxd4 4.Nxd4 Nf6 5.Nc3 The starting position of the Sveshnikov. 5...e5 The Sveshnikov Variation was pioneered by Evgeny Sveshnikov and Gennadi Timoshchenko in the 1970s. Before their efforts, the variation was called the Lasker–Pelikan Variation. Emanuel Lasker played it once in his world championship match against Carl Schlechter, and Jorge Pelikan played it a few times in the 1950s, but Sveshnikov's treatment of the variation was the key to its revitalization.The move 5...e5 seems anti-positional as it leaves Black with a backward d pawn and a weakness on d5. Also, Black would have to accept the doubled f-pawns in the mainline of the opening. However, in return, Black gets a foothold in the centre and gains time on White's knight, which has been driven to the edge of the board on a3. Today, it is extremely popular among grandmasters and amateurs alike. Top players who have used this variation include Magnus Carlsen, Vladimir Kramnik, Veselin Topalov, Teimour Radjabov, Boris Gelfand, Michael Adams and Alexander Khalifman, among many others.And the Sveshnikov Variation became even more popular after Magnus Carlsen employed it in his World Championship Match against Caruana. 6.Ndb5 The theoretically critical move, threatening Nd6+. 6...d6 The mainline preventing Nd6 invasion. Next Black will play... a6 and kick the Knight to the rim of the board. 7.Nd5 7.BC5 is the old mainline with tons of games and complicated theoretical battles.Recently this idea of 7.Nd5 became insanely popular thanks to Vladimir Kramnik, who was one of the few elite players to initiate this tabiya in modern times. He is indeed the trendsetter: îîEndBracketîî when it comes to opening ideas. 7...Nxd5 Forced, otherwise White was coming for Nc7+. 8.exd5 And here there are two main Knight retreats 8...Ne7 and 8...Nb8 The former is more concrete and leads to a narrow path where only moves are required to survive the initiative from White. And the latter, with 8... Nb8, is more logical to develop the Knight to d7 in the future and is more solid. 8...Nb8 The solid response with the plan of rerouting the Knight to d7. 9.c4 RevCving the old plan. 9.a4 is more popular and heavily played in the top-level games, with the point being to reroute the Knight via a3-c4 when attacked. There are tons of games with heavy theoretical battles. Apart from 9.a4 there is also this interesting one-game idea of Wesley with 9.Qf3 , with the idea of Qa3, which he played against Magnus online in 2020, and of course Black found the right way to deal with it later. The text move 9. c4 is also logical to expand and strengthen the d5 pawn, and also now he can

retract back with his Knight to c3. In addition, this direction was employed by Grandmaster Vachier-Lagrave in his recent game against Giri at Candidates. So let's go with the recent trend. :îîEndBracketîî 9...Be7 Looks natural, with the aim to castle quickly so that Qa4 ideas from White will become ineffective. 10.Bd3 10.c5 was played in the game of MVL-Giri, 2021 Candidates, but Black was fine after 10...O-O --- So I would like not to make committal moves and continue with natural developing moves. 10...0-0 10...a6 was played by Krasenko against Leko in 2002, 11.Nc3 O-O 12.O-O will also lead to the same story. 11.0-0 a6 12.Nc3 The critical juncture. 12...f5 looks logical to create an attack on the Kingside. 13.f3 Restricting the pawn mass on f5 and e5 as sometimes Black can insert ...e4 and create an attack. 13...Nd7 14.Kh1 Preparing for b4 advance as once again, with the King on g1 it would come under ...Qb6+. 14...Bg5 15.a3 If direct 15.b4 then there are a couple of ideas for Black after 15...a5 , trying to damage our pawn structure and though we are in time to create some concrete threats after 16.Bxg5 Here if 16.a3 Black has a wonderful idea with 16...e4 17.fxe4 Bf6 18.Bd2 Be5 threatening f4, and as well the Queen is landing on h4. Black obtains great counterplay here with a monstrous Bishop on e5. 16...Qxg5 17.Nb5 If 17.a3 then is once again met by a standard break with 17...e4 18.fxe4 Ne5 followed by 19...f4 and Black is taking over. So White always has to watch out for such ideas. comes a brilliant idea of 17...Rf6 18.Nc7 Rh6 and Whites position looks scary as Black is threatening Qg3. 15...b6 At some point Black has to play ...b6 in order to avoid b4-c5 breaks from White. 16.b4 Bxc1 17.Rxc1 With a pleasant position. White has a nice expansion on the Queenside and next on agenda is Qd2 connecting the Rooks. And at some point Na4-c5 ideas are incoming.

**B33**

## ☐ Chapter Sveshnikov
## ■ 7.Bg5-9.Nd5- Part II

*[IM Kushager Krishnater]*

In the second chapter, we will cover all the sidelines in the Sveshnikov Sicilian system with 7.Bg5. **1.e4 c5 2.Nf3 Nc6 3.d4 cxd4 4.Nxd4 Nf6 5.Nc3 e5 6.Ndb5 d6 7.Bg5 a6** more or less forced. **8.Na3** Black has a few choices here.

**8...b5**

[ 8...Be6?! a rare move. However, this has been tried by Shakh a lot. Black stops Nd5. However, after 9.Bxf6 Black is under some pressure. Qxf6 *( 9...gxf6?!* Black spoils their pawn structure for free. A possible idea is *10.Nc4 Rc8 11.Bd3 Ne7 12.Ne3 h5 13.Qf3±* White is significantly better due to the weak d5/f5 squares. *)* 10.Nd5 Qd8 11.Nc4! White keeps a great due to the central control. We don't need to spend time on routing the a3-knight anymore. A possible line is g6 12.Ncb6 Rb8 13.Qd2 h5 14.Qc3! Bxd5 15.Nxd5± with a clear edge for White. ]

[ 8...Be7?! This allows to play the thematic 9.Bxf6 Bxf6 10.Nc4! with a stable edge for White.

**A)** 10...0-0 loses a pawn to 11.Qxd6 Be6 12.0-0-0**±**;

**B)** 10...Be6!? some players have tried this, but Black doesn't have sufficient compensation. After 11.Qxd6 Be7 12.Qxd8+ Rxd8 13.a3 0-0 *( 13...Bc5 14.Ne3 Bxe3 15.fxe3± )* 14.Ne3 Bc5 15.Ncd5**±** White remains on top.;

**C)** 10...Nd4?! 11.Nd5 b5 12.Ncb6 Rb8 13.Nxc8 Rxc8 14.c3 Ne6 15.a4**±** With a clear stable advantage for White. ]

**9.Nd5 Be7**

[ 9...Qa5+?! 10.Bd2 Qd8 11.Bd3 Nxd5 *( 11...Be6 12.c4 bxc4 13.Nxc4 Nxd5 14.exd5 Bxd5 15.Qa4+-; 11...Be7 12.0-0 0-0 13.c4 bxc4 14.Nxc4± )* 12.exd5 Ne7 13.c4**±** ]

**10.Bxf6 Bxf6 11.c4** Black has a few choices here. **11...b4!?**

[ 11...Nd4!? This leads to a forced variation with 12.cxb5 Bb7 *( 12...0-0 13.b6!? Bb7 14.Bc4 Rc8 15.0-0 Bxd5 16.Bxd5 Qxb6 17.Nc4±* The d5-bishop is unchallenged. *)* 13.Bc4!? axb5 14.Bxb5+ Kf8 15.Bc4 Qa5+ 16.Qd2 Bd8 17.Qxa5 Bxa5+ 18.Kd1 Rc8 19.f3**±** White keeps a stable edge. The material advantage has been consolidated. ]

[ 11...0-0 12.cxb5 Nd4 transposes. ]

[ 11...Bg5 12.cxb5**±** outrightly loses a pawn. ]

[ 11...Qa5+ 12.Qd2 Qxd2+ 13.Kxd2 Bg5+ 14.Kd1**±** White keeps an edge due to the threat of Nc7+. ]

**12.Nc2 Rb8!?**

[ 12...a5 Black defends b4-prematurely. 13.Qf3!? sticking to our usual plan.

**A)** 13...Be6 a less played, but a possible option. However, after 14.Be2 Black's best bet is to transpose back with 0-0 *( 14...Bxd5?! 15.cxd5±; 14...Be7 15.h4!?* transposes. *)* 15.h4!?;

**B)** 13...Be7 14.h4 Be6 *( 14...0-0* transposes to the previous chapter. *)* 15.Be2 0-0 transposes to the previous chapter.;

**C)** 13...Bg5?! 14.h4! winning a free tempo. Bh6 *( 14...Be7* This gives White a free tempo essentially. Here, we may switch plans and play *15.g3 0-0 16.Bh3 Be6 17.Rd1 Qb8 18.Kf1* with a stable positional edge for White.*; 14...Bxh4?? 15.c5!? dxc5 16.Rxh4 Qxh4 17.Nc7+ Ke7 18.Nxa8+- )* 15.g4 Bf4 16.Nxf4 exf4 17.Qxf4**±** Black doesn't have sufficient compensation for the missing pawn. We want to safeguard our king next. ]

[ 12...0-0 was covered in the previous chapter. ]

**13.b3** stopping ...b3 ideas. **13...0-0**

[ 13...Bg5 is weaker and allows us to win a tempo with 14.g3 0-0 15.h4! Bh6 16.Bh3 Be6 17.Kf1 We keep the typical positional edge here. ]

**14.h4!** business as usual. **14...a5!?** Black's most natural response.

[ 14...Be6 15.g3! a5 *( 15...Be7 16.Qd3 a5 17.Bg2± )* 16.Qf3 Be7 17.Rd1 Qd7 18.Be2 transposes to the main line. ]

[ 14...Be7 15.g3 Be6 transposes. ]

☐ **Chapter Sveshnikov**
■ **7.Bg5-9.Nd5- Part I**
*[IM Kushager Krishnater]*

Welcome to the first chapter. In this chapter, we will start our coverage of the Sveshnikov Sicilian. My first recommendation against Sveshnikov is the positional

system with 9.Nd5 Be7 10. Bxf6. Here, I recommend a fresh system with 13.h4!?.
**1.e4 c5 2.Nf3 Nc6 3.d4 cxd4 4.Nxd4 Nf6 5.Nc3 e5 6.Ndb5 d6 7.Bg5 a6 8.Na3 b5 9.Nd5** One of the two big main moves in the position. Rather than spoiling Black's pawn structure with 9.Bxf6, we are opting the more positional approach with 9. Nd5. The point of this move is to centralize the knight. Further, we can play c3-Nc2 or c4 next. **9...Be7 10.Bxf6 Bxf6 11.c4!?** The more ambitious approach. We hit Black's Queenside and vacate the c2-square for our knight. **11...b4!** keeping more space on the Queenside.

[ 11...bxc4?! 12.Bxc4± In this case, White keeps an unchallenged grip in the center and on the Queenside. ]

**12.Nc2 0-0!?**

[ 12...a5 This and the other sidelines are covered in the second chapter. ]

**13.h4!?** This rare move is the reason I recommend this system. White gains space on the kingside and stops Black from exchanging the bad bishop with ...Bg5.

[ 13.Ncxb4 Nxb4 14.Nxb4 Qb6= White will have to give the pawn back here. We keep a balanced position. ]

**13...a5** the most natural move. Black defends b4.

[ 13...Be6 While this is popular, after 14.Qf3 we should mostly transpose back to 13...a5 lines. Bxd5?! *( 14...Be7 15.Be2 a5* transposes.*; 14...a5* transposes as well. *)* 15.cxd5 Nd4 16.Nxd4 exd4 17.Bd3± White gets a better version of the main line. We keep the typical good bishop vs bad bishop scenario. ]

**14.Qf3!?** This is quite rare, but feels like a very interesting attempt. We threaten to spoil Black's pawn structure on the kingside. More than that, the point is to play Be2-Rd1 next. White's queen is now better placed than it was on f1. **14...Be6!?**
The most natural move. Black brings their bishop to the center.

[ 14...Be7!? This move is a bit rare, but seems stronger. Black has chances to play ...f5 in certain positions. 15.Be2 We develop in the typical fashion. Kh8!!
This deep-positional move is the strongest. Black sidesteps all the potential checks and prepares ...f5. *( 15...f5?!* seems a bit premature. After *16.exf5 Bxf5 17.Bd3±* White keeps a bind on the light-squares in the center.*; 15...Be6* transposes. *)*
16.Rd1 covering the important d4-square. This move is a prophylactic attempt against ...f5.

**A)** 16...Be6 This is typical, but after 17.Rd2 Rb8 18.b3 Qd7 19.Nde3!? White keeps an edge due to the complete control of the center. a4 The only way to put pressure on White. Black tries to open up the Queenside. 20.Nf5 axb3 21.axb3 Ra8 22.0-0 Ra2 While Black gets the rook into the game, after 23.Rfd1 Rb2 24.Nxe7 Qxe7 25.Qe3 I think we maintain some pressure. Here are a few possible lines. Na5!? *( 25...Qxh4?! 26.Nxb4 Rxd2 27.Qxd2±; 25...Qb7 26.Ra1 Ra8 27.Rxa8+ Qxa8 28.Bd1!? )* 26.Na1 Rxd2 27.Qxd2±;

**B)** 16...f5 17.Nce3! A very strong idea. We are willing to sacrifice an exchange to lodge our knight on f5. *( 17.exf5?!* This is premature. After *Bxf5 18.Bd3* Black has the strong intermezzo to its rescue. *e4!∓ 19.Bxe4 Ne5 20.Qe2 Bxh4!!∓ )* 17...Nd4 *( 17...f4 18.Nf5 Bf6 19.h5!?* With obvious pressure due to

the active positioning of the knights.*; 17...fxe4?! 18.Qxe4± )* 18.Rxd4! exd4 19.Nxf5 Bf6 20.h5!? Black cannot do something easily here. I think White's play is easier due to the extra mobility in the position. Be5 21.Bd3 Black's play seems difficult. Here are some sample lines. Qg5 *( 21...a4 22.Qg4± )* 22.Kd1!? Bb7 23.Nc7⩲ ]

[ 14...a4 15.Rd1 Be6 16.Be2 transposes to the next chapter. ]

**15.Be2 Bxd5** The most natural attempt from Black.

[ Another possible idea seems to be 15...Be7 16.Rd1 Qb8 preparing ...Bd8-Bb6. *( 16...Kh8* transposes.*;* defending e7 with *16...Ra7* also makes sense, but after *17.Rd2 Qb8 18.Nxe7+ Rxe7 19.b3!?* White keeps the thematic pressure due to the weaknesses on the d-file. A possible line is *a4 20.Qd3 axb3 21.axb3 Rd8 22.0-0 Ra7 23.Rdd1* where we keep some pressure. *)* 17.Nce3!?

**A)** 17...Bxd5 can be met with 18.Nxd5 Bd8 19.h5 h6 20.0-0⩲ Black is unable to play .. .Bb6 here, while Nd4 runs into *( 20...Bb6 21.Nxb6 )* 21.Rxd4! exd4 22.Bd3 Re8 23.Qe2⩲ with a typical edge for White. Black is unable to break open up the Queenside.;

**B)** 17...Bd8 18.Nf5 Kh8 *( 18...g6? 19.Nxd6!± )* 19.g3 g6 It seems Black is able to play ...Nd4 next, but after 20.Nfe7!? White is able to keep some pressure. Bxe7 21.Nxe7 Nxe7 22.Qf6+ Kg8 23.Qxe7 b3 24.a3 Ra6 25.c5→ ]

**16.cxd5 Nd4 17.Nxd4 exd4 18.Rb1** It seems like the position has been liquidated, but in fact if we go deep, White keeps a risk-free pressure. We keep a good bishop vs bad bishop scenario. Our plan is to play g3-f4 at some point. We want to keep expanding on the Kingside. **18...a4!?**

[ 18...Qc7 can be met with 19.Bd3 a4 20.g3 a3 21.0-0 *( 21.b3* transposes and seems good too. *)* 21...axb2 22.Rxb2 Rfb8 23.Rfb1⩲ White keeps a risk-free edge. ]

**19.g3 a3 20.b3!?** Our claim is that Black is unable to progress in a meaningful way.

**20...Qe7**

[ 20...Qc7 21.Bd3 Qc3+ 22.Ke2 Rac8 23.h5 h6 24.Qf5⩲ While we are improving without any risks, Black cannot do anything worthwhile here. ]

**21.Kf1 Rfe8**

[ 21...Rac8 22.Bc4 Rfe8 23.Re1⩲ h5 24.Qd3 Rc5 25.f4⩲ ]

**22.Bd3 Rac8 23.h5 h6 24.Kg2 Rc3 25.Rbd1 Be5 26.Qe2 Qg5 27.Kh3⩲ Qe7 28.f4⩲** White gets the desired break in. Watch out for ... Qd7 ideas. Keep in mind that you will have e5-d6/Bb5 ideas after ...Qd7.

☐ **Chapter**
■ **N,N**

**1.e4 c5 2.Nf3 Nc6 3.d4 cxd4 4.Nxd4 Nf6 5.Nc3 e5 6.Ndb5 d6 7.Bg5 a6 8.Na3 b5 9.Bxf6 gxf6 10.Nd5 f5 11.Bd3 Be6 12.c3 Bg7 13.Nxb5 axb5**
This used to be played in the hope that delaying 0-0 would prevent White from developing a smooth attack, but it runs into a powerful reply. **14.Bxb5!** White offers a

pawn in return for a dangerous initiative. This move was recommended as a novelty in, and has since achieved a heavy plus score, having been tested in several games.

**14...Bd7 15.exf5 0-0 16.0-0 e4 17.a4 Re8 18.Qg4! Kh8 19.Qf4**

[ 19.Rad1 This has been played in almost all the games, and is of course the most logical continuation. The next move is rather forced:

**A)** 19...Re5 20.Ne3 Qf6 21.Rd5**±** shows the idea behind Rad1. We need one final split: B231) 20. Kh1!?N or B232) 20. Rfe1.;

**B)** 19...Rc8 20.Kh1 B231)

**B1)** It's tempting to try and force simplifications with 20...Ne5 21.Qxe4 Bxb5 22.axb5 Nd7 23.Qf4 Nf6 24.Ne3! but White avoids the exchange of the knights, and with g4-g5 ideas coming up, it doesn't look very easy for Black. For example: d5 25.g4 h6 26.Rg1↑;

**B2)** 20...Re5 21.Ne3 Qf6 *( 21...Qf8 22.f4* (or 22. Qh3!? with the idea of g2-g4) This looks unpleasant for Black. The king on h1 and rook on f1 are again ideally placed. *exf3 23.Qxf3≌ )* 22.Qh3!? *( 22.f4!? exf3 23.Qxf3 Qg5* and now Nc4, or f5-f6 and then Nc4, also deserve attention. Now Black is forced to enter a slightly unpleasant endgame after: *)*

**B2a)** If Black continues the same way as he did after 20. Rfe1 and Qh3, then now 22...Rc5 23.g4! is a lot stronger since Kh1 is of course more useful than Rfe1. A few sample lines: Ne5 ( *( 23...Rg8 24.Qg3 Bf8 25.Rg1±* ) *)* 24.Bxd7 Nxd7 25.Qg2 Qe5 ( *( 25...Ne5 26.g5± ;; 25...Qg5 26.Qxe4±* ) *)* 26.g5 Nb6 ( *( 26...Rg8 27.Rd4 d5 28.b4±* ) *)* 27.Rd4 d5 28.f4! With a rather strong attack.;

**B2b)** 22...Bxf5 23.Nxf5 Qxf5 24.Qxf5 Rxf5 25.Rxd6 Rc5 26.Re1!? Or 26. Rfd1. Na7 27.Bf1 f5 28.f3 exf3 29.gxf3 Black is close to a draw, but not quite there, and the three pawns look quite annoying.;

**B3)** 20...Nb8!? Rather artificial, but perhaps objectively the best, as the computer claims.

**B3a)** 21.Qh5 Rc5!? Another unusual defence from the computer, which leads to strange but interesting lines. For instance, there are g2-g4 ideas, but it seems hard to prove anything definite against the computer.;

**B3b)** 21.Qf4 Bxb5 ( *( 21...Be5 22.Qh6 Rg8 23.f6!* should be more pleasant for White, as we saw in the line with 19. Qf4. *Rg6 24.Qe3 Bxf6 25.Qxe4±* ) *)* 22.axb5 Be5 23.Qxe4 Bxc3 24.Qf3 Bxb2 25.Rb1 Be5 Black should be able to hold.;

**B3c)** 21.c4!? Now ... Bxb5, cxb5 would give White really menacing pawns. I will also mention a couple of alternatives for White: 21...Bxb2 22.Rfe1 Again, this position is full of possibilities, but it feels too deep to explore it further. Chapter-N,N;

**C)** 19...Rc8 20.Rfe1 B232);

**D)** 19...Rc8 Chapter-N,N ]

**19...Be5**

[ 19...Be5 20.Qh6 Rg8 21.f6 Rg6 ]

[ 19...Re5 20.f6 Rxd5 21.Rad1 Rxd1 22.fxg7+ Kg8 23.Rxd1 Ne5 24.Qxe4 Bxb5 25.axb5 Rb8 26.Qb4 Qb6 27.Rd5 ]

**20.Qh6!?N** 20. Nf4 is also more pleasant for White, but I prefer to keep the knights on the board. **20...Bg7**

[Khalifman's main line was 20...Rg8 21.f6 , but nobody on Black's side has dared to allow this yet, and it is obvious that White has a potent initiative.

**A)** 21...Rb8 22.Rfe1 Rg6

■ **N,N**

**1.e4 c5 2.Nf3 Nc6 3.d4 cxd4 4.Nxd4 Nf6 5.Nc3 e5 6.Ndb5 d6 7.Bg5 a6 8.Na3 b5 9.Bxf6 gxf6 10.Nd5 f5 11.Bd3 Be6 12.c3 Bg7 13.Nxb5 axb5 14.Bxb5 Bd7 15.exf5 0-0 16.0-0 e4 17.a4 Re8 18.Qg4 Rc8?!** Overly smart. I'll just briefly mention a few of the extra options here: **19.Rfd1!?** A major extra option for White; the move Rfd1 makes sense because the rook on a1 can be used to support the pawns later on, but after ... Kh8, Rfd1, then ... Rb8 was a lot stronger.

[ 19.Rad1 Kh8 20.Rfe1 Re5 transposes to variation B232. ]

[ 19.f4!? This seems the most exciting option to me. If ...exf3, then White would get f5-f6 soon as well, and his position does look overwhelming, although it might need to be checked further. And without ...exf3, White's pawn on f4 looks really impressive - preventing both ... Re5 and ... Ne5 ideas. Kh8 Black's main idea is a quick ... Ne7, so that is what White must try to prevent. *( 19...exf3 20.Qxf3⩲* with the idea of f5-f6. *)* 20.Qh5 *( 20.Rfd1 Ne7! 21.Qh4 Nxd5 22.Qxd8 Rexd8 23.Rxd5 Bxb5 24.axb5 Rc5= )* 20...Kg8 *( 20...Ne7 21.f6± )* 21.Kh1!? Rb8 *( 21...Ne7 22.Bxd7 Qxd7 23.Nb6±* After the text move, Black is finally preparing ... Ne7 again. Now I rather like the following insane idea: *)* 22.f6!? Bxf6 23.g4 Of course the position remains extremely complicated - and from a theoretical standpoint I don't think we ought to analyse it further - but the idea does seem a lot of fun. Black's ... Ne7 remains impossible after: Bg7 24.g5⩱ With the idea of Rg1, Rae1, rook lifts and so on; it seems really, really dangerous for Black. ]

**19...Kh8 20.b4!?N**

[ 20.Ra3? and transferring the rook along the 3rd rank is interesting, but Re5 21.Ne3 Qf6 would have to be analysed further. After my suggested novelty, White has strong play in a complex position, as the following lines illustrate: ]

**20...Rb8!?**

[ 20...Ne5 21.Qxe4 Bxb5 22.axb5± ]

[ 20...Re5 21.Ne3 Qf6 22.Qe2! Bxf5 23.Bxc6 Rxc6 24.a5↑ and the pawns are too fast. ]

[ 20...Nb8 21.g3!? Preparing an idea against ... Bxb5, as the following line shows. Bxb5 22.f6! Bxf6 23.axb5 Nd7 24.Ra7 Ne5 25.Qxe4 (25. Qf5!?) Nc6 26.Re7 Rxe7 27.Qf3 Bxc3 28.bxc6⩱ ]

**21.Qh5** 21. Ra3!? **21...Kg8**

[ 21...Ne5 22.Bxd7 Nxd7 23.b5 Nf6 24.Qxf7 Nxd5 25.Qxd5± ]

**22.Ra3**→ Black faces many problems, with just one of White's ideas being c3-c4 and then the a3-rook swinging hard right.

**B33**

☐ **Chapter**
■ **N,N**

**1.e4 c5 2.Nf3 Nc6 3.d4 cxd4 4.Nxd4 Nf6 5.Nc3 e5 6.Ndb5 d6 7.Bg5 a6 8.Na3 b5 9.Bxf6 gxf6 10.Nd5 f5 11.Bd3 Be6 12.c3 Bg7** This has been played a few times, including by Ivanchuk, but that was still in the early days of theory in this variation. When compared to variation B2 below, it makes little sense having the bishop on d6. Black will probably have to go for short castling anyway, after which the g4-g5 plan will carry even more venom. **13.Nxb5 axb5** An even worse version for Black is: **14.Bxb5** White takes a moment to improve his king, leaving Black with the problem of what to do with his own monarch. **14...Bd7** This has been the most popular choice, but going to the kingside carries an obvious risk. Other moves also leave Black in an unappealing position. **15.exf5! 0-0** Black creates a threat to take on e5, but it is easily avoided. **16.0-0 e4 17.a4!** Vishy played 17. Rhg1 and eventually drew with Ivanchuk, but Illescas Cordoba introduced this improvement just a month later. **17...Re8 18.Qg4 Kh8** This is a lot more flexible than 18... Rc8. Now we should consider various tries to increase our understanding of the position. Initially, I had been very happy about B21) 19. Rfe1, but for reasons I will explain below, I feel White has to be more inventive. So I now prefer B22) 19. Qf4!?N or B23) 19. Rad1 when my novelty arrives a move later. **19.Rfe1** This forces Black into action. A key point is that ... Rc8 has not been played, so after the typical moves ... Re5 and ... Qf6, Black is not able to take with ... Bxf5. This remains an interesting practical try for White, since Black needs to be very accurate to hold, but I believe the following line works for Black: B21)

[ 19.Qf4 B22) ]

[ 19.Rad1 B23) ]

[ 19.Rfd1 Rb8! I'd really like to play 20.Qf4 , but after Be5 21.Qh6 Rg8 22.f6 Qc8! the move Rfd1 feels as though it was inappropriate. ]

**19...Re5 20.Ne3 Qf6**

[ 20...Rc8 Black is essentially busted here, although the computer takes a bit of time to see it. 21.Nc4 d5 22.Nd6!N ( *( 22.Nxe5 Nxe5* This does not help much, but allowing g4-g5 would be disastrous for Black. *23.Qh5 Rb8!* was given by Kotronias, and eventually Black was just okay) White is going after the other rook. Then the rook on e5 remains rather misplaced, and White's a-pawn is much harder to keep in check: *)* 22...Qf6 23.Nxc8 Bxc8 24.a5 Bxf5! 25.Qd1 Na7 Black resigned in Camps - Gerard, corr. 2013. 26.Bf1± ]

**21.Qe2** White had a clear advantage in Illescas Cordoba - Karpov, Dos Hermanas 1999, as the extra piece was more valuable than Black's three pawns. Black can't take with ... Bxf5 as the c6-knight would be hanging. So White should be able to win an exchange with his various knight jumps. In most of the established theory (21... Rc5 and 21... Rc8 were considered by Kotronias) White seems to me to have great winning chances. Instead it's an unexpected defence that saves the day for Black:

This seems to be Black's best chance. **21...Rg8!!** This looks a rather natural move, but its justification involves an impressive idea.

[ 21...Rc5 and White soon won in Kucera - Harangus, email 2009. This really awkward move should alert White that he can force an advantage. 22.Rad1 has been successful for Black in one game, but White can easily improve with: Bxf5!N 23.b4 ( Rxc3 Black does not have much counterplay, and g4-g5 is a strong threat. 24.Nd5 is met by Qe5! , when the g-pawn cannot be taken due to dxc5, and g4-g5 remains a terrible threat.) 25.Qh5! prepares long castling by defending f7, but it is slow and passive. Such a sequence might seem artificial, but considering how Black's pieces are tangled up, it's natural that such an option must exist. Black is forced to play: Rc2 (The more ambitious 26.Ne3 Nxb4 27.Nxf5 Qf4⩲ Stephan - Isigkeit, email 2005. *( 27...Rc5!* The rest of the game illustrates why taking on g4 is always so dangerous for Black. *28.Nxg7 Qxg7 29.Qh4 d5 30.Qe7⩲ )* 28.Re2!?N Rc5 *( 28...Rc1 29.Rf1± )* 29.Bd7 Rc1 30.Rf1! may well be an improvement.) The new move when compared to Kotronias's analysis. After a later g2-g3, White can keep his king safe, while continuing to exert pressure due to his better pieces and a-pawn. Delaying castling with Rxf1+ 31.Kxf1 Nd3 ( *( 31...Rd8* transposes to the main line below.) *32.g3 Qc1+!* With the simple plan of g4-g5. We will see many more examples of this plan in the variations ahead. *33.Re1+-* This seems necessary, but White has several good ways to meet it. *)* 32.g3 Qc1+ gives White a few tempting continuations: 33.Kg2!?N ( Ne1+ ( 34.Rxe1! Depending on how Black recaptures, White will follow up with either g4-g5 or Nxd4, with an obvious initiative. Qxe1 35.Bc6 was seen in Shablinsky - Gerbich, corr. 2006, and now The safest move. Rf8!?N looks promising, as there is no time for 36.a5? on account of Winning the piece by force. Qxa5 .) 37.Nxg7 Qxh5 38.Nxh5 f5 is excellent for White.) 39.h3 White is obviously better, but whether Black can hold a draw is a subject for an endgame book. ]

**22.Ng4**

[ 22.Rad1 , the prospect of h5-h6 and the generally exposed state of Black's kingside are more significant than Black's control over a few light squares. Another game continued Bh6 23.Ng4 Rxg4 24.Qxg4 Bxf5 was interesting for me to explore further, but eventually I found Black had decent compensation everywhere. 25.Qg3 Be6! With the idea of ... Bf4, creating a big mess. ( *( 25...Ne7 26.f4 Rc5 27.Qf2* could be rather unpleasant for Black because his initiative is under control. ) *)*]

**22...Qg5** is swiftly destroyed by **23.Nxe5! Nxe5 24.Qxe4**

[ 24.Bxd7? with mate to follow, as Illescas Cordoba pointed out. Nf3+! 25.Kh1 Be5! is the key idea. 26.g3 Qh5 was played in Brodsky - Jaracz, Polanica Zdroj 1999, and here the correct queen retreat is 27.h4N Qg4-+ . This position was evaluated as better for Black by Lukacs in his annotations to the Anand game, but after ]

**24...Bxf5** Black gets powerful compensation on the kingside, Belka - Feco, corr. 2012.

**B33**

☐ **Chapter**
■ **N,N**

**1.e4 c5 2.Nf3 Nc6 3.d4 cxd4 4.Nxd4 Nf6 5.Nc3 e5 6.Ndb5 d6 7.Bg5 a6 8.Na3 Be6 9.Nc4 Rc8** This has been played in well over a thousand games, but it is hardly ever used by strong players these days. White gets a nice positional bind with just a few accurate moves. **10.Bxf6**

[ 10.Nd5!? Bxd5 11.Bxf6 gxf6!? 12.Qxd5 Nb4 13.Qd2 d5 14.exd5 Nxc2+ 15.Qxc2 Bb4+ 16.Kd1 is certainly interesting - maybe White will end up being better, but I would rather just avoid such lines. ]

**10...Qxf6**

[ 10...gxf6 11.Bd3! *( 11.Ne3* has been much more popular but after *Bh6* White has to deal with some concrete issues. The text move is more accurate, as White makes a useful developing move and delays Ne3 until it is really necessary. As some players figured out a long time back, that gives Black much less counterplay. *)* 11...Ne7 *( 11...Bh6* is pointless without the e3-knight as a target. *12.0-0 Rg8 13.Nd5±; 11...Rg8 12.0-0* does not really help Black either. *)* 12.Ne3 Bh6 13.0-0 Bxe3 14.fxe3 Qb6 15.Qc1 Ng8 Black had an unenviable position in Anand - Morovic Fernandez, Las Palmas 1993. The manoeuvre of the b8-knight to g8 is almost comical, and White can improve his position in any part of the board he chooses. ]

**11.Nb6 Rb8 12.Ncd5 Qd8**

[ 12...Qg6?! looks strange after 13.Qd3 , as Black will lose the right to castle. Be7 14.Nc7+ Kd8 15.Ncd5 f5 16.0-0-0 fxe4 17.Qc3± Rakay - Leroy, corr. 2011. Black's position is fairly solid, but moves like ... Rc8-b8 and ... Qxf6-d8 have wasted far too much time for my liking. Admittedly, White's knights are not ideally placed: they may look nice, but we should be mindful of the fact that Black may play around them and eventually mass his pieces on the kingside. Despite this small cautionary point, we should have more than enough time to complete our development and neutralize Black's hopes for counterplay. ]

**13.c3 Be7 14.Bc4 0-0 15.0-0 Bg5 16.a4 Kh8** Black has tried different move orders but he normally arranges his pieces in roughly this way, intending to prepare ... f5.

[ 16...Ne7 17.Nxe7+ Bxe7 18.a5± was pleasant for White in Ciolac - San Marco, Bethune 1992. I mentioned that our knights were slightly clumsy, so trading one of them for Black's only knight should help us. ]

**17.Qe2 g6 18.Rad1 Bh6 19.b4 f5 20.Bd3!?** There are other options available, but this one is certainly good enough. **20...f4 21.f3 Rf7 22.Bc4 Bf8 23.a5±**

Bologan - Cifuentes Parada, Las Palmas 1993. Black is under serious pressure, and must worry about ideas such as Ne3, Qa2, or simply doubling rooks on the d-file. Conclusion We started by checking the sideline 6...h6, which is not a bad move, but at the same time does not really challenge White, and instead gives us an enduring edge with the two bishops. The Sveshnikov proper occurs after 6...d6 , when 7.Bg5 a6 8.Na3 reaches our main starting point. 8...Be7 is often overlooked, but it contains several tricky points - the first one being the choice of move order for White. For reasons explained earlier, I think it's important to start with 9.Nc4 and hold back with Bxf6 for another move at least. I think White keeps an edge in all lines, but Black has several options, and it is worth checking them because each one requires handling in a different way. 8...Be6 9.Nc4 is an old line which has fallen out of fashion from Black's point of view - deservedly, in my view. 9...Rb8!? is an interesting nuance but 10.a4 seems like a good reply. The traditional 9...Rc8 allows us to establish a strong clamp with the knights on b6 and d5, and you can get an excellent position by following Bologan's example shown above.

**B33**

☐ **Chapter**
■ **N,N**

**1.e4 c5 2.Nf3 Nc6 3.d4 cxd4 4.Nxd4 Nf6 5.Nc3 e5 6.Ndb5** This just leads to solid but slightly worse positions for Black. **6...h6 7.Nd6+**
[ 7.Be3 d6 8.Nd5 Nxd5 9.exd5 Nb8 ]
**7...Bxd6 8.Qxd6** White continues to play in the simplest possible manner. **8...Qe7 9.Qxe7+**
[ 9.Nb5 Rb8 ]
**9...Kxe7 10.Be3** Black has tried several continuations here, but White keeps a slight edge everywhere. I will just mention one instructive example. **10...d6 11.f3 Be6 12.0-0-0 a6 13.b3**
[ 13.g4 b5 14.h4 Rhc8 15.g5 hxg5 White had an excellent position in Tiviakov - Chernyshov, Warsaw 2002. 16.hxg5 Nd7 17.Nd5+ ( Bxd5 18.exd5 is unpleasant) is obviously not an improvement for Black, even though his position remains solid in the short term. Eventually White's ‘extra' pawn should tilt the scales in his favour. For instance, an ideal game showing White's plan was Skembris - Sprecic, Tuzla 1990. Nb4 19.Rh2 ]
**13...Rhc8 14.Kb2 b5 15.a4 b4 16.Nd5+ Bxd5 17.exd5 Na5 18.Bf2 Nb7 19.Be1 Rc5 20.Bxb4±** The last move prepares Nc5. White showed excellent technique to put his opponent under pressure in Ljubojevic - Skembris, Thessaloniki (ol) 1984. **20...Rxd5** only makes development harder for Black. **21.Bc4 Rxd1 22.Rxd1 a5 23.Be1**

**B)** 18.Kh1 Rc5 19.f3 Rxd5 20.Qe2 ]

[ 17...Ng6 18.Qh5 Qc8 *( 18...Qf6 19.f4 )* 19.Kh1 *( 19.f4 Qc5+ )* 19...Rb8 20.Rab1 ]

[ 17...Qa5 18.Kh1 Rab8 *( 18...Qxd5 19.Qxd5 Nxd5 20.Nc4; 18...Nxd5 19.Bb3 Nf4 20.Nc4 Qc5 21.Qxd6 )* 19.Bb3 Qc5 20.f3 a5 21.Rb1 e3 22.Qd3 f4 23.g3 ]

**18.Qc1!?** I prefer not to commit the knight to the e5-square yet, as it might be targeted and exchanged off. Instead White should slowly improve his position with moves such as h2-h3 and c2-c4, while being ready to react to whatever Black might try.

[ 18.Nc4 Qc5! 19.Qe2 Rfc8 ]

[ 18.Bb3 a5± 19.Rb1 Qc5 ]

[ 18.Rb1 Qc5 19.Qh5 *( 19.Kh1 Nxd5 20.g4 Nf6 21.gxf5 Kh8 22.Qe2 d5 )* 19...Qxd5 20.f3 Qe6 21.g4 ]

**18...Nxd5**

[ 18...Qc5 19.Qg5 Nxd5 20.Bb3⩱ ) *( 20.Qxf5 Nxc3 21.Qxc5 Ne2+* ( *22.Kh1↑ dxc5? 23.Rae1!* ) *Bxb2?* is too active. *24.Nc4 Nd4 25.Bxe4 Rab8 26.Re3 )* 20...Nc7 21.Nc2⩱ ] Ne6 Ng4 ) 22.Qh4 is premature, as it opens the diagonal for the b2-bishop. ]

**19.Bb3 Qc5**

[ 19...Nc7 20.Nc4 White has sufficient compensation, but no advantage. It is hard to break though on the kingside, and the exchange of knights will ease some of the pressure. Qc5 21.Qf4 ]
[ 19...Ne7 20.Qg5 Qc7 [ 21.Nc4 ]
**20.Rd1 Nb6**
[ 20...Nc7
**A)** After 21.Nc4 d5! the game may continue: *( 21...Rfd8* ( *22.Qe3* ( *f4 )* 22.Ne3;
**B)** 21.Qe3 also maintains the tension, with promising compensation. 21...Qxe3 22.fxe3 Rfd8 23.Rf1 leads to a similar situation. ]
**21.Nc2 a5 22.a4⩲** The position is hard to assess. White has some pressure, but it is not clear exactly how he can break through. At the same time, Black doesn't seem to have any obvious way to swap off White's active pieces. Overall I would evaluate the exchange sacrifice as a fascinating idea which may appeal to some players, although Black has several ways of meeting it, and detailed computer analysis might reveal improvements in one or more of the above lines. **22...Rab8 23.g3 Qe5 24.Nd4 Rfc8 25.Qe3**

**B33**

☐ **Chapter**
■ **N,N**

**1.e4 c5 2.Nf3 Nc6 3.d4 cxd4 4.Nxd4 Nf6 5.Nc3 e5 6.Ndb5 d6 7.Bg5 a6 8.Na3 b5 9.Bxf6 gxf6 10.Nd5 Bg7 11.Bd3 Ne7 12.Nxe7 Qxe7 13.0-0 0-0 14.c4 f5 15.Qh5 Rb8 16.exf5 e4 17.Rae1 Bb7 18.Re3 bxc4 19.Bxc4 Qe5** Black wants to avoid the f5-f6 trick and get the typical ...d5-d4 formation in the centre. The downside is that it gives White time to start operations on the kingside. **20.Rh3 h6 21.Nc2!?** This is connected with a piece sacrifice. It is also possible to play without giving up material:
[ 21.Bb3 If White could get his knight to the blockading square on d4 then the game would essentially be over, so Black has to fight against that. d5
**A)** Also interesting is: 22.Rd1 Rbd8 Preparing against Nc2. ( *( 22...d4? 23.Qg6± ) )* 23.Nc2 d4 24.Rg3 Kh8 25.Bxf7 Bc8 26.Rxg7!? Qxg7 27.Bg6 Kg8 The last move is necessary prevent Nxd4. The resulting situation is similar to the line below after 22. Nc2, but this version is even harder to assess. Black has a little less counterplay due to his rook's positioning on d8, but the question is how White can improve. There are some ideas like Rd2 and Qd1 to provoke ... d3, which will give White the excellent e3-square for the knight, but it's hard to form any definite conclusions due to the number of options for both sides.;
**B)** 22.Nc2!? d4 23.Rg3! Now Black is forced to give up the f7-pawn. Kh8 *( 23...Rbd8?! 24.Qg6! Rd6 25.f6 Qxf6 26.Qxf6 Rxf6 27.Nxd4± )* 24.Bxf7 Bc8 The position remains rather messy. It's interesting to try and assess the

position after the following exchange sac: 25.Rxg7!? Qxg7 26.Bg6 The kingside is somewhat fixed, and it's hard for either side to make improvements. Perhaps a better version of this can be obtained after 22. Rd1 somehow.

**B1)** 26...Rxb2 27.Nxd4 looks dangerous for Black, despite the computer's assured 0.00 assessment. Rd2 28.Ne2 Rxa2 ( *( 28...a5 29.h4 Ba6 30.Re1± ) )* 29.h4!? I would definitely prefer White.;

**B2)** 26...Kg8! Avoiding Nxd4. 27.b3 *( 27.Rd1 Rxb2 28.Nxd4 Rd8= )* 27...Rb5 28.Qg4 Black seems to be okay after ... Bxf5, either here or after some preparation. ]

**21...d5 22.Ne3!?** This forces Black to find a series of 'only moves': **22...dxc4 23.Ng4 Qf4 24.f6 Bc8! 25.fxg7 Kxg7 26.Rg3 Kh7 27.Ne3 Be6** The computer thinks Black is safe here, but I feel the position could become difficult for him if White can just consolidate. The well-placed knight is clearly better than the bishop, and the g3-rook gives us some hope for a future initiative. We must watch out for ... f5-f4 of course, but we have the option of blockading with f2-f4 whenever Black moves his queen. The only problem for White is his b2-pawn, but he can solve it with some precise play. **28.Qe2!N**

[ Improving over 28.Qd1 Qe5 29.Ng4 Bxg4 30.Qxg4 Rxb2∓ as played in Czebe - Korpics, Budapest 1993. After the text move there are a lot of options for both sides, but the general ideas remain similar. I will therefore present a few lines to show the ideas described above, without trying to analyse things exhaustively. ]

**28...Rfc8**

[ After 28...Qe5 29.Nxc4 Bxc4 30.Qxc4 Rxb2 31.Qxa6 Black is struggling to equalize. ]

**29.Qc2!** A nice way of discouraging ... Qe5. **29...Rb5!?** Preparing against Qc3.

[ 29...Qe5? 30.f4! is one of the points of White's last move. ]

[ 29...h5 30.Nd1± ]

[ 29...f5 30.Qc3 Qc7 31.Qf6 ( *( 31.f4!? Rd8 32.b3 Rd3 33.Qf6 Qf7 34.Qxf7+ Bxf7 35.bxc4 Be6 36.Rc1* may be better for White as well) *)* 31...Qf7 32.Qxf7+ Bxf7 33.Nxf5 Be6 34.Nd6± ]

**30.a4 Rbc5**

[ 30...Rg5 31.Rxg5 hxg5 32.Qc3± ]

**31.Qc3 Qe5**

[ 31...Rg8 32.Rxg8 Kxg8 33.Rd1± ]

**32.f4!? Qxc3 33.bxc3 Bd7**

[ 33...f5 34.Rb1± gives White a nice endgame. ]

**34.Rd1!?**

[ 34.f5 Bxa4 35.Rf4 Bd7= ]

**34...Bxa4 35.Rd6** Surprisingly enough, White maintains some pressure here. There are threats against the king, and the a-pawn will take a long time to become dangerous. **35...R8c6 36.Rd4 Rb6**

[ 36...Rc7 37.f5± ]

**37.h3** Creating a safe square for the king. **37...f5**
[ 37...a5 38.f5! Bc6 39.Rd6→ ]

□ **Chapter**
■ **The Goring Gambit**
Black Weapons in the Open Games
*[Bologan,V]*

Fast Lane In Line A Black must accept the gambit. Learn how to react if White rushes with his K toward c4(Line C1). In this chapter White throws down the gauntlet with ... **1.e4 c5 2.Nf3 Nc6 3.d4 cxd4 4.Nxd4** Black can turn down the challenge by transposing to the Ponziani with 4 ... Nf6(Chapter 19).Since declining the gambit has already been covered,one would expect that it's time to test White's preparation with 4 ... dxc3.I have to admit that I was very interested in capturing the P(and another if White continues with 5 Bc4). However,I wasn't able to find any advantage for Black in one sideline.For that reason I turned to the trustworthy ... **4...Nf6 5.Nc3 e5 6.Ndb5 d6** With two Q-side pieces already developed,it makes sense for Black to transfer his K to the Q-side as quickly as possible. **7.Bg5 a6 8.Na3 Be7 9.Nc4 Be6!** Black could achieve the same idea one move earlier with 7 ... Bxf3 and 8 ... Qc4,but keep in mind the 7 Nc3 move order. ,so he ususally plays: A) 10 Be3!?∓ B) 10 Qb3∞ C) 10 Bxc6+ A) If White is determined to play a gambit,he will play this line. B) Instead of doubling Black's Ps,White is ready to accept doubled Ps on the b-file,but he will not benefit a great deal from the open a-file. C) Regardless of how Black takes on c6,he will have a good position.Still,White has a weaker score if Black doubles his c-Ps. **10.Bxf6 Bxf6**
[ 10...gxf6 11.Ne3 ]

**11.Nxd6+ Kf8 12.Nc4 Qd4**
[ For one thing,only Black can profit from the inserted 12...Bg5 13.Nd5 ,because later he will be able to play ... Bb6. For another,if White doubles Rs with b5 14.Nce3 g6 ,Black can continue with his plan 15.Bd3 ]
**13.Ne3 Qxd1+** In practice,it's easier for White than for Black to lose this position. Why is this so?Mostly because White fails to play his main trump - installing his K on c4.
[ 13...Bh4 14.Ncd5 ]
[ 13...Rd8 14.Bd3 ... and Black's activity guarantees a draw. Or Nb4 15.0-0 Nxd3 16.cxd3 Bg5! *( 16...Qxd3 17.Qf3* Gizatullin,D (2115) -Chojnacki,K (2306) Poznan op-A 2004 (5) 1/2-1/2 ,White would enjoy the more pleasant side of equality. *)* 17.Qf3 h5 ,with another R-endgame. After 18.Ncd5 comes Rh6 19.Nf5 Bxf5 After 20.Qxf5 ]
In the next two lines,White plays differently with his K: C1) 1 4 Kd3!?= C2) 14 Rac1= C1) This is the main move in the book Danish Dynamite. C2) Things can quickly go wrong for White if he simply develops his Rs on c1 and d1 and puts his K on f3.
**14.Rxd1!? Bg5!** If he wants to equalize in a relaxed manner,Black must play this move immediately. **15.Ncd5** Black now has several ways to equalize. One is **15...Rd8 16.Be2 g6** Smith,C-Green,P IECC Quad 31 1995 1/2-1/2 Traps Inexperienced players have trouble with Sobolevsky's Gambit 5 Bd3,even after playing the correct 5 ... Bg4. Don't try to experiment with 7 ... Bxf3 . Transpositions & Move Order White may try to confuse Black with the move order at the 7'h move. However,if Black knows that his Bs should go to g4 and b4,he will always reach the desired position.Moreover,Black himself can try to confuse White by switching moves with 6 ... Bb4+ and 7 ... Bg4. In Line A Black takes on c3,but not immediately. Almost all variations in Line C can transpose from one to another,and the only significant distinction is whether White will play his K to f3 or c4. Ideas To Remember The placement ofWhite's K in the position with the isolani(Line C1). Another is ... **17.h4!** Zlotkowski,A (2092) -Ingersol,H (2375) ST-2010-0-00074 0-1 **17...Bxe3 18.fxe3 h5 19.0-0 Kg7 20.c4**

☐ **Chapter**
■ **N,N**

**1.e4 c5 2.Nf3 Nc6 3.d4 cxd4 4.Nxd4 Nf6 5.Nc3 e5 6.Ndb5 d6 7.Bg5 a6 8.Na3 b5 9.Bxf6 gxf6 10.Nd5 f5 11.Bd3 Be6 12.c3 Bg7 13.Nxb5 axb5 14.Bxb5 Rc8 15.Qa4 Bd7 16.exf5 0-0 17.0-0 e4 18.Rfe1 Ne5!**

[ After 18...Re8? 19.Rxe4± Black fails to untangle his pieces. The text move is better, and forces a series of exchanges. ]

**19.Bxd7**

[ 19.f6 Bxb5 20.Qxb5 Bxf6 21.Rxe4 ( *( 21.b4 Bg7 22.a4 f5 23.a5 f4* is not to my liking) *)* 21...Bg7 Black was ready to launch his counterplay with ...f5 in Svacek - Scherer, corr. 2010. I don't think we can realistically hope for any advantage here, despite the excellent knight on d5. ]

**19...Nxd7 20.Qxe4 Nf6** This is the point of Black's pawn sacrifice: all these exchanges make his life a lot easier. **21.Nxf6+**

[ 21.Ne7+ seems to be a drawing path, for instance: Kh8 22.Qf3 Rc7 23.Nc6 ( *( 23.Nd5!?* is quite similar to 21. Nxf6+; I don't know if we might find a slight improvement for White here but, after *Nxd5 24.Qxd5 Rc5! 25.Qd3 d5* , intending ...d4 - a thematic idea that you will see later - Black seems to be doing fine.) *)* 23...Qa8 24.Nd4 Qxf3 25.Nxf3 Rb8 26.Re2 Rcb7 27.a4 Rxb2 28.Rxb2 Rxb2 29.a5 Rb8 30.a6 Ra8 31.a7 Ne4 32.Ra4 d5 33.Nd4 Bxd4 34.cxd4 Nd6 35.g4 Nc8 36.Ra5 Rxa7 37.Rxd5 Two correspondence games were drawn like this. ]

**21...Bxf6** When I first looked at this position, I thought it should be better for White without any risk. However, the pesky correspondence players have shown that Black can do a good job of holding up the queenside pawns with active moves. One of the most important resources is the ...d5-d4 sacrifice, which erodes White's pawn structure and enables Black's pieces to become much more active, while it should be easy enough to recover the d4-pawn. Of course the position still deserves attention, and I am not completely convinced that Black's life will be easy in a practical game, but it's certainly hard to prove a theoretical advantage. **22.Red1!?N**

[ 22.a4 is an obvious try, but d5! prepares Black's thematic pawn sacrifice. (Instead *( 22...Qb6 23.Re2 Rfe8 24.Qxe8+ Rxe8 25.Rxe8+ Kg7 26.Re2±* would be pleasantly one-sided) *)* 23.Qg4+ Kh8 24.Red1 d4!= Followed by ... Qd5, and Black should be fine. ]

[ 22.Rad1 This is the obvious way to prevent ...d5. If White can consolidate and start pushing the queenside pawns he will be clearly better but Black can do just enough to obstruct that plan. Qb6 23.Qg4+ *(*After *23.Re2 Rfe8 24.Qxe8+ Rxe8 25.Rxe8+ Kg7=* the two rooks are nothing special, since we can't really push the pawns*.; 23.Qc2 Rfe8 24.Rxe8+ Rxe8 25.a4 d5* is also equal, as Black is ready to play ...d4. *)* 23...Kh8 24.Rd2 Rfe8 25.Rxe8+ Rxe8 26.Qd1 The players agreed a draw in Evtushenko - Degtyarev, corr. 2011, as White cannot effectively

push the pawns. Having seen the outcome of the last game quoted above, the logic behind the text move should be clear. The rook was not doing much on the e-file, and it would soon have been exchanged had it stayed put. Therefore I want to use that rook to hold up ...d5-d4 and keep the other rook behind the a-pawn. ]

**22...Qb6 23.Rd2 Rfe8 24.Qf3 Re5**

[ After 24...d5 25.g3 it is not so obvious if Black should proceed with ...d4. He will not be able to blockade on d5, and if he recaptures on d4 with the bishop then Qg4+ will force him into a more passive position than he would like. ]

**25.g3 Rce8!** It is useful for Black to have the option of ... Re1+, especially if White advances the a-pawn.

[ 25...Qc5?! is not so good: 26.a4! Rxf5 27.Qg4+ Kh8 28.a5± Black has spent a lot of time going after a less-than-vital pawn, while the a-pawn has been gaining ground. ]

**26.Rf1**

[ 26.Rad1 Re1+ 27.Kg2 Qa6 is a bit annoying; White can defend against mate easily enough, but he can hardly hope for an advantage. ]

**26...Qc5** 26... Re1 allows 27.b3! when White is ready to block any counterplay with c3-c4, followed by slowly improving his position. The text move is better though: Black stops our plan and attacks the f5-pawn. In short, although we have several ways of handling this line, I found no clear route to an advantage in any of them.

**B33**

☐ **Chapter**
■ **N,N**

**1.e4 c5 2.Nf3 Nc6 3.d4 cxd4 4.Nxd4 Nf6 5.Nc3 e5 6.Ndb5 d6 7.Bg5 a6 8.Na3 b5 9.Bxf6 gxf6 10.Nd5 Bg7 11.Bd3 Ne7 12.Nxe7 Qxe7 13.0-0 0-0 14.c4 f5 15.Qh5 Rb8 16.exf5 e4 17.Rae1 Bb7 18.Kh1!?N** Removing the king from checks and creating the threat of Bxe4 followed by f2-f3, or just f2-f3 immediately. **18...bxc4!** This would be a tough decision in a practical game, as there are many plausible alternatives, but all of them have certain problems:

[ 18...Kh8 19.Bxe4! Bxe4 20.f3 Bxf3 21.Qxf3± ]

[ 18...Qe5 19.f3! Qxb2 20.fxe4± is great for White, since Qxa3? loses to 21.f6 . ]

[ 18...Bxb2 19.Nc2 Kh8 ( *( 19...Rfe8 20.f3 bxc4 21.Bxc4 d5 22.Bb3↑ ) )* 20.Bxe4 Bxe4 21.f3 Bxf3 ( *( 21...bxc4 22.Rxe4± ) )* 22.Rxf3 Qa7 23.c5↑ ( *( 23.f6? Qc5* ) The last move is a nice touch, since *)* dxc5 takes away the ... Qc5 defence after f6 . A final alternative is: 23...Qxc5? is met by 24.Rh3 , and ]

[ 18...Rfe8 19.cxb5! *( 19.f3 exf3! 20.Rxe7 fxg2+ 21.Kg1 Rxe7* is rather messy, so we should hold the f-pawn back for a moment. *)* 19...axb5 *( 19...d5 20.bxa6 Bc6 21.f3 Qf6 22.fxe4 dxe4 23.Be2 Rxb2 24.Nc4 Rxa2 25.Ne3± )* 20.Bxb5 Rec8 21.f3 exf3 22.gxf3 Qf6 23.Bd3!? Qd4 *(* After *23...Qxb2 24.Nc4* White is getting nicely coordinated. *)* 24.Be4 d5 25.Nb5 *( 25.Bb1 Qxb2*

seems okay for Black. *)* 25...Qxb2 26.Bd3 White keeps some initiative in a complicated position. ]

**19.Bxe4 Bxe4 20.f3 Rfc8!**

[ 20...Qf6!? 21.fxe4 Rfc8 transposes to the note with 21... Qf6 below. ]

**21.fxe4**

[ 21.Rxe4 Qf6 22.Rxc4 d5 23.Rxc8+ Rxc8⩲ ]

**21...Bxb2!** This seems to lead to a forced draw after a series of accurate moves from both sides, although the line looks rather worrying for Black at first. Alternatives fall short of equality:

[ 21...Be5 22.f6 Bxf6 23.e5 Bxe5 24.Qg4+ Kh8 25.Nxc4 Rg8 26.Qe4 Qe6 27.b3± ]

[ 21...Qf6!? This is a more human continuation to avoid the scary pawn sacrifices. 22.Re2 *( 22.e5!? dxe5 23.Qe2* could be more pleasant for White, but the computer doesn't agree. The text move is a more solid choice. *)* 22...c3 *( 22...Rxb2? 23.Rxb2 Qxb2 24.f6* wins. *)* 23.b3 a5 24.Nc2 White is a pawn up and can regroup his pieces accordingly. Qh6 25.Qxh6 *( 25.Qg4!?* is also possible: *Kh8 26.Re3 Be5 27.Rh3 Qg7 28.Qe2± )* 25...Bxh6 26.Rf3 Rc5 27.g4 Bd2 28.Rd3± ]

**22.e5!**

[ 22.Nc2 f6 23.Ne3 Be5 seems safe for Black. ]

**22...Kh8!** Another precise move.

[ 22...dxe5 23.Qg4+ Kf8 24.Nxc4 f6 25.Re4± looks unpleasant for Black. ]

**23.f6**

[ 23.e6 f6 24.Nc2 could be an interesting position to analyse, but Black doesn't appear to be in immediate danger. ]

**23...Qb7!** Another only move.

[ 23...Qf8? 24.Re4 is winning for White. ]

**24.Rf3 Bxa3**

[Black can also equalize with: 24...Rg8 25.e6 Bxa3 ( *( 25...fxe6? 26.f7 Rgf8 27.Nxc4±* ) *)* 26.exf7 Rgf8 27.Rxa3 Qxf7= ]

**25.Rxa3 dxe5 26.Rg3 Qe4! 27.Rg1 Rg8 28.Rxg8+ Rxg8 29.Qxf7 c3 30.Qc7 Rxg2 31.Rxg2 Qe1+=** It's a draw in the end, but the novelty came at move 18, so it would be incredibly hard for Black to find all these moves over the board.

**B33**

☐ **Chapter**
■ **N,N**

**1.e4 c5 2.Nf3 Nc6 3.d4 cxd4 4.Nxd4 Nf6 5.Nc3 e5 6.Ndb5** It is important to note that White has to play this move before Nf3, since it discourages ... h6 by renewing the idea of Ne6. We will begin to make our way down the main theoretical path, by examining the sidelines F1) 6... Qc7!?, F2) 6...e5!? and F3) 6...g6!?, before

moving on to the main move F4) 6...e6. **6...d6!?** This has been dubbed the Greek Variation, having been used successfully by the GM trio of Banikas, Nikolaidis and Skembris. It seems that all three of them no longer trust it - with the possible exception of Skembris, who continues to employ the variation from time to time against weaker opposition. Still, White needs to show quite some precision to pose problems for the defence. This has been dubbed the Greek Variation, having been used successfully by the GM trio of Banikas, Nikolaidis and Skembris. It seems that all three of them no longer trust it - with the possible exception of Skembris, who continues to employ the variation from time to time against weaker opposition. Still, White needs to show quite some precision to pose problems for the defence. F3) **7.Bg5 a6 8.Na3!** I believe White should adopt a prudent approach. **8...b5 9.Bxf6!** White is simply preparing for Black's eventual ...h6. **9...gxf6 10.Nd5!** Such piece sacrifices are all too common in the ... Nd7 variation. **10...Bg7N** This untested move is worth checking, but White maintains fine compensation by patiently improving his pieces. **11.Bd3!** Other moves are possible, but I like this one the most. **11...Ne7 12.Nxe7 Qxe7 13.0-0! 0-0 14.c4** Black can try various moves, but White has a vicious attack for the piece no matter what. Even the computers don't want to defend Black's position. **14...f5 15.Qh5 Rb8 16.exf5±** Black is barely able to move his pieces, while White can easily continue his attack, Rae1 being the obvious follow-up. Returning some material with **16...e4 17.Rae1 Bb7 18.Re3 bxc4 19.Bxc4±** would leave White with an excellent position. Moving the rook is critical, but it costs a valuable tempo. **19...d5** just gives White two excellent pawns for the piece, as well as a strong initiative. **20.Bxd5 Bxd5 21.f6! Qxf6?!** Not the best move, but life was already difficult for Black. (

[ 21...Bxf6 22.Qxd5! ( ]

**22.Qxd5 Rxb2** (

[ 22...Qxb2 7. Qe2 has been played as well, but the text move is simpler. In the remaining part of this chapter, we will deal with F41) 7...h6, a questionable attempt by Black to challenge the knight on g5, and the more solid sideline F42) 7... Be7. The main line is 7... Bd6, which will receive dedicated coverage in the next chapter. 23.Nc4 In this line we will see Black presenting an interesting challenge by delaying ...h6. In the earlier variation E, we saw that the ...h6 move presented a target for the g4-g5 advance, so it makes a certain amount of sense for Black to avoid it. Conversely, White should look for a way to exploit the knight's continued presence on g5. In this line we will see Black presenting an interesting challenge by delaying ...h6. In the earlier variation E, we saw that the ...h6 move presented a target for the g4-g5 advance, so it makes a certain amount of sense for Black to avoid it. Conversely, White should look for a way to exploit the knight's continued presence on g5. F42) Qxa2 24.Rxe4 Black continues with the policy described above. *( 24.Rg3 Rb1* Black has to react quickly, otherwise White will build an easy attack with Bd2, 0-0-0 and g4-g5. I found a few games after the text move, but so far nobody has found the best way forward for White. *)* 24...Rb1! Exploiting the fact that ...h6 has not been played. 25.g3 ]

[ 22...Rfd8!N This move may be considered a kind of prelude to the 4... Bf5 section, in which we will see many lines where this pawn advance comes back to haunt Black. The computer suggests several ways in which Black may react, but the attack proceeds smoothly in all cases. 23.Qxe4 Rxb2 24.Qc4 *( 24.Nc4±* the white king is perfectly placed. *Rxa2 25.h3 )* 24...h6 25.Nc2!? Rd2! *( 25...Qg6!* when the queens are getting exchanged by force. *26.Ne1?!* is pointless, as after *)* 26.Ne1 Rxa2 27.Nf3 Rdc2 28.Re8+ Kh7↑ White has an obvious initiative, which is worth more than Black's extra pawn. Conclusion In this chapter we have discussed a range of possible alternatives for Black after 4...Nd7 5.Ng5. White's fifth move sets up various tactical motifs based on a timely N(x)e6 or Nxf7, and we have seen several scenarios where he was able to implement those ideas successfully. In some other lines, such as 5...Nb6 and 5...Ndf6, Black prevents any such sacrifices but compromises his development along the way. Variation E with 5... e6 is interesting for the way in which it ties in with our repertoire against the Rubinstein Variation of the French. As we have seen, the extra ...h6 move only weakens Black's kingside. 5...Ngf6 6.Bd3 introduces the main line, and we have examined several sidelines after it. All of them are interesting in their own ways, although special mention must be made of the famous piece sacrifice 6...e6 7.N1f3 h6 8.Nxe6!, as well as the tricky 7...Be7. The final variation is perhaps the most theoretically challenging in the present chapter, although White has a pleasant choice between a slightly better endgame, as mentioned in the notes after 9.0-0, and a more aggressive set-up involving a pawn sacrifice to achieve a quick g4-g5. Chapter 23-F42) White must avoid 29.Qd5 Ra4 *( 29...a5 30.Ne5 )* 30.Qh5 ]

**23.Nc4**

[ 23.Rxe4 Rd8 24.Qc4⩲ White has fantastic compensation, and it seems to me that Black will have massive problems in re-shuffling his pieces.) h6 F1) 25.Nc2 F2) Qc3 F4) F4) This is the main move, preparing to develop the kingside. ]

**1.e4 c5 2.Nf3 Nc6 3.d4 cxd4 4.Nxd4 Nf6 5.Nc3 e5 6.Ndb5 d6 7.Bg5 a6 8.Na3 Be7 9.Nc4 0-0** This seems like the most logical way to sacrifice the d6-pawn. **10.Bxf6 Bxf6 11.Qxd6 Be6** White needs to know what he's doing here, as Black is getting active rather quickly. **12.0-0-0!?**

[ 12.Nd5 leads to some forcing lines culminating in an endgame: Bxd5 (After *( 12...Bg5 13.Qxd8 Raxd8 14.Ncb6 Rd6* Black managed to hold easily in Balogh - Radjabov, Bastia 2010, but that doesn't mean much. I think this was just a one-off experiment in a rapid game by Radjabov, as Black is just a pawn down without much compensation.) *)* 13.exd5 Nd4 14.Qxd8 Raxd8 15.0-0-0 Rxd5 16.c3 b5 17.Ne3 Rc5 18.Kb1 Ne6 19.g3 The computer insists White is just better here, and practical results have so far been decent, with a mix of wins and draws. There are probably some lines in which we would settle for this type of advantage but, since Black has made a questionable pawn sacrifice, I want to find something more convincing. ]

**12...Qxd6**

[ 12...Be7 13.Qxd8 Rfxd8 ( *( 13...Raxd8 14.Be2* is similar) *)* 14.Be2 b5 15.Ne3 Bg5 16.Kb1 Nd4 17.Bd3 left Black without any real compensation in Nierobisz - Cardenas Huaman, email 2008. ]

[ 12...Bg5+ 13.Kb1 Qf6 At first this looks like a cool idea, but White just has to realize that ... Rd8 can be met by Nd5. 14.f3 Rfd8 15.Nd5! Bxd5N *( 15...Qh6 16.Qc7!?± )* 16.Qxf6 gxf6 *( 16...Bxf6 17.exd5± )* 17.exd5 b5

**A)** White could even consider the fancy 18.f4!? , intending exf4 *( 18...Bxf4 19.g3 Bg5 20.Bg2* , but such ideas are hardly necessary. *)* 19.Be2 or;

**B)** 18.Na3 Ne7 19.c4± White has the stronger bishop and better pawn structure. ]

**13.Nxd6 Bg5+ 14.Kb1 Rfd8 15.Be2!?** This looks like a fairly straightforward move, but the tactical ideas after ... Nd4 are critical, and rather hard to foresee.

[ 15.h4 Be7 16.Nf5 Rxd1+ 17.Nxd1 Bc5 18.a3 Rd8 occurred in Palmkoeck - Cijs, corr. 2007. In this case Black has better compensation than in some other lines because of the nice bishop on c5, although I'm still not sure if it's enough for full equality. ]

**15...Nd4!?N** As mentioned above, this is the critical move to consider.

[ 15...b5 is just better for White after 16.Nf5 or 16. Nb7!?N. ]

[ 15...Be7 also gives White a risk-free advantage: 16.Nc4 Bc5 17.Rxd8+ Rxd8 18.Rd1 Bd4 ( *( 18...Bxf2 19.Nxe5!* ) *)* 19.Ne3 Bxc3 ( *( 19...Bxe3 20.fxe3±* ) *)*

20.Rxd8+ Nxd8 21.bxc3 Kf8 22.Bc4 Ke7 23.Kb2 Bd7 24.Bd5± ]

**16.Nxb7 Rdc8 17.h4!**

[ 17.Bd3 Rab8 18.Nd5 Rxb7 19.Bxa6 Rxb2+ 20.Kxb2 Rxc2+ 21.Kb1 Rxf2 is pretty unclear, but thankfully we can avoid such messy complications. ]

**17...Be7 18.Rxd4!?** This was my idea. **18...exd4 19.Nd5** With two pawns for the exchange, we have a nice material balance as well as good squares for our pieces and a lack of activity for Black's rooks. **19...Bf6**

[ 19...Bxd5 20.exd5 Rc7 21.Na5 Rd8 22.Bf3± ]

**20.Nxf6+**

[ After 20.Nb6?! Rcb8! 21.Nxa8 Rxb7 White has no advantage and even has to be careful not to fall into trouble with such a badly-placed knight. ]

**20...gxf6 21.Bd3**

[ 21.Na5 f5 22.Bd3 fxe4 23.Bxe4 Ra7 24.Bd3 could also be considered, but the text move is simpler. ]

**21...a5 22.Nd6 Rd8 23.Nf5 Bxf5 24.exf5 h5 25.b3±** It will take a lot of work to convert White's advantage, but it's a one-sided endgame and White has many possible ways to improve his position.

**B33**

☐ **Chapter**
■ **N,N**

**1.e4 c5 2.Nf3 Nc6 3.d4 cxd4 4.Nxd4 Nf6 5.Nc3 e5 6.Ndb5 d6 7.Bg5 a6 8.Na3 b5 9.Bxf6 gxf6 10.Nd5 f5 11.Bd3 Be6 12.c3 Bg7 13.Nxb5 axb5 14.Bxb5 Bd7 15.exf5 Nb8**

[ 15...Rb8?! This line makes very little sense as it doesn't solve any of Black's underlying problems - the king remains in the centre, his pieces remain mostly uncoordinated, and his threats are not effective. Still it has been played a considerable number of times, so we should analyse it:

**A)** 16.a4 0-0 A1) 17.0-0 Re8 18.Qg4 Kh8 *( 18...e4* is impossible due to: *19.Bxc6 Bxc6 20.f6+- )* 19.Qe4! Threatening f5-f6. f6 This is obviously a dream position for White. Black has no counterplay, and he is condemned to fight for a draw with only the smallest margin for error. White's play is quite logical - he can allow the exchanges of minor pieces after ... Ne7, keep blocking the ...d5 break, and continue to push the queenside pawns.

**A1)** 20.Rfd1 Ne7 21.Bxd7 Qxd7 22.b4 *(*Or *22.Nxe7 Qxe7 23.b4 . )* 22...Nxd5 23.Rxd5 Rec8 *( 23...Qc6!* is a better defence. *24.Qd3 e4 25.Qd4 e3 26.fxe3 Rxe3* Black drew in a few correspondence games from here, but from a practical perspective, it is one-sided after something like *27.Qxe3 Qxd5 28.a5 Qxf5 29.a6 Ra8 . )* 24.Qd3 Qf7 25.Rd1 Bf8 26.a5 Qc7 27.g3 Qxc3 28.Qxc3 Rxc3 29.b5 Be7 30.Ra1 Rb3 31.b6 Kg7 32.Rc1 Kf8 33.g4! h6 34.h3 Ke8 35.Rc7 Rb4 36.Ra7± Rather amazing,

and a computer-like display of domination in Stoyanov - Gromotka, corr. 2012. This shows how hard it is for Black to survive by following such a passive defence.;

**A2)** 20.b4 I would also like to show an instructive game: 20...Ne7 21.Bxd7 Qxd7 22.Nxe7 Rxe7 23.Rfd1 Keeping d5 under control. I don't know if Black can somehow defend this, but there is certainly no forcing way to hold this position; so Black continues to suffer. Bf8 *(*Or *23...Qc8 24.b5!?N Qxc3 25.b6 Qa5 26.Rxd6* also seems unpleasant for Black.*;* Rogozenko suggests that *23...Qc7* is level, but we can simply play *24.b5!?* as above. *)* 24.a5 Qc8 25.Qd5!? Ra7 26.Rd3 Qd7 27.Rg3 Bh6 28.Rd1 Rd8 29.Rf3⩲
In a practical game, Black remains without any counterplay, while White has various ways to improve his position. It's much harder to break through in a correspondence game, so eventually this was drawn in Schoen - Tinture, email 2007. Chapter 25-A1);

**B)** 16.a4 Rg8 A2);

**C)** 16.a4 Now there are two options to consider: A1) 16... 0-0 or A2) 16... Rg8. Chapter-N,N ]

**16.a4 Bxb5 17.axb5 Rxa1 18.Qxa1 Nd7**

[ After 18...0-0 19.Qa3! ( *( 19.0-0 Nd7* ) it's difficult for Black to develop and get the set-up he wants. For White, 0-0, Ra1, b5-b6 etc. will follow. *)* 19...Kh8 20.0-0 Qg5 21.Qxd6 Qxf5 22.Ne3⩲ Lefebvre - Bailet, Nimes 2009. ]

**19.Qa6!?**

[ 19.Qa7 0-0 20.0-0 transposes to line B22. Now Black is forced to enter a rather bizarre line, which seems to be playable only in correspondence chess! Objectively, White has a rather pleasant position, and will score especially well over the board. ]

**19...Nf6**

[ 19...Qb8? 20.Qc6+- . Or after ]

[ 19...0-0 20.Qxd6 e4 21.0-0 Be5 22.Qb4 Re8 23.c4 Nf6 24.Ne3 White is simply better. ]

**20.Qc6+ Qd7**

[ 20...Kf8 21.0-0⩲ ]

**21.Qa8+ Qd8 22.Nc7+ Kd7 23.Qc6+ Ke7 24.g4! Bh6!?** The alternatives offer a clear advantage to White.

[ 24...Qd7 25.g5⩲ ]

[ 24...h6 leaves Black playing without his bishop, as the following lines show: 25.0-0! Qd7 26.Qb7 Rd8 27.Ra1 Nxg4 ( *( 27...Kf8 28.Ra7 Kg8 29.Qb6⩲* ) *)* 28.Nd5+ Ke8 29.Qxd7+ Rxd7 30.b6 Rb7 31.Ra7 Rb8 32.Re7+ Kf8 33.b7 Nf6 34.Rc7 Rxb7 35.Rc8+! (less convincing is *( 35.Rxb7 Nxd5 36.Rd7⩱* ) *)* 35...Ne8 36.f6 Bh8 37.b4 Arithmetically, Black has an extra piece, but White is effectively a piece up, and should win. ]

**25.0-0 Qd7 26.Qb7 Rg8 27.h3 e4!?** An interesting defensive resource.

[ 27...Qxf5 28.Nd5+ Ke6 29.Qe7+ Kxd5 30.Qxf7+ Kc5 31.Qxg8 Nxg8 32.gxf5

Kxb5 Black was able to hold this endgame in correspondence chess, but it seems unpleasant to play. 33.Rd1 Kc6 34.Kg2 Nf6 35.Ra1± ]

**28.Nd5+ Nxd5 29.Qxd5 e3 30.f4!?N** After this novelty we should be able to achieve a one-sided position where White is pressing. Even though Black maintains drawing chances, he is far from reaching clear equality.

[ Both games continued 30.b6 Rb8 and Black was able to hold. ]

**30...Qa7**

[ 30...e2 31.Qe4+ Kf8 32.Re1 d5 33.Qe3 Qxb5 34.Kf2± Black is completely stuck with his pieces on the kingside. ]

**31.Kg2 Qa8 32.Qxa8 Rxa8 33.Kf3 Ra5 34.Kxe3 Rxb5 35.b4 Bg7 36.Kd3±**

☐ **Lesson**
■ **Sveshnikov 9.Bxf6 gf610.Nd5f5**
11.Bxb5 (11.Nxb5)
*[GM Ivan Cheparinov]*

**1.e4 c5 2.Nf3 Nc6 3.d4 cxd4 4.Nxd4 Nf6 5.Nc3 e5 6.Ndb5 d6 7.Bg5 a6 8.Na3 b5 9.Bxf6 gxf6 10.Nd5 f5 11.Bxb5** Back in the day this sacrifice was a big one. Nowadays almost nobody plays it because Black has plenty of ways to equalize.
[ 11.Nxb5? This is just a bad idea. axb5 12.Bxb5 Bb7 Compared to the lines with the Nxb5 sacrifice after 11.c3, the bishop gets to the active long diagonal. White's compensation is questionable. 13.exf5 Rc8 14.0-0 Bg7 15.Qf3 *( 15.c3 0-0∓ )* 15...Bf6 16.c3 Kf8∓ ]
**11...axb5 12.Nxb5 Ra4** The main move
[ There are also other good options: 12...Ra5 ]
[ and 12...Bb7 ]
**13.Nbc7+**
[ 13.0-0?! A dubious choice. Be7! The king can hide on f8 after a check now. 14.b4 Nxb4 15.c4 Nxd5 16.Qxa4 Nf4 A discovered check is not devastating by any means here. 17.Nxd6+ Kf8 18.Nxf5 Rg8 19.g3 Ne2+ 20.Kg2 Nd4∓ White only fights for survival. ]
[ 13.c4? This simply doesn't work. Rxc4 14.Nbc7+ *( 14.0-0 Be7 15.Rc1 Rc5-+ )* 14...Kd7 15.0-0 *( 15.Qh5 Rxe4+ 16.Kf1 Qh4 17.Qxf7+ Be7-+* Everything is covered and White is just a piece down. *)* 15...Nd4! 16.Nb6+ Kxc7 17.Nxc4 Kb8-+ The minor pieces are much, much stronger than the rook here, especially considering the ...Bb7, ...Rg8 idea. Black is winning. ]
[ 13.b4!? An additional pawn sacrifice played to open the b-file that might be useful in some lines. Rxb4 *(* Also good is *13...Qh4!? 14.0-0 Rg8 )* 14.Nbc7+ Kd7 15.0-0 Rg8 Many other good options 16.Rb1!
**A)** 16...Rxe4 17.Qf3! Qg5 *( 17...Nd4?! 18.Qa3 )* 18.g3 Be7 19.Qc3 Bd8 20.Nb6+ Kxc7 21.Nxc8 Rg6⇄;
**B)** 16...fxe4 The most practical continuation, which puts an onus on White to find a narrow path to a draw. 17.c3! *( 17.Nxb4?! Nxb4 18.Nd5 Nxd5 19.Qxd5 Ke7∓* Black is just better with the two bishops. *)* 17...Rxb1 18.Qxb1 Qh4 19.g3 Qh3 20.Qb5 Rg6 21.f4 The only move! Rxg3+= With a perpetual. ]
**13...Kd7 14.0-0**
[ 14.b4?! Qh4 15.0-0 Rg8 16.f4 Kd8 17.c3 Ra7∓ ]
**14...Rxe4**
[ 14...Rg8 Also good ]

**15.Qh5 Qh4!?** A rare, but fully satisfactory move.
[ More popular is 15...Nd4 ]
**16.Qxf7+**
[ 16.Qxf5+? Kd8 17.Qxf7 Be7 18.g3 Rg4∓ ]
**16...Be7** There are quite a few options possible for White here. A lot of Black moves in the following lines should be perfectly possible to find over the board. One crucial idea worth remembering is meeting g3 with ...Rg4! **17.Nxe7**
[ 17.g3 Rg4 18.Ne6 Nb4!? 19.Nb6+ Kc6 20.Nxc8 Rxc8 21.Nd4+! exd4 22.Qc4+ Kd7 23.Qxb4 Qf6 24.Rfe1 h5 25.Qb5+ Kd8 26.Qb6+= ]
[ 17.Nb5 Kd8!? 18.Nxe7 Qxe7 19.Qd5 Kd7 20.Rad1 Nd4 21.f3 Ne2+ 22.Kh1 Rh4 23.Qxd6+ Qxd6 24.Rxd6+ Ke7 25.Re1 Rb4 26.Rd5 Nf4 27.Rdxe5+ Kf6 28.b3 Rd8⇄ 29.c3 Nd3 ]
[ 17.Ne6 Nd8! 18.Nxd8 Kxd8 19.g3 Rg4 20.Nb6 Qf6 *( 20...Bb7 21.Rad1 Qh6 22.Qxf5 Rxg3+ 23.fxg3 Qe3+ 24.Rf2 Qxb6 25.Qxe5 Rf8 26.Rd4= )* 21.Qd5 Qe6 22.Qa8 f4 23.Rad1 fxg3 24.fxg3 Rf8 25.Rxf8+ Bxf8⇄ ]
**17...Nxe7 18.Nd5 Kd8 19.g3**
[ 19.Nf6 Qh6 20.Nxe4 fxe4⇄ ]
**19...Rg4 20.Nf6 Qh6 21.Nxg4 fxg4 22.Rad1 Nc6 23.f4**
[ 23.Qd5 Kc7 ]
[ 23.f3 Rf8 24.Qd5 Kc7⇄ ]
**23...Rf8 24.Qd5 Kc7⇄** According to the engine the position is equal. In practice White should be careful with a pretty exposed king and Black's bishop ready to appear on the long diagonal.

**B33**

☐ **Lesson Sveshnikov The,P**
■ **Sveshnikov 9.Nd5 10.Bxf6 11.c**

1.e4 c5 2.Nf3 Nc6 3.d4 cxd4 4.Nxd4 Nf6 5.Nc3 e5 6.Ndb5 d6 Today we will look at the second part of the three lessons on the Sveshnikov. 7.Bg5 The main move and definitely the most challenging one. Nd5 is threatened, Black's next move is practically forced. 7...a6 8.Na3 b5 Obviously the best move in the position, White wants to get the knight closer to the d5-square, this move prevents that plan and threatens ...b4 as well. 9.Nd5 So today we are going to study this move, 9.Nd5, a kind of positional system. It has been played countless times on the top level. Now Black has to be very accurate, after listening to this course you will have good knowledge of the nuances of this system and if your opponent is not so well-prepared then you have considerable chances to get a certain advantage out of the opening. 9...Be7 The only move to fight for equality, and even if Black most often equalizes on the top level, just one wrong move and White will get a significant advantage. Definitely, a rather risk-free variation for White if you know what you are doing. For those of you who want to play this line with Black, I'll try to give a detailed analysis of

the current state of theory, the best directions and certain concrete variations - that will already be enough information for you to play it with Black îîStartBracketîîif you are not in the top 10 of the worldîîEndBracketîî. 9...Be6 is a mistake, you'll understand this more after watching the next lesson. 10.Bxf6 gxf6 11.c3 f5 12.exf5 Bxf5 and Black simply lost a tempo. 10.Bxf6 Bxf6 In this position for many many years White would practically immediately play c3, which I believe that it's still the strongest move, trying to follow it up with Nc2. 11.c3 Bg5 The most fashionable system nowadays, coupled with Rb8-O-O-b4. It might be even better to start with 11...Rb8 , as Nxf6+ is never really a threat. 12.Nc2 Bg5 and now the point is that h4 doesn't work anymore. 13.h4 Bxh4 and there is no mate on the h-file of course. 12.Nc2 Rb8 Black wants to get the same position without allowing Garry's annoying h4. 13.a3 a5 14.h4 Bxh4 15.Nce3 Bg5 16.a4 bxa4 17.Qxa4 Bd7 18.Bb5 Black didn't manage to equalize.

**B33**

Nd5 is threatened, Black's next move is practically forced. 7...a6 8.Na3 b5 Obviously the best move in the position, White wants to get the knight closer to the d5-square, this move prevents that plan and threatens ...b4 as well. 9.Nd5 So today we are going to study this move, 9.Nd5, a kind of positional system. It has been played countless times on the top level. Now Black has to be very accurate, after listening to this course you will have good knowledge of the nuances of this system and if your opponent is not so well-prepared then you have considerable chances to get a certain advantage out of the opening. 9...Be7 The only move to fight for equality, and even if Black most often equalizes on the top level, just one wrong move and White will get a significant advantage. Definitely, a rather risk-free variation for White if you know what you are doing. For those of you who want to play this line with Black, I'll try to give a detailed analysis of the current state of theory, the best directions and certain concrete variations - that will already be enough information for you to play it with Black îîStartBracketîîif you are not in the top 10 of the worldîîEndBracketîî. 9...Be6 is a mistake, you'll understand this more after watching the next lesson. 10.Bxf6 gxf6 11.c3 f5 12.exf5 Bxf5 and Black simply lost a tempo. 10.Bxf6 Bxf6 In this position for many many years White would practically immediately play c3, which I believe that it's still the strongest move, trying to follow it up with Nc2. 11.c3 Bg5 The most fashionable system nowadays, coupled with Rb8-O-O-b4. It might be even better to start with 11...Rb8 , as Nxf6+ is never really a threat. 12.Nc2 Bg5 and now the point is that h4 doesn't work anymore. 13.h4 Bxh4 and there is no mate on the h-file of course. 12.Nc2 Rb8 Black wants to get the same position without allowing Garry's annoying h4. 13.a4 bxa4 14.Ncb4 A very serious attempt by White. Here you need to know and memorize some theory but it is only one major critical line and it seems that if you analyze it well and remember all the details there is a very good chance Black will equalize. 14...Nxb4 15.cxb4 All of the top players are taking with the pawn now. 15...0-0 16.Rxa4 a5 If you want to equalize in a very straightforward way then this is definitely what you should do. 17.h4 Bh6 18.b5 Bd7 The main move. 19.Nc3 d5 20.Qxd5 Bc1 21.b3 Bb2 22.Qd2 Bxc3 23.Qxc3 Bxb5 24.Bxb5 Rxb5 The game should end in a draw.

**B33**

**Lesson Sveshnikov The,P**
**Sveshnikov 9.Nd5 10.Bxf6 11.c**

1.e4 c5 2.Nf3 Nc6 3.d4 cxd4 4.Nxd4 Nf6 5.Nc3 e5 6.Ndb5 d6 Today we will look at the second part of the three lessons on the Sveshnikov. 7.Bg5 The main move and definitely the most challenging one. Nd5 is threatened, Black's next move is practically forced. 7...a6 8.Na3 b5 Obviously the best move in the position, White wants to get the knight closer to the d5-square, this move prevents that plan and threatens ...b4 as well. 9.Nd5 So today we are going to study this move, 9.Nd5, a kind of positional system. It has been played countless times on the top level. Now Black has to be very accurate, after listening to this course you will have good knowledge of the nuances of this system and if your opponent is not so well-prepared then you have considerable chances to get a certain advantage out of the opening. 9...Be7 TheConly move to fight for equality, and even if Black most often equalizes on the top level, just one wrong move and White will get a significant advantage. Definitely, a rather risk-free variation for White if you know what you are doing. For those of you who want to play this line with Black, I'll try to give a detailed analysis of the current state of theory, the best directions and certain concrete variations - that will already be enough information for you to play it with Black îîStartBracketîîif you are not in the top 10 of the worldîîEndBracketîî. 9...Be6 is a mistake, you'll understand this more after watching the next lesson. 10.Bxf6 gxf6 11.c3 f5 12.exf5 Bxf5 and Black simply lost a tempo. 10.Bxf6 Bxf6 In this position for many many years White would practically immediately play c3, which I believe that it's still the strongest move, trying to follow it up with Nc2. 11.c3 Bg5 The most fashionable system nowadays, coupled with Rb8-O-O-b4. It might be even better to start with 11...Rb8 , as Nxf6+ is never really a threat. 12.Nc2 Bg5 and now the point is that h4 doesn't work anymore. 13.h4 Bxh4 and there is no mate on the h-file of course. 12.Nc2 Rb8 Black wants to get the same position without allowing Garry's annoying h4. 13.a4 bxa4 14.Ncb4 A very serious attempt by White. Here you need to know and memorize some theory but it is only one major critical line and it seems that if you analyze it well and remember all the details there is a very good chance Black will equalize. 14...Nxb4 15.cxb4 All of the top players are taking with the pawn now. 15...0-0 16.Rxa4 a5 If you want to equalize in a very straightforward way then this is definitely what you should do. 17.h4 Bh6 18.b5 Bd7 The main move. 19.Nc3 d5 20.exd5 f5 Black's plan is actually to just play two pawns down, but with full control over the dark squares while playing a slow game for compensation. This is a very tough and complicated position to analyze, even the engines at the beginning gave a big advantage for White but then starts to drop until finally, it gives as equal. Basically, both players are playing for three results. After 20...e4 , it is not so clear. 21.Rxe4 f5 22.Rd4 and Black has chances to make a draw but it is not 100% sure. 21.Be2 Kh8 22.g3 Now g5 is not so good. 22...f4 23.g4 f3 One of the important lines in this variation. 24.Bxf3 Bc1 Attacking the pawn on b2. Black is still two pawns down but

has considerable compensation in the position. All in all, this position has been played a lot in top-level games and in correspondence games and it is important to know that Black if he knows what he's doing he doesn't risk ending up worse. More so in a practical game, I wouldn't be very comfortable with a king still stuck in the center. This system in my opinion is the most reliable according to the modern state of theory.

**B33**

☐ **Lesson Sveshnikov The,P**
■ **Sveshnikov 9.Nd5 10.Bxf6 11.c**

1.e4 c5 2.Nf3 Nc6 3.d4 cxd4 4.Nxd4 Nf6 5.Nc3 e5 6.Ndb5 d6 Today we will look at the second part of the three lessons on the Sveshnikov. 7.Bg5 The main move and definitely the most challenging one. Nd5 is threatened, Black's next move is practically forced. 7...a6 8.Na3 b5 Obviously the best move in the position, White wants to get the knight closer to the d5-square, this move prevents that plan and threatens ...b4 as well. 9.Nd5 So today we are going to study this move, 9.Nd5, a kind of positional system. It has been played countless times on the top level. Now Black has to be very accurate, after listening to this course you will have good knowledge of the nuances of this system and if your opponent is not so well-prepared then you have considerable chances to get a certain advantage out of the opening. 9...Be7 TheConly move to fight for equality, and even if Black most often equalizes on the top level, just one wrong move and White will get a significant advantage. Definitely, a rather risk-free variation for White if you know what you are doing. For those of you who want to play this line with Black, I'll try to give a detailed analysis of the current state of theory, the best directions and certain concrete variations - that will already be enough information for you to play it with Black îîStartBracketîîif you are not in the top 10 of the worldîîEndBracketîî. 9...Be6 is a mistake, you'll understand this more after watching the next lesson. 10.Bxf6 gxf6 11.c3 f5 12.exf5 Bxf5 and Black simply lost a tempo. 10.Bxf6 Bxf6 In this position for many many years White would practically immediately play c3, which I believe that it's still the strongest move, trying to follow it up with Nc2. 11.c4 This move started to get more and more popular sometime around the end of the 20th century, and was causing Black some problems for a while. Nevertheless, I believe that Black found a convincing way to deal with the text move. Black tried the move 11...Nd4 for a while, sacrificing the b-pawn for some compensation, but it's not very convincing. 11...b4 The most logical reply. 12.Nc2 a5 The problem for White in this setup is that the d4-square is terminally weakened. So the knight on c2 is tasked with defending it, trying to hold the knight on c6 for as long as possible. White's plan ideally is to exchange the bad light-squared bishop, should he achieve that task White will end up in a strategically winning position. Nevertheless, I must emphasize that it goes against my classical positional education to put the White pawn on c4 limiting the light-

squared bishop on c1, with a potential hole on d4 I don't believe this should ever give White any advantage. 13.g3 The main idea in this line. 13...0-0 14.h4 WhiCe's main try. A multifunctional move, firstly stopping ...Bg5, now Black has a problem to solve with his dark-squared bishop. Secondly preparing Bh3 and trying somehow to exchange the bishop. Black didn't manage to equalize here for quite a while, but by now, people îîStartBracketîîor their enginesîîEndBracketîî finally figured out a solid and good setup against it. Actually, it is not a setup, but Black rather organizes tactical counterplay quickly and it seems to work! 14...Be6 15.Bh3 The most dangerous and straightforward way of playing for White. White now has ideas of Bf5-h5 and Kf1-Kg2. Black has certain difficulties finding moves here, the dark-squared bishop remains passive on f6 and ...Qd7 is never possible because of Nb6. 15...a4 A very important move. Black simply wants to play ...b3 next. 16.Bxe6 fxe6 17.Ndxb4 Nxb4 18.Nxb4 White grabs a pawn but Black has very powerful compensation and will probably get the pawn back very quickly. 18...Qb6 Tactically everything works for Black. 19.Qd2 Probably the best move. Now there is not direct tactics but we have a very strong move now. 19...Be7 A very unpleasant resource. Black is threatening d5. 20.a3 Rf3 Another thematic Sveshnikov maneuver, Black is organizing his counterplay from all sides of the board. More so now the white king can't even castle now because the g3 pawn is hanging. All in all, I believe this is almost a refutation for the g3-g4-Bh3 idea, I really don't see how White can fight for any opening advantage in this line. When the players finally realized that, they started playing Bg2 instead.

**B33**

☐ **Lesson**
■ **Sveshnikov Nab1**
*[GM Ivan Cheparinov]*

**1.e4 c5 2.Nf3 Nc6 3.d4 cxd4 4.Nxd4 Nf6 5.Nc3 e5 6.Ndb5 d6 7.Bg5 a6 8.Na3 b5 9.Nab1** A rare, but decent line. The idea is to put the first knight on d5 and bring the other one to c3. **9...Be7** Black should be able to achieve a very good position with simple moves.

[ Other options are: 9...Be6 ]

[ and 9...Ne7 ]

**10.Bxf6 Bxf6 11.a4**

[ White can start playing without a4 with 11.Nd5 0-0 , but it should most probably transpose anyway. Omitting a4 altogether is nothing Black should worry about. ]

**11...b4**

[ Also possible is 11...Nd4 12.Bd3 *( 12.axb5 Bg4 13.Be2 Nxe2 14.Nxe2 axb5 15.Rxa8 Qxa8 16.h3 Be6 17.Qxd6 Qxe4 18.Qb8+ Bd8 19.Nbc3 Qc6 20.Qxe5 0-0 21.0-0 Bf6= )* 12...b4 13.Nd5 Rb8 14.Nd2 0-0 15.0-0 a5= ]

**12.Nd5 0-0**

[ Similar is 12...Be6 ]

**13.Bc4**

[ 13.Nd2 Be6 is similar. White will probably put the bishop on c4 anyway. ]

[ 13.c3 Rb8 ]

**13...Be6**

[ Also good is 13...Bg5 ]

**14.0-0**

[ After other moves we play ...Bg5 and the game is likely to transpose: 14.Nd2 Bg5 ]

[ or 14.Qd3 Bg5 ]

**14...Bg5 15.Qd3**

[ 15.c3 a5 16.Qd3 Transpose to 15.Qd3. ]

[ 15.Nd2 Kh8 Stepping out of the a2-g8 diagonal to prepare ...f5. 16.Nf3 Bh6 17.Qd3 *( 17.Qe2 f5* There is a forcing sequence possible: *18.Nxb4 fxe4 19.Nxc6 exf3 20.Nxd8 fxe2 21.Nxe6 exf1Q+ 22.Kxf1 Rfc8 23.b3 Rab8 24.Rd1 Rc6⇄* Black is fine with the e6-knight lacking squares to go to. *)* 17...f5 18.Ne3 Bxc4 *(* Also good is *18...fxe4 19.Qxe4 Bxc4 20.Qxc4 Rc8 21.Qxa6 e4 22.Nd2 d5⩲ )* 19.Qxc4 fxe4 20.Qxe4 Bxe3 21.fxe3 *( 21.Qxc6 Bc5* The bishop is very strong. White should be careful.*; 21.Qxe3 h6 22.Rad1 Qc7= )* 21...d5 22.Qg4 Qe7= Our pawns are extended, but we can easily defend them. ]

**15...a5 16.c3**

[ 16.Nd2 Bxd2 17.Qxd2 Nd4 18.Qd3 Rc8= ]

[ 16.Rd1 Rc8 ]

**16...Rc8 17.Rd1**

[ 17.Ba6 bxc3 18.bxc3 Rb8 19.Bb5 Ne7= ]

[ 17.Nd2 We can initiate direct tactics to equalize by force: bxc3 18.bxc3 Bxd2 19.Qxd2 Nd4 The point. 20.Qd3 Bxd5 21.exd5 *( 21.Bxd5? Rxc3! )* 21...Qc7 22.cxd4 Qxc4 23.Qxc4 Rxc4 24.dxe5 dxe5= ]

**17...bxc3 18.Nbxc3**

[ 18.bxc3 Ne7= A simple idea. If the knight comes out of b1, Black can simply trade everything on d5 and capture on c3. ]

**18...Nb4!** Black takes advantage of the newly created outpost. **19.Qe2 h5!?**

An interesting kingside expansion that can prove useful in the long run. The position has a non-forcing character now and Black has enough time for such moves.

[ 19...Rc5 is a simple and good alternative. The character of the position doesn't change. 20.b3 Nxd5 21.Nxd5 g6 22.Rd3 Kg7= ]

**20.b3**

[ 20.h3 g6 21.b3 Nxd5 22.Nxd5 Rc5 23.Rd3 Kg7 24.Rad1 Qb8= 0-1 (42) Lavrencic,M (2350) -Yaniv, Y (2390) Iasi 2023 ]

**20...Nxd5**

[ It is also worth considering to provoke a slight kingside weakening: 20...Bg4!? 21.f3 Be6 ]

**21.Nxd5 g6 22.Ra2**

[ 22.Rd3 Kg7 23.Rad1 Rc5= ]
**22...Bg4** The same idea as in the alternative 20... Bg4 line. **23.f3 Be6=** 1/2 (31) Colbow, C (2379) -Sebastian, D (2435) Germany 2023 It is not easy for Black to become better in these positions, but on the other hand, he is very solid and doesn't run many risks.

**B33**

☐ **Lesson**
■ **Sveshnikov Rare Th Moves**
*[GM Ivan Cheparinov]*

**1.e4 c5 2.Nf3 Nc6 3.d4 cxd4 4.Nxd4 Nf6 5.Nc3 e5 6.Nde2** This move, together with 6.Nf5, are the best options for White out of all these rare alternatives. After 6.Ne2, White intends to bring the knight to g3 next.
[ 6.Nxc6 bxc6 Transposes to the previous lesson. *(* In this particular case, it's also fine to recapture with the d-pawn. *6...dxc6 7.Qxd8+ Kxd8* The knight is already on c3 and White doesn't have the plan that was mentioned in the previous lesson which was f2-f3, Be3, and Nd2-Nc4. *8.Bc4 Bb4 9.f3 Ke7= )*]
[ 6.Nf3 Bb4 It's logical to pin the knight, perhaps threatening to capture it at some point. *( 6...Bc5* Is also good. *)* 7.Bc4 *( 7.Bd3 Bxc3+ 8.bxc3 d6 9.0-0 0-0∓* White's pawn structure is damaged. *)* 7...0-0 8.0-0 Bxc3 9.bxc3 d6 This move seems to be more accurate, trying to play for a win. *( 9...Nxe4* This is also possible and leads to equality. *10.Ba3 d6 11.Re1 Ng5= )* 10.Qd3 *( 10.Ba3 Na5!* White has some issues now with the pawn on e4 and bishop on c4. *)* 10...Re8 11.Rd1 Be6⇄ ]
[ 6.Nb3 Bb4 7.Bd2 *( 7.Bd3 d5 8.0-0 d4 9.Ne2 0-0∓* The structure with the d4 and e5-pawns is good for Black.*; 7.Bc4 0-0 8.Qd3 d5 9.Bxd5 Nxd5 10.exd5 Ne7 11.0-0 Bf5 12.Qe2 Bxc3 13.bxc3 Qxd5 14.Ba3 Rfe8∓ )* 7...Bxc3 8.Bxc3 0-0 9.Qf3 *( 9.Bd3 d5* When 10.exd5 Nxd5 is good for Black. *)* 9...d6 The threat of Bg4 prevents 0-0-0, so White should spend a tempo on h3. 10.h3 a5 *( 10...Be6* Also gives Black a pleasant position. *)* 11.a4 Nb4 12.Bd3 The only way for White to not be worse. Nxd3+ 13.cxd3 Re8 14.0-0 d5= The position is equal but Black's position seems slightly preferable thanks to the central pawns on e5 and d5. ]
[ 6.Nf5 Many games have been played this move, occasionally by top-level players too. The theory has developed over time even in this line, so Black is absolutely fine. d5 7.exd5 *( 7.Nxd5? Nxe4∓ )* 7...Bxf5 8.dxc6
**A)** 8...Qxd1+ Exchanging the queens leads to equality. 9.Nxd1 bxc6 10.Ne3 Be6 Black's pawn structure has been compromised but on the other hand, the pieces are more active, so the position is balanced. 11.Nc4 *( 11.Bc4?! Nd5* Is already a bit suspicious for White.*; 11.Bd2 Bc5= )* 11...e4 12.Ne5 Bc5! 13.Be3 *( 13.Nxc6?! Ng4* Is bad for White since the pawn on f2 is about to fall.*;*

*13.Ba6 Rb8 14.0-0* 14.Nxc6 Rb6 is good for Black. *0-0=; 13.Bc4 Nd5 14.0-0 0-0= )* 13...Bxe3 14.fxe3 Nd5 15.Bc4 *( 15.Nxc6 Nxe3 16.Kd2 Nf5 17.Re1 Nd6⇄* With the e and f-pawns, Black has good chances to take over, although the position is balanced at the moment. *)* 15...Nxe3 16.Bxe6 fxe6 17.Kd2 Nxg2 18.Rag1 0-0-0+ 19.Kc3 Nf4 20.Rxg7 e3 21.Re1 Rhg8! Using the moment that 22.Rxg8 Rxg8 23.Rxe3 is impossible due to 23...Nd5+, winning an exchange. 22.Rxa7 Ng2 23.Re2 Nf4=;

**B)** 8...bxc6 The most flexible move keeping chances to play for a win with Black. 9.Qf3 *( 9.Bd3?! e4 10.Qe2 Bb4 11.0-0 Qe7 12.Bc4 0-0⇄* Black's position is to be preferred already. *)* 9...Qd7 *( 9...Qc8?! 10.Ba6* White developed the bishop with tempo, while exchanging the bishops isn't very good for Black. *)*

**B1)** 10.Bb5? e4-+;

**B2)** 10.Bd3 e4 11.Qe2 Bb4⇄ Should transpose to the line arising from 9. Bd3 after Black plays Qe7.;

**B3)** 10.Bg5?! e4 11.Qe2 *( 11.Qf4 Bd6* Black develops with tempo.*; 11.Qd1 Bd6∓ )* 11...Be7 12.Rd1 Qc7∓ White's pieces are a bit awkward, especially the bishop on f1.;

**B4)** 10.Bc4 Be7 *(*It's not so clear after Black captures the pawn with: *10...Bxc2 11.Qe2 Bg6 12.Qxe5+ Be7* The engine assesses this position as equal, but it might be a bit uncomfortable for Black in a practical game due to the damaged pawn structure on the queenside.*; 10...Bb4 11.0-0 0-0* Is another option for Black. *)* 11.0-0 0-0

**B4a)** 12.Qe2 Rfe8=;

**B4b)** 12.Bg5 Bxc2 *( 12...e4!?* This is also an interesting try for Black. *)* 13.Rfe1 h6 14.Bxf6 Bxf6 15.Ne4 Bd8= White has compensation for the pawn but it's only enough for equality.;

**B4c)** 12.Rd1 Qc8 13.Qe2 *( 13.Ba6 Qe6* 13...Qxa6 14.Qf5 might be a bit unpleasant for Black since the e5-pawn will be attacked. *14.Bc4 Qc8=; 13.Re1 e4 14.Qg3 Re8= )* 13...Qc7 The easiest continuation for Black, simply protecting the e5-pawn. *( 13...e4 14.h3* Some games have been played with this continuation and probably Black is also equalizing in this line.*; 13...Bb4!?* This is a suggestion from the engine and although it doesn't seem very logical to a human to give up the bishop voluntarily, it does lead to equality. *14.Bb3 Bxc3 15.bxc3 a5 16.a4 Re8= )* 14.h3 *( 14.Bg5 Bg6= )* 14...Bb4 *( 14...Bg6=* Is also fine for Black. *)* 15.Na4 Rfe8 16.a3 Bf8= 1/2 (66) Fernandez, D (2500) -Jackson,J (2314) London 2017 Even though Black's pawn structure is a bit scattered, Black has active pieces and intends to continue with Bg6, while it's difficult for White to find proper squares to develop the pieces. ]

**6...Bb4**

[ An alternative for Black is: 6...Bc5 7.Ng3 0-0 8.Bd3 h6 9.0-0 a6 White can maybe try a move like Nd5, and although the position is playable a more

straightforward solution is the main line with 6...Bb4. ]

**7.a3** It's good for White to include the moves a3 and Ba5.

[ 7.Bd2 0-0 8.Ng3 Bxc3 9.Bxc3 d5⇄ ]

[ 7.Bg5 h6 8.Bxf6 Qxf6⇄ This is harmless for Black. ]

**7...Ba5 8.b4**

[ 8.Bg5 h6 9.Bxf6 Qxf6 10.f3 *( 10.Qd3 0-0* Is similar since White needs to play f3 anyway in order to castle long. *)* 10...0-0 11.Qd3 Intending 0-0-0. *( 11.b4?! Bd8 12.Nd5 Qg6∓* White's king is too weak and Black can proceed with moves like d7-d6 and f7-f5 to open up the position. Black has a better version of the Sveshnikov. *)* 11...Ne7 The simplest continuation for Black, fighting for the control over the d5-square. *(*Quite unclear is: *11...d5!? 12.b4 Nxb4 13.axb4 Bxb4 14.Qb5 a5 15.0-0-0 Be6∞ )* 12.0-0-0 d6 13.h4 *( 13.Qxd6?! Be6*↑ The position can become quite dangerous for White.*; 13.Nd5 Nxd5 14.Qxd5 Bb6=; 13.Kb1 Be6* Is very similar to 13.h4. *)* 13...Be6 14.g4 Rac8 15.Kb1 Bc4 Going after the pawn on f3. 16.Qe3 Bb6 17.g5 Bxe3 18.gxf6 gxf6 19.Rxd6 Rfd8 20.Rxd8+ *( 20.Rxf6? Kg7-+ )* 20...Rxd8 21.Ng3 Bxf1 22.Rxf1 Rd2= The position is approximately balanced where probably it's White who should be more careful due to Black's active pieces. ]

**8...Bb6 9.Qd6!** An important move that hinders Black's development.

[ 9.Ng3 d5 *(*Another possibility is: *9...Bd4!? 10.Nge2 0-0* Black could have also repeated moves with 10...Bb6, but playing on is also possible, when 11.Nxd4 will be met by 11...exd4. *)* 10.Nxd5 *( 10.exd5?! Bd4* This is good for Black. *)* 10...Nxd5 11.Qxd5 Qf6 12.Be3 Bxe3 13.fxe3 0-0⩲ Intending Be6 next. ]

[ 9.Qd3 0-0⇄ ]

**9...h6!?** A useful move that prevents Bg5 and waits to see how White will proceed.

[ 9...Bc7 10.Qd3 Now the bishop is on c7 in comparison to the position with 9.Qd3, so the same ideas with d7-d5 and Ng4 don't work for Black now. ]

[ The line with 9...Qe7 10.Qxe7+ Nxe7 11.Bg5 d6 is unclear, but I don't prefer this continuation as White can continue with moves like f3 and Nb5 later on. ]

**10.Be3**

[ 10.Ng3 Bc7 11.Qd2 Retreating the queen to d2 is the most accurate move because it doesn't block the light-squared bishop from f1 which can be developed on the c4-square. *( 11.Qd3 a5 12.Rb1 axb4 13.axb4 0-0⇄ )* 11...d6 12.Bc4 0-0 13.0-0 Ne7 14.Bb2 Be6= ]

[ 10.f3!? This is one of the lines suggested by the engine for White. Qe7 *( 10...Bc7* Leads to a sharp position. *11.Qd3 0-0 12.Bb2 a6 13.0-0-0 d6∞* White will start an attack with g4-h4-g5, while Black needs to find some counterplay on the other side with moves like a5, Nd4, or d6-d5 at some point. The position is quite complicated, and although it might be playable, a simpler continuation is 10... Qe7*. )* 11.Qxe7+ *( 11.Nb5 a6 12.Nc7+ Bxc7 13.Qxc7 d5 14.Qxe7+ Kxe7 15.exd5 Nxd5= 16.c4 Nb6* Black is putting pressure on the c4-pawn when 17. Nc3 can be met with 17...Be6. *)* 11...Kxe7 Exchanging the queens is fine for Black since White doesn't have Bg5.

**A)** 12.Bb2 d6 13.Nd5+ Nxd5 14.exd5 Nb8 15.c4 a5 16.c5 *( 16.f4 f6* Solidifies the center. *)* 16...dxc5 17.bxc5 Bxc5 18.Bxe5 f6 19.Bf4 Rd8 20.Nc3 Na6 21.Bc4 Bf5= Black can consider playing Bd6 at some point if needed.;
**B)** 12.Na4 d5 13.Bd2 Rd8 Capturing the pawn on e4 can be met with b4-b5 and then Bb4+ which can be a bit unpleasant, so it's better to include the rook in the action. 14.b5 Na5 15.Bb4+ Ke8 16.Nec3 dxe4 17.Nxb6 axb6 18.fxe4 Rd4 19.Bd3 Nb3 20.cxb3 *( 20.Rd1 Nc5* Is also okay for Black. *)* 20...Rxd3 21.Na4 Bd7 22.Nxb6 Rd8= The position remains complicated when Black's pieces are quite active and Black intends to capture either the pawn on e4 or the one on b5 next. ]

**10...Bc7** Although 10...Bxe3 11.fxe3 might be playable, Black is kind of stuck in that position, so I prefer 10...Bc7. **11.Qd2**

[ 11.Qd3 d6 12.Ng3 0-0 13.Rd1 Be6 14.Be2 a5 15.b5 Nd4 A very good pawn sacrifice! 16.Bxd4 exd4 17.Qxd4 Rc8⩲ ]

**11...d6 12.Ng3**

[ 12.0-0-0 Ne7 Preparing d6-d5. 13.f3 Be6 14.Nb5 And now the engines are suggesting the following line: d5 15.exd5 Nexd5 16.Nec3 a6 17.Nxd5 Nxd5 18.Bc4 axb5 19.Bxd5 Rxa3 20.Bxe6 Ra1+ 21.Kb2 Qxd2 22.Bxd2 Rxd1 23.Bxf7+ Kxf7 24.Rxd1 Rd8= ]

**12...Be6**

[ 12...a5!? 13.Rb1 axb4 14.axb4 0-0 15.Bc4 Be6 This continuation is also fine for Black. ]

**13.Be2 d5 14.Nxd5 Nxd5 15.exd5 Qxd5 16.Qxd5 Bxd5** Black managed to equalize completely. **17.f3 Be6!?N** Supporting the f7-f5 push.

[ 17...0-0 This is also possible, although I prefer 17...Be6. 18.0-0-0 Be6 19.Bd3 f5 20.Bc5 Rf7 21.Rhe1 a6 22.c3 Rd8= 1/2 (32) Dard,M (2260) -Trushnikov, V (1878) ICCF email 2021 ]

**18.Ne4**

[ 18.0-0-0 f5 f5-f4 is an unpleasant threat to face for White. ]

[ 18.Bd3 Bb6= ]

**18...0-0-0 19.Bd3**

[ 19.Nc5 Bf5 Is also fine for Black. ]

**19...b6 20.0-0-0 a5 21.c3 f5 22.Ba6+ Kb8 23.Nd2 axb4 24.axb4 Ne7=**

☐ **Lesson**
■ **Sveshnikov Rare Th Moves**
*[GM Ivan Cheparinov]*

**1.e4 c5 2.Nf3 Nc6 3.d4 cxd4 4.Nxd4 Nf6 5.Nc3 e5 6.Ndb5 d6 7.a4**
The main moves 7.Bg5 and the move that became popular lately, 7.Nd5, will be

analyzed in the upcoming chapters. Many games have been played with 7.a4, but it doesn't pose much of a challenge to Black, who can easily equalize with:

[ 7.Be2 a6 8.Na3 b5 Black is already fine since b5-b4 is a threat. 9.Nd5 *( 9.Nab1?! Be7 10.0-0 Nd4 11.Bd3 Bg4* It's good to provoke some weaknesses from White. *12.f3 Be6∓* The knight on d4 is great while White's queenside is quite passive. Black can consider playing d6-d5 at some point. *)* 9...Nxe4 Black isn't obliged to capture the pawn, but there is no reason not to.

**A)** 10.Be3 Rb8 11.Bf3 Ng5 12.Bxg5 Qxg5 13.Nc7+ Kd7 14.Nd5 The king is a bit exposed on the d7-square, but on the other hand, Black is a pawn-up. Now Black can give the pawn back in order to obtain a good initiative. e4!? 15.Bxe4 Qe5 16.Qf3 Kd8 17.Qe3 17.0-0 runs into 17...f5 18.Bd3 Nd4, when White has problems defending the knight on d5. Qxb2 18.0-0 Qd4∓;

**B)** 10.Bf3 Many games have been played with this move, although 10.0-0 is more dangerous in my opinion. Nc5 Provoking White to win an exchange, although capturing it isn't good for White. *( 10...f5 11.0-0 Be6* Is also a good option for Black. *)*

**B1)** 11.Nf6+? gxf6 12.Bxc6+ Bd7 13.Bxa8 Qxa8 14.0-0 h5∓ Black has a fantastic position with a strong pawn center and active pieces, while the knight on a3 isn't contributing to the game.;

**B2)** 11.Nb4 Nxb4!? *( 11...e4* This continuation is enough for equality, but maybe Black can try to play for more with 11...Nb4. *12.Nxc6 Qd7* Attacking both pieces simultaneously. *13.Bxe4 Nxe4 14.Nd4 Be7= )* 12.Bxa8 d5 Blocking the escape route of the bishop on a8. 13.0-0 Be6 14.c3 Qxa8 15.cxb4 Ne4 16.Nc2 Bd6∓ Black has very nice centralized pieces and a strong pawn center.;

**B3)** 11.Be3 Be6 12.0-0 Rc8⇄ Intending Be7 and 0-0 next.;

**B4)** 11.c4 e4 This is an interesting line suggested by the engines. *(*Another possibility is: *11...b4 12.Nc2 Rb8⇄ )* 12.Be2 Ne7!? Intending to exchange the knights next. 13.Be3 *( 13.cxb5 Nxd5 14.Qxd5 Bb7⇄* Black's central pawns can become very strong. *)* 13...Nxd5 14.Qxd5 Be6 15.Qc6+ Bd7 16.Qd5 Be7 *( 16...Be6=* Black can also repeat moves of course. *)* 17.cxb5 0-0 18.0-0 Be6 19.Qd1 Bf6 20.Bd4 axb5 21.Nxb5 Bxa2 22.Bxf6 Qxf6 23.Qxd6 Qxb2 24.Qxc5 Qxe2 25.Nd6= The pawn on e4 is weak so it's very likely that White will manage to make a draw.;

**B5)** 11.0-0 Rb8 Stepping away from the dangerous diagonal. 12.c4 b4 13.Nc2 Be7 14.Be3 0-0 15.Qd2 b3 16.Ncb4 Nxb4 17.Nxb4 e4 18.Bd1 18.Nc6 doesn't accomplish much for White after 18... Qc7. Bb7 19.axb3 Bf6⇄ The position remains complex, although it seems that White is the side that should be more careful.;

**C)** 10.0-0 Nf6!? Trying to exchange the strong knight on d5. *(*Another possibility is: *10...Be6 11.Be3 Rc8 12.c4 b4 13.Nc2⩲* The position is playable for Black, although White didn't spend a tempo on the move Bf3 in this case. *)*

**C1)** 11.Bg5 Be6 12.c4 Nd4⇄ The knight on d4 is quite active.;
**C2)** 11.c4 Nd4⇄ When White is very likely to play 12.Bg5 on which 12...Be6 reaches the same position as the one arising from 11.Bg5.;
**C3)** 11.Nxf6+ gxf6!? Trying to play for an advantage. *( 11...Qxf6* Is also a possible continuation. *12.Bf3 Bb7 13.c4 d5!* A very important move after which Black equalizes immediately. *14.Bxd5 Bxa3 15.bxa3 0-0= )* 12.Bf3 Qd7 13.c4 Rb8⇄ Black's king is very safe behind the pawn shelter in the center, when White needs to prove that there is enough compensation for the missing pawn which won't be very easy to do.;
**C4)** 11.Bf3 Nxd5 12.Bxd5 Qd7! 13.Qf3 Bb7 14.Rd1 Rb8 14...Nd4 loses to 15.Rxd4 and then Bxb7. 15.c4 *( 15.c3 Nd8 16.Nc2 Be7= )* 15...Nb4!? *(* Another playable continuation is: *15...Nd4 16.Rxd4 exd4 17.Bg5∞ )* 16.Bxb7 Qxb7 17.Qb3 Nc6 18.cxb5 axb5 If Black manages to complete the development with Be7 and 0-0, Black might be better.

**C4a)** 19.Rd5 Nd4 20.Rxd4 exd4 21.Bg5 Be7 22.Re1 f6 23.Bf4 Qd7 24.Qd5 Qb7 White has nothing better than a move repetition, and 25.Qxd6 also leads to a draw. *( 25.Qe6 Qd7= )* 25...Rc8 26.Qb4 Kf8 27.Bd6 Bxd6 28.Qxd6+ Kf7 29.Qe6+ Kg6 30.Qg4+=;
**C4b)** 19.Be3 Na5 20.Qb4 Nc6 21.Qe4 *( 21.Qb3= )* 21...Be7 22.Rac1 Nd8 23.Rd5 *( 23.Qxb7 Rxb7* White has sufficient compensation to maintain the balance but not more. *24.Rd5 Kd7 25.Nxb5 Ne6 26.a4 Ra8 27.b3 f6⇄* Black will chase away the blockading rook on d5, and will proceed by pushing the d-pawn down the board. *)* 23...Qa8!? 24.Rc7 Qa5 25.Rxe7+ Kxe7 26.Bd2 *( 26.Bc5* Leads to a draw. *dxc5 27.Qxe5+ Ne6 28.Qd6+ Kf6 29.Qe5+= )* 26...Qa4 27.Bb4 Nc6! 28.Bxd6+ Ke6 29.b4 With the king on e6, White wants to keep the queens on the board. Rhd8 30.Nc2 f6 A possible continuation to continue the game, although it also leads to equality. *( 30...Rxd6 31.Nd4+ Ke7 32.Nxc6+ Rxc6 33.Qxe5+ Re6 34.Qc7+ Kf6 35.Qf4+= )* 31.Ne3! Qxa2 32.Qg4+ Kf7 33.Qh5+ Kg8 34.Bxb8 Qb1+ 35.Nf1 Rxb8 36.Rxb5= When Black can't capture on b5 due to a checkmate on e8, but Black can play 36. ..Rd8 for example. ]

[ 7.Na3 Bg4!? Although this is a rare move, it seems to be the easiest option for Black, provoking f2-f3. Other good options for Black include: *( 7...Be7; 7...Be6 )*

**A)** 8.Be2?! Bxe2 9.Qxe2 Nd4 10.Qd3 d5∓;
**B)** 8.Qd3 d5! 9.Nxd5 *( 9.exd5?! Nd4∓ )* 9...Nxd5 10.Qxd5 *( 10.exd5?! Nd4 11.c3 Bxa3 12.cxd4 Bb4+ 13.Bd2 Bxd2+ 14.Qxd2 Qxd5∓ )* 10...Bb4+ 11.c3 Bxa3 12.Qxd8+ Rxd8 13.f3 Bxb2 14.Bxb2 Be6= White should probably continue with Bb5 and then exchange the knight on c6, otherwise Black will play Na5 with a better position.;
**C)** 8.Qd2?! Be6∓ The bishop on c1 is stuck while Black intends to continue with d6-d5.;
**D)** 8.f3 Be6 Black can try to make use of the g1-a7 diagonal on numerous occasions. 9.Bc4 *( 9.Nc4 d5 10.exd5 Nxd5 11.Nxd5 Bxd5 12.c3 Rc8⇄;*

*9.Bg5 Be7⇄ )* 9...a6 The easiest continuation, intending b7-b5 next. *( 9...Be7?! 10.Nd5* This isn't so good for Black.*; 9...Na5!?* Is also possible. *)*

**D1)** 10.Bb3 Nd4 *(*Another possible option is: *10...Na5!? 11.Bg5 Be7 12.Bxf6 Bxf6 13.Nd5 Bg5*= With a typical Sveshnikov position. *)* 11.Nc4 Be7 12.0-0 Rc8 13.Ne3 0-0=;

**D2)** 10.Nd5 Ne7! It's important to exchange the knight on d5.

**D2a)** 11.0-0?! Bxd5 12.Bxd5 *( 12.exd5?! g6∓* The bishop on g7 will be quite strong, while White's pieces on the queenside are quite bad. *)* 12...Nexd5 13.exd5 Be7⇄ This type of position is easy to play with Black when some pair of minor pieces have been exchanged.;

**D2b)** 11.Nxf6+ gxf6 12.Bxe6 fxe6 13.f4 *( 13.0-0 d5⇄* Black has a very strong center. *)* 13...Qb6 A simpler option than capturing on f4. *( 13...exf4!?* This is a possible continuation for Black, although it does lead to a very complicated position. *14.Bxf4 d5 15.0-0 dxe4 16.Qe2 f5 17.Nc4 Ng6 18.Rad1 Qc8⇄* White has some compensation in the form of an uncastled king on e8, but the position remains complex. *)* 14.c3 0-0-0 15.fxe5 dxe5 *( 15...fxe5* Is also possible. *16.Nc4 Qc7 17.Qe2 Ng6= )* 16.Qe2 Ng6 17.Nc4 Qc6 18.g3 Prevents any Nf4 ideas. h5 19.Bd2 h4 20.0-0-0 Be7= Black doesn't have any problems in the position. ]

[ 7.Be3 a6 8.Na3 Rb8! *(*Another option is *8...b5 9.Nd5 Rb8 )*

**A)** 9.Nc4 b5 This is Black's idea with Rb8, the b6-square is now covered. 10.Nd2 Be7 *( 10...d5* Is also good. *)* 11.Nd5 0-0⇄;

**B)** 9.Bg5 b5 10.Nd5 Be7 White is clear tempo down on the theoretical lines that will be analyzed in the upcoming chapters.;

**C)** 9.Nd5 Nxd5 10.exd5 *( 10.Qxd5?! Nd4∓* 11.Bxd4 Be6 traps the queen. *)* 10...Ne7 11.Be2 *( 11.c4 Nf5 12.Bd2 Be7 13.Bd3 0-0 14.0-0 Nh4⇄* Intending f5 and then Black can consider moves like Ng6 and e5-e4. *)* 11...g6 12.0-0 Bg7 13.c4 Nf5 14.Bd2 Nd4 15.Bd3 Bf5 16.Bxf5 Nxf5= White is the one who should be careful in this position. ]

**7...a6 8.Na3 Bg4!** Provoking f2-f3. This was also the way to continue without the inclusion of the moves a4 and a6.

[ Other options for Black include 8...Be6 and 8...Be7. ]

**9.Be2**

[ 9.Qd3?! Nb4∓ ]

[ 9.Qd2?! Nd4 10.Bd3 d5∓ ]

[ 9.f3 Be6 10.Bc4 *( 10.Bg5 Be7 11.Bxf6 Bxf6 12.Nd5 Bg5 13.Bc4 0-0 14.0-0 Rc8⇄* The inclusion of the moves a4 and a6 is slightly in White's favor, although it is a typical Sveshnikov position that is good for Black. *)* 10...Nb4 11.Bg5 Qc7 It's tempting to put pressure on the bishop on c4 immediately. Other options for Black are: *( 11...Rc8; 11...Be7 )* 12.Qe2 *( 12.Bxf6 Bxc4 13.Bh4 Rc8 14.Qd2 f6*= Intending to retreat the bishop to f7. If 15.Nxc4 Qxc4, it will be very difficult for White to successfully play the move Nd5 since Black's knight is great on the b4-square. *)* 12...Rc8 13.Bxe6 fxe6 14.Bxf6 gxf6 15.f4 *( 15.0-0?! d5∓ )* 15...exf4

16.0-0-0 Rg8 An interesting idea that's approved by the engine, activating the rook via the 5th rank. *( 16...h5* Is also good. *)* 17.Kb1 Rg5 18.Rhf1 Qb6⇄
The engines assess this position as equal, although with the knights placed on c3 and a3, White should be very careful. ]

**9...Bxe2 10.Qxe2 d5 11.exd5**

[ 11.Bg5 dxe4 12.Nxe4 Qa5+ 13.c3 *( 13.Bd2?! Qd5 14.Nxf6+ gxf6∓ )*
13...Nxe4 14.Qxe4 Bxa3 15.Rxa3 0-0= The position is a bit more comfortable for Black due to the misplaced rook on a3. ]

**11...Nxd5 12.0-0 Nxc3 13.bxc3 Bc5** The bishop is better placed on the c5-square in comparison to e7. **14.Nc4**

[ 14.Rd1 Qe7 15.Nc4 0-0 16.Be3 Rad8= ]
[ 14.Rb1 Qe7 15.Nc4 0-0= ]

**14...Qe7 15.Re1 f6 16.Be3 0-0=** White has weak pawns on the queenside, but in return, White has counterplay along the b-file, so the position is dynamically balanced.

**B33**

□ **Chapter Sveshnikov Kalas**
■ **Sveshnikov,Ne7**

1.e4 c5 2.Nf3 Nc6 3.d4 cxd4 4.Nxd4 Nf6 5.Nc3 The starting position of the Sveshnikov. 5...e5 The Sveshnikov Variation was pioneered by Evgeny Sveshnikov and Gennadi Timoshchenko in the 1970s. Before their efforts, the variation was called the Lasker–Pelikan Variation. Emanuel Lasker played it once in his world championship match against Carl Schlechter, and Jorge Pelikan played it a few times in the 1950s, but Sveshnikov's treatment of the variation was the key to its revitalization.The move 5...e5 seems anti-positional as it leaves Black with a backward d pawn and a weakness on d5. Also, Black would have to accept the doubled f-pawns in the mainline of the opening. However, in return, Black gets a foothold in the centre and gains time on White's knight, which has been driven to the edge of the board on a3. Today, it is extremely popular among grandmasters and amateurs alike. Top players who have used this variation include Magnus Carlsen, Vladimir Kramnik, Veselin Topalov, Teimour Radjabov, Boris Gelfand, Michael Adams and Alexander Khalifman, among many others.And the Sveshnikov Variation became even more popular after Magnus Carlsen employed it in his World Championship Match against Caruana. 6.Ndb5 The theoretically critical move, threatening Nd6+. 6...d6 The mainline preventing Nd6 invasion. Next Black will play ...a6 and kick the Knight to the rim of the board. 7.Nd5 7.BC5 is the old mainline with tons of games and complicated theoretical battles.Recently this idea of 7.Nd5 became insanely popular thanks to Vladimir Kramnik, who was one of the few elite players to initiate this tabiya in modern times. He is indeed the trendsetter: îîEndBracketîî when it comes to opening ideas. 7...Nxd5 Forced, otherwise White

was coming for Nc7+. 8.exd5 And here there are two main Knight retreats 8...Ne7 and 8...Nb8 The former is more concrete and leads to a narrow path where only moves are required to survive the initiative from White. And the latter, with 8... Nb8, is more logical to develop the Knight to d7 in the future and is more solid. 8...Ne7 So Black with this option wants to get the Knight immediately to the Kingside, either to f5 or g6. 9.c4 The critical move strengthening the pawn on d5 and paving way for the Queen on d1 to a4 to create a stir before Black consolidates. 9...Ng6 So Black's intention is to play Be7, castle followed by the pawn roll with ...f5. And once again direct 9...a6 fails to the standard 10.Qa4 and Black cannot interpose with 10...Bd7 due to 11.Nxd6 mate. 10.Qa4 With discovered threats floating in the air; also White's main idea to maneuver the Queen to a3 or b4 to target the d6 pawn is on the cards. 10...Bd7 The only move, blocking the a4-e8 diagonal. 11.Qb4 Exerting pressure on the d6 pawn. 11...Qb8 is the main critical line here. 12.h4 TheCstandard idea to play against the g6 Knight. This idea has become more common by now. Like my first course on 1. e4 îîStartBracketîî Part 1îîEndBracketîî here also we get to see a lot of Harry 4 ideas! 12...a6 13.h5 is the key nuance, and it leads to forced lines after 13...axb5 14.hxg6 Ra4 14...fxg6 15.cxb5 is worse for Black. 15.Qb3 fxg6 16.cxb5 Qa8 16...Re4 17.Be3 does not change the evaluation. 17.Bd3 And Bxg6 is incoming. Black is clearly worse here.

**B33**

□ **Chapter Sveshnikov Kalas**
■ **Sveshnikov,Ne7**

1.e4 c5 2.Nf3 Nc6 3.d4 cxd4 4.Nxd4 Nf6 5.Nc3 The starting position of the Sveshnikov. 5...e5 The Sveshnikov Variation was pioneered by Evgeny Sveshnikov and Gennadi Timoshchenko in the 1970s. Before their efforts, the variation was called the Lasker–Pelikan Variation. Emanuel Lasker played it once in his world championship match against Carl Schlechter, and Jorge Pelikan played it a few times in the 1950s, but Sveshnikov's treatment of the variation was the key to its revitalization.The move 5...e5 seems anti-positional as it leaves Black with a backward d pawn and a weakness on d5. Also, Black would have to accept the doubled f-pawns in the mainline of the opening. However, in return, Black gets a foothold in the centre and gains time on White's knight, which has been driven to the edge of the board on a3. Today, it is extremely popular among grandmasters and amateurs alike. Top players who have used this variation include Magnus Carlsen, Vladimir Kramnik, Veselin Topalov, Teimour Radjabov, Boris Gelfand, Michael Adams and Alexander Khalifman, among many others.And the Sveshnikov Variation became even more popular after Magnus Carlsen employed it in his World Championship Match against Caruana. 6.Ndb5 The theoretically critical move, threatening Nd6+. 6...d6 The mainline preventing Nd6 invasion. Next Black will play... a6 and kick the Knight to the rim of the board. 7.Nd5 7.BC5 is the old mainline with

tons of games and complicated theoretical battles.Recently this idea of 7.Nd5 became insanely popular thanks to Vladimir Kramnik, who was one of the few elite players to initiate this tabiya in modern times. He is indeed the trendsetter: îîEndBracketîî when it comes to opening ideas. 7...Nxd5 Forced, otherwise White was coming for Nc7+. 8.exd5 And here there are two main Knight retreats 8...Ne7 and 8...Nb8 The former is more concrete and leads to a narrow path where only moves are required to survive the initiative from White. And the latter, with 8... Nb8, is more logical to develop the Knight to d7 in the future and is more solid. 8...Ne7 So Black with this option wants to get the Knight immediately to the Kingside, either to f5 or g6. 9.c4 The critical move strengthening the pawn on d5 and paving way for the Queen on d1 to a4 to create a stir before Black consolidates. 9...Ng6 So Black's intention is to play Be7, castle followed by the pawn roll with ...f5. And once again direct 9...a6 fails to the standard 10.Qa4 and Black cannot interpose with 10...Bd7 due to 11.Nxd6 mate. 10.Qa4 With discovered threats floating in the air; also White's main idea to maneuver the Queen to a3 or b4 to target the d6 pawn is on the cards. 10...Bd7 The only move, blocking the a4-e8 diagonal. 11.Qb4 Exerting pressure on the d6 pawn. 11...Qb8 is the main critical line here. 12.h4 TheCstandard idea to play against the g6 Knight. This idea has become more common by now. Like my first course on 1. e4 îîStartBracketîî Part 1îîEndBracketîî here also we get to see a lot of Harry 4 ideas! 12...h5 The critical juncture. 13.Be2 13.Be3 is played in almost all top level games. Play continues after 13...a6 14.Nc3 Be7 with a complex fight. The point of the text move with 13.Be2 is to be flexible with the c1 Bishop as it can directly go to g5 to meet 13...Be7 sometimes. 13...Be7 14.g3 a6 14...e4 happened in the game of Sam Shankland-Grischuk 2021 online and will be met by 15.Bg5 followed by long castle. Now you can see the point of not committing to an early Be3. Sam was clearly better in the aforementioned game. 15.Nc3 b5 Trying to create some counterplay. 16.cxb5 axb5 17.Nxb5 0-0 18.a4 Black definitely has some compensation for the pawn but he has to play like a computer in order to prove his compensation. Practically it is a very good try for White and moreover, the h5 pawn is also hanging now.

**B33**

☐ **Complete Open Sicilian**
■ **N,N**
Chess Position Trainer

1.e4 c5 2.Nf3 The Sicilian is one of Black's most dynamic options against 1. e4. Black controls the d4-square with his c-pawn instead of his e-pawn, meaning that a more imbalanced game will ensue. 2...Nc6 3.d4 The Maroczy bind can also be reached from 2...g6 3.d4 cxd4 4.Nxd4 Bg7 5.c4. 3...cxd4 4.Nxd4 Black trades his c-pawn for White's d-pawn, creating a central majority. 4...Nf6 5.Nc3 Black puts immediate pressure on White's e4-pawn. 5...e5 White also brings another minor

piece into the game and protects his e4-pawn. 6.Ndb5 Black finally puts a pawn in the center. The downside of this move is that it weakens the d6-square significantly and creates a backward pawn on the d-file. Black will have some dynamic compensation however. This once controversial, but now fully accepted move is often thought of as the start of the Sveshnikov Variation. However, Black has some sidelines he can choose before reaching the 'proper' Sveshnikov. 6...d6 As in the Kalashnikov, this is the only critical move. Black now almost always stops Nd6+ with 6...d6, but there is a minor alternative 7.Bg5 This simply transposes to the Sveshnikov Variation. 7...a6 Pinning the Knight, in order to strengthen control over d5. This position is more commonly reached starting 1.e4 c5 2.Nf3 Nc6 3.d4 cxd4 4. Nxd4 Nf6 5.Nc3 e5 6. Ndb5 d6 7.Bg5. 8.Na3 Black aims to drum up some compensation for his weak d5 square by forcing White's knight to the side of the board, where it will be temporarily out of play. If Black delays this for just one move, White can play 8.Nd5 and then bring his other knight into the game with Nbc3. 8...b5 9.Nd5 Black continues to play very dynamically, but he is lagging behind in development. 9...Be7 This one of two main lines, the other being 9. Bxf6. I have chosen this move however because there has been a fairly recent theoretical development in this line that promises White a very nice position. 9.c4 is a pretty decent alternative, but this move just transposes into the Sveshnikov, so why not? 10.Bxf6 Well, this is Black's main move by far. It's extremely natural, of course, breaking the pin, getting ready to recapture on f6 with the Bishop, and clearing the way to castle. White now almost universally continues: 10...Bxf6 Avoiding ...Nxd5, which may or may not win material, but also just exchanging the Dark Squared Bishop, which can never fight for control of the key d5 square directly, for a very important Knight. 11.c4 10...gxf6 would weaken the kingside too much. 11...b4 This is the new theoretical development that I mentioned earlier and is quickly becoming the new main line as White has excellent results in this position. The old main line is 11.c3 followed by Nc2 and Nce3. However, that promises Black good chances. I also quite like the line11.c3, but I don't think this objectively gives any more than dynamic equality either, and has been very well covered in literature lately (there's been Logozar's course on Chessable, Illingworth's book which is available on Chessable, Shaw's book, and maybe some others I'm forgetting) (. Anyway, the text is thought of as the more 'positional' main line. White solidifies his control over d5, induces a closing of the Queenside, to some extent, and also prepares the bring the a3 Knight back into the game via c2. On the other hand, closing the Queenside may make it harder for White to break through and win the game, while the d4 square is certainly weaker than after) 12.Nc2 This move is practically forced. 12...0-0 Naturally, White hops closer to the d5 square, while he may or may not be threatening to take on b4 (he isn't really.) 13.g3 This is Black's main choice, which has sort of replaced 12...a5 once people figured out that taking on b4 doesn't really give White an advantage. 13...Bg5 This is the main line, and will be my main recommendation for the course. White allows ...Bg5, but will hope to use that Bishop as a target later, for either f2-f4 or h2-h4. The Bishop from g5 can, importantly,

exchange itself off for a Knight coming to e3, thus reducing White's control over the all important d5 square. Meanwhile, White's Bishop can either go to g2, securing the Light Squares, or h3 at some stage, planning to exchange off the Light Squared Bishops. 14.Bg2 Black tends to like to play this move at some stage. Again, it activates the Bishop, prepares ...Ne7, exchanging off the d5 Knight - as there is no Nxf6 to worry about now - and facilitates a hypothetical ...Bxe3 exchange. On the other hand, once again, it can be a target for various White pawn advances. The b4 pawn still can't really be taken. Often Black ends up playing ...a5 anyway, and just transposing to the main line, but there is also an independent approach. 14...Qa5 15.0-0 Black threatens ...b3+, but also plans the strategic idea of swinging the Queen over to c5, to point out that the d4 square isn't so well covered itself. 15...Qc5 Black is trying to activate his pieces, but White has an excellent knight on d5 that is not so easy to get rid of without making positional concessions. 16.Kh1 This is one of the computers top two suggestions after I ran it overnightthe other is 16.b3, with a very similar evaluation. This move in particular looks really logical to me; the Black Queen is away from the Kingside, so unpin the f-pawn, and then push it! 16...a5 17.f4 White can maybe claim a small advantage. He might proceed with, e.g. Nce3, Qd3/e2, b3 and at some point fxe5 or f5.

**B33**

□ **Cheparinov,Ivan**
■ **Carlsen,Magnus**
Short & Sweet: The Magnus Sicilian

**1.e4 c5 2.Nf3 Nc6 3.d4 cxd4 4.Nxd4 Nf6 5.Nc3 e5 6.Ndb5 d6 7.Bg5 a6 8.Na3 b5 9.Bxf6 gxf6** The dynamic recapture, and the only move.
[ 9...Qxf6 10.Nd5 Qd8 11.c4! *(*Instead *11.Bxb5* is also terrible for Black. *)* 11...b4 12.Qa4 Bd7 13.Nb5! Ouch! axb5 14.Qxa8 Qxa8 15.Nc7+ and White wins. ]
**10.Nd5 Bg7 11.Bd3 Ne7 12.Nxe7 Qxe7 13.c4**
[ 13.0-0 is the main alternative, although this often transposes to the move played in the game. 0-0 14.c4 f5! with active counter-play for Black, as examined in the theoretical section. ]
**13...f5!**
[ 13...bxc4 14.Nxc4 and some sort of position where White imposes a bind with Ne3-d5, or Ne3-f5, is something we should definitely avoid. Therefore it's a good idea to play our dynamic ...f5 break as early as possible. ]
**14.0-0 0-0 15.cxb5?!** This line gives Black good play without any particular problems to solve.
[ There are at least two meaty alternatives for White here, one of which is 15.Qh5 Rb8 16.exf5 e4 17.Rae1 Bb7 And here White has a wide choice, as examined in the theoretical section. ]
[ 15.Qf3 d5 16.cxd5 fxe4 17.Bxe4 Rb8 And Black obtains enough

compensation, as examined in the course. For both of these lines I refer you to the *11. Bd3 chapter*. ]

**15...d5!** This is the idea. Black forces a position where the bishop on g7 becomes active. **16.exd5 e4 17.Qe2 Rb8** This is less convincing than 17... Qb4, but Black still retains good practical chances.

[ Black achieves good play with 17...Qb4! 18.Bc4 Qxb2 19.Nc2 axb5 20.Rab1 Qf6 21.Rxb5 f4 This line is mentioned in the theoretical section of the course - *line #39*. ]

**18.Rab1**

[ 18.Bc4 The engines prefer this move, giving White some advantage. This is not entirely clear to me, but it is not theoretically that relevant. 17... Qb4 is our improvement earlier. ]

**18...Rb6** Magnus goes for the rook lift, a common idea in this line. **19.Qe3 Rg6 20.Bc2** The black attack becomes very strong after this move, but it's very tough to defend this position. White has offside pieces on a3 and b1.

[ 20.bxa6 This greedy looking move is probably best. Qh4 21.a7 Bb7 22.Bc4 Bd4! a nice tactical trick, that ensures the draw. *( 22...Be5 23.g3 Qh3 24.f4 Bc7* is also playable and avoids the immediate end of the game with the perpetual after 22.. . Bd4. The engines already calculate a forced draw from here, which is of course rather academical and not very relevant for human play. White has many ways to go wrong in the defense. *)* 23.Qxd4 Rxg2+= ]

**20...Qh4** The game is a mess. Black has given away the queenside, but still has huge chances on the other side of the board. **21.b6?**

[ 21.f4? exf3 22.Qxf3 *( 22.Rxf3?? Bd4-+ )* 22...Be5 23.h3 Rg3→ ]

[ 21.g3 This is the toughest defence. Qh3 22.f4 White needs to be able to defend on the second rank. h5 and Black's attack is still very dangerous. Instead of 22... h5 the move 22... Bd4 draws already for Black, which makes the whole line additionally unattractive for White: Black has a draw in hand and can look for more... ]

**21...Kh8** Magnus already had a winning shot, but misses it.

[ 21...f4! 22.Qxe4 Rh6 23.h3 *( 23.Rfd1 f5 24.Qf3 Qxh2+ 25.Kf1 Re8* and White is in a mating net. *)* 23...Qg5 24.d6 *( 24.Kh2 Be5 25.Qf3 Bg4* and this clearly is too much to handle. *)* 24...Rxh3 25.b7 f3 and again Black wins. ]

**22.Nc4?**

[ Again 22.g3 had to be played, with still sufficient chances to defend. ]

**22...Rg8** This is good enough to win.

[ 22...f4 23.Qxe4 Rh6 The same attacking pattern would have worked again, as on move 21. ]

**23.g3 Qh3 24.Rfd1**

[ 24.Qd2 f4! White collapses on h2 now. 25.Bxe4 *( 25.Qxf4 Rh6-+ )* 25...Rh6-+ ]

**24...Rh6 25.Qf4 Bf6**

[ 25...a5 A very strong alternative, getting ...Ba6 on the map. This move was

winning as well. 26.d6 Ba6 27.b3 e3 A cool winning shot! 28.Qxe3 Bb7 And Black wins. ]

**26.Ne5**

[ 26.b7! White would have posed more problems with 26. b7. Bxb7 27.Nd6 Rxg3+ This does the job, but the more obvious 27... Qxh2+ is not enough, surprisingly. 28.Qxg3 *( 28.fxg3 Qxh2+ 29.Kf1 Qh1+ 30.Ke2 Rh2+ 31.Ke3 Qg2* and Black wins! This is not at all easy to see! *32.Nxf7+ Kg7 33.Ne5 Qxc2 34.Qxf5 Bc8 35.Qf4 Qc5+ 36.Rd4 Rh5* Ultimately White's king will fall. *)* 28...Rg6 29.Nxb7 Be5 30.Nd8 Bxg3 31.fxg3 f4 And the attack crashes through. ]

**26...Bxe5 27.Qxe5+ f6 28.Qf4 Rg4 29.Qc7 Rg8 30.Re1** Now Black wins quite easily.

[ 30.Qf4

**A)** 30...Rh4 This also wins, but requires to find an amazing string of moves. 31.Qd6 Be6!! A fantastic shot! *( 31...Qxh2+ 32.Kf1 Qh1+ 33.Ke2 Qf3+ 34.Kd2 Qxf2+* This even lands Black in trouble. *35.Kc3 Rh6 36.Rbc1* and amazingly White is winning in this position! The king will be safe on the queenside and the d- and b-pawns are terribly strong. *)* 32.Qxe6 *( 32.dxe6 e3* The key move of the attack. *33.fxe3 Qxh2+ 34.Kf1 Qh1+ 35.Ke2 Qg2+ 36.Kd3 Rc8!* This is the only move that wins!! The threat is now ... Qe4+, followed by ...Rh2+. *37.gxh4 Qxc2+ 38.Kd4 Qe4# )* 32...Rxg3+ 33.fxg3 Qxh2+ 34.Kf1 Qh1+ 35.Ke2 Qf3+ 36.Kd2 Rh2+ 37.Kc1 Qe3+ 38.Rd2 Qxd2#;

**B)** 30...a5 The simple one. ...Ba6 is decisive. ]

**30...Qxh2+ 31.Kf1 Qh1+ 32.Ke2 Qf3+ 33.Kd2 Qxf2+ 34.Kd1 f4 35.Qc3 fxg3 36.Bxe4 Bg4+ 37.Kc1 Rc8** A good example of the type of attack that Black often manages to start in the Sveshnikov main line with 11. Bd3.

**0-1**

**B33**

□ **Chapter Sveshnikov Kalas**

■ **Sveshnikov,Ne7**

1.e4 c5 2.Nf3 Nc6 3.d4 cxd4 4.Nxd4 Nf6 5.Nc3 The starting position of the Sveshnikov. 5...e5 The Sveshnikov Variation was pioneered by Evgeny Sveshnikov and Gennadi Timoshchenko in the 1970s. Before their efforts, the variation was called the Lasker–Pelikan Variation. Emanuel Lasker played it once in his world championship match against Carl Schlechter, and Jorge Pelikan played it a few times in the 1950s, but Sveshnikov's treatment of the variation was the key to its revitalization.The move 5...e5 seems anti-positional as it leaves Black with a backward d pawn and a weakness on d5. Also, Black would have to accept the doubled f-pawns in the mainline of the opening. However, in return, Black gets a foothold in the centre and gains time on White's knight, which has been driven to the

edge of the board on a3. Today, it is extremely popular among grandmasters and amateurs alike. Top players who have used this variation include Magnus Carlsen, Vladimir Kramnik, Veselin Topalov, Teimour Radjabov, Boris Gelfand, Michael Adams and Alexander Khalifman, among many others.And the Sveshnikov Variation became even more popular after Magnus Carlsen employed it in his World Championship Match against Caruana. 6.Ndb5 The theoretically critical move, threatening Nd6+. 6...d6 The mainline preventing Nd6 invasion. Next Black will play ...a6 and kick the Knight to the rim of the board. 7.Nd5 7.BC5 is the old mainline with tons of games and complicated theoretical battles.Recently this idea of 7.Nd5 became insanely popular thanks to Vladimir Kramnik, who was one of the few elite players to initiate this tabiya in modern times. He is indeed the trendsetter: îîEndBracketîî when it comes to opening ideas. 7...Nxd5 Forced, otherwise White was coming for Nc7+. 8.exd5 And here there are two main Knight retreats 8...Ne7 and 8...Nb8 The former is more concrete and leads to a narrow path where only moves are required to survive the initiative from White. And the latter, with 8... Nb8, is more logical to develop the Knight to d7 in the future and is more solid. 8...Ne7 So Black with this option wants to get the Knight immediately to the Kingside, either to f5 or g6. 9.c4 The critical move strengthening the pawn on d5 and paving way for the Queen on d1 to a4 to create a stir before Black consolidates. 9...Ng6 So Black's intention is to play Be7, castle followed by the pawn roll with ...f5. And once again direct 9...a6 fails to the standard 10.Qa4 and Black cannot interpose with 10...Bd7 due to 11.Nxd6 mate. 10.Qa4 With discovered threats floating in the air; also White's main idea to maneuver the Queen to a3 or b4 to target the d6 pawn is on the cards. 10...Bd7 The only move, blocking the a4-e8 diagonal. 11.Qb4 Exerting pressure on the d6 pawn. 11...Bf5 12.h4 Threatening h5 to corner the Knight on g6. 12...h5 Looks very logical to prevent the advance of Harry further. 13.Bg5 Exploiting the drawback of h5 advance from Black. We have got a nice square for our dark squared Bishop, restricting Black's f8 Bishop and now that piece is passive. 13...Qb8 TheCe are few options here like 13. ..f6 , played in the game of my compatriots S.L. Narayanan against Vidit in Asian Continental 2019, which was dubious as it only weakened Black's position. After 14.Be3 a6 15.Nc3 Qd7 16.Na4 Black had huge problems and was clearly worse as the Knight was heading to the b6 square. And if 13...Qd7 then 14.Qa5 is a strong manoeuver provoking some weakness in Black's camp, 14...b6 is forced as Nc7+ was on the cards 15.Qa4 threatening Nc7+ once more and 15...f6 16.Be3 Kf7 moving away from Nc7+, but White can grab the b6 pawn now due to the pin on the a-file after 17.Bxb6 and he wins. Now you can see why it is useful to provoke pawn pushes :îîEndBracketîî Finally, Note that îîStartFENîîr2qkb1r/pp3pp1/3p2n1/1N1PpbBp/1QP4P/8/PP3PP1/R3KB1R b KQkq - 1 13îîEndFENîî 13...Be7 would be a blunder because after 14.Bxe7 Black would need to recapture with the King not to lose material. 14.Be2 Keeping an eye on the h5 pawn. 14...a6 The Knight has to be kicked away from b5, which is creating a big nuisance. 15.Nc3 Qc7 Bringing Her Majesty back into the game. 16.g3 Restricting the Knight on g6. 16...Be7 Happened in the game of Karjakin-Carlsen, Shamkir

2019. 17.Be3 e4 Trying to activate the Knight via e5, the key square for it. 18.Qa4+ Bd7 18...Kf8 is met by 19.Rd1 Ne5 20.c5 and strong break attacking the e4 pawn by opening the way for the Queen on a4. And if 20...Bd7 there is 21.Qa3 with a promising advantage. 19.Qb3 Now the e4 pawn is hanging. 19...f5 19...Bf5 will be met by 20.Bd4 attacking the g7 pawn and keeping an eye on the e5 Knight when the g6 Knight lands there. 20...Ne5 21.O-O O-O 22.Bxe5 and now the difference is that in the previous position our Queen was on b4 and now it is not on b3 so we gain this important tempo as after 22...dxe5 we can win the h5 pawn with 23.Bxh5 with a nice advantage. 20.0-0-0 Ne5 21.Kb1 Black has got his Knight to e5 and at the same time we have consolidated ours King's position. 21...Rc8 Attacking the c5 pawn will be met by a nice break with 22.c5 Navigating through Black's camp, and Her Majesty on b3 is sparked off. 22...dxc5 23.d6 Opening up the position and now the Knight is invading the d5 square. 23...Bxd6 24.Nd5 Qc6 25.Nb6 And Black is in big trouble as the d-file is under fire. 25...c4 25...Rd8 26.Bg5 Be7 27.Bxe7 Kxe7 28.Qc3 threatening Qxg7 is quite powerful. 26.Qc3 0-0 27.Nxc8 Bxc8 28.Bf4 And White is winning.

**B33**

□ **Chapter Sveshnikov Kalas**
■ **Sveshnikov,Ne7**

1.e4 c5 2.Nf3 Nc6 3.d4 cxd4 4.Nxd4 Nf6 5.Nc3 The starting position of the Sveshnikov. 5...e5 The Sveshnikov Variation was pioneered by Evgeny Sveshnikov and Gennadi Timoshchenko in the 1970s. Before their efforts, the variation was called the Lasker–Pelikan Variation. Emanuel Lasker played it once in his world championship match against Carl Schlechter, and Jorge Pelikan played it a few times in the 1950s, but Sveshnikov's treatment of the variation was the key to its revitalization.The move 5...e5 seems anti-positional as it leaves Black with a backward d pawn and a weakness on d5. Also, Black would have to accept the doubled f-pawns in the mainline of the opening. However, in return, Black gets a foothold in the centre and gains time on White's knight, which has been driven to the edge of the board on a3. Today, it is extremely popular among grandmasters and amateurs alike. Top players who have used this variation include Magnus Carlsen, Vladimir Kramnik, Veselin Topalov, Teimour Radjabov, Boris Gelfand, Michael Adams and Alexander Khalifman, among many others.And the Sveshnikov Variation became even more popular after Magnus Carlsen employed it in his World Championship Match against Caruana. 6.Ndb5 The theoretically critical move, threatening Nd6+. 6...d6 The mainline preventing Nd6 invasion. Next Black will play... a6 and kick the Knight to the rim of the board. 7.Nd5 7.BC5 is the old mainline with tons of games and complicated theoretical battles.Recently this idea of 7.Nd5 became insanely popular thanks to Vladimir Kramnik, who was one of the few elite players to initiate this tabiya in modern times. He is indeed the trendsetter:

îîEndBracketîî when it comes to opening ideas. 7...Nxd5 Forced, otherwise White was coming for Nc7+. 8.exd5 And here there are two main Knight retreats 8...Ne7 and 8...Nb8 The former is more concrete and leads to a narrow path where only moves are required to survive the initiative from White. And the latter, with 8... Nb8, is more logical to develop the Knight to d7 in the future and is more solid. 8...Ne7 So Black with this option wants to get the Knight immediately to the Kingside, either to f5 or g6. 9.c4 The critical move strengthening the pawn on d5 and paving way for the Queen on d1 to a4 to create a stir before Black consolidates. 9...Ng6 So Black's intention is to play Be7, castle followed by the pawn roll with ...f5. And once again direct 9...a6 fails to the standard 10.Qa4 and Black cannot interpose with 10...Bd7 due to 11.Nxd6 mate. 10.Qa4 With discovered threats floating in the air; also White's main idea to maneuver the Queen to a3 or b4 to target the d6 pawn is on the cards. 10...Bd7 The only move, blocking the a4-e8 diagonal. 11.Qb4 Exerting pressure on the d6 pawn. 11...Bf5 12.h4 Threatening h5 to corner the Knight on g6. 12...a6 If Black tries to kick our dominating Knight on b5, then we can ignore and vice versa counter attack his Knight on g6. 13.h5 Nf4 Happened in Kramnik-Roganovic, 2018 Olympiad, from where this trend with 7. Nd5 started. 14.Nc3 Be7 15.Be3 15.Qxb7 would be premature as it gives Black decent compensation after 15...O-O so it is important to develop our pieces. Also preparing the key idea of long castle threatening g3 then to trap the f4 Knight. 15...Nd3+ As if White long castles the Knight will be trapped there on f4. 16.Bxd3 Bxd3 17.0-0-0 e4 17...Bf5 18.h6 followed by Qxb7 is also crushing. 18.h6 Dampening blacks Kingside by exposing his King through this pawn break. 18...g6 19.Rxd3 A cool exchange sacrifice as we can get two pawns for it and also in a way we simply get rid of any counterplay. 19. f3 is also interesting here. 19...exd3 20.Qxb7 0-0 21.Rd1 We will capture the d3 pawn as well now and we are not materially worse. And then we will slowly improve our position with good scope of an advantage.

**B33**

□ **Chapter Sveshnikov Kalas**
■ **Sveshnikov,Nb8**

1.e4 c5 2.Nf3 Nc6 3.d4 cxd4 4.Nxd4 Nf6 5.Nc3 The starting position of the Sveshnikov. 5...e5 The Sveshnikov Variation was pioneered by Evgeny Sveshnikov and Gennadi Timoshchenko in the 1970s. Before their efforts, the variation was called the Lasker–Pelikan Variation. Emanuel Lasker played it once in his world championship match against Carl Schlechter, and Jorge Pelikan played it a few times in the 1950s, but Sveshnikov's treatment of the variation was the key to its

revitalization.The move 5...e5 seems anti-positional as it leaves Black with a backward d pawn and a weakness on d5. Also, Black would have to accept the doubled f-pawns in the mainline of the opening. However, in return, Black gets a foothold in the centre and gains time on White's knight, which has been driven to the edge of the board on a3. Today, it is extremely popular among grandmasters and amateurs alike. Top players who have used this variation include Magnus Carlsen, Vladimir Kramnik, Veselin Topalov, Teimour Radjabov, Boris Gelfand, Michael Adams and Alexander Khalifman, among many others.And the Sveshnikov Variation became even more popular after Magnus Carlsen employed it in his World Championship Match against Caruana. 6.Ndb5 The theoretically critical move, threatening Nd6+. 6...d6 The mainline preventing Nd6 invasion. Next Black will play ...a6 and kick the Knight to the rim of the board. 7.Nd5 7.BC5 is the old mainline with tons of games and complicated theoretical battles.Recently this idea of 7.Nd5 became insanely popular thanks to Vladimir Kramnik, who was one of the few elite players to initiate this tabiya in modern times. He is indeed the trendsetter: îîEndBracketîî when it comes to opening ideas. 7...Nxd5 Forced, otherwise White was coming for Nc7+. 8.exd5 And here there are two main Knight retreats 8...Ne7 and 8...Nb8 The former is more concrete and leads to a narrow path where only moves are required to survive the initiative from White. And the latter, with 8... Nb8, is more logical to develop the Knight to d7 in the future and is more solid. 8...Nb8 The solid response with the plan of rerouting the Knight to d7. 9.c4 RevCving the old plan. 9.a4 is more popular and heavily played in the top-level games, with the point being to reroute the Knight via a3-c4 when attacked. There are tons of games with heavy theoretical battles. Apart from 9.a4 there is also this interesting one-game idea of Wesley with 9.Qf3 , with the idea of Qa3, which he played against Magnus online in 2020, and of course Black found the right way to deal with it later. The text move 9. c4 is also logical to expand and strengthen the d5 pawn, and also now he can retract back with his Knight to c3. In addition, this direction was employed by Grandmaster Vachier-Lagrave in his recent game against Giri at Candidates. So let's go with the recent trend. :îîEndBracketîî 9...Be7 Looks natural, with the aim to castle quickly so that Qa4 ideas from White will become ineffective. 10.Bd3 10.c5 was played in the game of MVL-Giri, 2021 Candidates, but Black was fine after 10...O-O --- So I would like not to make committal moves and continue with natural developing moves. 10...0-0 10...a6 was played by Krasenko against Leko in 2002, 11.Nc3 O-O 12.O-O will also lead to the same story. 11.0-0 a6 12.Nc3 The critical juncture. 12...f5 looks logical to create an attack on the Kingside. 13.f3 Restricting the pawn mass on f5 and e5 as sometimes Black can insert ...e4 and create an attack. 13...Nd7 14.Kh1 Preparing for b4 advance as once again, with the King on g1 it would come under ...Qb6+. 14...Nc5 15.Bc2 a5 Stopping b4 but eventually White will get his desired plan after polishing and connecting his pieces. 16.Be3 b6 17.a3 And once White gets this b4 break, he is better.

**B33**

## ☐ Inevitable Graduation
## ■ Hikaru Nakamura vs. Boris Gel,London 2012

We Ćave already seen in Chapter 1 that connected passed pawns can be a potent short- or long-term asset. This remains just as true in the endgame as it does in the middlegame, but there are some notable differences in how the positions should be approached when fewer pieces are on the board. The most obvious one is that the reduced material tends to imply less counterplay for the opposing side, and connected passers can often cruise straight through with little to no resistance.The first guideline of the book, found in chapter 1, reads: îîStartBlockQuoteîîA passed pawn in the middlegame often poses no threat of becoming a queen, but connected passers can sometimes run straight down the board. It is often worth investing material to gain connected passed pawns, or to advance existing connected passers towards promotion. îîEndBlockQuoteîîThis guideline remains just as valid in the endgame, and is the only guideline in the book that I have not modified in any way when the number of pieces have been reduced. Let's look at a case where an elite player correctly gave some material to send his pawns through. 1.e4 c5 2.Nf3 Nc6 3.d4 cxd4 4.Nxd4 Nf6 5.Nc3 e5 6.Ndb5 d6 7.Nd5 Nxd5 8.exd5 Nb8 9.a4 Be7 10.Be2 0-0 11.0-0 Nd7 12.Kh1 f5 13.f4 a6 14.Na3 exf4 15.Bxf4 Ne5 16.Qd2 Bd7 17.Qb4 Rb8 18.c4 a5 19.Qb3 Ng6 20.Be3 b6 21.Nb5 Bxb5 22.axb5 Bg5 23.Bg1 Ne5 24.Qa3 Bd2 25.Rad1 Bb4 26.Qh3 Qg5 27.Be3 Qf6 28.Bd4 Bc5 29.Bc3 Qg5 30.Bxe5 dxe5 31.g4 fxg4 32.Qxg4 Qxg4 33.Bxg4 Bd6 34.Be6+ Kh8 35.Kg2 g6 36.b3 Kg7 37.h3 e4 38.Bg4 h5 39.Be2 Rf6 40.Rde1
Black has played a fine game up to this point and has good prospects in the ending. White's 4-2 queenside/central pawn majority is largely ineffective due to the blockade on the dark squares, and one should note that the protected passed pawn does not promise much, since Black has managed to keep an uneven minor piece assortment - a little throwback to Chapters 5 and 6. But how will Black progress further ? White is fighting for control of the only open file, and Black is unlikely to win if all the rooks are exchanged. In addition, the e4-pawn might look nice, but it clearly will not promote anytime soon. Gelfand found the best way to continue. 40...Rf5 Black intends to bring his other rook to f8 to fight for the open file, and he is ready to take back with the pawn if White ever exchanges on f5. White is in a tough spot: he will have to either surrender the only open file while leaving all four rooks on the board, which hardly feels like a recipe for success, or allow Black to obtain connected passed pawns. Note that Black's last move involves a pawn sacrifice, as h5 will hang if White exchanges the rooks. But Gelfand does not care at all, and instead prioritizes getting connected passed pawns. 41.Bd1 Rbf8 42.Rxf5 I am sure Hikaru was loath to take on f5, but he did not have much of a choice. In fact, he was nearly in zugzwang ! The attempt to put pressure to the e4-pawn would not work either: 42. Bc2 Rg5+ ! 43.Kh1 Rf3 ! Far from the only winning move, but an attractive one nonetheless. 44.Rxf3 exf3 Black threatens ...Rg3, taking everything, and if 45.Rg1 f2

46.Rf1 Bc5 White can resign. 42...gxf5 43.Bxh5 Black has achieved his goal of acquiring connected passers. It cost him a pawn to get them, but this is of no consequence. All that remains is to send them through. 43...Kf6 44.Rh1 Kg5 Gelfand's move is surely good enough to win and there is no reason to criticize it. Still, I would have preferred 44...Ke5 to support the pawns more directly, after which 45. Rg1 f4 wins comfortably. 45.Bd1 Kh4 46.Rf1 Rg8+ 47.Kh1 Rg5 48.Bc2 Kxh3 White has no counterplay whatsoever, so Black is in no hurry. I doubt that Gelfand would have bothered to take on h3 if there was any race to be had or if White had anything proactive to do. 49.Rf2 Kg3 50.Rh2 Rg4 51.Rg2+ Kf4 52.Rf2+ Kg5 53.Rd2 Rg3 54.Re2 Rh3+ 55.Kg1 Kf4 56.Kg2 Gelfand finds a nice simplifying tactic to bring the game to its conclusion. 56...Rh2+ 57.Kf1 57.Kxh2 Kf3+ regains the rook with an easy win. 57...Rxe2 58.Kxe2 Ke5 With ...f4-f3 followed by ...e3-e2 on the way, Nakamura had seen enough.Gelfand's play was not difficult once he found 40... Rf5 !, and one does not need to be a former World Championship challenger to close out such an game. He should, however, be praised for his excellent play leading up to that point. Giving up an insignificant pawn on h5 to obtain the connected passers was an easy decision. But often, it takes more material than that to get them.

**B33**

□ **Games From Practice**
■ **Kristovic,Marijan**

1.e4 c5 2.Nf3 Nc6 3.Nc3 Nf6 4.d4 cxd4 5.Nxd4 e5 6.Nxc6 bxc6 7.Bc4 d6 8.0-0 Be7 Until here we have the position from the book. 9.h3 White chouse here to go for the h3 instead of the Qd3. There is no significant difference between both those moves. 9...0-0 10.Bg5 h6 11.Bh4 a5 12.a4 Rb8 And now we have a very important position for this variation on the board. I relay believe that black is a little bit better. White just put the pieces on active positions but they don't work together and white doesn't have a clear plan or targets, when black has a concrete play on the queenside. 13.Qd3 Nh5 Very important positional move. This knight goes now on the h5 with the idea to exchange the dark square bishop and potentially to land on the f4 square. 14.Bxe7 Qxe7 15.Ne2 White prevents black from playing Nf4. 15...Be6 Black finish the development and stay slightly better. 16.b3 Nf6 17.Bxe6 Qxe6 18.Rad1 d5 19.Ng3 Rb4 The position stays slightly better for black after the thematic d5 break and the black pieces are a little bit better than white. 20.Qa6 Nxe4 21.Nxe4 Rxe4 22.Qxa5 f5 Black has a nice initiative here. 23.Rfe1 Rxe1+ 24.Rxe1 f4 25.c4 f3 26.cxd5 cxd5 27.g4 h5 Now black increases the pressure on the kingside and make some target for his pieces. Pawns on the h4 and g4 as the open white king there. 28.Rd1 d4 29.Re1 Re8 30.Re4 Qxb3 31.gxh5 Qb1+ 32.Re1 Qf5 33.Kh2 Kh7 34.Qd5 Qxh5 35.Re4 Qg5 36.Rg4 Qf6 37.a5 Rd8 38.Qe4+ Kg8 39.a6 Rd7 40.Rg3 Qxa6 41.Qxe5 Here white makes a final mistake and now

lose the game. 41...Qe2 The only winning move. I find him after the time trouble and win the game. 42.Qb8+ Kh7 43.Qb1+ d3 44.Kg1 Re7 45.Qb6 d2 And white resigns.

**B33**

□ **Larsen,Bent**
■ **Robatsch,Karl**

Bent did not qualify for the next Interzonal: he finished fourth in the Zonal tournament in Bergendal (1961) and then, when FIDE annulled its results (a unique case: Holland refused Uhlmann an entry visa, and as a mark of protest many participants withdrew from the tournament) and appointed a new Zonal in Czechoslovakia, the Danish Chess Federation did not send Larsen there ! The grandmaster's comment was brief: 'A sad affair, that demonstrated the powerlessness of FIDE.'Two years' military service hampered Larsen's chess development, but he was occasionally allowed leave to take part in competitions, and in the summer of 1963 he joined the next world championship cycle, taking second place (after Portisch) in the Zonal tournament in Halle. In a Sicilian Defence against Robatsch the Dane employed a clever variation, which later was named after him. 1.e4 c5 2.Nf3 Nc6 3.d4 cxd4 4.Nxd4 Nf6 5.Nc3 e5 'This is often called 'Lasker's Jagd-Variante' (Jagd = hunt) , because the great Emanuel played it in one of the games of his match against Schlechter in 1910. But the move 5... e5 had been played earlier, of course, and it was not considered to be very good.' (Larsen) It achieved real fame in the 1970s thanks to the Chelyabinsk grandmasters Sveshnikov and Timoshchenko. 6.Ndb5 Schlechter went 6.Nb3 ?! Bb4 7.Bd3 d5 ! against Lasker. 6...d6 7.Bg5 The logical reply, fighting for the weakened d5-square. Sometimes, however, wishing to change the pattern of the struggle, White plays 7.Nd5 Nxd5 8.exd5 - recently this has again acquired some popularity (e.g. Leko-Kramnik and Anand-Topalov, Monaco blindfold 2003) . 7...a6 Driving back the knight to a3. 8.Na3 8.Bxf6 ?! gxf6 9.Na3 f5 ! Tarrasch-Janowski, Vienna 1898. 8...Be6 Later the Chelyabinsk Variation became the main one - 8...b5 ! 9.Bxf6 gxf6 10.Nd5 f5 or 10...Bg7 , or 8...b5 9.Nd5 Be7 10.Bxf6 Bxf6 , but not 8...b5 9.Nd5 Be6 ?! 10. Bxf6 10.c3 ?! Be7 11.Bxf6 Bxf6 12.Nxf6+ gxf6 13. Nc2 O-O 14.Bd3 Kh8 15.O-O Rg8 16.Ne3 b4 ! with equality, Olafsson-Larsen, Zurich 1959 10...gxf6 11.c3 Bg7 12. Nc2 f5 13.exf5 Bxf5 14.Nce3 when the move ...Be6 turns out to be a waste of a tempo. 9.Nc4 Exploiting the opportunity, the knight promptly returns to life. 9...Rc8 Larsen's patent variation, and superior to 9...Nd4 ?! 10.Bxf6 gxf6 10...Qxf6 11.Nb6 ! 11.Ne3 Rc8 12.Bd3 (Bronstein-Pilnik, Moscow Olympiad 1956) . Here Robatsch thought for almost a whole hour... 10.Nd5 If 10.Ne3 the Danish grandmaster was planning 10...Be7 11.Bxf6 Bxf6 12.Ncd5 Bg5 ! with a flexible 'Chelyabinsk' structure. Soon afterwards in the magazine Skakbladet Larsen suggested 10.Bxf6 !? gxf6 11.Ne3 on the other hand 11.Bd3 ! Ne7 12. Ne3 transposes into the 'Larsen' position 11...Ne7 before 11...Bh6 ! was found 12.Bd3

Qb6 13.O-O ! Qxb2 , although after 14.Ncd5 ! White has a strong initiative for the pawn. Therefore after 10.Bxf6 Black was attracted by 10... Qxf6 11.Nb6 Rb8 12. Ncd5 , and now 12...Qd8 not 12...Qg6 ?! 13.Qd3 Be7 , Kamsky-J.Polgar, Buenos Aires 1994, on account of 14.Nc7+ ! and Ncd5 13.c3 Be7 14.Bc4 14.Be2 !? 14...O-O 15.O-O Bg5 16.a4 with a complicated struggle and only a slight, although enduring, advantage for White (Karpov-Nunn, London 1982) . 10...Bxd5 11.Bxf6 gxf6 11...Qxf6 ?! 12.Qxd5 12.exd5 'After this I prefer the black position ! 12.Qxd5 Nd4 ? 13.O-O-O Qe7 14.Rxd4 gives White more than enough for the exchange.' (Larsen) After 12.Qxd5 Nb4 13.Qd2 d5 14. exd5 Nxc2+ !? or 14...Qxd5 15.Qxd5 Nxd5 16.O-O-O Rd8 17.Bd3 b5 18.Na5 15.Qxc2 Bb4+ 16.Kd1 b5 16...Qxd5+ ?! is risky: 17.Qd3 Qc6 18.Qb3 ! Qd5+ 19.Bd3 Qxg2 20.Kc2 ! 17.Qe4 bxc4 18.Bxc4 Qb6 19.Rc1 White's chances are somewhat better. Black also does not gain clear equality with 12.Qxd5 b5 13.Ne3 Ne7 13...Bh6 ?! 14.Nf5 ! 14.Qd3. 12...Ne7 13.Bd3 If 13.Be2 or 13.Qf3 , then again 13...f5 ! is good. 13.b4 !? is more energetic (Gligoric-Brinck-Claussen, Hastings 1963/ 64) , but Black still has the good reply 13...f5 ! 14.a4 Bg7 15.a5 O-O with a double-edged game. 'Robatsch had already spent more than an hour and a half without achieving a very good position. My opening surprise had been a success. ' (Larsen) 13...f5 The start of a classic plan of attack, which later occurred in numerous games played with the popular Chelyabinsk Variation. '13... e4 !? 14. Be2 f5 15.Qd4 Rg8 and ...Bg7 is also interesting, but the move in the game is safer.' (Sveshnikov) 14.0-0 Bg7 15.Qh5 'This looks aggressive without being it, but it is difficult to recommend a good continuation for White. He must give attention to his d-pawn, which may suddenly be threatened by the annoying ...Rc5.' (Larsen) 15...e4 16.Be2 0-0 17.c3 f4 Black's pawn mass advances inexorably on the king. 18.Qg5 b5 19.Nd2 f5 20.a4 Or 20.Rfd1 Kh8 21.Kh1 Be5 etc., whereas 20.Qxf4 ?! Nxd5 21. Qg3 Kh8 ! was even more dangerous for White. 20...Kh8 'A move of historic importance.' (Sveshnikov) And in fact, after this game the vacating of the g8-square for the rook became a typical idea. Of course, there was no point in playing 20... Nxd5 ? 21.Qxd8 Rfxd8 22.axb5 with equality. 21.Nb3 It was also bad to play 21.f3 ?! Bf6 ! 22.Qxf4 22.Qh5 Qb6+ 22...Nxd5 23.Qg3 Bh4 ! 24.Qh3 Nf4 , winning. 21.axb5 was more consistent, but here too Black has a powerful attack: 21...f3 ! 22.gxf3 22. Bc4 Rg8 ! 22...Rg8 23.Kh1 Bxc3 24.Qf4 Be5 ! Larsen gives 24...Nxd5 ?! 25. Qxf5 Rg5 , missing 26.Qxe4 Nf6 27.Qe3 , when there only remains 27...Nd5 with equality 25.Qh4 Rc2 26.Rad1 Qf8 27.fxe4 Ng6 28.Qh3 fxe4 etc. 21...f3 22.gxf3 Bxc3 23.Kh1 23.bxc3 ? Rg8 23...Bxb2 24.Ra2 Be5 25.axb5 Or 25.fxe4 fxe4 with the new threat of ...Rc3-h3 !. 25...Rg8 26.Qh5 26.Qh4 Qf8 ! 27.fxe4 Ng6 or 27...Qg7 28. Bf3 Rc3 and wins. 26...Nxd5 27.fxe4 Nf4 28.Qxf5 Qh4 29.Bd1 Ne2 30.Qxe5+ dxe5 31.Rxe2 Without waiting for 31...Qh3 , White resigned.

■ **Svetlin Mladenov Vs Rainer,B**

1.e4 c5 2.Nf3 Nc6 3.d4 cxd4 4.Nxd4 Nf6 5.Nc3 e5 6.Ndb5 d6 7.Bg5 a6 8.Na3 b5 9.Nd5 Be7 10.Bxf6 Bxf6 11.c3 Rb8 12.Nc2 0-0 13.a3 Kh8 14.Bd3 Be6 15.Ncb4 Nxb4 16.axb4 Bxd5 17.exd5 Qb6 18.0-0 g6 19.Ra3 Ra8 20.Qb3 Rfe8 21.Rc1 e4 22.Be2 Re5 23.Ra5 Rf5 24.Rf1 Qb7 25.c4 Bd8 26.Raa1 bxc4 27.Bxc4 Bb6 28.Qa4 Qa7 29.Qc6 Bxf2+ 30.Kh1 Rd8 31.Rxa6 Qd4 32.b5 Qe5 33.h3 In the game, White thought Black had to move or defend his Rook after 33.Qc7. But Black had something else in mind: 33...Qxh2+ 34.Kxh2 Rh5# (Greco's mate) . Instead, White could have defended easily with either 33.h3 or 33.Be2 , although Black has an advantage in this position.

■ **Nazarenus Vs V Vologin,O**

1.e4 c5 2.Nf3 Nc6 3.d4 cxd4 4.Nxd4 Nf6 5.Nc3 e5 6.Nb3 Bb4 7.Bc4 0-0 8.Qd3 d6 9.0-0 Bxc3 10.bxc3 Be6 11.Bxe6 fxe6 12.Ba3 Ne8 13.Rad1 Rf7 14.Rd2 b6 15.Rfd1 Rc8 16.Bxd6 Nxd6 17.Qxd6 Qf6 18.c4 Rd8 19.Qxd8+
In the game, White thought he could win a Knight with 19.Qxc6. He was undoubtedly surprised by Black's combination starting with 19...Qxf2+. White has two options, both leading to checkmate: 20.Kh1 Qf1+ 21.Rxf1 Rxf1# (Back rank mate) , 20.Rxf2 Rxd1+ 21.Rf1 Rdxf1# (Back rank mate) . Instead, White cannot avoid fatal tactics, except by sacrificing the Queen for two minor pieces. 19...Nxd8 20.Rxd8+ Rf8 21.R8d2
